Granted that it is properly enriched, and for this purpose there is nothing equaling fertilizer from the barn-yard, the next best thing is thorough preparation. The various harrows will do much toward putting it into the desired shape, but after they are through, a few times over with some good wheel hoe or weeder will do even more toward bringing the soil into available shape than the fertilizer. By breaking up the lumps it leaves no chance that some poor seedling will struggle in vain to peep up to the light; it opens up the soil to moisture and facilitates its ability to gather nitrogen. As snow has been termed the "poor man's fertilizer," so may air be added, a commodity available at all seasons if we but plan to make use of it.

"Green manuring" is another form of fertilization known for generations. The weeder of old threw his weeds in a pile on the compost heap, confident that in due time he would have as a result a superior potting soil.

With a tool for utilizing the green weeds as they grow the results come more quickly and with less waste. In a bit of ground that had previously been considered of little worth because it contained so much clay as to pack hard, a single summer's cultivation with a wheel hoe and weed cutter completely transformed it into light earth and a producer of good vegetables.

The work was easily performed by a woman after the plowing and harrowing were completed. Finding the hoe attachments too heavy for her use, she used mainly the weed cutter, which cut the weeds just below the surface, also cutting a thin layer from the surface of the soil. This readily crumbled, and as it became pulverized the cutting bar was gradually sunk deeper. In a few weeks the soil was light and the plants thrifty.

The results convince us that proper fertilization and mechanical force may be made to solve the problem of clay land. If the field is a large one, disc harrow and other implements may still solve the problem. Take a small plot at a time and work it thoroughly, remembering that the labor is not for a season but to a certain extent for a generation. The clay farm properly cared for has rich possibilities, but they are not opened up to the man who merely scratches over its surface.—Bessie L. Putnam.

A Land Transaction.

From San Antonio, Texas, November 20th, it was reported that Charles M. Armstrong had sold the old Timon Ranch, in Starr and Hidalgo counties. The property consists of 40,000 acres, and the price was approximately $250,000. The purchasers are H. Nelson Rider, of Cambridge Springs, Pa.; Riley Allen, of Allentown, N. J.; and George C. Moore, of Cambridge Springs, Pa.

BOSTROM'S $15.00 FARM LEVEL HAS TELESCOPE

With Magnifying Lenses, Enabling You to Read the Target Over 400 Yards Away,

Shipping Weight 15 lbs.

Complete Outfit, with full instructions, Shipped Anywhere C. O. D. $15.00 and express charges subject to examination.

And is being welcomed by land owners from the Atlantic to the Pacific, for *Draining, Irrigating, Terracing, Ditching, Grading, Road Building, Running Fences, Setting Out Orchards, Levelling Buildings and Foundations, Getting Angles,* and every sort of work requiring a Level. THE BEST POULTRY PAPER.

We are often asked which is the best poultry paper published in the United States, and the answer is, The Reliable Poultry Journal. There are other good papers, but this is the best. The subscription price of The Reliable Poultry Journal is 50 cents a year, and the subscription price of the **Universal Magazine** is 25 cents a year. We have made arrangements whereby we can send the **Universal Magazine** and The Reliable Poultry Journal, both papers, one year, for 50 cents. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

The Farmer and Egg Shipments.

Profit in poultry raising is generally dependent upon two factors—the cost of feed and the nearness to market. The poultry raiser who is not a farmer has to purchase much of his feed in a retail market, but he or she generally makes it up by securing a closer market than does the general farmer; nevertheless, when the farmer or any member of his family goes into the business of poultry raising with a determination to make a good income from it, no one else has the slightest chance of comparing with him in final results, and when a half dozen farmers conclude to unite their egg shipments for the purpose of getting full cases of fresh eggs on the market continuously, then they insure themselves the highest market price for their eggs throughout the entire year.

Crops of middlemen have been raised and fed upon the fact that a speculation always presents itself wherever the products of the farmer are not large enough to reach the unit of shipment. The unit of an egg shipment is a case of thirty dozen, and a case should be filled up in three days at least. Not one farmer in a thousand can fill up a case of eggs in three days, but a co-operative association of ten farmers, or ten farmers' wives or sons or daughters, could do so in the time stated. It is the same with shipping chickens, only it is not so easy to divide up the proceeds, unless they are all weighed before being crated and shipped to market, and then when returns from market arrive the amount can be divided equitably.

The farm that produces but a few dozen eggs each week is dependent for a market upon the country store; but the country store never ships a case of real fresh eggs, and never tops the market; the consequence is that farmers often receive 16 to 18 cents a dozen, when their own fresh eggs, if they could fill up a case, would bring 25 to 28 cents on the market.

The demand for eggs and poultry is continually on the increase, not so much in the big cities as in the smaller towns. It is the total that counts, and there does not appear to be any limit. Farmers must not look for prices to be always high, because high prices cut down consumption, but they must advance the grade of their products and so add a cent or two per pound or per dozen, and get closer to their markets than they have been.

These remarks are suggested by a conversation with a commission man who deals in poultry and eggs. "How much of your business comes direct from the farmer?" "Farmer, nothing!" said he. "These eggs and all the chickens are from country stores. They are accumulations. They are passably decent eggs, especially after being candled and the bad ones thrown out, but very few farmers ship eggs direct to market."

There is plenty of room for farmers' consignments, especially so when they can say on the tag: "These eggs all guaranteed fresh on day of shipment," and then the commission man will find a market for them at a special price, regardless of what inferior and doubtful eggs are bringing.

Poultry Notes.

At Trenton, Mo., the plant of Swift & Company is to be enlarged and improved. They intend to put up a plant where 10,000 chickens can be fed for market. The intended improvement also includes a creamery with capacity of 3,000 pounds of cream per day.

The Missouri State Poultry Show will have some large turkeys on exhibition, notwithstanding Thanksgiving Day has come and gone. A prize of $25 is offered for the largest turkey in Missouri, and it is claimed that the largest in Missouri must necessarily be the largest in the world.

Mr. Geo. H. Lee, of the Geo. H. Lee Company, of Omaha, Nebraska, says that what caused him to go into the poultry business and afterwards into the poultry supply business was bad store eggs; he was tired of eating stale eggs, and the consequence was the purchase of a dozen Plymouth Rocks, and that led in a direct line to poultry remedies, incubators, etc.

We learn from the Holden Progress that Uncle John Carter says that his hens are taking a lay off. How is it with you?

The Butler Weekly Comet says: "A hen too fat gets lazy; she takes no interest in life. One too poor cares nothing about her egg record. The happy medium is a happy hen."

Commercial Poultry says: "A good grain ration for the laying stock is composed of wheat, buckwheat, oats and corn, the wheat predominating. Too much corn is not good for laying hens, but a little fed with other grains is beneficial. Add to this grain ration a daily allowance of vegetable food, cut clover and a little green cut bone two or three times a week and you will have an almost perfectly balanced ration for the laying hens."

An egg company in New York City objects to the Department of Agriculture exercising police powers, and has brought suit, and the trial is set for some time in November.

The Missouri State Poultry Show, which has attained national dimensions and importance, is held at the Grand Coliseum, St. Louis, Mo., December 6th to 11th. If there is yet time to make up your mind to attend, that is the proper and profitable thing to do.

The early eggs going into cold storage were selling in New York at 25 cents a dozen in October, and late packed eggs (June and July) were selling at 18 to 20 cents. The cold storage egg of April is the choice article. On October 1st, 1,948,747 cases of eggs were reported in storage, against 1,723,697 last year, add 2,000,031 at same tme in 1907.

Saw Your Own and Your Neighbor's Lumber.

The price of lumber is now high and still going up. Those of our readers who have an engine or good power will find it profitable to get a good saw mill and start a lumber-sawing business in your district. One of the best mills we know of is made by R. R. Howell & Co., of Minneapolis, and we suggest that you write them for their catalogue K and prices. See their adv. in this issue.

Turkey Prices Changed in One Day.

The turkey market in the country and the turkey market in town are wide apart. There is no telling what the market is or will be until it is over. In St .Louis, the day before Thanksgiving, the market for live turkeys opened at 20 to 22 cents a pound, and owing to large shipments arriving late in the day, live turkeys dropped to 14 and 15 cents a pound. Dressed turkeys sold early at 20 to 22½ cents a pound and closed at 18 to 20 cents. Very large numbers of turkeys were sold, and the prices averaged 4 to 5 cents better than last year.

The Enid Stock and Poultry Show.

This Show opens December 11th and continues until the 18th. It is conducted on broad-gauge principles and premiums are very liberal.

It is possible for one Percheron stallion to win $170 in cash and two gold medals. One Percheron mare $120 in cash and two gold medals. One stallion and four mares $715 in cash, five gold medals and two silver loving cups. One bull $175 in cash. One cow $140 in cash. One bull and four females $635 in cash. One boar $35 in cash. One sow $35 in cash. One boar and three sows $130 in cash.

Sales will take place daily, and amongst the consignments are eleven draft stallions by Walker Bros & Co., of Oklahoma City, whose advertisement will be found in our breeders' cards. Mr. F. S. Kirk is Manager, his address being Enid, Oklahoma. Enid is a very important railroad center and can be reached advantageously from all directions.

Missouri Poultry Institute.

The State Poultry Institute for 1909 will be held at Columbia, in the new State Agricultural College, December 29th-30th, during Farmers' Week. Three noted poultry lecturers and judges have been engaged to conduct the Institute and give practical demonstrations. Dr. A. A. Brigham, Principal of the School of Agriculture at Brookings, S. D.; Rolla C. Lawry, Professor of Poultry Husbandry in Cornell University; and D. E. Hale, a noted judge and writer, will each be present to instruct the farmers and poultry raisers in all practical questions pertaining to foods, feeding, incubators, brooding, breeding, caponizing, judging and general poultry and egg farming, both upon the farm and as a special business. Noted speakers for all branches of agriculture, and the dedication of the new agricultural building on December 31st. Don't miss this meeting. It's a year's course in poultry husbandry boiled down into two days.

Gains in Pig Feeding.

At the Ohio Experiment Station, in a pig-feeding experiment of sixty-six-days' duration, by feeding corn meal alone 100 pounds of gain cost $6.18; with corn meal and soy bean meal, in the proportion of 4 to 1, the cost was $4.71; with corn meal and tankage, in the proportion of 6 to 1, the cost was $4.12; with corn meal and middlings, equal rations, the cost was $5.06; and with corn meal and skim milk the cost was $4.11 per 100 pounds of gain. The average daily gain per pig of those fed corn meal alone was .57 of a pound; of those fed corn meal and soy bean meal, 1.057; of those fed corn meal and middlings, 1.250; of those fed corn meal and tankage, 1.612; and of those fed corn meal and skim milk, 2.23 pounds.

How can you expect your livestock and poultry to make money for you if they're out of condition?

You can't. So it's up to you to keep them well and hearty. How? By giving them

Pratts

Animal Regulator AND Poultry Regulator

They cost very little but the results are wonderfully big.

Pratts Poultry Regulator, for instance. It's a guaranteed egg producer. Keeps your hens laying steadily all winter. And makes your market poultry big, fat and heavy. It cures the common poultry ailments, too.

And Pratts Animal Regulator makes good just as quickly. Builds up run-down horses so that you'll get a heap more work out of them.

Puts cows in fine condition so that they give more and richer milk. Makes your hogs prize winners for size.

All Pratts Preparations are guaranteed with this square deal

GUARANTEE:

If any fails to give results claimed, take the empty box or package back to your dealer and he will return your money without argument.

Pratts Worm Powder is a special preparation for the destruction of all kinds of worms in horses, cows, hogs and sheep. It is purely vegetable, has a strong tonic effect that builds up and helps the animal regain strength, and is unquestionably the quickest, surest and most thorough worm-destroyer procurable.

If your dealer cannot supply you, send us his name and 50 cents, and we will mail you a box.

We will have ready, about January 1st, two new books, written expressly for us by famous authorities, and we want to send you *Free* a copy of the one that is of most interest. Write for it. Simply say—Send me a copy of

"Poultry Wrinkles,"

by Michael K. Boyer, the famous Poultry Editor of Farm Journal, and author of "Poultry Secrets." Or,

Our New Stock Book,

"Things you ought to know about Horses and Cows."

Either book is worth its weight in gold. Which do you want?

Illinois State Poultry Show.

The Illinois State Poultry Association will hold the sixteenth annual meeting at Springfield, Ill., in the State Arsenal building, January 3rd to 8th, 1910. The premiums are liberal, the entrance fees reasonable; owing to the appropriation received from the Legislature, there will be no admission fee charged to the show room.

Free admission to every one, thereby hoping to encourage prospective buyers and the public to take more interest in one of the largest industries in the State of Illinois.

Premium list is ready for mailing.—F. A. Bennett, Secretary, Canton, Ill.

The Oats Market and Prices.

On the information of a crop 175,000,000 bushels greater than 1908, the oats market has gradually declined until it appears lower than it may be later. In the Chicago speculative market on June 30th the December oats quotation was 44 cents a bushel, and December oats closed at 39¼ on November 30th. The May, 1910, quotation on July 31st was 40⅞ cents, and on November 30th the May quotation was 42 cents and the July quotation closed at 40 cents. From this it appears that an abundance of oats is expected to be available after the December option is closed out.

Raising Pigs on Pasture.

An Iroquois county, Illinois, correspondent writes: "Which kind of pasture would be the best to raise pigs on when no grain is fed?"

No kind of pasture is best under those conditions. While a good pasture is really essential in raising hogs, yet pasture without grain has never been proved profitable. For a pasture, with grain, alfalfa undoubtedly is the best; red clover and rape are good. If one must get along without grain, then some such crop as cow-peas should be fed. Alfalfa alone is merely a maintenance ration, while cow-peas will produce pork cheaper probably than any other forage crop. Some hog raisers attempt to bring their pigs up to six months without corn. I get best and quickest results from feeding grain just as soon as the pigs will eat. Mill-feed, clover pasture and corn is a combination in pig-raising that is hard to beat. With that kind of feeding March pigs in northern Illinois can be marketed the next January at around the 300-pound mark.—L. C. Brown.

Sheep in City Parks.

Mowing the grass several times during the year of the several hundred acres of Washington Park, Chicago, has needed a small army of men, and it meant a tremendous expense. This last summer the Superintendent has been doing the mowing with a 200-herd bunch of sheep. These are cared for by one man with his Collie, and the sheep are changed daily from one part of the park to another. The experiment has been a success. The sheep keep the turf more evenly clipped than the men did with machines, and, besides, the droppings of the sheep are distributed over the ground where it will do the most good. The sheep are penned up at night, but every day, rain or shine, they go to work in Chicago's most beautiful park. They make a pretty sight, and thousands of city children are attracted to the park because they want to see live sheep. The flock will be kept on the grass until fall, and then will be sold, and they are fat enough to bring top prices.—L. C. Brown.

Sheep Notes and Items.

Heavy-weight sheep are not in demand so much as medium weights. Wethers weighing 100 to 115 pounds are heavy enough, and wethers weighing 130 to 150 pounds are too heavy. At Christmas, however, choice fat heavy sheep sell well to moderate numbers.

The Southern States have a great many advantages in raising sheep, the chief of them being the mild winters that permit early lamb raising.

Sheep raising is a safe business for farmers under present circumstance. On farms there ought to be no trouble about insuring a fine crop of lambs, whereas on the Western ranges, when seasons are unfavorable, the lamb crop is small. That is what is the matter with New Mexico this season. A shortage of lambs has cut down the Western lamb-feeding business, so that there is sure to be a shortage in the markets next spring.

Farm Level a Necessity.

Many a farm is laid out to great loss and disadvantage for want of a first-class farm level. People who have farm levels do not have to employ engineers or surveyors to do work they are in a position to do for themselves. Terracing, ditching, grading, fencing, setting out orchards all call for the practical use of a farm level. Once the work is understood and the level is brought into use for many purposes. People with farm levels don't have crooked fences, straggling orchards, misplaced buildings, land washing or land disputes. All angles and directions are true and indisputable when properly verified. The best farm level is manufactured by Bostrom Brady Mfg. Co., 1107 Pine street, St. Louis, Mo. It is not expensive considering its value. Write for full particulars if you are interested.

Angora and Milk Goats.

By this time the Angora goat in the United States ought to be producing a fleece that would sell as high as the Turkish product; but Turkey extras sell in New York at 50 to 58 cents a pound, and the best American fleece at 31 to 35 cents.

The Angora goat breeders are divided amongst themselves as to the best method of marketing their fleeces. They should concentrate their shipments and establish a market. For the product raised east of the Rocky Mountains, and maybe for all the output of the Pacific Coast, St. Louis would be the best point. A selling agency here could handle the entire American fleece, which is not large enough to be scattered.

Wabash Premiums For Students.

The Wabash Railroad Company has set aside a fund of $900 for eighteen free scholarships for one student each from St. Louis, St. Charles, Warren, Montgomery, Audrain, Boone, Randolph, Macon, Adair, Schuyler, Chariton, Carroll, Clay, Ray, Livingston, Daviess, Gentry and Nodaway counties, Missouri, through which the road runs, in the agricultural course at the Missouri University, Columbia, for the terms of seven weeks, beginning January 4.

The student from each of these Wabash counties, who, at the end of the full seven-weeks' course, shall have made the best progress will receive a check for $50 from the railroad company. This is worth investigating and is very generous on the part of the officials of the Wabash Railway.

Swine in America.

Coburn's new work on Swine Husbandry is a 650-page book; each page being 6x9 inches and the price is $2.50 per copy. It is bound in fine silk cloth, with gold side and back stamping, making a most handsome and attractive book. Mr. Coburn is Secretary of the Kansas Department of Agriculture, and has a world-wide reputation. His book is the standard of the world, and covers everything from the history, the breeding, raising, feeding, marketing, and the final pork packing. We cannot sell the book for less than the publisher's price, but we can include two years subscription to The National Farmer and Stock Grower. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Times Square Automobiles.

The Times Square Automobile Company, with headquarters at 215 West Forty-eighth street, New York City, have opened St. Louis headquarters corner of Pine and Eighteenth streets, near the Union Station. They have new machines and bargains on hand, and when manufacturers are overstocked this company is ready to take the surplus at figures which will do a buyer some good. Every car is guaranteed to be as represented. Mention this paper when you write or call. It will be a recommendation. See card in this edition.

WORMS NOW IN SEASON.

I Cured My Rupture

I Will Show You How To Cure Yours FREE!

I was helpless and bed-ridden for years from a double rupture. I wore many different kinds of trusses. Some were tortures, some positively dangerous, and none would hold the rupture. The doctors told me I could not cure it without a surgical operation. But I fooled them all, and cured myself by a simple method which I discovered. Anyone can use it, and I will send the cure free by mail, postpaid, to anyone who writes for it. Fill out the coupon below and mail it to me today.

Free Rupture-Cure Coupon

ABSORBINE DOES GREAT WORK.

Barney Ogan, Somerset, Ind., under date of June 22, 1909, reports to Mr. Young as follows: "I have this to say of your Absorbine—that it has done great work for me in a short time. I began using it on a Friday morning and Saturday my horse could put his foot to the ground for the first time in three months. It was a bad case, but I was surprised to find what the Absorbine had done so soon. I thought that she would have to be killed almost any time, but it looks as if she were going to get along now." Absorbine for all kinds of Lameness, Bruises, Soft Swellings, Bog Spavin, Big Knee, Poll Evil, etc. $2.00 at druggists, or sent express prepaid upon receipt of price. W. F. Young, P. D. F., 106 Temple street, Springfield, Mass.

A Duel of To-day.

At a "Privat Mittagstisch," a sort of eating club, in a German university, Mr. W. E. Cross became acquainted with a student who, one night, after a quarrel in a cafe, was challenged to fight. "It was to be a serious fight, too," not one of the playful, almost harmless German student duels, with "eyes, head, arms, body, nearly everything protected," but "a real struggle, where an eye or other vital part might suffer serious damage." All arrangements were duly made, Mr. Cross was invited by his friend to be present, and on the appointed day was driven to the scene of the conflict, an old inn some two miles from the town. Arriving there, Mr. Cross found within a number of friends of both duelists. He tells the story as follows in the London Daily News:

"We enter, too. There are two rooms; the fight will take place in the larger one, at the side of which stands the doctor, arrayed in a white overall, who is setting out various frightful-looking instruments upon a table, where they will be 'handy.' I try to repress a shudder and fail; a man next me says they are seldom wanted, 'only in an emergency.' I shudder again.

"In the same room, in a corner, my friend's opponent is getting ready, but as it is etiquette to stay with the man whose guest one is, I pass into the second and smaller room and greet my friend, who is already stripped to the waist, and looks as pale as his enemy. His 'armor' is being adjusted. A wide protector of padded leather, looking like a life-belt, is fastened around his body, leaving his chest bare. Another thick pad, like a "stand-up' collar, fits round his neck, while his wrists and parts of the forearms are similarly bandaged. There is no protection else; his head, face, chest, arms and shoulders are left to skillful parrying. A noise behind me attracts my attention; they are sharpening the swords, horrible curved weapons, to examine which almost makes one ill.

"All is ready. The opponents stand face to face, an arm's length apart. The seconds, covered with elaborate protecting pads, stand, alert, by the principals. A referee reads out the rules of the fight, from which we learn, among other things, that no 'prodding' is allowed. The antagonists look palely fierce during these trying moments of suspense; then Ready, Go! and the duel commences.

"Not very exciting, now it has begun; banging each other's weapon as one does in single sticks * * * then I remember, with a sickly shudder, that the swords, when I examined them, had edges like razors. One false parry, and * * *

"A shout, the seconds' swords go up, the fighting stops, and the doctor comes forward with a bowl of antiseptic wash. He is sponging the blood from the face of the other—that cut in the cheek will leave its mark forever. My friend, too, is wounded, but only slightly, on the arm. Not much times is lost, a hush ensues, the referee 'calls,' and once more the fight begins. The same clash-clash-clash, the same parrying and slashing, the same razor edges—eugh!—and the seconds once more stop the fight. My friend is cut here and there, but the other has sustained a deep wound somewhere on the forehead—and a Niagara of blood covers his face, eyes and all. A moment's consultation among the seconds and referees, and the announcement comes that the man can not fight any more—can not see to fight—and my friend has the victory. In one swift moment his face loses its wild paleness, and literally beams, while we crowd around him and congratulate—though among ourselves we agree he has been lucky. Anyhow, off come the bandages, and we drive away home triumphant, but quietly so, for here is no gloating. I glanced at the other on my way out; the doctor was there and—it was very horrid.

"It is the way they have here, and they seem satisfied with it. My friend fights another duel next week; he was rejoicing in a cafe on the night of his victory, and—well, he exchanged cards again. I saw his former opponent yesterday; his head in a mask of bandages and cotton wool. 'Ten stitches,' it is whispered, and I am not disposed to contradict. But he had really bad luck. Had the cut been elsewhere, so that the blood had not run into his eyes, at least one other round would have been fought. My friend does not fight badly—but I am glad he had only two rounds. In duels anything may happen."

He Surely Saw Two.

"The officer seems wonderfully certain about the details of my case," said a defendant, with a sneer; "but how is it he doesn't call his fellow-officer to corroborate what he says?"

"There's only one officer stationed in the village, sir," explained the policeman.

"But I saw two last night," indignantly asserted the defendant.

"Exactly," the policeman rejoined, smiling broad—"that's jest the charge agenst you!"

Pratts New Poultry Book.

Pratts New Poultry Book is worth having as a gift, and many that we have to buy are not as good. It is written in the interest of Pratts Poultry Regulator, and that is good reading also. It is the farmer who can make the most money out of poultry, and this book is a manual of information concerning the raising of poultry for profit. Write to Pratt Food Co., Dept. F, Philadelphia, Pa., and ask for a free copy of "Pratts New Poultry Book."

Beans and Peas at St. Louis.

White beans—Choice hand-picked at $2.28@2.30; screened or machine-picked at $2.15; choice imported at $2.10, and country at $1.25@1.50—all inferior goods less; black-eyed peas $2.60; Scotch peas at $2.30; split peas at $2.30 per bu. or $8 per bbl. of 3½ bu.; Lima beans 5, 10c per lb; lentils 4@4½c; California pink 5c; red kidney 5¼@5½c.

Greatest Clothes Offer Ever Made

Save Half On This $25 Suit Made To Order Guaranteed Fabrics

This is positively the biggest good clothes offer ever appearing in this paper.

To Quickly Introduce our fine clothes and overcoats in every town, city and state, we will make to your measure, this fine three button business or dress sack suit, cut in the latest fashion of finest high grade goods for only **$12.50**

Sent On Approval See Before You Pay

We guarantee the perfect fit and satisfaction of every garment. Many tailors would charge $30 or more. The secret lies in the fact that we enable you to

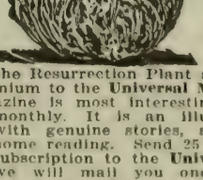
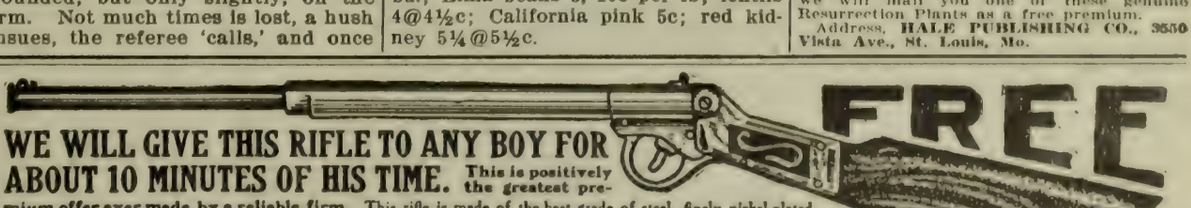
THE MEXICAN RESURRECTION PLANT.

This is a great and pleasing novelty. Without water it dries up and is apparently dead. Place it in a shallow tank of water and it revives to a beautiful, living, fern-like plant. Let it dry out again and it curls up like a ball and can be kept for years. It will revive again directly it is placed in water. It requires no soil, no nourishment, no attention.



We have adopted the Resurrection Plant as a subscription premium to the **Universal Magazine.** The magazine is most interesting and is published monthly. It is an illustrated publication, with genuine stories, splendid poetry and home reading. Send 25 cents for one-year's subscription to the **Universal Magazine** and we will mail you one of these genuine Resurrection Plants as a free premium.
Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**



FREE

WE WILL GIVE THIS RIFLE TO ANY BOY FOR ABOUT 10 MINUTES OF HIS TIME. **This is positively the greatest premium offer ever made by a reliable firm.** This rifle is made of the best grade of steel, finely nickel-plated with polished walnut stock. Made From Sole Leather.

The largest and most expensive leather belt ever made has just been completed in New York for the Great Southern Lumber Company of Bogalusa, La. It is of three piles of leather, 240 feet long, 6 feet wide, and it took the hides of 540 Texas steers to furnish the material. It has been shipped to the owners, the express charges being $243.07. The belt is intended for driving the large band saw, such as is used in the big lumber mills of the South and West. Its extraordinary length is due to the fact that the ground conditions of the mill are such that the engine has to be a good distance away from the mill proper. If a belt that long was made any thinner or narrower it would not stand the resistance it encounters. The belt was manufactured by Charles A. Schieren & Co.

Rough on Rats in Outbuidings.

In setting Rough on Rats in outbuildings after mixing it well with any food decided upon, separate into small bits, place on several pieces of boards, and put these here and there under the floors. Close up all openings large enough for Dogs, Cats or Chickens to enter, but leave some small openings for Rats to get in and out. One 25c. box of Rough on Rats, being all poison, will make enough mixture to clear out in one or two nights' setting hundreds of Rats and Mice. 15c., 25c., 75c., at Druggists. E. S. Wells, Jersey City, N. J.

Dairy Calendar For 1910.

One of the most pleasing calendars for 1910 that we have seen is the one sent out by our friends, the Vermont Farm Machine Company.

It is in several colors and shows a pretty dairy maid in full regalia in the foreground, with a setting of trees, a running brook and a herd of dairy cows. And in the corner, modestly symbolizing the support that it is to all dairy maids who use one, is a United States Cream Separator. It is fitting that it should be there, because these famous machines make life a pleasure to thousands of dairy maids and dairy women throughout the world.

We reproduce the calendar in the accompanying illustration. Of course, the beautiful effect of the many colors is lost and the reduction detracts from its beauty, but it affords at least an idea of this striking picture.

The original painting is the efforts of one of New Yorks' best artists and is a credit to the painter, lithographer and company issuing it.

The Vermont Farm Machine Company, Bellows Falls, Vt., inform us they will mail to those readers of The National Farmer and Stock Grower interested in improved dairying methods, this beautiful ten-colored lithographed calendar who mention our paper. Better write at once before the calendars are all gone, as we understand their quantity is limited. Address, Vermont Farm Machine Company, Box 125, Bellows Falls, Vermont.

Highway Dust and Highway Mud.

The road problem is a great problem in every country. The more civilized a nation, the more attention does it give to road building.

Mud and dust are the great factors to be overcome in the road problem. Were it not for these two factors, we would easily solve the road problem.

Mud and dust interfere in every way with our community interests, and of these mud is the greatest obstacle. Dust is disagreeable, but mud is a community resister.

In all road improvement, temporary expedients are first tried. In the end the permanent improvements have to be adopted. The Romans made the same mistakes and were forced to the same conclusions. In the end they built so permanently that some of their roads exist to this day.

We want the permanent road, but up to the present time it has cost too much money to make it possible in the rural community. But the time is coming when the permanent road will be the only kind of a road linking our communities.

The more good highways we have the less will it be necessary to depend on the electric road. The latter will be a long time in coming in some of our thinly-inhabited localities.

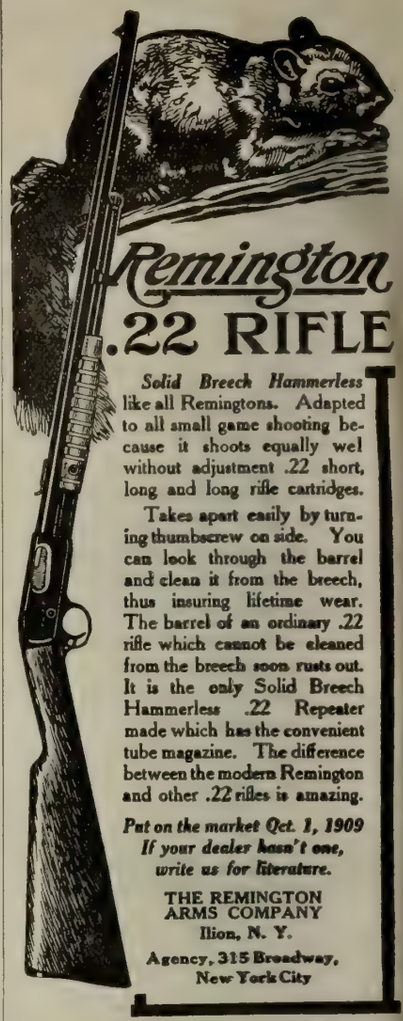
The cities and villages that have paved roads are interested in the paving of country roads, for it is from the country roads that mud is dragged onto the paved city streets. This mud has to be cleaned off, and, in the case of macadam, it takes some of the surface of the road with it. In this way the unpaved road wars against the paved road. This will continue the subject a live one till all our roads are improved.

In the cities, asphalt is coming more and more into use, either in its pure state or in some combination with broken stone and macadam. It presents a hard surface that will not go to pieces under the wheels of the automobile. Unfortunately, the adulterator has found out how to cheat the road builder and is buying the products of the gasworks and mixing this coal-tar product with the pure macadam. Of course, such adulterated asphalt is low in wearing quality.

Dust and mud in the highway will be fought from generation to generation and finally abolished. Thousands of brains are working on the subject and improvements are being made from year to year.

It is believed by many that the automobile has sealed the doom of the macadam road. The machine sucks the fine blinding dust out of the road and tosses it in the air to be driven away by the wind. In our large cities where the automobiles are largely used the macadam streets have greatly deteriorated during the past ten years. In some cities the damage in that time has amounted to hundreds of thousands of dollars. In the light of this experience it does not look as if the macadam road should be further pushed in rural communities.

Every rural community should study this problem, but it should at the same time go slow in entering on heavy expenditures in the building of permanent roads, for in the near future it may be possible to build permanent roads at a far less cost than at the present time.



Remington
.22 RIFLE
Solid Breech Hammerless like all Remingtons. Adapted to all small game shooting because it shoots equally wel without adjustment .22 short, long and long rifle cartridges.
Takes apart easily by turning thumbscrew on side. You can look through the barrel and clean it from the breech, thus insuring lifetime wear. The barrel of an ordinary .22 rifle which cannot be cleaned from the breech soon rusts out. It is the only Solid Breech Hammerless .22 Repeater made which has the convenient tube magazine. The difference between the modern Remington and other .22 rifles is amazing.
Put on the market Oct. 1, 1909
If your dealer hasn't one, write us for literature.

Ilion, N. Y.
Agency, 315 Broadway, New York City

POCKET KNIFE SUBSCRIPTION PREMIUM.

This is a splendid three-blade pearl-handle Pocket Knife, three inches long, superior steel, imported. No better knife on the market. Directly one is seen and examined, everybody wants one. The subscription price of The National Farmer and Stock Grower is $1.00 for three years. Send us $1.00 and we will mail you The National Farmer and Stock Grower for two years, and in place of the third year we will give

you this splendid Pocket Knife. This will please everyone who gets it. Uncle Piper, subscription editor of The National Farmer and Stock Grower, has undertaken to eat his own head off if we fail to send out ten thousand of these knives in one month, and we don't wish to lose Uncle Piper that way. Address, THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

Practical Farming and Gardening.

This is a book of 500 pages, 6x7¼ inches to the page. It is a complete farmers' instruction book. The feeding chart is worth a ten-dollar bill to any stock farmer. Soil fertility, drainage, grain crops, gardening, truck growing, fruits, forestry, pruning, grafting, budding, injurious insects, plant diseases, spraying, cattle, sheep, horse raising and feeding, treatment for diseases, silos and silage, poultry, handy rules and farm cookery, are a few of the subjects. There are eighteen three-column pages of index. If you look for something you find it. We have adopted this book as a subscription premium. Send One Dollar and we will send you **Practical Farming and Gardening**, postage paid, and The National Farmer and Stock Grower for two years. This is a grand offer. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Decreased Breadstuff Exports.

The Department of Commerce and Labor is out with a statement in regard to breadstuffs, wheat, flour, etc., to the effect that although the exports have fallen off, the domestic consumption has gained correspondingly. Although we are doing pretty well so long as crops are not excessive, it is a very sure thing that Argentine and Canada, which have increased in exports as we have decreased, will not go out of business when on account of increased production we will need broader export markets. It is a good thing that the United States population is increasing, and it is a very good thing for farmers that Providence sometimes takes a notion to regulate supplies. A full grain crop in this country would result in 60-cent wheat, 25-cent corn and 8-cent cotton, and a 5-cent top for beef cattle and 4 cents for hogs. If the city, state and national governments can show the city people how to make a living over and beyond the requirements for their rent and taxes, the farmers will feed them at reasonable prices, one year with another.

Moisture Effects on the Preservation of Trees and Vines.

Both in winter and summer, the question of moisture supply is a large one, as it affects the preservation of trees and vines. They can stand a great deal of heat and dryness above them if they have a supply of moisture at their feet. In the winter also they can stand much cold if the soil is well supplied with moisture when the trees and vines go into winter quarters.

Some years ago the writer visited a fruit grower who had many of his grapevines killed the preceding winter. On examination it was found that the vines had been killed only where they came within about twenty feet of thrifty trees. It was concluded that the roots of the trees had so exhausted the ground of moisture that not enough was left for the supplying of the vines with the amount of moisture they required. But it must be reasonable to suppose that this impoverishment of the water supply had come while the trees were in leaf, which would be in the early fall and not in the late fall, for as soon as the leaves become turned in color they would have stopped pumping moisture out of the soil.

It is therefore evident that it is the moisture that comes in the early fall that is chiefly valuable, and which should be secured to the vines while they have the leaves with which to utilize it. Is it not then a question of the opening up of the late wood, the packing in of a little more material to give the woody growth proper resisting power? This seems to be the case.

But the moisture that comes after the leaves fall has some value, but it would be the same in all the ground of a grapery, whether near the trees or not. The effect of this late moisture is to harden the surface soil with the coming of cold weather. Just as the ice on the stream protects the water below from becoming too cold, so the moisture in the soil on freezing protects in a lesser degree the soil below it from becoming excessively cold. It is fair to assume that the more moisture in the soil the less will be the depth to which the soil will freeze hard. In moist forests it is not probable that the soil ever freezes very deep, but when the same forest area is partly cleared and the land drained the soil is dryer and freezing takes place to a greater depth. After a hard winter, the writer lost three magnificent oaks, the remains of a primeval forest. They simply froze to death, though while surrounded by other trees and in undrained soil they had stood the winters of probably a hundred years.

In localities subject to very hard winters there is such a thing as draining orchard or forest areas too much. Good drainage should be given, but not so much that the soil will not retain enough moisture for the use of the perennial plants growing upon it. A sandy soil particularly may be overdrained. A clay soil is so retentive of moisture that there is little danger of overdraining it except in areas covered with mature trees whose roots have become accustomed to a certain depth of freezing.

Symmetrical Shade Trees.

There are few symmetrical shade trees to be found either in a state of nature or in places where they have been brought up under the care of man.

If one but keeps his eyes open as he goes about he will be convinced that most of the trees along our village highways are non-symmetrical, and the same is true of most of the trees in our ctiy parks, if we take the mature trees. There are many small trees that are symmetrical, but in time most of these trees lose their symmetry. The writer spent half a day in a large city park hunting for large trees that because of their symmetry might be called beautiful, and he was able to find but one. This was a magnificent elm with a spread of seventy feet. There were thousands of other trees, but none of them was worthy of any particular attention.

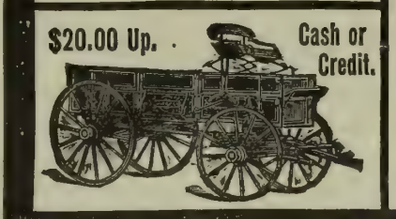
Along the country highways we oftenest find symmetrical trees. In his travels about the country the writer has run across a good many such trees, either standing by the highway or a little back from the fence line. Why they exist it is easy to understand. When the original arboreal growth was cleared away, here and there a small tree presented so much beauty to the eye of the farmer that he had not the heart to destroy its beauty. Therefore he left it, especially if it happened to be on the line of the highway. All the other trees about it were cut down, and that gave the spared tree an abundance of light and sunshine. In the course of half a lifetime these trees have made large growth and have expanded on every side. Every traveler along these highways is compelled to remark their beauty.

In an Eastern pasture the writer remembers some magnificent hard maple trees that had been spared by the same process. In fifty years they had developed thick foliage on all sides and were as trim and beautiful as they would have been under the nourishing care of the most expert landscape gardener.

We can learn a lesson from what has happened to these trees. The factors of plenty of air and an abundance of sunshine count for as much with the planted tree as with the tree spared by the axe of the original woodsman. We must stop crowding our trees.

In this part of the country at least the practice is almost universal of planting trees so close together that they will never be able to develop into symmetrical large trees. One tree does not have to be planted very close to another tree to shut off a large part of its direct sunshine. Where the sunshine does not fall there is a check in the evaporation of the moisture from the surface of the leaves and from the surface of the bark on the trunk, limbs, branches and twigs. The check in evaporation means a lessening of the flow of sap, which in turn carries the food for the upbuilding of the parts. Therefore those shaded portions develop ever more slowly and do not make the growth that is made by the parts of the tree in full sun. The result is that the partly-shaded tree becomes more and more unsymmetrical as the years go by.

On the country highway, shade trees like the hard maple and the elm should not be planted closer together than 100 feet.



AGENTS WANTED

We want men who are not actively engaged in business to act as our agents. We pay liberal cash commissions. Write for our catalogue and full particulars.

Waiting to See Him Go.

A millionaire, famous for his love of horses, and also for the very low prices he paid for them, saw a very good-looking hack in a Quaker's stable. Hs usual, he bid a low figure for the animal, which, to his surprise, the Quaker accepted.

"Have no fear," said the Quaker. "I can assure you that you will be pleased when you see him go."

The horse, when home, turned out an inveterate jibber; nothing could induce him when in harness to move a yard.

The angry millionaire interviewed the Quaker and exclaimed:

"You assured me when I bought the horse that I should be pleased when I saw him go."

"So I did, my friend," was the reply; and you will be pleased when you do see him go."

Quantity vs. Numbers.

Old Uncle Rastus asked George George Washington Johnson, of Utah, why he married such a "monst'us big woman."

"You see it was 'dis way," said Uncle George, "the Mormons has as many women as dey want, and I taught bein's I couldn't have as many as dey had, I'd get as big a one as I could while I was a-gittin'."

Base Ball Fatalities.

A base ball enthusiast took his wife to the ball game. That night the "fan" was awakened from his slumber by his better half shouting in her dreams: "Kill the umpire!" "Kill the umpire!" Half asleep, he sprang out of bed, and in doing so he knocked over the washstand. The crash awoke Mrs. "Fan." "Did you kill the umpire? John?" she inquired.

"No," replied John, angrily. "But I smashed the pitcher."—Success.

Only the Landlady's Husband.

When the new boarder went into the dining room and sat down, there was only one other person at the table. The new boarder had a kind heart and thought he would be affable.

"I s'pose you've boarded here for some time?" he said to the other man.

"Yes, quite a while."

"How is it? Any good?"

"Yes, pretty fair. I have no complaint to make."

"Landlady treat you decent?"

"Well, perhaps I ought to"—and then he hesitated.

"Oh, never mind, old man," said the new boarder. "That's all right, I'm on. But, say, mebbe you never tried chucking her under the chin once in a while. That's the way to get on with 'em. I never yet had a landlady that didn't treat me A1. It's all in the way you handle 'em. See! I'll bet I can live here for a month on end without being asked for a shilling. Watch me banter her when she comes in. Before this time tomorrow she'll be telling me her family history. Poor old girl! She looks as if she'd had her troubles. Probably tied up to some John Henry, who was about man enough to shoo the chickens out of the yard, and that's all. My name's Smith. Let's see. I haven't heard yours, have I?"

"No—no, I believe not. But it doesn't matter. I'm just the landlady's husband."

Had to Stand Aside.

"Can I have two good seats, well down, not behind a post, and on the aisle?" asked the quiet gentleman at the box-office window.

"Three dollars apiece," replied the ticket seller, slamming out two tickets that call for seats in the last row, behind a post and in the middle of the row at that.

"But these aren't what I want," objected the man.

"Can't help that. Got to take 'em or nothin'," responds the ticket seller, obviously irritated.

"Look here, young man, that's no way to talk to people who come here to buy seats."

"Huh! You talk as if you owned the theater."

"I do. I happen to be the new owner."

"Then git away and let people that want to buy seats have a chance. You know very well you can get in for nothing."—Life.

FREE Peary-Cook NORTH POLE TALKING DOLL TO EVERY LITTLE GIRL

This is the very latest creation right from the Frozen North and is all dressed in fluffy furlike Arctic costume with Eskimo cap, moccasins and gloves. It has a voice like a real Eskimo baby and says "Mamma" and "Papa" in its own language. This has come to take the place of the squeaking Teddy Bear, and is going to be even a thousand times more popular. It is an exact reproduction of the Baby Dolls that our great discoverers—Cook and Peary—saw on their journeys to the North Pole, and every American girl should have one. These dolls are unbreakable. We are the exclusive Western distributers and are importing thousands of them.

How You Can Get One FREE!

Send in your name and address and we will send you 6 packages of our beautiful gold embossed souvenir post cards to distribute on our special plan, collecting 25c for each package. Our post cards are great value and everybody will buy them from you. When you have collected the $1.50 send it to us and we will send you this fine Eskimo Doll at once, **all transportation charges prepaid.** Write for the cards and full particulars at once. IT COSTS NOTHING TO TRY. Address

A MOST BEAUTIFUL PICTURE—"THE WOOING."

This is a most elegant and beautiful picture. The colors are delightful. It is the refinement of elegance in the treatment of the "Story of Love." This represents the companion picture to another picture entitled "Playing Two Games at Once." In order to hurry up old subscribers, to encourage new subscribers and to do something we are proud of, we are offering these two elegant 16x20-inch pictures to anyone who will send direct to us a postoffice money order for 50 cents to pay for one-year's subscription to The National Farmer and Stock Grower. This is a good farm paper. Read it over and you will find it to be interesting and instructive, and you will be delighted with the pictures; if not, we will refund the money.

SUBSCRIPTION BLANK—Cut It Out and Mail to Us.

The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Herewith please find 50 cents. Please credit up one-year's subscription to The National Farmer and Stock Grower and mail to me the two beautiful 16x20-inch pictures as advertised.

SENDS FREE REMEDIES FOR THESE DISEASES

Free Treatment for Kidney Trouble, Bladder Trouble or Rheumatism Sent Free to the Sufferer's Home—Legions Say They Cured Themselves With It.

It seems possible now to obtain what thousands claim is a sure home treatment for such painful and dangerous uric acid diseases as kidney trouble, bladder trouble, or any form of rheumatism; and so that those who

DR. LYNOTT

The doctor sends his great illustrated Medical Book describing these diseases as well as a full Letter of Medical Advice to all who write him.

suffer in this way may learn for themselves that the cure will prove effective in their own case, a free home treatment can be obtained by sending your name and address to the fortunate doctor who has the remedies.

Not a cent of money is asked of you, and where it says free it means free. The purity of the remedies is vouched for to the Government, and you are putting yourself under no obligations in any way.

Wonderful is it in stopping the torturing backaches of kidney trouble, in quieting the inflamed bladder and conquering the wrenching, grinding rheumatism. I am prepared to show letters from hundreds of people that it has done this. Some had been "old chronics" for years. The first relief they ever had was with the treatment I sent them free, just as I am now willing to send you or any other afflicted person a free home treatment.

So there can be no doubt about it I will give some of the leading symptoms of kidney, bladder and rheumatic diseases:

1. Pain in the back.
2. Too frequent desire to urinate.
3. Burning or obstruction of urine.
4. Pain or soreness in the bladder.
5. Prostatic trouble.
6. Gas or pain in the stomach.
7. General debility, weakness, dizziness.
8. Constipation or liver trouble.
9. Pain and soreness under right ribs.
10. Swelling in any part of the body.
11. Palpitation or pain around the heart.
12. Pain in the hip joints.
13. Pain in the neck or head.
14. Pain or soreness in the kidneys.
15. Pain or swelling of the joints.
16. Pain and swelling of the muscles.
17. Pain and soreness in nerves.
18. Acute or chronic rheumatism.

You can write me a letter describing your case in your own words, or, simpler still, fill out the coupon and send it to me. You have only to put down the numbers of the symptoms that afflict you and sign your name and address clearly. My address is Dr. T. Frank Lynott, 2909 Occidental Building, Chicago, Ill.

Let no victim of these diseases pass this offer by. It involves no money, and surely when a doctor is willing to go to the time and expense to send you a free treatment you should at least be willing to give it a trial. Do this, even though you, like thousands of others, are tired of past failures with other methods.

Write today.

Dr. T. Frank Lynott,
2909 Occidental Bldg., Chicago.

The Loan Collection.

This is one of the pleasantest and most instructive methods of raising money, and there is scarcely a community in which a creditable display may not be brought to light. By charging a small sum, noting, if possible, in the local papers some of the leading features, the attendance will be all that can be desired and a handsome sum added to the church or library fund.

Almost every family has some curios worthy of a place in the loan collection. In a small town where a Street Fair was being held, some of the ladies recently made a collection which included a number of pieces of linen more than a century old. China, books and fancy work of various kinds also bore the marks of age. There was a silver sewing bird, perhaps new to almost all of the present generation, snuffers, candlesticks four hundred years old, and many things as strange as ancient. The old blue-and-white counterpane, old-fashioned quilts, gowns, and various articles of dress, found a place in the collection.

The interest of the community is easily aroused, and the historic value of the articles will readily be appreciated. More, almost anyone in looking over such a collection will recall similar material at home, and perhaps bring it the next day. At all events, the home relics will hereafter be properly cared for, even if they have previously been consigned to the attic.

But the first step in such an exhibition is a suitable case for the coins and other valuables, and a place behind the ropes for all textile fabrics, where they will be out of the reach of the fingers of the curious, while in full view of their eyes.—Bessie L. Putnam.

The Garden Inventory.

Some varieties of vegetables are good under all conditions and please all tastes; others are especially adapted to certain local conditions, and a few depend upon personal taste for favor. Now is the time to put the matter to a test and determine what varieties shall be retained another year and what discarded to make room for a preferred sort.

Those liking a long, slender pickle will adhere to the Long Green cucumber, while if the favorite form is a fat but still shapely sort, the White Spine will be a favorite. For a quick stew the Navy bean is ever popular; but if a rich dish of baked beans is desired, the Horticultural is found to have a flavor unsurpassed. And thus we may go through the list, each variety having some special merit, yet for our own use there is generally a best. And when the preference is found, stick to it. Novelties come and go. Be chary of them until thoroughly tested. If the new variety is really good it will in a year or two come down to normal prices; if disappointing, it will eventually drop out of the catalogues.

Is your space fully occupied? And if not, what more can you most profitably add? Are you buying strawberries instead of raising them? Two or three rows across the garden would give an abundance for family use.

Has it occurred to you that the ground which furnished the early potatoes would furnish room for celery?

Have you more peppers than you need? Divide with a neighbor, and plan for next year by your experience of the one just closing. Its successes and its failures have much in store for the future.—Bessie L. Putnam.

Why She Turned Pale.

Two ladies, who had known each other in years gone by, met on the street. Both of them were married to musicians. The one, a bride of a year, was pushing a baby carriage in which were three fine babies—triplets, all girls. The other lady had been in the bonds of matrimony a couple of weeks.

"What beautiful children!" exclaimed the newly-married one with interest.

"Yes," replied the proud mother, "let me tell you the funniest coincidence. At our wedding supper the boys who played with my husband in the orchestra serenaded him and they played 'Three Little Maids' from 'The Mikado.' Isn't that queer?

At this the newly-married one turned pale.

"Mercy!" she gasped. "At our wedding supper Tom's friends serenaded him also, and they rendered 'The Sextet' from 'Lucia.'"—Ladies' Home Journal.

The Tonkawa's Indian's Paper.

"Last Saturday, Joe Marcus, a Tonkawa Indian, subscribed for the News. The following Tuesday he came to the office with his war paint on and wanted to know why he was not getting his paper. We have been visited by indignant subscribers before, but not so soon after becoming one. Joe was pacified by the assurance that the paper was issued once a week. He departed, with the very reassuring remark: "You no send paper me maybe so take scalp." There is one thing sure: There might be some of our readers who will fail to get their paper, but Joe Marcus will not be among the number."—Tonkawa (Okla.) News.

KEEP YOUR FEET WARM.

It is generally conceded that if the feet are warm one is tolerably comfortable all over. The Clark Heater is made for the express purpose of keeping the feet warm on cold winter drives. These heaters are made in various styles, but a good one and a dozen bricks of the fuel for it can be purchased for as low as $1.50. When so much comfort can be had for so little, it would seem wise to be comfortable. Write for catalogue to the Chicago Flexible Shaft Co., 682 LaSalle street, Chicago, Ill.

She Helped Him Out.

He was a bashful lover and had wooed her long; she knew he loved her, and knew he was afraid to propose. She resolved to help him out.

"When I get married I hope to see you at my wedding," she said.

"Heavens!" he gasped. "I hoped to marry you myself."

'Well," she rejoined, as she blushed to the hue of a rosy sunset, "I meant I hoped to see you there as groom."—Exponent.

Encouraging the Author.

"Gladys," reprimanded her stern father, "I am shocked. I actually saw you kiss that tall young man with the long hair."

"Well, papa, he's an author," spoke up Miss Gladys with a pout.

"And what has that to do with it?"

"Why, papa, didn't you say with your own lips that young authors should be encouraged?"—Chicago News.

Nut-growing Industry.

During one week in Texas, twenty car-loads of pecans were shipped out of San Saba county, and in that particular territory the total crop is estimated at seventy-five car-loads.

According to the Nut Grower, the estimated yield of a pecan tree is five pounds the fifth year, fifteen pounds the seventh year, fifty pounds the tenth year. There will be a few nuts the third and fourth years.

Do You Hear Well?

Deaf or partially deaf people may now make a month's trial of the Stolz Electrophone in their own homes. This plan makes it possible for you to be very sure, before you purchase it, that the Stolz Electrophone is exactly suited to your personal needs.

The Electrophone in use—less noticeable than eye glasses.

Opinions After a Test

"Your Electrophone enables me to hear speakers over 50 feet away. Without it I could not hear their voices. It has **improved my natural hearing at least 50 per cent.** and has **stopped the head noises.**" E. P. Rogers, 159 LaSalle St., Chicago.

"The Electrophone is very satisfactory. Being small in size and great in hearing qualities makes it **preferable to any I have tried,** and I believe I have tried all of them." W. M. Hoyt, 1 Michigan Ave., Chicago.

The Stolz Electrophone is a tiny ELECTRICAL hearing device which **magnifies** sound. It renders drums, horns, etc., useless and leaves **both hands** free. Endorsed by thousands, including many world-famous people. Call at our office and make arrangements at once for a Full Month's Home Test of a Stolz Electrophone. If you cannot call, write for particulars and long list of satisfied users in Chicago and elsewhere who will answer **your** inquiries.

Stolz Electrophone Co., 137 Stewart Bldg., Chicago, Ill.

Address, THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

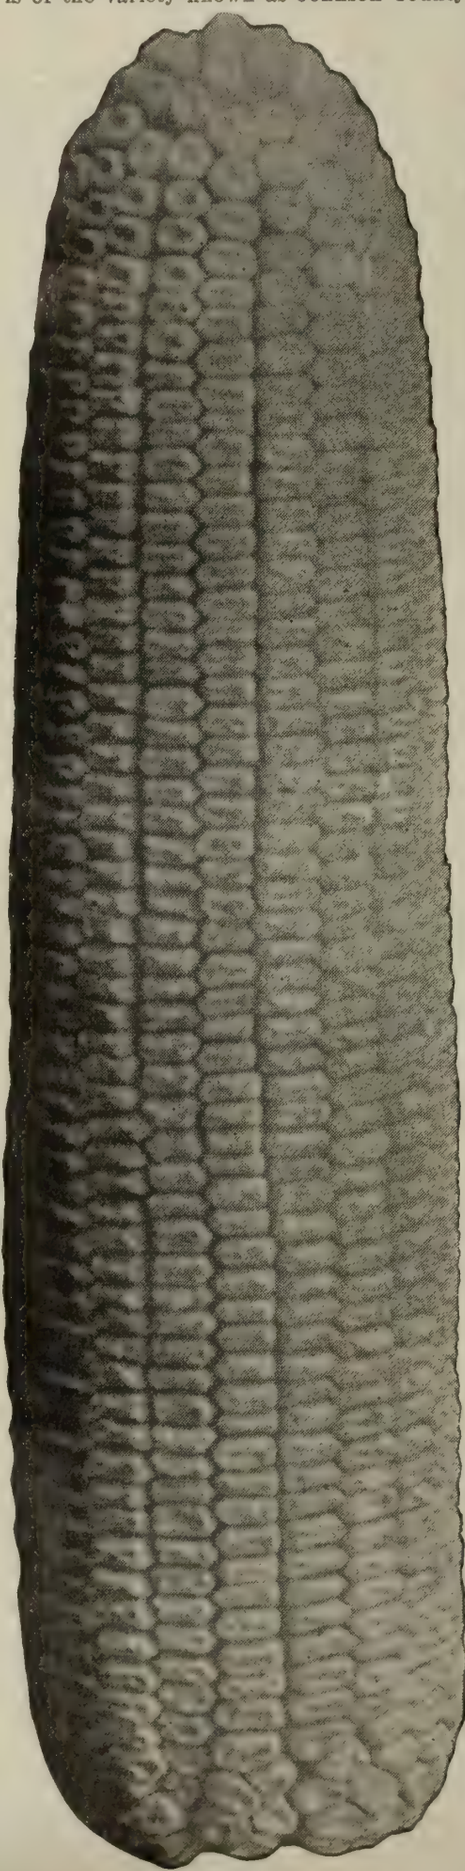
GRAND SWEEPSTAKES WHITE CORN.

Offered as a premium by the Subscription Department of The National Farmer and Stock Grower.

The fine ear of corn represented is the one which was sold for $250. It is of the variety known as Johnson County White Dent. It is the corn that won the highest awards at the National Corn Shows of 1907 and 1908. Mr. L. B. Clore, of Indiana, is the breeder, raiser, grower and exhibitor of this wonderful ear of corn. Mr. Clore has won so many sweepstakes prizes for corn exhibits that he has the high honor of being the recognized champion, and is barred from competition. He can select corn of his own raising and be sure to win the championship. At one Corn Show his winnings amounted to $7,536.50. Mr. Clore has very kindly furnished us with a small quantity of his Grand Sweepstakes Seed Corn for premium purposes. We offer it to our readers for experimental purposes. We have offered this same corn for two years with gratifying success. A fourteen-year-old boy in Georgia received a pound of this corn from us as a subscription premium and from it he raised a good stand and selected ten ears which won a $50 first prize at the Georgia State Fair. This office also awarded him $25.00, and the same corn is now in competition at the National Corn Show of 1909.



Mr. Clore habitually raises 90 to 100 bushels per acre. A pound of his seed is worth considerable money.

PREMIUM OFFER NO. 1.

For premium purposes we make this offer: Anyone sending us a postoffice money order for 60 cents will be credited with one-year's subscription to The National Farmer and Stock Grower, and he can select one pound of Clore's Grand Sweepstakes White Corn as a premium, to be sent postpaid by mail, and safe delivery guaranteed.

PREMIUM OFFER NO. 2.

Anyone sending us one dollar by money order or registered mail will be credited with two-years' subscription to The National Farmer and Stock Grower, and will have the privilege of selecting two pounds of Clore's Grand Sweepstakes White Corn as a premium, to be sent postpaid, and safe delivery guaranteed.

OUR PRIZE OFFERS.

Furthermore, if any of our patrons grow corn from premium seed corn furnished by us as a premium and exhibit ten ears of the same at their own State Fair or at any Interstate Fair, or at their own Agricultural College Corn Show—for every championship premium won by said corn we will pay the exhibitor fifty dollars; for every first prize twenty-five dollars; for every second prize ten dollars, and for every third prize five dollars, providing that these prizes are won during the year 1910 with corn grown by our subscriber from the seed corn furnished by us to him as a premium.

THE NATIONAL SHOW OFFERS.

If any premiums are won at the National Corn Show of 1910 by corn grown by our subscriber from premium seed furnished by us, we will double the amounts. Thus, ten ears of corn at a State Show winning a first prize will receive from us $25.00, and, if winning a sweepstake prize, will receive $50.00 from us. Then, if winning a first prize at the National Corn Show, the exhibitor would receive $50.00 additional from us, and, if winning a sweepstake prize, would receive $100.00 from us, or a total of $225.00 in all. All this is possible with ten ears of corn grown from the corn which we will send as a subscription premium.

Had Tried Hot Water.

A buxom-colored sister once approached her pastor and said: Brudder Johnsing, me an' my ole man don't agree at all. We is all the time quarrelin'. Will you oblige me wid some advice?"

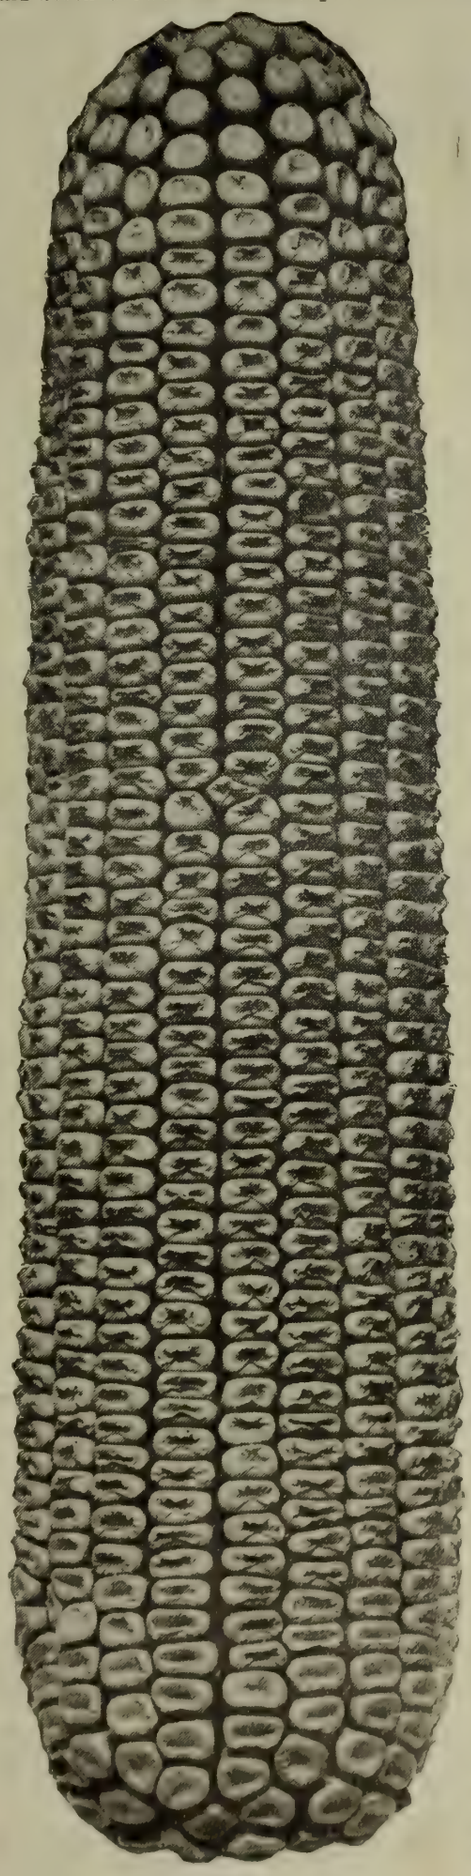
The pastor replied: "Sister Jackson, has yo' tried heapin' coals of fire on his head?"

She then exclaimed: "No, Brudder Johnsing, but I'se tried hot water."—National Monthly.

GRAND CHAMPION YELLOW DENT CORN.

Offered as a Premium by the Subscription Department of The National Farmer and Stock Grower.

During the past two years, at the proper season, The National Farmer and Stock Grower has made a practice of offering a small quantity of seed corn as a special subscription premium, and we have decided to do so again. For yellow corn we have decided to use the corn grown by Mr. D. L. Pascal, of Iowa. We will use his Reid's Yellow Dent Corn, which has been bred pure for sixty-two years. Mr. Pascal obtained his seed from the originator. He has won many prizes and trophies. The ear of corn which is illustrated here was produced by Mr. Pascal, and it has not had an equal. Mr. Pascal is a farmer, not a seed merchant. His corn sent us comes from the breeding blocks in which the Grand Champion Ear was raised, and is related to it. Properly planted, carefully cultivated in a good season under favorable conditions, there is a fair chance that a pound or two of this seed corn will produce show corn. It is worth the trial.



This ear of corn pictured here is 10¼ inches long, 7⅞ inches in circumference at a line three inches from the butt, and 6⅞ inches at a point two inches from the tip. It weighs 19 ounces, and although only nine rows of kernels are shown in the picture, it carries twenty rows of kernels. This is the ear of corn that won the Allee Trophy at Ames, Iowa, January, 1907, and was pronounced by two great corn experts, Prof. F. G. Holden and Prof. A. D. Shamel, as being the best ear they have ever seen.

PREMIUM OFFER NO. 1.

For premium purposes we make this offer: Anyone sending us a postoffice money order for 60 cents will be credited with one-year's subscription to The National Farmer and Stock Grower, can select one pound of Pascal's Champion Yellow Dent Corn as a premium, to be sent postpaid by mail, and safe delivery guaranteed.

PREMIUM OFFER NO. 2.

Anyone sending us one dollar by money order or currency, will be credited with two-years' subscription to The National Farmer and Stock Grower, and will have the privilege of selecting two pounds of Pascal's Champion Yellow Dent Corn as a premium, to be sent postpaid, safe delivery guaranteed.

OUR PRIZE OFFERS.

Furthermore, if any of our patrons grow corn from premium seed corn furnished by us as a premium and exhibit ten ears of the same at their own State Fair or at any Interstate Fair, or at their own Agricultural College Corn Show—for every championship premium won by said corn we will pay the exhibitor fifty dollars; for every first prize twenty-five dollars; for every second prize ten dollars, and for every third prize five dollars, providing that these prizes are won during the year 1910 with corn grown by our subscriber from seed corn furnished by us to him as a premium.

THE NATIONAL SHOW OFFERS.

If any premiums are won at the National Corn Show of 1910 by corn grown by our subscriber from premium seed furnished by us, we will double the amounts. Thus, ten ears of corn at a State Show winning a first prize will receive from us $25.00, and, if winning a sweepstake prize, will receive $50.00 from us. Then, if winning a first prize at the National Corn Show, the exhibitor would receive $50.00 additional from us, and, if winning a sweepstake prize, would receive $100.00 from us, or a total of $225.00 in all. All this is possible with ten ears of corn grown from the corn which we will send as a subscription premium.

Railroads Want 10,000 Men.

Men without knowledge or experience cannot jump into a railroad position. There was a time when they could lay around and take chances, but not since the establishment of railway schools which prepare young men for the service. If they are mentally and physically competent, young men who have graduated from these schools are guaranteed positions if their school has official recognition. We have advertised the Wenthe Railway Correspondence School of Freeport, Ill., for several years. This institution is operated by experienced railway officials, and their graduates have the preference. Send today, giving your age and weight, asking for full information. Address Wenthe Railway School, Office 258, Freeport, Ill.

St. Louis Root Quotations.

Quote, per lb.: Golden seal at $1.70; ginseng—wild at $6@6.25 and cultivated $5.50@6; lady slipper 18c; Seneca 32c; pink 23c; black dry 7c; May apple 5½c; snake 39c; Angelica 5c; wahoo—bark of root 14@16c; bark of tree 4c; blood 5½c; blueflag 5c; sassafras—bark of root 5c; bark of tree valueless; wild ginger 10c; spikenard 3c; skullcap 7c.

TO WOMEN WHO DREAD MOTHERHOOD!

Information How They May Give Birth to Happy, Healthy Children Absolutely Without Pain—Sent Free.

No women need any longer dread the pains of childbirth, or remain childless. Dr. J. H. Dye has devoted his life to relieving the sorrows of women. He has proved that all pain at childbirth may be entirely banished, and he will gladly tell you how it may be done absolutely free of charge. Send your name and address to Dr. J. H. Dye, 248 Lewis Block, Buffalo, N. Y., and he will send you, postpaid, his wonderful book which tells how to give birth to happy, healthy children, absolutely without pain; also how to cure sterility. Do not delay but write today.

MAY MANTON EMBROIDERY.

A Line of Nice, Useful, Up-to-Date Paper Patterns.

These paper patterns require only a hot iron to insure a perfect transfer on cloth. The way to do it is to lay the material to be stamped on a padded ironing board or table. Place the pattern over it with the printed side down and press over the entire surface of the paper with a hot iron, when a perfect outline will result.

Flower Adornments.

No. 417.—Design for embroidering sprays of forget-me-nots. Suitable for a lingerie waist or for any object for which small flowers are appropriate. Patterns for eleven sprays and ten separate flowers are given.

Round Yoke Embroidery.

No. 446.—Design for embroidering a round yoke, collar and sleeves of a blouse or Princesse gown. The flowers, ribbons and dots are designed to be worked in solid embroidery, or the ribbon and dots in solid embroidery, the flowers as eyelets.

Design For Braided Blouse.

No. 433.—Design for a braided blouse or Princesse gown. Patterns for stamping the front, collar and sleeves are given. Soutache braid or rat-tail cord may be used.

Design For Centerpiece.

No. 383.—Chrysanthemum design for a centerpiece measuring 22x22 inches. The flowers are designed to be worked in solid embroidery or in satin stitch; the stems, veins and lattice work to be outlined; the scrolls outlined with solid ends, and the scalloped edges to be buttonholed.

Dutch Collar and Cuffs.

No. 418.—Design for embroidering a Dutch collar and rolled-over cuffs for a Miss's blouse or shirt waist. The scalloped edges are to be buttonholed, the flowers and leaves to be worked in solid embroidery; the dots solidly or as eyelets, the stems to be outlined.

Rose Leaf For Blouse.

No. 410.—Design for embroidering a blouse or shirt waist. The roses and leaves are designed to be worked in long and short stitch; the buds, calyces and turned-over edges of the flower petals in solid embroidery; the stems and veins in outline stitch, and the stamens of the smaller roses to be worked in French knots.

The price of these patterns is 10 cents each.

Please send all orders for these embroidery patterns to the **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

No use paying high prices for fence when Kitselman Bros. ask only 15 cents a rod up. See their ad. in this paper and write to-day.

THE TWICE-A-WEEK GLOBE-DEMOCRAT

is a magnificent newspaper, containing all the latest home, foreign and political news. It is undoubtedly the best Republican newspaper in the United States. It is published at $1.00 per year, and is well worth the money.

The National Farmer and Stock Grower is a nice, clean, general farm monthly publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, to vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, to horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. It is published at 50 cents a year, or three years for one dollar.

Combination Offer.

Send us One Dollar and we will mail to your address **The St. Louis Globe-Democrat Twice-a-Week Edition** for one year; also **The National Farmer and Stock Grower** for three years. Address, **EVANS SUBSCRIPTION AGENCY, 3552 Vista Ave., St. Louis, Mo.**

Send us your address and we will explain the business fully, remember we guarantee a clear profit of $3 for every day's work, absolutely sure. Write at once ROYAL MANUFACTURING CO., Box 1212 Detroit, Mich

MAY MANTON PATTERNS.

Very Elegant Fashion Service, With Full Instructions For Ordering and Making.

This is the very best pattern service, and we are very much pleased to obtain it for our friends and patrons. Every pattern is new and original.

Girl's Box-plaited Dress.

No. 6481.—The box-plaited dress that is worn with a shield in sailor style is much in vogue just now, and this one is exceptionally attractive. It includes the becoming sailor collar. It is simple and childish in effect, and is unquestionably smart. The one illustrated is made of Bordeaux red serge and trimmed with black braid. The shield is of tucked messaline, and the combination is an effective one, but there are a great many appropriate materials. Cashmere is a favorite of the moment, some of the new silk-finished wools are exceedingly attractive, and plaid and checked materials are fashionable. For the trimming, any preferred banding may be used, and if a simpler dress is wanted, the skirt can be left plain.

The dress is made with the blouse and skirt. Both blouse and skirt are laid in box plaits with gathers between. They are joined by means of the belt, and the closing is made invisibly beneath the box plait at the left of the front. The shield is separate and attached under the collar. The sleeves are cut in one piece each, are gathered and finished with pretty flaring cuffs.

The quantity of material required for the medium size (ten years) is 6 yards 24 or 27, 4½ yards 32, or 3¼ yards 44 inches wide, with ⅝ yard 18 inches wide for shield and 14 yards of banding.

The Pattern 6481 is cut in sizes for girls of six, eight, ten and twelve years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Child's Long Coat.

No. 6494.—The long coat is always the best for little children, and this one includes the plaited sides that make such a feature of the season. It is thoroughly comfortable and attractive at the same time that it is smart and new. Bordeaux red cloth with bands of satin is the material illustrated, but cloakings include rough-finished materials, such as zibeline, Bedford cords and mixtures, as well as plain-finished cloths. For the trimming any banding is correct.

The coat is made with front, back and side portions, and the plaited flounce is attached to the sides beneath the belt. The collar finishes the neck edge, and there is a shield which is adjusted under the coat and closed at the back. The coat itself is lapped in double-breasted style and held by three buttons, the shaped edge making a notable feature.

The quantity of material required for the medium size (six years) is 4½ yards 27, 2¾ yards 44 or 52 inches wide, with 2¾ yards of banding.

The Pattern 6494 is cut in sizes for girls of four, six and eight years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

College Girl's Blouse.

No. 6465.—Such a blouse as this one belongs in every girl's wardrobe, whether she attends college or does not. It is simple and girlish; it is useful and practical, and it is smart in the extreme. It can be made from serge or from broadcloth, or from similar material. It can be worn with a plaited skirt to match, or can be used separately and worn over an odd skirt, as liked. This one is made of blue serge with pearl buttons, and is finished with turned-over portion of collar and cuffs made from white. These last can be made from silk or the material, however, if preferred. The model promises to be a favorite of the season, and already is shown made from plain-colored materials with plaid skirts as well as with those to match. Often the facing at the lower edge and the turned-over portions of collar and edges are made to match the skirt.

The blouse is made with front and back portions with under-arm gores. The lower edge is finished with a facing and is turned up and buttoned into place. The sleeves are in one piece each, of moderate fullness and gathered into straight cuffs. A standing collar finishes the neck.

The quantity of material required for the sixteen-year size is 3½ yards 27, 2⅞ yards 32, or 1⅞ yards 44 inches wide, with ⅜ yard 27 inches wide for turned-over portions of collar and cuffs, ⅜ yard 27, ¼ yard 44, or ⅛ yard 52 inches wide for facing for lower edge.

The Pattern 6465 is cut in sizes for girls of fourteen, sixteen and eighteen years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Misses' Long Coat.

No. 6469.—The coat that is made with plaitings at the sides makes a favorite feature of the season and is essentially graceful and attractive. This one, designed for young girls, is simple and girlish, at the same time that it is chic and smart, and can be made from any seasonable material. One of the new herringbone cloths makes the coat illustrated, but if it were made in three-quarter length it would be adapted to the two-piece suit and become available for suiting materials as well as for cloakings. Rough-finished cloths and cheviots are having great vogue, but broadcloth is always the material of all others for the handsomer street suits and continues all its vogue.

The coat is made with front and back portions that are extended for full length side-front and side-back portions, which are cut off and joined to the plaited panels. There is a high turned-over collar finishing the neck, and the right-front is cut to form the point that is so well liked this season. The sleeves are in two pieces each with rolled-over cuffs. When shorter length is desired, the coat can be cut off on indicated lines.

The quantity of material required for the eleven-year size is 7¼ yards 27, 4½ yards 44, or 4 yards 52 inches wide for full length; 6⅝ yards 27, 4 yards 44, or 3½ yards 52 inches wide for three-quarter length.

The Pattern 6469 is cut in sizes for girls of fourteen and sixteen years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Blouse or Shirt Waist.

No. 6482.—The shirt waist that is made with a yoke is one of the smartest just now, and this one is exceptionally pretty. The yoke is cut to form tabs that give a novel effect, and the sleeves with their deep cuffs are new and comfortable and smart. In this instance the material is plaid silk piped with a plain color and trimmed with little silk buttons, but the waist is equally well adapted to wool, silk and washable fabrics. If the full sleeves are not liked, plain ones can be substituted, as shown in the back view. Moire silk and cashmere promise to be favorites for separate waists, and either would be attractive made after this model. Also the waist is well suited to the entire gown. The closing can be made either at the front or the back, as liked. When made at the back it is designed to be invisible; when made at the front, it can be effected either by means of buttons and buttonholes worked through the fore plait, or by means of buttonholes worked in a fly.

The waist consists of front and back portions. When made with closing at the back, the backs are made separately; but when the front closing is preferred, the back is seamless. The tucks in the fronts are stitched for a portion of their length only, but the full-length box plait gives long lines at both front and back. The full sleeves are finished with deep cuffs. The plain sleeves are cut in one piece each.

The quantity of material required for the medium size is 4 yards 24 or 27, 3½ yards 32, or 2½ yards 44 inches wide, with ⅝ yard of contrasting material for piping.

The Pattern 6482 is cut in sizes for a 32, 34, 36, 38 and 40-inch bust measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Please be sure to give size of pattern ordered and write your own name and address clearly that no mistake can be made to cause delay.

Kindly address all pattern orders to **Hale Publishing Co., 3550 Vista Vista Ave., St. Louis, Mo.**

FREE TO YOU—MY SISTER

Free to You and Every Sister Suffering from Woman's Ailments.

I am a woman.
I know woman's sufferings.
I have found the cure.

I will mail, free of any charge, my **home treatment** with full instructions to any sufferer from woman's ailments. I want to tell all women about this cure—you, my reader, for yourself, your daughter, your mother, or your sister. I want to tell you how to cure yourselves at home without the help of a doctor. Men **cannot** understand women's sufferings. What we women know **from experience**, we know better than any doctor. I know that my home treatment is safe and sure cure for **Leucorrhoea or Whitish discharges, Ulceration, Displacement or Falling of the Womb, Profuse, Scanty or Painful Periods, Uterine or Ovarian Tumors, or Growths; also pains in head, back and bowels, bearing down feelings, nervousness, creeping feeling up the spine, melancholy, desire to cry, hot flashes, weariness, kidney, and bladder troubles where caused by weaknesses peculiar to our sex.**

I want to send you a **complete ten day's treatment entirely free** to prove to you that you can cure yourself at home, easily, quickly and surely. Remember, that, **it will cost you nothing** to give the treatment a complete trial; and if you **wish to continue, it will cost you only about 12 cents a week or less than two cents a day. It will not interfere with your work or occupation. Just send me your name and address,** tell me how you suffer if you wish, and I will send you the treatment for your case, entirely free, in plain wrapper, by return mail. **I will also send you free of cost,** my book—**"WOMAN'S OWN MEDICAL ADVISER"** with explanatory illustrations showing why women suffer, and how they can easily cure themselves at home. Every woman should have it, and learn to **think for herself.** Then when the doctor says—"You must have an operation," you can decide for yourself. Thousands of women have cured themselves with my home remedy. It cures **all old or young. To Mothers of Daughters,** I will explain a simple home treatment which speedily and effectually cures Leucorrhoea, Green Sickness and Painful or Irregular Menstruation in young Ladies, Plumpness and health always results from its use.

Wherever you live, I can refer you to ladies of your own locality who know and will gladly tell any sufferer that this **Home Treatment** really cures all women's diseases, and makes women well, strong, plump and robust. **Just send me your address,** and the free ten day's treatment is yours, also the book. Write to-day, as you may not see this offer again. Address

Treating Sweater Necks.

If the neck of a sweater becomes stretched too wide from wearing, do not sew up or cut out any of it; simply dip neck part in clear warm water, wring out lightly, and hang up to dry. The neck will, when dry, have resumed its original shape and size.—Woman's Home Companion for December.

Boys' Corn Club.

The winner of the first premium of the Boys' Corn Club of Claiborne Parish, Louisiana, this year grew 47 bushels 22 pounds to the acre; and the average of the ten winners was a yield of 53 bushels per acre.

AMERICAN BEAUTY ROSE PICTURE FREE.

This illustration very indefinitely represents a most beautiful and delightful premium picture—a reproduction of a masterpiece. This magnificent picture is in the richest of color. It is 16x20 inches. It is finished equal to an oil painting. It will adorn and beautify any room in which it may be placed. If it is neatly framed it will be "a thing of beauty and a joy forever." Without framing it will last for several years. The illustration gives no idea of the size and beauty of the picture. We are using the AMERICAN BEAUTY ROSE PICTURE for the purpose of introducing our new publication, the UNIVERSAL MAGAZINE. This is a nice, bright, thirty-two-page, three-column publication, which will interest all the family. Send us 25 cents in silver for one-year's trial subscription to the UNIVERSAL MAGAZINE and we will send you free by mail one AMERICAN BEAUTY ROSE PICTURE securely packed in a tube, and safe arrival guaranteed. Address HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

SELECTED POETRY.

CHRISTMAS EVE.

God bless the little stockings
All over the land to-night,
Hung in the choicest corners,
In the glow of the crimson light.
The tiny scarlet stocking
With a hole in the heel and toe,
Worn by the wonderful journeys,
The darlings have had to go.

All heaven pity the children,
Wherever their home may be,
Who wake at the first gray dawning,
An empty stocking to see;
Left in the faith of childhood,
Hanging against the wall,
Just where the dazzling glory
Of Santa's light will fall!

Alas! for the lonely mother,
Whose cradle is empty still,
With never a shoe nor a stocking
With daity toys to fill;
Who sits in the swarthy twilight
There, sobbing against the pane,
And thinks of the little baby,
Whose grave lies out in the rain!

Oh, the empty shoes and stockings,
Forever laid aside!
Oh, the tangled, broken shoestrings,
Nevermore to be tied!
Oh, the little graves at the mercy
Of the cold December rain!
Oh, the feet in the snow white sandals,
That never can trip again!

But happier they who slumber,
With marble at foot and head,
Than the child who has no shelter
No raiment, nor food, nor a bed!
Then heaven help the living,
Children of want and pain,
Knowing no food nor pasture,
Out to-night in the rain!

—May Riley Smith.

CONSTANT CHRISTMAS.

The sky can still remember
The earliest Christmas morn,
When in the cold December
The Savior Christ was born;
And still in darkness clouded,
And still in noonday light,
It feels its far depths crowded
With angels fair and bright.

Oh, never fading splendor!
Oh, never silent song!
Still keep the green earth tender,
Still keep the gray earth strong;
Still keep the brave earth dreaming
Of deeds that shall be done,
While children's lives come streaming
Like sunbeams from the sun.

No star unfolds its glory,
No trumpet wind is blown,
But tells the Christmas story
In music of its own.
No eager strife of mortals
In busy field or town,
But sees the open portals
Through which the Christ came down.

Oh, angels sweet and splendid,
Throng in our hearts and sing
The wonders which attended
The coming of the King.
Till we, too, boldly pressing
Where once the angels trod,
Climb Bethlehem's hill of blessing
And find the Son of God.

—Phillips Brooks.

A CHRISTMAS CAROL.

"What means this glory 'round our feet?"
The Magi mused, "more bright than morn?"
And voices chanted, clear and sweet:
"To-day the Prince of Peace is born!"

"What means that star?" the shepherds said,
"That brightens through the rocky glen?"
And angels, answering overhead,
Sang: "Peace on earth, good will to men!"

'Tis eighteen hundred years, and more,
Since these sweet oracles were dumb;
We wait for him, like those of yore,
Alas! he seems so slow to come.

But it was said in words of gold
No time or sorrow e'er shall dim,
That little children might be bold
In perfect trust to come to him.

All 'round about our feet shall shine
A light like that the wise men saw
If we our loving wills incline
To that sweet life which is the law.

So shall we learn to understand
The simple faith of shepherds then,
And, clasping kindly hand in hand,
Sing: "Peace on earth, good will to men!"

And they who do their souls no wrong,
But keep at eve the faith at morn,
Shall daily hear the angel song:
"To-day the Prince of Peace is born!"

—James Russell Lowell.

THE WAY OF LIFE.

Into the house of Joy I went one day
To pluck the rose of pleasure for my own;
On an untrodden path I walked alone,
And through the doors alone I found my way.
But when I passed the portals all around
Were pleasant faces, laughter, clasping hands;
Never alone in Joy's wide house he stands
Who has the entrance to her dwelling found.
Joy's richest gifts he may not know, or gain,
Who shares with none her favor or her smile;
Who seeks her presence, though but for a while,
With kindred souls must own her gentle reign.

But when, long called, unwilling feet I turned
Unto the house of Sorrow, dark and bare,
Whose walls all windowless rose in the air,
Whose gloomy doors all happiness have spurned,
There dwelt the shadowy warder, Grief, alone
My slow steps echoed on the empty air;
No hand outstretched met mine with tender care.
Alone he fares, whom Sorrow calls her own.
Joy, pleasure, happiness, we may not store,
But scatter wide and give with lavish hand;
But when before Grief's silent shrine we stand
Alone we bow, though wide the open door.
—Ninette M. Lowater, in New York Sun.

BILL'S RULE.

In life there are plenty of well-worn saws
To fit each case, if they're well applied;
But old Bill Simpkins says: "My laws,
I couldn't repeat 'em all if I tried;
There's too much philosophy driftin' by—
I use one rule as I go my way;
It fits pretty well, when it's time to buy;
The other chap's game is hard to play.

"Some feller holds out a glittering scheme,
And it's hard to resist the golden lure;
There's not a flaw in it, so 'twould seem,
It looks like a winner, sure, dead sure.
But I stop and think that he's planned it all,
And he knows where the little jokers lay,
So I jest say over my maxim small:
The other chap's game is hard to play.

"I see many fellers rise to the heights,
And then, of a sudden, they take a fall;
They've studied and figgered, and set up nights,
But along comes some one that spoils it all;
A voice that is oily unfolds a plan,
They listen, and all is swept away!
That's why I say—I'm a cautious man—
The other chap's game is hard to play."
—Arthur Chapman, in Denver Republican.

HEAVEN.

"What do you think that heaven may be?"
The hearer answered with a smile:
"A place where the folk like you and me
May hear sweet music all the while.
Where roses bloom and birds will sing
And silver streams plash in the shade,
With naught but joy in everything—
Of these, I know, is heaven made."

"What do you think that heaven may be?"
The mother answered: "'Tis a land
Where all mine own may be with me
And where, too, I may understand
The longings of the little hearts,
And find my happiness complete
In soothing with a mother's arts
The weary litte hands and feet."

"What do you think that heaven may be?"
The old man answered with a sigh:
"A cot beneath a spreading tree
That towers ever green and high,
And never weariness nor strife,
But just a comfort, calm and blest,
Such as we may not have in life—
A folding of the hands in rest."

What do you think that heaven may be?
Why, it would be of little worth
Were it not given us to see
Some promise of it here on earth;
If through the moments and the years
We could not bring its radiant glow
To light our smiles and dry our tears
Of all the weary folk we know.

—Chicago Post.

DRIFTING.

My soul to-day
Is far away
Sailing the Vesuvian bay;
My winged boat,
A bird afloat,
Swims round the purple peaks remote—
Round purple peaks
It sails and seeks
Blue inlets and their crystal creeks,
Where high rocks throw,
Through deeps below,
A duplicated golden glow.

Far, vague, and dim,
The mountains swim;
While on Vesuvius' misty brim
With outstretched hands,
The gray smoke stands
O'erlooking the volcanic lands.

Here Ischia smiles
O'er liquid miles;
And yonder, bluest of the isles,
Calm Capri waits,
Her sapphire gates
Beguiling to her bright estates.

I heed not, if
My rippling skiff
Float swift or slow from cliff to cliff—
With dreamful eyes
My spirit lies
Under the walls of paradise—

Under the walls,
Where swells and falls
The bay's deep breast at intervals,
At peace I lie,
Blown softly by,
A cloud upon this liquid sky.

The day, so mild,
Is heaven's own child,
With earth and ocean reconciled;
The airs I feel
Around me steal,
Are murmuring to the murmering keel.

Over the rail
My hand I trail
Within the shadow of the sail;
A joy intense,
The cooling sense
Glides down my drowsy indolence.

With dreadful eyes
My spirit lies
Where summer sings and never dies—
O'erveiled with vines
She glows and shines
Among her future oils and vines.

Her children, hid
The cliffs amid,
Are gamboling with the gamboling kid;
Or down the walls
With tipsy calls,
Laugh on the rocks like waterfalls.

The fisher's child,
With tresses wild,
Unto the smooth, bright sand beguiled,
With glowing lips,
Sings as she skips,
Or gazes at the far off ships.

Yon deep bark goes
Where traffic blows,
From lands of sun to lands of snows;
This happier one,
Its course is run
From lands of snows to lands of sun.

O, happy ship,
To rise and dip,
With the blue crystal at your lip—
O, happy crew,
My heart with you
Sails and sails and sings anew.

Is Your Husband a Drunkard

Is Your Father a Drinking Man?
Is Your Son on the Downward Way?

YOU CAN SAVE HIM

Write to This Woman To-Day

She cured her husband, her brother and several of her neighbors, and now she generously offers to tell you of the simple, inexpensive remedy that she so successfully used. The remedy can be given to the patient unnoticed so there is no publicity of your private affairs. She is anxious to help others so we earnestly advise every one of our readers who has a dear one who drinks to drop her a line today. She makes no charge for this help, she has nothing to sell (she asks for no money and accepts none) so there is no reason why you should not write her at once. Of course, she expects that you are yourself personally interested in curing one who drinks, and are not writing out of mere curiosity. Send your letter in confidence to her home. Simply write your name and full address plainly in the coupon below and send it to her.

MRS. MARGARET ANDERSON,
791 Home Avenue, Hillburn, N. Y.

Please tell me about the remedy you used to cure your husband, as I am personally interested in one who drinks.

Name .....

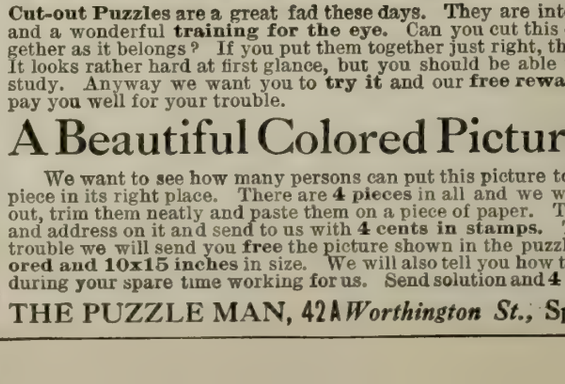
No more, no more
The worldly shore
Upbraids me with its loud uproar!
With dreamful eyes
My spirit lies
Under the walls of paradise.

In lofty lines,
'Mid palms and pines,
And olives, aloes, elms, and vines,
Sorrento swings
On sunset wings,
Where Tasso's spirit soars and sings.

—Thos. Buchanan Read.



Can You Solve This Puzzle

Cut-out Puzzles are a great fad these days. They are interesting, educational and a wonderful **training for the eye.** Can you cut this one out and put it together as it belongs? If you put them together just right, they will fit perfectly. It looks rather hard at first glance, but you should be able to do it with a little study. Anyway we want you to **try it** and our **free reward** offered below will pay you well for your trouble.

A Beautiful Colored Picture for You

We want to see how many persons can put this picture together, getting each piece in its right place. There are **4 pieces** in all and we want you to cut them out, trim them neatly and paste them on a piece of paper. We will also tell you how to make a lot of money during your spare time working for us. Send solution and **4 cts postage today** to

THE PUZZLE MAN, 42A *Worthington St.,* Springfield, Mass.

A Sallow, Pimply or "Muddy" Complexion

Is Easily Gotten Rid Of When Constitutional, Instead of Local, Treatment Is Taken.

Every woman strives to acquire and preserve a clear, faultless, rose-and-lily complexion. This is apparently the height of the feminine ambition. No more fallacious epigram was ever penned than the one which says that "beauty is only skin deep;" and no greater mistake can possibly be made in endeavoring to gain a clear, pretty complexion, entirely free from pimples, blackheads and other skin blemishes, than the use of cosmetics, powders, lemon juice, cold cream, electric massage, and various other treatments, which aim at the complexion alone, and have no effect whatever on the blood, or on the general system.

Whenever you see a person with a clear, flawless complexion, you may be assured that its perfection depends, not on the local application of the many fad treatments on the market, but exclusively upon a pure, wholesome condition of the blood, and upon its active, vigorous circulation through the skin.

It is the blood which gives the skin its rosy color, and although electric massage, and other local treatments may draw the blood temporarily to the surface of the skin, it cannot keep it there. Only a strong circulation can do that. When the blood becomes impoverished and the circulation sluggish, the complexion, as a natural sequence, becomes sallow or "muddy," and pimples, blackheads, "liver spots," and other skin troubles put in their appearance.

One box of STUART'S CALCIUM WAFERS, which are taken internally, will do the complexion more good than all the cosmetics, beauty powders, cold creams, electric or manual massage, will do in a lifetime. These powerful little wafers cure because they strike at the root of the trouble. They purify and renovate the blood so completely that the complexion cannot do otherwise than becme clear, flawless and free from all skin blemishes.

Besides relieving the system of every particle of impurity and thereby cutting off the source of the skin diseases, they also build up the blood, greatly increasing the number of red corpuscles in its current, and invigorating, strengthening and improving the circulation so decidedly that in a wonderfully brief period the cheeks become rosy, the complexion clear, the eyes bright, and the whole system glows with renewed life and vigor.

Secure a package of this blood-cleaning, complexion-clearing and system-renovating remedy from your druggist for 50 cents, and begin the treatment at once. Also send us your name and address and free sample package will be sent you. Address F. A. Stuart Co., 175 Stuart Bldg., Marshall, Mich.

Odd Custom of Venice Courts.

In the courts of Venice, when a prisoner is about to be condemned to death, a tall and ghostly-looking individual, dressed in a long, black gown, walks majestically to the center of the court room, bows solemnly to the judge and in a cavernous voice announces the words: "Remember the baker!" Then he bows again and stalks away.

Three hundred years ago a baker was executed in Venice for a crime of which he was not guilty.

When his innocence was established the judges who condemned him gave a sum of money to the city, the interest on which was to be devoted to the setting up and perpetual burning of a lamp, known as the "lamp of expiation," in the palace of the doges.

Children's Stockings.

It is a good plan to reinfocce the knees of children's hose with a round or oval piece cut from old ones of the same color and neatly cross stitched to the wrong side of the hose with cotton threads, and a piece of soft cambric basted in the heels of the children's stockings will save patching, and they will last twice as long as they otherwise would. While stocking darning should receive due attention, it is poor economy to do too much of it, and the elder girl's stockings can easily be remade for the younger ones, thus doing away with so much darning, and a good pattern of any size can be bought for a trifle, but the seams should be carefully run flat so as not to hurt the tender little feet.

Stockings that are outgrown can be made over by piecing them at the top and making new feet from the legs of old stockings, and old socks with worn feet can be made over for the small children.

Care must be taken in laundering stockings to keep them soft and in shape, and the best way is to wash all the stockings of the household by themselves, and in nice, clean suds prepared especially for them, and there is nothing better for washing stockings of any color than warm suds made by stirring enough Pearline in warm, soft water to make a nice lather. Wash through this suds by rubbing between the hands, then rinse through two clear waters to get rid of all suds and hang by the toes to dry. When nearly dry, pull into perfect shape and iron on the wrong side, and if the cleaning is carefully done, the stockings will be as soft as when new. The knee-caps can be bought for twenty-five cents or they can easily be made at home from good pieces of pants cloth. These home-made caps are cut in two pieces and are made to fit over the knee by sewing the rounded edges together, then braid is sewed over the seam, and they are bound all around. Two bands of rubber are stitched on one side of the cap and a small piece of stout goods is stitched on the other end of the rubber for buttonholes, then sew buttons on the cloth and they are complete and will be a great protection to the stockings.—M. H.

Inexpensive Vacations.

A standing objection to farm life is that the work is too steady; the recreation hours are too few. The farmer and his family are practically tied. If there are financial resources, duty forbids free coming and going.

While this is in many instances true in a certain sense, farmers have in their hands more available resources for pleasure than they have any idea of. In almost any live farming community are some places of more than local interest. For instance, near the home of the writer is a state fish hatchery, the details of which are interesting in the extreme. Creamery, mills and various industrial plants may be studied as well as in the heart of a great city. There are rich geological formations well worthy of a day's visit. A large swamp covering a thousand acres contains many strange forms in animal and vegetable life, and a day's outing within its limits supplied thought for weeks. Two or three hours by rail or trolley bring one to the shore of one of the great lakes. The same distance in another direction leads to the old original oil fields, rich in history of industrial triumphs or failures. While still a third route lies along paths filled with the romance of history.

There is scarce a tract in this broad land of which similar words may not be said. We seek the rainbow in the distance, oblivious to the fact that scenes as bright may be realities within our grasp. If we cannot take a trip to Seattle, we can hunt out some unique spot within easy reach of home, there to enjoy the novel, to rest from our labor, to breathe new air and gain a new lease of life. The best things do not always cost the most money; the robin's song may be as enjoyable as that of the renowned singer. And recreation and rest are not far to seek if we seek with the proper spirit.—Bessie L. Putnam.

I Guarantee to Cure ECZEMA TO STAY CURED!

DR. J. E. CANNADAY, THE DOCTOR WHO TREATS NOTHING BUT ECZEMA.

It is also called SALT RHEUM, SCALD HEAD, TETTER, ITCH, WEEPING SKIN, MILK CRUST, PRURITUS—these are different names, but all mean one thing—ECZEMA.

I prove every word that I have said—I give to every sufferer

A FREE TRIAL

Just to show you that you need my treatment. It is yours for the asking. If you have been to other Doctors, if you have taken patent medicine, and used lotions and salves till you are disgusted, write to me—I will send you ABSOLUTELY FREE OF CHARGE, A TRIAL TREATMENT. There are no strings to this statement. There is not one cent to pay—not a penny accepted. I know what my trial treatment will do; I know that it will convince you more than anything else on earth that you need my treatment.

Don't Miss This Chance for a Cure

If you are SUFFERING FROM ECZEMA you can only be cured one way—REMOVE THE CAUSE. What is the cause? ACID IN THE BLOOD. How do you remove it? By cleansing the blood of the ACID.

My treatment is soothing—relieves the dreadful itching at once and cures the disease quickly. You don't have to take treatment for months and months. ONLY ONE CASE IN TEN needs the second treatment—ONE IN FIFTY needs the third—think of that!

What Eczema Is

Eczema is a disease of the blood and affects all parts of the body—the face, lips, ears, hands, feet, genital organ, etc.

SYMPTOMS.—Yellowish red eruption; the pimples or patches may swell and the itching is so great the person will scratch the top off, then they bleed and dark scales form; there is an oozing of matter. In some the skin cracks and bleeds. Itching is terrible; a person suffering will scratch till they bleed. Scales form on parts of the body, where the clothing comes in contact.

Ten Years Guarantee

I positively Guarantee that every case cured by me will stay cured 10 YEARS! It must be good or it could not be sold this way.

Strong as Rock of Gibraltar

I am a graduate from two leading medical schools. I am the holder of a GOLD MEDAL taken in Competitive Examination. Does this not show that I am fully qualified? I will send you my book, showing endorsements of business men of all classes. Also testimonials and pictures from cured patients everywhere. Some of them may be YOUR NEIGHBORS.

MY BOOK

Is the most complete book ever sent out. I explain every form of the disease plainly and fully. I show pictures of many severe cases, which are extremely interesting. I send you names of thousands who have been cured and are grateful.

DR. J. E. CANNADAY
969 Park Square
Sedalia, Mo.

Reliable Beyond Question

This is a statement from the bank of my home town, where I have done business for years.

THE CITIZENS NATIONAL BANK OF SEDALIA.
SEDALIA, MO.

February 11th, 1908.

TO WHOM IT MAY CONCERN:

This certifies that Dr. Cannaday's patients, from all over the United States, have been placing their money in this bank while they tried his treatment on eczema. In all this time we have been called upon but five times to return the patients money.

One died before the treatment was shipped; two did not get the treatment as it was lost in transit; one paid cash for the treatment three days later after getting her money; and one was not satisfied.

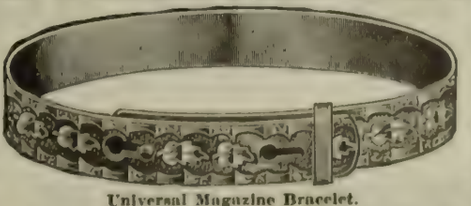
The Universal Magazine Bracelet.

This is all the rage. And Adjustable Bracelet. The most elegant design and perfectly finished. It is not solid gold, but it is washed and plated and will stand the acid test. Its match cannot be purchased in country jewelry stores for any price. It is a duplicate of the latest Parisian creation made expressly for the purpose of using it as a subscription premium to the Universal Magazine. The Universal Magazine is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, fashions, patterns and poetry—a splendid publication for the money. To anyone who will send us a money order for 50 cents we will send the Universal Magazine for two years, and we will send one elegant Universal Magazine Bracelet, postage free, as a subscription premium. Money returned if not satisfied. Address, HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.



Universal Magazine Bracelet.

4 RICH PRESENTS FREE

FOUR--YES--FOUR!

Four gifts of the most superb richness given away right now. Given **altogether.** You can have them. You get them all at once.

They are free—**FREE**—just as we announce in this, the most wonderful offer ever made. An offer never equaled. An offer that never **can** be equaled.

Look at the pictures of these gifts—forty pieces of magnificent dishes—a 7-piece glass water set of the splendor of a genuine cut glass set—real Nottingham lace curtains—and a beautiful mission table. All yours. **YOURS FREE.** And you get all of these four articles **at the same time.** Read on! This offer was never even approached before.

FORTY MAGNIFICENT PIECES AND ALL FREE. FREE BESIDES 3 OTHER BEAUTIFUL GIFTS.

40 Piece Gold Decorated Initial Dinner Set

Look at this set! Note its superb elegance. And remember it is **only one** of the **four** premiums we give you.

There are six large dinner plates, six medium size pie or dessert plates, one large handsomely contoured meat platter, one latest fashioned vegetable dish, one sugar bowl of splendid pattern, one special bread or cake plate, or decorated plaque, six large size cups and saucers to match, six individual butter dishes, six oatmeal, fruit or sauce dishes—a total of ***forty pieces,*** and forty of as elegant pieces as ever went into any home.

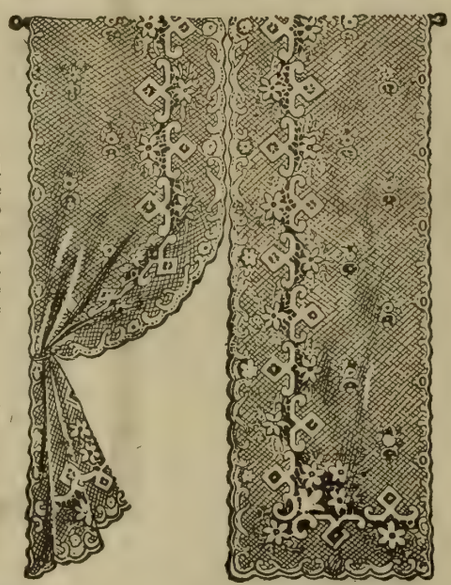
Each piece is beautifully decorated with ***gold tracings,*** and each is ***gold lined.*** More than this each and every piece will be decorated ***With Your Own Initial in Gold.*** Not the cheap initials you may have seen, ***but gold initials.*** Your initial is ***burnt right into the china.*** Yet this is but ***one*** of the ***four*** splendid gifts of this distinctly ***new offer,*** an offer never made before.

MISSION TABLE

This is the handsome little table or Tabouret finished in the popular Mission style. Suitable for tea set stand for jardiniere or for any ordinary decorative purpose.

NOTTINGHAM LACE CURTAINS

Pure White Pattern, woven in fancy scroll flower pattern, heavy lace border, good weight, two and one-half yards long, and full thirty inches wide. Overlocked stitched edge. A nice genteel pair of lace curtains, beautiful in the extreme.



7-PIECE GLASS SET

Made of A-1 Crystal Glass, six full-size tumblers, and one large-size water bottle, manufactured and patterned after an expensive cut-glass set costing $25.

GREATEST OFFER EVER MADE

There is positively no doubt but that this offer eclipses ***anything*** ever offered any place before. You must admit this yourself. You may have been offered ***one*** premium or perhaps ***two*** before, but never have you had the opportunity of getting ***four*** all at once.

Now, all we want you to do is to simply ***send your name***—just your name and address here on this coupon. We will then send you, all charges prepaid, 24 of the most beautiful Art-Nouveau pictures you ever saw. They are in colors and measure 16 by 20 inches—positively the new style fac similes. We will also send you 24 sets of Gold Embossed Souvenir Post Cards. We will ask you to distribute one picture and one set of post cards on a very attractive offer—an offer entirely new and so ***very, very*** delightful that we can afford to give away the four grand presents we offer here. Just distribute these post cards and pictures collecting only 25 cents and giving the Picture and Post Card set as a receipt. After you have distributed all pictures and post card sets send us the $6 collected and the names of the people to whom you distributed the goods and then we will ship you ***immediately*** the 40-piece Gold Initial Dinner Set, the Nottingham Lace Curtains, the Mission Table and the 7-piece Glass Set—all four at one time for this little service. It cannot possibly take you more than a few hours at the most. And then these magnificent ***gifts are yours.***

It is no wonder there are literally thousands of people asking for the opportunity of accepting this offer. For the offer is exceedingly attractive, with the pictures and post cards thrown in extra just for receipts. The small service which I have outlined here is ***positively*** all you will be asked to do to entitle you to these four elegant premiums, and we guarantee that these premiums are exactly as we say they are.

Extra Premium Right Away for Sending this FREE COUPON

A handsome advance premium for every **Woman and Girl** answering this advertisement in good faith will be sent at once—**one of the new Lincoln Pennies—covered with celluloid, attached to stickpins.** It is the new Lincoln Penny Stick Pin. It looks **exactly like gold** and under the covering of the celluloid it will never tarnish. It will always look like gold—much like a $10 gold piece. This stick pin is one of the prettiest pins ever offered and it makes a most handsome ornament. So send the coupon and get this handsome pin right away. You get this pin **extra,** and in addition to the other four prizes, if you write in good faith and take up the most liberal offer which we are making.

WRITE TODAY--AT ONCE-- Don't delay. We are already thousands and thousands of orders behind. Your name will be entered at the time it is received and you will get your stick pin and our great offer just as soon as we can get it to you. **Don't delay about this, for this is the one great big opportunity of the year.** Send the coupon **now.**

5 Cents a Copy. Published Monthly by The Hale Publishing Co. 50 Cents a Year.

and Stock GROWER

Practical Farming and Gardening.

This is a book of 500 pages, 6x7¼ inches to the page. It is a complete farmers' instruction book. The feeding chart is worth a ten-dollar bill to any stock farmer. Soil fertility, drainage, grain crops, gardening, truck growing, fruits, forestry, pruning, grafting, budding, injurious insects, plant diseases, spraying, cattle, sheep, horse raising and feeding, treatment for diseases, silos and silage, poultry, handy rules and farm cookery, are a few of the subjects. There are eighteen three-column pages of index. If you look for something you find it. We have adopted this book as a subscription premium. Send One Dollar and we will send you **Practical Farming and Gardening**, postage paid, and The National Farmer and Stock Grower for two years. This is a grand offer. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

THE STRAWBERRY CULTURIST.

This is a handy little jewel of a book. It is by Andrew S. Fuller, one of the greatest of horticulturists. It contains all the necessary information to enable everybody to raise their own strawberries. It is fully illustrated; bound in flexible cloth; is 5x7 inches. The strawberry crop is equal to all the other small fruit crops combined. This little book contains that which a beginner should have to start on and an expert needs to rely on. We will send a copy of the Strawberry Culturist post free by mail and The National Farmer and Stock Grower for one year for Fifty-five Cents. This is a splendid opportunity to get a good book for the cost of postage. An average crop of strawberries is 1,701 quarts to the acre. Address, THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

Irrigation a Growing Factor in Our Agriculture.

There never was a time in the history of this country when greater interest was shown in the science of irrigation than at the present time. The rising price of land has made it more and more profitable to bring arid land under irrigation. In twelve years the amount of irrigated land in the United States has increased from about eight millions to about eighteen millions. This is an increase of about ten millions of acres, and ten millions of acres under irrgiation will produce food for a great many millions of people.

It is only in late years that the government has taken a hand in furthering irrigation projects. But the governmental work is but begun and the future will see other tens of millions of acres of land brought under this system of agriculture by the assistance of the national government.

In the main, the new lands that are thus being made productive are more advantageously situated than the lands in the humid portions of the country, for the reason that they lie generally under unclouded skies. The volume of sunshine is greater than where skies are cloudy, and the amount of heat received by the ground has a positive influence in hastening the maturity of crops. This heat supply in irrigated regions is of far more consequence than most people think, for when it is supplemented by an abundance of water it means the certainty of crops every year. In humid states there are years when the skies are so continually covered with clouds in the summer time that crops ripen but imperfectly, and the aggregate of production is cut down to an extent equaling hundreds of millions of dollars. In some of the rainier regions of this country it is found impossible to ripen wheat for the above reason.

In the progress of irrigation it is discovered that the soil of arid states is often very rich in nitrogen. This is contrary to the common belief, which is, that the more rain the more plant growth and the greater the amount of nitrogen incorporated with the soil. The soil nitrogen in the dry lands is a mine of wealth waiting to be exploited by means of irrigation water and sunshine.

There is probably not a state in the Union where irrigation experiments are not being made. In some cases they are being made by the states, but in others by private individuals. Even in Florida, where the rainfall is very large, we hear of extensive experiments being carried on by private firms and by individuals. When asked why irrigation is being advocated for a humid state, the land owners reply that irrigation would not be serviceable if the rainfall were equally distributed throughout the year, but that there are seasons when the rain fails just when most needed and crops are ruined for lack of it. It is an encouraging sign when this great fact is being widely recognized, that steps are being taken to introduce irrigation on lands supposed not to need it.

No farmer can afford to lose even one crop. It is worth much to be sure that the crop being taken care of will be finally secured. Irrigation greatly increases the certainty of the securing of crops.

The Dressed Swine Carcasses.

At the Chicago International Show there were three classes for the dressed hog contest.

Class 213 was for hogs weighing 300 pounds and over. The first prize was won by Joseph Kestel, of New Lenox, Ill., by a Poland-China weighing 445 pounds, which dressed out 87.42 per cent.; the second prize also won by Mr. Kestel was by a Poland-China weighing 445 pounds and dressing 86.99 per cent. The third prize was awarded to the Iowa State College on a pure-bred Duroc-Jersey weighing 539 pounds and dressing 86.27 per cent.

Class 214 was for hogs weighing when entered 200 pounds and under 300 pounds. The first prize was won by John Francis & Son, of New Lenox, Ill., on a grade Poland-China weighing 318 pounds when slaughtered and which dressed out 85.54 per cent. The same firm won second prize upon a pure-bred Poland-China weighing 345 pounds at time of slaughter and dressing out 84.64 per cent. The third prize was won by Funk Bros., of Bloomington, Ill., on a Chester White grade weighing 287 pounds and dressing out 83.83 per cent.

Class 215 was for hogs weighing 100 pounds and under 200 pounds when entered. The first prize was awarded to F. P. Mapps, of Wilmington, Ill., on a pure-bred Duroc-Jersey pig weighing 162 pounds that dressed out 80.62 per cent. The second prize was awarded to John Francis & Sons, of New Lenox, Ill., on a Poland-China-Chester-White grade weighing 241 pounds and dressing out 81.55 per cent.; and the third prize was awarded to Sheffield Farm, Glendale, Ohio, on a pure-bred Berkshire weighing 220 pounds which dressed out 80.95 per cent.

The championship contest was between the three first-prize winners and was awarded to the 318-pound grade Poland-China exhibited by John Francis & Sons, of New Lenox, Ill. Sixty first-class hogs entered the contest.

The fruit exhibit at the National Horticultural Congress that attracted most attention was by Mr. C. E. Mincier, of Hamburg, Iowa, who has but twenty acres of trees, and, as a matter of fact, his exhibit came from a smaller acreage than that.

American Fence

Light Wire

Made of Hard, Stiff Wire, of Honest Quality

A Heavy American Fence Costs You No More Per Rod Than Lighter Fences of Other Makes

A roll of heavy fence means big wire. Big wire means more strength and longer life. Insist upon the dealer weighing the roll of fence he sells you. This will tell the story quicker than any other way, for you cannot always tell the size of wire by eye. American Fence will stand this test against any fence made, and will prove its greater weight. Why, then, pay the same money for a lighter fence?

American Fence is made of hard, stiff steel. It is made of a quality of wire drawn expressly for woven-wire-fence purposes by the largest manufacturers of wire in the world. Galvanized by latest improved processes, the best that the skill and experience of years has taught. Built on the same elastic hinged-joint (patented) principle, which effectually protects the stay or upright wires from breaking under hard usage.

Test, judge and compare American Fence under any and all conditions and you will find that the steel, the structure and the galvanizing are equal in durability, strength and efficiency to the hardest uses.

F. BAACKES, Vice-Pres. & Gen. Sales Agent

American Steel & Wire Co.

The Favorite Corn Husker.

This Corn Husker is more largely sold than any other on the market. We have therefore selected it as a seasonable subscription premium. It is made for the right hand. The hook sets at any angle to prevent glancing. Opening or closing the small end of the plate adjusts a fit to any size hand and prevents chafing. The improved shape of the plate and leather makes this hook the favorite.

We will send The National Farmer and Stock Grower for one year and one Favorite Corn Husker for fifty-five cents. It takes five cents for mailing and the Corn Husker is a free premium. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Limits to Effects of Cold Storage.

Those not acquainted with the actual facts of cold storage have the opinion that meat when in cold storage is kept in the state in which it is sent into cold storage. This is certainly thought to be so if the cold used is so great that the meat is frozen hard. But this does not entirely prevent the chemical changes that go on in meat, though such changes are greatly retarded. It has of recent years ben learned that even down to zero chemical changes go on in meats and other things.

The result of this is that the meats we trust to be safe from disease-producing factors are not always so. Diseases are not only produced by germs; they are also produced by the products of germs and become poisonous. Therefore meats that have begun to decompose may contain elements that are decidedly poisonous.

A short time ago some experiments were made with poultry kept in cold storage for four years. It was found that while the cold storage had been so perfect that the fowls remained apparently undecomposed, a careful analysis showed that decomposition had begun long since in the intestines of the fowls, and especially in the muscles connected with the intestines. It was shown also that on thawing out and before being eaten, poisonous qualities could easily develop. This is probably just what happens in some meats that have been long kept in cold storage and which are then thawed out and put on sale in the markets, where they may remain for days before being sold.

In the keeping of butter it has been demonstrated that changes go on in butter even down to five degrees above zero. This is twenty-seven degrees below the freezing point of water. Yet even though the butter is frozen hard it is still deteriorating. Below zero some change may go on, but it is hard to keep anything continually below that temperature, as a commercial proposition, for brine is generally used in commercial cold-storage houses. Of course, it is not practicable to keep things at such a low temperature that high-priced methods must be used to obtain that degree of cold. If we could keep meats and butter at fifty degrees below zero it might give us some results we do not now obtain.

In the storage of cheese it was a dozen years ago discovered that the curing processes go on when the cheese is kept at below the freezing point. It was also discovered that cheese so kept developed a mild, desirable flavor and was free from some of the undesirable flavors that creep in at a higher temperature. Therefore the curing of cheese at a low temperature is now being quite extensively practiced. This of course lengthens out the process, for the higher the temperature the more rapidly does the cheese cure. The great advantage, however, is that cold-storage places can be used for ripening cheese in place of the expensive cheese curing rooms that were previously thought desirable. It shows, however, that even cheese cannot be kept indefinitely by freezing it.

Evidently nature does not intend that we shall have any substitute for fresh foods.

Barley in Oats.

A Winamac, Indiana, correspondent writes: "I have some very fine early oats which I am keeping to sell for seed next spring. It has some barley in it. Will that injure it for seed?"

Most farmers would not object to, say, one or two per cent. of barley in oats, providing they wish to sow the oats for home feeding or to sell. But when a new variety is offered for seed, buyers usually order just enough of them to get a fresh seed supply the following year, and in such cases barley is a very serious objection. I class any foreign grain in seed oats as an objection. Every effort should be made to keep oats pure and clean. If oats containing barley is sold, the fact should be clearly stated, so that the buyer may know just what to expect from his crop.

There is too much of these mixtures creeping into seed supplies. Those who grow grain for seed purposes should hand-pick their fields until their seed is pure. Most of this barley trouble has been brought in by the seed oats shipped from the North and Northwest, where it is common to grow both barley and oats on the same farm. I know how difficult it is to get absolutely pure seed from Northern regions, and the only way I see out of the trouble is to sow the best we can get and then hand-pick our own fields which are to be used for seed the next season. And while you are hand-picking for barley, better take out any wild mustard or other weeds you find in your fields.—L. C. Brown.

Now comes the news that there is an egg famine in England. Ireland, Denmark, Austria, France, Italy and Russia are all shiping eggs to England, and yet there is a shortage.

Feeders Well Bought, Well Fed, Well Sold.

About a year ago, upon order of Foster Bros., of Earlham, Iowa, Messrs. Clay, Robinson & Co. bought 100 head of 980-pound steers that were branded Wyoming Hereford cattle. The price paid was $4.75 per 100 pounds. Last June two loads brought to weigh 1,475 pounds by good feeding, were sold upon the Chicago market at $7.15 per 100 pounds. On Monday, November 29th, at Chicago, nineteen head were sold that averaged 1,573 pounds, and the price was $9.50 per 100 pounds, a record price by 20 cents per 100 pounds on the open market, and 25 cents per 100 pounds above the next best price thus far in 1909. The other fifteen head, averaging 1,554 pounds, were exhibited at the Chicago International Show and were sold in the auction ring on December 2d at $9.80 per 100 pounds. The four loads of cattle made an average price of $8.40 per 100 pounds, or $3.65 above first cost, and they averaged 1,536 pounds, showing an average gain of 586 pounds per head in the feeding period. The Foster Bros. are famous feeders, as was clearly shown in this instance alone. This is an example of feeders well bought, cattle well fed and well sold. As Foster Bros. said: "Great credit is due to Clay, Robinson & Co.'s buying and selling departments."

Mixed Grasses For Meadow.

A Knox, Indiana, correspondent writes: "I want to seed forty acres to meadow, for hay to ship. Would it be best to sow mixed grasses or sow timothy alone?"

It is not always easy to determine which is the best variety to sow, for one's soil and market outlet must determine which variety would be best for a given region. All over Northern Indiana meadows are mixed, and red top usually predominates. When one is growing hay for city consumption, clear timothy usually finds the most ready sale, but in regions where timothy does not prosper, then sow grass which will prosper. One should be governed largely by results from nearby fields which have been growing the same kind of grasses, of course always keeping in mind the demands of the market to which shipment is to be made.

One of my neighbors has fed many cattle during the last twenty years, and his meadows and pastures have been seeded with the intention of supplying the best varieties for cattle. His meadows contain not more than one-fifth of timothy and about the same proportion of red clover. The fescues and red top predominate. This year he happens to have seventy-five or eighty tons more than he will feed, but city buyers really do not want that grade of mixed hay, consequently it must be sold at $10 to $11 a ton, when clear timothy would sell for $16.

One who puts down land to meadow for hay for city consumption should by all means know his own market requirements. For instance, at Chicago, this week, clear, bright timothy is selling at around $16 a ton, while mixed hay (timothy and red clover) sells readily at about $15 a ton, while mixed hay made up of timothy, red top and fescue sells from one to two dollars less per ton. Chicago wants the bulk of its hay for feeding horses, and buyers here discriminate very sharply against clover, prairie hay or any of the fine cattle hays. Some localities will pay more for clover and timothy mixed than for straight timothy.

Another thing which hay growers must be more particular about is getting clean hay. Weeds hurt any sample, and a bale or two containing bad weeds may cause the shipper a loss of a dollar a ton on the car. Keep the meadows clean, and when that is done, store hay in a barn or under a good hay-shed until it is baled. Barn hay comes out bright and sound and will sell when stack-cured hay will go at a big discount.—L. C. Brown.

Wheat After Alfalfa.

"A Marion county, Kansas, manager of large estates reports that a field of wheat after alfalfa averaged forty bushels per acre, while an adjoining field of equal original fertility averaged but fifteen bushels. These results have been duplicated in innumerable instances where alfalfa fields have been plowed and planted to other crops. A Colorado man who farms 1,000 acres, with 200 acres of it in alfalfa, says he cannot afford not to plow up his alfalfa after he has had from it four-years' crops; that it is necessary to maintain the general farm fertility and obtain big crops of corn, oats and potatoes. In the potato districts of Colorado, alfalfa is used systematically as a rotation to maintain the yields and quality of their potatoes, both of which are so famous."—From Coburn's "The Book of Alfalfa."

CREDIT Subscriptions.

MILK PRODUCERS' MEETING.

Election of Officers For the Ensuing Year—A Satisfactory Meeting Adjourned to February 28th.

On Monday, December 27th, the Milk Producers' Protective Association of Missouri and Illinois met at the office of the Secretary in St. Louis and elected Hon. D. I. Furbeck, of Allenton, Mo., President; Mr. Fred Henke, of Fruit, Ill., Vice-President; and Wm. A. Fischer, Secretary and Treasurer. This was the adjourned annual meeting, and it was well attended.

During the month of December a meeting was held at New Douglas, Ill. Mr. W. S. Prickett was elected President; Wm. Foster, Vice-President; and R. N. West, Secretary and Treasurer. They voted to join the association, and in addition to the officers named the following paid their dues for the ensuing year: F. J. Rosenthal, Ed Hosto, Robert Bruce, Warren Watson, Thomas Bruce, Fred Luescher and Alvin Fritschi.

The Secretary reported that since the last meeting he had received moneys on account of dues from Fred D. Talleur, Edwardsville, $2.30; Henry Heckenkemper, Albers, Ill., $2.00; Frank Theising, Bartelso, Ill., $3.15; Gus Kreutzberg, Marine, Ill., $2.00; Jacob Webber, Alhambra, Ill., $1.00; Ben Jasper, Washington, Mo.; $2.00; Christ Ehmler, Orchard Farm, Mo., $3.25.

The following had resigned from the association by letter: H. C. Deahl, Shipman, Ill.; F. H. Kahl, Shipman, Ill.; W. F. Halter, DeSoto, Mo.; S. R. Winchester, Bunker Hill, Ill.

During the meeting dues were paid in by and in behalf of Albert Jones, New Douglas, Ill.; and Wm. Niemeyer, Lebanon, Ill.

Mr. Ben Schomaker, of Carlyle, Ill., representing shippers on the B. & O. Route, attended the meeting and paid over to the Secretary the dues in behalf of Ralph Hirschfeldt, James Crocker and Casper Krebs, all of Carlyle, Ill.

Mr. Furbeck made verbal report as Milk Committee, and his report was ordered printed and sent out to all members in good standing.

During the meeting Messrs. Joseph Hogan, Jno. Zika, of Edwardsville, Ill.; Mr. Fred Henke, Vice-President elect; Neal Schafer, Fruit, Ill.; H. Rohrkaaste, Fruit, Ill.; Wm. H. Schafer, R. R. 5, Edwardsville, Ill.; and Ben Schomaker, Carlyle, Ill., took part in the discussion and urged all milk producers to join the association, not only for the good it had done, but for the good it was able to do. They consider it a valuable asset in the interest of the dairymen who center upon and are located within shipping distance of St. Louis, Mo.

Before the meeting closed the President explained that efforts had been made by himself and others to meet with the officials having charge of the milk transportation on the Big Four Route with a measure of success, and for the present at least there will be no advance in rates.

The association then adjourned to meet again Monday, February 28th, at one p. m., at the office of the Secretary, Wm. A. Fischer, 409 Franklin avenue, St. Louis, Mo.

Shall We Subsoil?

I have made fall plowing and subsoiling a careful study and made many experiments to test the value of such plowing, and find when done in the manner at the right time on the right soil and for the right crops, such plowing is exceedingly valuable.

To get good results one must study thoroughly the nature of both top soil and subsoil. He must also take into consideration the crop to follow each plowing as well as know how deep to plow and when to plow deep. I have found from experience it is time wasted and money thrown away to plow to any unusual depth on a field that has a sandy subsoil. I also find it detrimental to plow deep on wet natural land. Give me a loamy top soil with an underlying red clay subsoil and I can accomplish wonders with fall plowing, subsoiling and cover crops, such as rye and crimson clover. I know from experience I can take such land and get from six to twenty bushels more of corn per acre by breaking and subsoiling in fall and sowing to rye. I have grown from five to fifteen bushels more per acre from breaking and subsoiling alone. I find such treatment of the above natural land to render it much easier to get in condition when the rush of spring work is at hand. I find land so treated not to be near so badly infested with insects and pilfering weeds. I find water that falls on such land during the winter and spring rains not to run rapidly away and carry much valuable soil with it, but soaks deep into the stirred subsoil and is there stored, to be drawn from by the searching roots of the thirsty growing crop.

I have seen corn on same natural land not fall plowed subsoiled and sown to a cover crop, to parch up and be almost a complete failure, while land that was so treated grew an abundant yield.

I have gotten from ten to eighteen bushels more corn per acre by doing only $3.00 worth of fall breaking, subsoiling and rye sowing. I have also gotten from twelve to twenty-eight bushels more of Irish potatoes per acre by doing the same.

I find it best to deepen the soil with the subsoiler gradually, and an increase of six to eight inches at one subsoiling will prove detrimental. We have one field of twelve acres that twelve years ago made four to six barrels of corn per acre. This field has never received one pound of home-made or commercial fertilizer and now makes from eight to eleven and one-half barrels (forty to sixty-one and one-half bushels). This land has been cultivated every year. Fall plowing, subsoiling, rye and cowpeas did the work.—W. C. Crook, Huron, Tenn.

Three Big Papers, 65 Cents.

The National Farmer and Stock Grower; Twice-a-Week Republic of St. Louis, the oldest, biggest and best semi-weekly in the Southwest; and Farm Progress, the biggest semi-monthly farm paper printed, sent to any address a full year for only 65 cents. The subscription price of all these papers, if taken separately, would be $1.25. Take this big combination and get all the reading matter you need the coming year. Send orders to the St. Louis Republic, St. Louis, Mo.

The Hay Market at St. Louis.

The following were December 31st sales: Timothy, new choice, $17.50; No. 1, $15 to $17; No. 2, $12 to $14. Prairie—Choice, $12.50 to $13; No. 1, $10.50 to $12.50; No. 2, $9.00 to $10. Good alfalfa scarce and wanted at $18.50 to $19 for choice; No. 1, $17 to $18. Clover—Choice, $17; No. 1, $15 to $17.

Stock peas are selling at St. Louis at $1.40 to $1.50 per bushel.

FUR SHIPPERS WE WILL MAKE IT PROFITABLE FOR YOU to ship your Mink, Skunk, Raccoon, Muskrats, Otter, Opossum, Fox and all other raw furs to us—We are an old (established 1872) and RELIABLE House in this the Biggest and BEST MARKET on this continent. Try Kerosene Engine
30 Days Free

Gasoline Prices Rising.

You can't run a farm engine profitably on gasoline much longer. Price of gasoline going sky high. Oil Companies have sounded the warning. Kerosene is the future fuel and is now 6c to 10c a gallon cheaper than gasoline. The Amazing "Detroit" is the only engine that uses common lamp Kerosene (coal oil) perfectly. Runs on gasoline, too, better than any other. Basic patent. Only 3 moving parts. Comes complete ready to run. We will send a "Detroit" on free trial to prove all claims. Runs all kinds of farm machinery, pumps, saw rigs, separators, churns, feed grinders, washing machines, Silo fillers and electric lights. Money back and freight paid both ways if it does not meet every claim that we have made for it. Don't buy till you get our free catalog. 2 to 24 h. p. in stock. Prices $29.50 up. Special demonstrator agency price on first outfit sold in each community. 2000 satisfied users. We have a stock of testimonials. Write quick. (20)

The Worn-out Farm.

Many a farm with great possibilities has been practically abandoned because it was worn out, according to the popular notion. With the uninstructed a worn-out farm is of no value and has definitely passed its days of usefulness. With the agricultural scientist a so-called worn-out farm is merely a problem that can be solved according to known rules.

Many a farm that has been abandoned by its former owners has been picked up by a well-to-do agriculturist, and in a few years made to bloom and blossom like the rose. Some of our rich men realize the great possibilities in the farms that have been abandoned and are putting money into them and their development.

As an illustration, the writer might cite the area of land in Southern Illinois that has long been considered as past its day of usefulness. That land has been farmed longer than any other land in Illinois and has decreased in crop-producing capacity. The farmers that tilled it took off everything and put nothing back, and in a hundred years took out so much of a certain element that the land failed to produce enough to keep the families of the farmers from want. In time the houses became delapidated and the people poverty-stricken in appearance. The worn-out farm could be seen on every side. Yet the land was not really worn out. It had simply been exhausted as to a single element or two and these could be readily restored. The writer knows several agricultural professors that have bought farms in this locality and have made them profit producing in a large degree. They found that potash and phosphate were needed and applied them. The land was sour, and they put on lime to neutralize the acidity. Then they were able to grow clover in great abundance and also cowpeas, soy beans and the other legumes. The writer has walked through these clover fields where the clover was more than two feet high and formed a solid mass, so great was the luxuriance with which it grew; and this was on land that had been worn out.

It may be set down as a general rule that if a farm has once produced good crops it can be again made to produce good crops without a very heavy expense. The worn-out farm is far superior, as a commercial proposition, to the land that has never produced anything and must be practically remade before it will give good returns to the cultivator. The farm that was once productive and now is not has simply been so unscientifically handled that it has lost some one element that crops need. Usually this will be found to be potash or phosphorus.

If a man will take a worn-out farm and treat it with lime, if the soil is sour, and then try a plot with a phosphate and another with potash, he may have his eyes opened. The writer has seen a farmer put on such land a dressing of lime at the rate of a ton per acre and then put on about $3.00 porth of potash per acre and make land worth $50 per acre.

The worn-out farm is a thing that will shortly cease to be. We have numerous Agricultural Colleges and Experiment Stations that are spreading light of soil fertilization. Year by year thousands of young men are being sent forth from the Agricultural Colleges with a definite knowledge of how to take care of the worn-out farm and make it productive. Many of these are only too glad to pick up $50 land for from $10 to $20 per acre because it is regarded as worn-out.

SUCCESS PLOWS

A plow that has been on the market for years without a change in its construction; a plow that was so well built at the start that no changes have been necessary; a plow that has the largest sale of any riding plow made; a plow that is so simple it cannot get out of order, so strong that it lasts a lifetime—

Such is The Success.

It has the strongest and simplest frame ever put on a riding plow; the best hitch, the best landing device, the best rolling cutter, and best bottoms ever made. It has but two levers, but they give the same wide range of adjustments as plows with three or four levers. The **Success** is heavier, it has more material, but fewer parts, and therefore less complicated, than others. That is why it is simple, strong and durable. That is why we call it **The Success.**

The Success is a medium-priced plow that will work anywhere, and it is backed by an unqualified guarantee. Why buy a high priced plow when you can accomplish the same results with the Success, a medium-priced plow?

When so ordered, we furnish Alfalfa Shares, which are broader than the ordinary shares.

Insist on getting **P. & O.** Canton Plows, Harrows, Planters, Cultivators, Potato Diggers, Stalk Cutters, etc., from your dealer. Send for Catalog C **81** A Beautifully Illustrated Pamphlet will also be mailed. Write for it today.

Parlin & Orendorff Co., Canton, Ill.

The Carcass Competition.

At the International Live Stock Show, fourteen yearlings and seven two-year-old steers competed for the championship of the dressed carcass. They were judged on foot by Mr. Jno. G. Imboden, a cattle judge and expert cattle feeder, and they were judged again by Sam T. White, a first-class butcher. It is almost needless to say that the judgments alive and judgments dead differed.

In the yearling class the No. 1 alive was No. 5th dead; No. 2 alive was not placed dead; No. 3 alive was No. 1 dressed; and No.4 alive was not placed dressed; No. 5 alive was not placed dressed. A steer not placed alive was No. 2 dressed, and steers not placed alive were 3d and 4th dressed. Six not placed alive were not placed dressed.

In the two-year-old class, No. 1 alive was not placed dressed; No. 2 alive was No. 3 dressed; No. 3 alive was first and champion dressed; No. 4 alive was No. 4 dressed; and No. 5 alive was No. 2 dressed. Two not placed alive were not placed dressed.

It would appear from this that the judgments on foot and on the block do not agree. Judgment on only one steer was exact and on one other steer it was not reversed. It was a contest between selected animals, each the best from the different feed lots, and the judge who could probably pick the best twenty-one steers out of a hundred could not place the twenty-one selected exactly in the order of merit as they did appear after being cut up and exhibited on the butcher block. The butcher block is the final test, and from it there is no appeal.

Breeding Oats By Seelction.

A Vermillion county, Illinois, correspondent asks: "What is meant by breeding oats by selection?"

"Selection" means merely picking out the best heads, as they stand in the field. These are then used as the foundation for the seed plot the following year. This process of selection is carried on until the supply is large enough to seed the general crop. Not many farmers will take the pains to follow up oat breeding after this fashion, and regrading their seed is about all they do. It is evident that not much real improvement can be made through simply regrading. About all that process will do is to give more nearly uniform size seed, and that will help in getting an even stand.—L. C. Brown.

Sweet potatoes were selling at 50 to 70 cents a bushel when this paper went to press.

NO MATTER WHERE YOU LIVE

Send Postal for FREE BOOK No. 118.

—I'll Send You a Chatham Fanning Mill for 30 days' FREE Test—Without a Penny's Deposit or a Contract or Note of Any Kind, And

I'll Pay The Freight, Too

I'LL pay the freight to your railroad station—and back, if you don't want the Chatham after 30 days' use. And I'll make you a price so low that you'll see in a minute how you simply can't afford to be without a Chatham. You'll see at once how much it means to you in extra crop profits from **planting clean** seed and selling clean seed. Then, if you take me up on my offer, I'll give you plenty of time to **pay** for the Chatham. Pay me out **of** the extra profits it makes for you and it will pay for itself the first year. It will last for years and keep on making profits for you for 25 years or longer. POTASH

The German Kali Works have talked Potash and its benefits for twenty-five years. They have never sold a pound direct to local agents or farmers.

You know how hard it was to buy and get Potash. Things have changed. The mines are now producing enough to enable us to offer

POTASH FOR SALE

in carload lots of twenty tons, to local dealers without interfering with the requirements of those to whom we have sold Potash to be used in mixed goods. We have, therefore, established a Selling Agency in Baltimore, Md., and in 1910 will sell all potash salts in carload lots for cash, **Delivery Guaranteed** direct from the mines to the buyers in original sealed bags, or kainit in bulk, at lower rates than were ever before quoted.

Potash Pays You can buy the real potash salts—plant food without fillers or make-weights—you save all the money you have been spending for interest, freight, excessive profits on fillers and mixing charges.

For particulars and prices write to

Hammond's Handy Atlas of the World.

This great Atlas contains 107 pages, 6x8 inches, is printed in colors and is bound in a durable red-cloth cover. It contains seventy full-page maps of every state and territory, with new railroads and towns. Every country in the world is shown by maps of the latest plates. We use this Atlas as a subscription premium. For One Dollar paid in advance we will send one copy of **Hammond's Handy Atlas** post free by mail and credit three-years' subscription to The National Farmer and Stock Grower. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Growth of the Forestry Idea.

Fifteen years ago the forestry idea in this country was principally in the minds of a few enthusiasts who were trying to work it into legislation. To-day the idea has become so potent that it is a mighty factor in our economics. At that time we had almost no forestry department, and not more than a dozen men were employed by the national government to look after the work that might be related to forestry. To-day we have a vigorous forestry service with nearly, if not quite, four thousand men employed.

Fifteen years ago the national government owned no forestry area. Some men were advocating the setting aside of public lands for forestry purposes, but rather expected to have their dream realized only in the very distant future. But sometimes affairs move with unexpected celerity, and that proved to be the case with forestry conditions. The creation of forestry reserves once started proved to be a very popular one and the laws were found to be flexible enough to permit the creation of great forestry reserves. The result is that we now have forestry reserves covering about 170,000,000 acres. These forests, too, are already profit producing, that profit now amounting to nearly two millions a year.

The forestry idea has taken hold of the states, and some of them have already invested in cheap land and begun to create forests. This means that in the near future we will have good-sized forests. This is the more neecssary because in the older states there is now no government land, and if the general government is to create forests in such states it must purchase land, and this must be ordered or permitted by Act of Congress. But the states through their legislators have the same power and a greater incentive, for the people of a state are nearer to any selected reserve than are the people of the nation to any forest reserve. Moreover, the states can find it easy to get hold of cheap land, as much of this land is annually forfeited to the states through non-payment of taxes. Much of this land so reverting to the states was formerly in forest and was cut over by logging companies, who then abandoned the land. There is a strong sentiment for the securing and holding of such land.

If one looks closely at what is going on, he will see that the forestry idea has taken root in our large towns and cities. The park commissions are looking for cheap land to be put into forests. At the last session of the Illinois Legislature the Metropolitan Park System for the vicinity of Chicago was created. This commission is planning to take possession of extensive areas far outside of Chicago and will create forestry parks following the course of several streams. Some of these will be eight or ten miles in length and are to bear good-sized forests. At the coming spring election in Cook county this enterprise is to be voted on. So it is really a county and not a city affair. It shows how a county may increase its taxing power to secure a system of forests which should in time become to some extent productive and help extend still further the forestry idea.

The forestry idea is destined to grow and grow till much of the cheap land along our water courses is covered with beautiful and profitable forests.

Returns From Commercial Fertilizer.

A pamphlet entitled "Plant Food," issued by Mr. Wm. H. Bowker, of the Bowker Fertilizer Company, has an introduction which is at once interesting, instructive and well worth thinking over. The introductory paragraph says in substance: "An acre of tillage land eight inches deep weighs 1,000 tons, and if an average of 1,000 pounds per acre of concentrated fertilizer is plowed in, it only adds one pound of mixed fertilizer to every 2,000 pounds of soil. This is less than a grain of actual plant food to each pound of soil. And yet this infinitesimal amount combined with the 'natural yield of the land' has been known to produce such results as to turn loss into profit, failure into success and still leave the soil no poorer, but in most cases much richer."

WITTE ENGINES

Potash From the Producer to the Consumer.

Heretofore potash salts produced in Germany have been sold in the United States in immense quantities only to manufacturers of special fertilizers. Potash alone has been difficult for farmers to obtain for the reason that it was not generally carried in stock by fertilizer agents or sold except in combination with other fertilizer material. Fertilizer manufacturers in general have used potash in their combinations just so far as they were forced to do so—and no farther. Recognizing the necessity for potash in the combinations placed on the market, it was not absent from them, but in nearly every instance potash was not used on the basis that "potash pays," but on the bare ground that it was a necessity. Quite recently the German Kali Works has determined to place potash salts close to the farmer by making it available in car lots of twenty tons to users or dealers, to enable farmers to mix their own fertilizers wherever they desire to do so, or to use potash alone where the soil is rich in nitrogen or phosphates; in other words, to obtain potash easier and cheaper than they have ever done before. We commend this movement on the part of the German Kali Works and believe it will cause a great increase in the judicious use of potash with corresponding benefits. By addressing the German Kali Works, Continental Building, Baltimore, Md., particulars and prices can be obtained.

Profitable Vegetable Growing.

The National Stockman and Farmer of Pittsburg, Pa., has discovered a market gardener who with twelve acres in cultivation very close to the city of Cleveland, Ohio, who with about eighteen acres in all, is selling products amounting to $30,000 a year and realizing a net income of $12,000 to $20,000 a year. There are two full acres under glass, and outside the garden a few acres are devoted to corn. The principal crops grown are celery, asparagus, rhubarb, lettuce, tomatoes and cucumbers. The farm is in the old bed of Lake Erie, and the soil varies from sandy to clay loam. Winter lettuce and fall tomatoes are profitable specialties. In this vegetable garden crops are kept coming all the year round, and the investment is a large one for labor, tools, glass and material, but it is profitable to the last degree, and the greatest of all is that it is the work of a college professor, who with his son began their gardening and their agricultural education on the very ground upon which they have been so successful.

Notwithstanding this is a remarkable income derived from such an amount of land, it is probably because of exceptional market connections and conveniences. In the vicinity of New York and Philadelphia, average truck farms sending their product to be sold through commission firms usually consider $300 an acre net profit after paying $100 per acre rent, only a fair return for gardens backed by greenhouses. Vegetable gardening as a specialty, like flower gardening and small fruit growing, is as far ahead of general farming as it is possible to imagine; furthermore, a ten-acre truck farm in improvements alone may cost more than large farms do in the West and Southwest, and naturally greater results ought to be expected. The whole country cannot be given over to vegetable growing, but the great results from these models of intensive farming furnish good examples to keep in mind when contemplating the possibilities of agriculture on our own properties.

Slaughter Test Averages.

At the Chicago International Show fourteen yearling steers entered the slaughter contest and the general average live weight was 1,223 pounds, and they dressed out an average of 63.56 per cent. Of these, six head were short yearlings, averaging alive 1,042 pounds, and dressing 62.71 per cent. The eight long yearlings averaged 1,355 pounds alive and dressed 64.25 per cent. The six that were two years old and under three averaged 1,518 pounds and dressed 65.8 per cent. When it is considered that strictly good market cattle dress about 60 per cent. of beef and that 64 per cent. is extraordinary, it will be understood that sixteen of these cattle were above the average of show steers.

The first-prize yearling carcass was that of Hinkle, a grade Angus steer, weighing alive 1,390 pounds, dressing 914 pounds of beef, or a yield of 65.8 per cent.; the hide weighed 82 pounds; fat, 62 pounds. He sold for 14¼ cents a pound on foot, and was fed by the University of Nebraska.

The first-prize winner in the two-year-old class and champion of the carcass show was also fed by the University of Nebraska. He was the Aberdeen-Angus steer La Preto, a son of the great bull Prince Ito, 2d. His live weight was 1,490 pounds, dressed 995 pounds, which is a yield of 66.8 per cent. The hide weighed 99 pounds, the fat 34 pounds, and he sold on foot at 17¾ cents a pound.

Dan Patch Moving Pictures.

On page 14 will be found an offer to send free a set of moving pictures showing the World's record mile by the grand pacer, Dan Patch, 1:55. Any stock raiser who will answer three simple questions stated in the advertisement will receive a set absolutely free of cost and will be delighted. The Dan Patch mile is on one side and on the reverse are fifty scenes of the International Stock Farm, including Minor Heir, 1:59½; Buttonwood, 2:19; Roy Wilkes, 2:06½; Arion, 2:07¼; Directum, 2:05¼; and Mr. M. W. Savage, Proprietor. A more interesting exhibit was never produced. Attend to this at once and you will be very much pleased with the result.

Swine-raising Notes.

As an evidence of the value of alfalfa for carrying pigs, Mr. W. P. Chaffin, of Elk City, Oklahoma, who is engaged in hog raising and shipping, said that he had a patch of alfalfa on a town lot 75 by 150 feet, about a quarter of an acre. On this little patch he has grazed sows and shoats since last June, which, with a little corn to fit them for market, have brought him $400. If anybody has a quarter care of alfalfa that can beat this as to results, he can come forward and claim the championship.

FARM AND RANCH LANDS.

ARKANSAS. — SOUTHEAST ARKANSAS offers exceptional advantages to home-seekers and investors. We have Timbered, Farming and Rice Lands in which are some special bargains. Write us what you wish. **Jno. A. Culbreath & Co., Warren, Ark.**

Colorado Irrigated Land

22,000 acres of irrigated Government land in Southeastern Colorado has recently been opened for entry under the provisions of the Carey act. The State of Colorado has contracted with the Two Buttes Irrigation and Reservoir Company to construct the irrigation works for the reclamation of this tract of land, which is located in Baca and Prowers counties, close to Rocky Ford and other proven districts. Water rights are of incontestable priority and title to land come direct from the State.

Price of Land 50 Cents Per Acre
Perpetual Water Right $35 Per Acre

Payable $5.25 per acre cash, balance in ten annual payments. The tract is nearer Kansas City and Mississippi Valley markets than any other Carey act project. Land free from brush and stone, and soil will average 5 feet in depth. Altitude, 4,050 feet; climate best in State; rainfall 16 inches; crops, all grains, alfalfa, sugar beets, vegetables and fruit; no alkali. Local markets for everything.

No agents employed and no commission paid. Farmers wanted, not speculators. For particulars write

THE TWO BUTTES IRRIGATION AND RESERVOIR CO., LAMAR, COLO.

GEORGIA.—FRUIT LANDS IN SOUTH GEORGIA.—Ask us for our Maps, Plats and Illustrated Circular regarding the Fruitland Colony Company's truck garden, fruit farm and pecan lands in South Georgia. Good town on railroad. Sell you 10 acres (grows four crops a year—plenty of rainfall) and give you a lot in town free, long time payment. Lots average $10.00 to $50.00 each. Our literature is instructive. If you don't want to buy, it will tell you things you never heard of before and only costs the asking. Let us send it to you.

Fruitland Colony Company, Desk B,
167 Adams Street, Chicago,
or **Land Dept., Desk B,**
Ga. So. & Fla. R. R., Macon, Ga.

IOWA.—Rowland & Henderson, of Marengo, Iowa, have a list of fine Iowa Farms for sale. Write them.

MEXICO.

For Sale: Timber, Agricultural and Grazing Lands in Western Mexico, States of Michoacan, Sinaloa and Tepic. Fine timber. Soil of the best. Grows abundant crops. Plenty water. Climate excellent. Lands now cheap, $1.50 up, but upon completion of Southern Pacific R. R. now building will advance steadily.

For particulars address,
J. H. Cavanaugh & Co.,
Acaponeta, Tepic, Mexico,
or **J. H. Cavanaugh & Co.,**
P. O. Box 76,
Guanajuato, Mexico.

MICHIGAN.—I sell Farms in Oceana, the best county in the United States; fruit, grain and stock. Write for list. **J. D. S. Hanson,** Hart, Mich.

MINNESOTA.—If you want a quarter or half section of good land at a low price, for dairying or agriculture, in Northern Minnesota, write **to J. J. Coffey,** Mentor, Polk county, Minn.

MISSISSIPPI.—ALFALFA LANDS IN NORTHEAST MISSISSIPPI.—Our lands grow from three to six tons of Alfalfa per acre, and the hay sells for $15 to $20 per ton. Prices from $10 to $40 per acre. "Do you want to be shown?" Write to **J. W. Murfee,** Okolona, Mississippi.

MISSOURI.—For Sale: Finest 1,500-acre farm in Jackson county, Missouri; improvements worth $65,000; ten miles Kansas City, Mo., by rock road; R. R. Station on farm; land, improvements in good condition; 2,580 acres well fenced; cross fenced; four good houses; eight splendid barns; rich corn land, finely watered all good corn land or fine blue grass land; 1,500 acres blue grass; $40 acre; one-third cash, balance long time, 5 per cent.; other high-class farms in Western Missouri and Eastern Kansas. **J. H. Lipscomb,** 306 Fidelity Trust Bldg., Kansas City, Mo.

MISSOURI. — CENTRAL MISSOURI FARMS. For Corn and Blue Grass Farms that will prove profitable and satisfactory for homes and investments, write for new list. Farms described and priced. **Hamilton Realty Co.,** Box 1, Fulton, Mo.

MONTANA.—GOVERNMENT LANDS, 320 Acre Homesteads. For particulars address **Hopkins & Yoas,** Paxton, Montana.

TENNESSEE.—Send for booklet on farming and full description and prices of lands for sale in the valley of East Tennessee, the healthiest climate and best lands in the country. Address, **East Tennessee Real Estate Company,** Morristown, Tenn.

TEXAS.—One Thousand Acres; 75 per cent. agricultural, the balance grazing, with an inexhaustible supply of excellent water. Price, $15.00 per acre; half cash; deferred payments to suit the purchaser. Situated 10½ miles from Sabinal. Also **Twenty-six Hundred Acres,** 11 miles from Sabinal; about half agricultural, balance excellent grazing. Price, $7.00 per acre; half cash; deferred payments to suit the purchaser. **Fourteen Hundred Acres** grazing land, watered by springs. $3.50 per acre. All in Uvalde county, Texas. Address, **Albert D. Evans,** North Fort Worth, Texas.

WEST MEXICO LANDS.

Plant your money in West Mexican Lands and Orchards and watch the big dividends grow.

WESTERN CANADA

Prof. Shaw, Well-Known Agriculturist, Says:
"I would sooner raise cattle in Western Canada than in the corn belt of the United States.

Feed is cheaper and climate better for the purpose. Your market will improve faster than your farmers will produce the supplies. Wheat can be grown up to the 60th parallel (800 miles north of the International boundary). Your vacant land will be taken at a rate beyond present conception. We have enough people in the United States alone who want homes to take up this land." Nearly

70,000 Americans

will enter and make their homes in Western Canada this year.

1909 produced another large crop of wheat, oats and barley, in addition to which the cattle exports was an immense item.

Cattle raising, dairying, mixed farming and grain growing in the **provinces of Manitoba, Saskatchewan and Alberta.**

Adaptable soil, healthful climate, splendid schools and churches, and good railways. For settlers' rates, descriptive literature "Last Best West," how to reach the country and other particulars, write to Sup't of Immigration, Ottawa, Can., or to the Canadian Government Agent.

J. S. Crawford, 125 W. 9th St., Kansas City, Mo.; C. J. Broughton, 412 Merchants Loan & Trust Bldg., Chicago, Ill.

According to government report, nineteen establishments having government inspection conduct live stock slaughtering plants in New York City.

A Most Useful Premium.

A farm on which there is not a sewing awl is in difficulties when work is most pressing. It is surprising how useful this little implement is. It is the Myers Famous Lock Stitch Sewing Awl. It is the only sewing awl made with a groove running the full length of the needle and has what is known as a diamond point. In order to sew leather or any heavy, thick material without breaking or cutting the thread it requires a needle with the groove running the full length of the needle. You might just as well have no groove in the needle as to have it only part of the way. With the Myers Awl you can sew old or new harness, saddles, carpets, canvas, tents, rugs, quilts, shoes, grain bags, and many other things. You can use any kind of thread in the Myers Awl, and it makes a lock stitch same as a sewing machine. It is very simple; a woman can use it as well as a man. It is one of the most practical devices ever invented. They are put up with two needles; one is straight and one curved, with a small screwdriver and wrench combined. Also a reel of waxed thread with each awl ready for use. Every teamster and farmer should own a Myers Lock Stitch Sewing Awl, as there is use for one in almost every household. The Myers Awl is nicely finished, the metal parts are nickel-plated, the needles and wrench are kept in the hollow handle, which has a screw top.

Anyone who will send One Dollar cash to pay in advance for two-years' subscription to The National Farmer and Stock Grower can select one of Myers' Lock Stitch Sewing Awls, which we will send by mail, postage paid, as a free premium. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

The Best Farmer in America.

The United States Department of Agriculuture is issuing a bulletin in which Mr. Arnold Martin is specially set forth as the best farmer in America. Mr. Martin is certainly an excellent example of what industry and intelligence can do with a small and unpromising piece of land, and if others can do half as well, the fear that American farmers will not feed the ever-increasing population can be set aside as absurd and unfounded.

Mr. Martin arrived in Nebraska from Switzerland ten years ago without a dollar. He went to work as a farm hand and in three years had saved $275. Then he started out for himself.

"Twenty acres was all I wanted," he said recently. "That is enough land, if farmed properly, for any man; 320 acres is a misfortune, and 640 acres is a calamity."

The twenty acres which Mr. Martin picked out cost him $12.50 an acre, although surrounding land was worth $50 to $75 per acre. It was rocky and not worth farming, according to Mr. Martin's neighbors, who laughed at him. He paid $100 down, gave a mortgage for the balance and used the rest of his money to buy farm implements and live stock.

To-day Mr. Martin is caring for his family and saving $1,000 each year. He has a standing offer of $2,500 for his farm, which is improved with a good house and fine barns. He is out of debt and has money in the bank.

Mr. Martin has accomplished this by not allowing one foot of his twenty acres to remain idle. He takes two or three crops off every acre each year, and most of his neighbors will admit that he is making more money on his twenty acres than they are making off 160 acres.

While he has considerable fruit on his land and he can almost be called a truck grower, Mr. Martin's principal crops are those raised ordinarily in Nebraska. He keeps his land busy from early spring until late in the fall. He cultivates between his fruit trees, either growing small fruits, potatoes or other vegetables.

At the last cultivation of his potatoes corn is planted between the rows. A full crop of potatoes and a fair crop of corn are obtained from the same ground. After the potatoes ripen the corn keeps down the weeds. By the time the corn needs the ground his potatoes are ripe and the corn is in shock before it is time to dig the potatoes. Crops of squashes sometimes supplant the corn between the potatoes. Corn and melons are planted in rows between the melons.

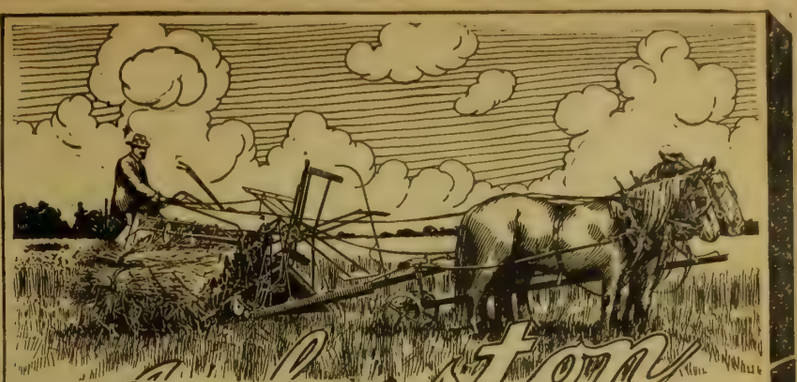
"I think I have found a remedy for hard times and poverty," said Mr. Martin recently. "Any man who will save just a little money can pick up ten or twenty acres of land. On ten acres he can make a good living, and on twenty he can get rich. I cannot understand why a man will stay around the city and work for starvation wages when he can go out into the country and become independent."

Vitality of Seed Corn.

Notwithstanding the corn crop of 1909 is 103,725,000 bushels greater than in 1908, it is not by 155,040,000 bushels equal to the crop of 1906. We are also reliably informed that the quality of the crop in general is not up to the usual standard, and that owing to frost and protracted wind and rain storms while the corn was still in the field the germinating power of the seed was more or less impaired, and that the matter of securing seed for the coming year is a more important subject than usual. Corn growers will have to be more particular than ever in selecting good from their own crops and more careful in testing any seed they may buy. Reliable seed corn growers usually put a limit upon the time in which their seed is gathered from the field, knowing full well that the germinating power deteriorates rapidly under strenuous weather conditions; but farmers are not so careful, and the result is the replanting, which ought not to be necessary. This subject is very important and needs the guiding hand of the Agricultural Colleges to a greater extent than usual. The quality of corn is estimated by the Department of Agriculture as being an average of 2.7 per cent. lower than 1908, and that includes all corn-growing states; but where most corn is grown for seed the deterioration caused by adverse weather conditions is much greater.

Broom corn seed is quotable at $2.25 per 100 pounds.

Sorghum at St. Louis is quotable at 35 to 40 cents a gallon.



Johnston CONTINENTAL BINDER

Its perfect performance in all kinds of grain and under all conditions, in all grain growing countries of the world, and its ability to produce results, have put it in a class by itself—the grain binder of today, tomorrow and all times to come—the binder you will be delighted with.

The Johnston Binder has greater strength and more elevator capacity than any other binder. Roller bearing wheels, folding dividers, right-hand levers in easy reach of the driver, an adjustable reel and back wing, which can be set for any kind of grain under all soil conditions; a trip that never repeats, a knotter that always ties; light of draft. Built in four sizes—5 ft., 6 ft., 7 ft. and 8 ft. Every binder is fully guaranteed.

In short, the Johnston "Continental" Binder is a strongly constructed, light, accessible, easily operated, clean cut, easy running, perfect-working grain binder, reduced to the simplest and most dependable form—in fact, meets every requirement of the most exacting farmer.

Remember we are the original independent firm, as we have no connections whatever with any trust, combine or monopoly of harvesting machines.

Let us send you our 1910 Catalogue. It is profusely illustrated and will greatly interest you. It's FREE. Drop us a postal today.

United States Separators

and their Products

Win All Important Awards in 1909

IN keeping with its usual successes and accomplishments, the year 1909 has been another record-breaker for the United States Cream Separator. The few awards we mention are far from all. These are a few of the more important ones.

THE GRAND PRIZE (Highest Award) on Separators at the ALASKA-YUKON-PACIFIC EXPOSITION, Seattle, awarded the U. S. This was positively the highest award received by any separator.

GOLD MEDAL (Highest Award) on Separators at the Intermountain Four State Fair, Ogden, Utah, awarded the U. S.

Butter made from U. S. Cream by Jas. H. Toomer, Morgan, Utah, also won First Prize and Gold Medal at this Fair.

GOLD MEDAL (Highest Award) on Separators at the Sacramento, Cal., State Fair, was awarded the U. S. Separator.

FIRST PRIZE (Highest Award) on Separators at the Texas State Fair, Dallas, awarded the U. S. Separator.

FIRST PRIZE (Highest Award) on Separators at the State Fair, Birmingham, Alabama, awarded the U. S.

FIRST PRIZE also STANDARD SILVER CUP (valued at $100.00) was won by Mrs. Alex Simpson, of Atwood, Ontario, at the Winnipeg Industrial Exposition. Mrs. Simpson has used a U. S. Separator for years and has always been a prize winner on butter.

FIRST PRIZES (Highest Awards) at the great New England Fair, Worcester, Mass., were awarded to Harry C. Shepard, of Sturbridge, Mass., on Dairy Butter, and Gloverdale Creamery, Tunbridge, Vt., on Creamery Butter. Both U. S. users.

THE GOLD MEDAL (Highest Award) at the NATIONAL DAIRY SHOW recently held at Milwaukee, Wis., was awarded to J. Gilbert Hickcox, of Whitefish Bay, Wis., on Market Cream obtained by the U. S.

FIRST PRIZE (Highest Award) at the Illinois State Fair, Springfield, on Dairy Print Butter, was won by Robert Moren, Morrison, Ill., a user of the U. S.

FIRST PRIZE (Highest Award) at the Vermont State Fair, White River Junction, was awarded L. R. Dana, Pomfret, Vt., on Dairy Butter. Mr. Dana also uses a U. S. Separator.

FIRST PRIZE (Highest Award) at the Maine State Fair on Dairy Tub Butter was won by Mrs. L. S. Brimmer, of Tilden, Me., user of a U. S. Separator.

FIRST PRIZE (Highest Award) South Dakota State Fair, on Dairy Butter won by Mrs. M. F. Andrews, of Huron, a U. S. user.

FIRST PRIZE (Highest Award) on Home Dairy Butter, Western Fair, London, Ontario, awarded Mrs. Alex Simpson, Atwood, Ont., a U. S. user.

FOUR FIRST PRIZES, Viking Agricultural Fair, Viking, Alberta, Canada, Oct. 5th, 1909. Dairy Butter, Mrs. S. Stenberg swept all four First Prizes. Another Great Victory for the United States.

FIRST PRIZE, Georgia State Fair, Macon, Ga., October 27th to November 6th, 1909. First Premium on both Separator and Exhibit, awarded to United States Separator.

Don't let the hypnotic statements of unscrupulous advertisers, claiming the earth, with no records to back their claims, influence you in the least.

If you keep two or more cows and handle their milk by any other means than with the U. S. Separator, we can show you the way to a greater profit. Ask for Catalogue No. **125** and we will attend to the rest.

Remember, **you can try a U. S. Separator before you pay one cent.** This does not mean the bogus free trial some advertisers offer, who require the cash deposited in the bank before they ship the goods. Agents in every dairy community will give **absolutely a free test,** and in case you buy, favorable terms. Could anything be more fair?

VERMONT FARM MACHINE CO.

BELLOWS FALLS, VT., U. S. A.

Another Missouri Milk Record.

At the Missouri Agricultural College another cow has been added to the list, having produced 700 pounds or more of butter in a year. Her name is Princess Salatine Carlotta, 56,190.

Carlotta was calved August 15, 1908, and six weeks later was taken to the State Fair. While there she averaged sixty-five pounds of milk per day. Her highest day's yield during the year was seventy-three pounds. Her record in detail is given below:

	Milk. Lbs.	Fat. Lbs.
August, 1908 (15 days)	946	32.7
September	1,950	66.3
October	1,868	66.0
November	1,819	47.3
December	1,477	50.2
January	1,552	55.9
February	1,397	46.4
March	1,589	58.8
April	1,439	54.8
May	1,465	47.3
June	1,258	39.0
July	1,155	37.5
August (16 days)	486	15.9
	18,405	618

The amount of butter-fat is equal to 727 pounds of commercial butter. Her average percentage of fat for the year was 3.41, which is about an average for her breed.

The milk produced by Carlotta was used for butter making. During the year the average price received was thirty-two cents per pound; at this rate, her butter for the year was worth $232.64. In addition there were about 15,000 pounds of skim milk and buttermilk. Counting this at twenty-five cents per hundredweight, its value for hog feed, although the college actually received considerably more, it adds $37.50, or a total value on the butter basis of $270.14.

Carlotta is an unusually healthy animal, weighing about 1,400 pounds. She is now nine years old; has had seven calves, and has never been sick in her life. She is a cow with a great appetite, as all such great producers must be. While making this remarkable record she was of course well fed, but there is no special secret in such feeding. Only ordinary feeding stuffs were used. In the winter, corn silage and good alfalfa furnished the roughness. In summer, she was on pasture and had what alfalfa she would consume. Her grain ration during the year consisted of corn chop, bran, oats, gluten meal and linseed meal. As a rule, the mixture fed at any one feed contained at least three of the above. Her highest grain ration was twenty-four pounds per day for a short time, and her lowest ten pounds. The total amount fed in the year was approximately three tons of grain, two tons of silage and two tons of alfalfa hay; the average grain ration being sixteen pounds per day. The total cost of the ration for the year is estimated at $100.

The Holstein Cow Records.

The Holstein cows which are tested for admission to the Advanced Register are practically the best cows of the breed.

During the period from November 19th to December 4th, 154 cows were accepted. This herd of 154 animals, of which one-third were full-aged cows, produced in seven consecutive days 61,904 pounds of milk, containing 2,099.376 pounds of butter-fat, thus showing an average of 3.39 per cent. fat. Each animal produced an average of 402 pounds of milk, containing 13.632 pounds of butter-fat, equivalent to 57.4 pounds, or 27⅓ quarts of milk per cow per day, and from which 15.9 pounds of commercial butter were or could be made each week.

When it comes to the production of the very best Holstein cows, thirty-two of them have each produced in excess of 654 pounds of milk in seven consecutive days. This herd of thirty-two cows, of which some were not of full age, produced within a period of seven days 21,759.7 pounds of milk, containing 719.72 pounds of butter-fat, thus showing an average of 3.31 per cent. fat. The average for each cow was 680 pounds of milk, containing 22.49 pounds of butter-fat, equivalent to 97.1 pounds, or 47¼ quarts of milk per day, and 26¼ pounds of the best commercial butter per week. These animals are the heaviest milkers of the breed, one of them producing 119 pounds of milk in one day, yet the average per cent. fat for the mixed milk of the lot is fully 10 per cent. in excess of the usual legal requirements for milk as sold.

Ordinary maple syrup is selling at 75 cents a gallon; Canada and Ohio at $1.00 per gallon.

Better Farming

A John Deere Book

—Just Out

A Farmer Can Get It Free

IF interested in farming, get our FREE book called "BETTER FARMING." It tells all about—

Alfalfa	*Making Hay*
Dairying	*Fighting Frost*
Seed Wheat	*Silos*
Corn Crops	*Cultivation*
Stock Feeding	*Cotton Crops*
Art of Plowing	*Soil Fertility*
Boll Weevil	*Gasolene Engines*
Controlling Weeds	*Adjusting Plows*

Hired Help Costs Big Money

Your land is high priced and hired help expensive. There is only one way to make big money—use implements that cut down the cost of your crops. Isn't it true that when you break something on a plow it is nearly always a cast part? Wherever strain comes on a John Deere Plow there you will find steel—tool steel. Take any plow that has had hard work for five years, put it along side of a John Deere which has been in service that long—and see the difference. Then there is no paint to cover up poor material. You can see the wear and the defects. The John Deere will be solid, staunch and ready for the hardest job. Then you begin to know that quality counts.

You can take pride in owning a John Deere—the standard plow of the world for two generations.

We will send you the 80-page, illustrated book free if you write and ask for

Package No. **7.**

Mention the package number *sure*, then you will get exactly the right stuff.

DEERE & COMPANY, MOLINE, ILL.

You're Never Snowbound

in Arkansas and Eastern Texas. Besides the *comfort* of living in a genial, mild climate, you save big money, for there are no long, costly feeding periods and no expensive shelter needed—stock can graze all year. You can often plant some crops in January, harvest in May and then plant again before the northern farmer is well started on one crop. You make money *every* month

in Arkansas and East Texas

and make more of it per acre than you can on high priced land up north. The rich, virgin soil there produces enormous crops of wheat, corn, oats, cotton, rice, etc., and *right now* land only costs from $5 to $25 per acre. With such cheap, fertile land, plenty of rain, a long growing season and good, close markets, farmers are getting independently rich in Arkansas and East Texas. You could do as well, if you *take hold now* before the opportunity of cheap land is gone.

COTTON BELT ROUTE

You will never know how big the opportunities really are until you investigate. Send for free copies of our books about Arkansas and Eastern Texas. Post yourself on conditions. Take advantage of the low fares offered twice each month by the Cotton Belt Route. Make a trip down there to look around. It will be a start on the road to prosperity. Write today—tomorrow you may forget.

E. W. LaBeaume, G. P. & T. A., St. L. S. W. Ry.
1408 Pierce Bldg, St. Louis

Feeding Cotton-seed Meal to Cows.

While I am a strong advocate of feeding cotton-seed meal to cows, I must confess my own experience will not let me feed over one and one-half pounds at each feed to the heaviest milkers. Others contend that they can feed more with safety, but such has not been my experience. I feed silage and some alfalfa hay and at each meal I sprinkle about one pound of cotton-seed meal over the silage, and this the cows seem to enjoy. I find that if I am without the meal for a few days there is a great falling off in the milk flow. My cows are grade Jerseys, and every time I have tried to increase beyond the pound or pound and a half, in two or three days the cow refuses her feed. Then I take it all away and give only the silage and some alfalfa hay, and the cow soon resumes her feed. I again put in the cotton-seed meal. Of course, feeding alfalfa hay and silage at the time may account for this, as the alfalfa contains so much protein and is perhaps all the cows can digest. If I continue the feeding of the cotton-seed meal after the cow has protested, in the only way she has of telling me her food does not agree with her, I find the milk will begin to be slippery, and then I am well aware that she is getting a case of indigestion not easily cured. I had one cow, a large milker, that I gave one and one-half pounds of cotton-seed meal at each feeding and she would have dizzy spells, as a person will do when overfed. As soon as I began to cut it out she began to recover, but as soon as I resumed it at all she would have the dizzy spells. I sold her to a man who feeds dry rations, and she has never had an attack and gives a nice mess of milk. My own experience would warrant watching cows we are forcing into doing their best or we are apt to come up against some queer problems. They can no more stand up under heavy feeding for a long period than we can. If it were not for that time of short rations that each cow gets after she is through with her milking period I am fully convinced that they would give out sooner than they do. I have also found that watering them each evening about an hour after milking has a tendency to keep up a good flow of milk. In cold weather I do not believe that ice-cold water is any benefit, especially if the cows seem to shiver after drinking. With my methods of feeding and watering I am able to keep up the flow of milk very close to that in the summer. I always warm the water slightly in a tank heater, if the weather is very cold. I expect that my hired man will be kind to the cows under his care. If he does not, he will receive his wages at the end of the week and a notice to quit. I have never had a man who could get as much milk from my herd as I am able to get, and I make it a point to help in that work, so as to be there and know what kind of treatment they are receiving. Good care, a balanced ration fitted to the need of each cow, clean stables, plenty of good, pure water and warmth are necessary for cows in the winter if one wants them to do their best. I also find it a good plan to change their feed once in a while and substitute some other grain with their silage, just for a change. Many are opposed to cotton-seed meal on account of its price, but I do not think there is any basis for this. If cotton-seed meal costs $30 a ton, this brings it down to $1.50 per hundred pounds. Now, this is one and a half cents a feed to the average cow, and is therefore cheaper than bran or any other of the protein feeds on the market. A friend of mine has been feeding malt with his silage and contended it was cheaper; but on figuring it out he was paying five cents for every feed to my one and half cents, beside the time it took to draw it home and the more trouble to store and feed. With the present prices of feed it behooves every farmer to know just what it is costing to feed his cows if he is to get any profit out of them. There is nothing cheaper than the silage for any kind of stock, but it seems difficult to make farmers generally think so.—O. F. Taylor, R. R. 2, Box 19, Tunnel Hill, Union county, Ill.

Hay For Cows.

A Kane county, Illinois, correspondent asks: "I have timothy, mixed clover and June hay, more than I will need for feed this winter. The timothy on the market sells for $14 a ton, the clover $13.50, and the June hay for $11. Which hay had I best keep for my cows?"

By all means keep the clover. The feeding value plus the manurial value of the clover hay is nearly $22 a ton, while that of the timothy is only $16 a ton, and, besides, if the clover is sweet and bright it will be better assimilated than timothy hay. I have not a very high regard for blue grass hay, such as is made in Illinois, because this generally means that the meadow is running out, and other even less nutritious grasses are apt to be mixed with it. The man who sells clover hay, when he has cows to feed, at the common market price, loses money on every load.—L. C. Brown.

Bull Calves at Nominal Price.

A large number of farmers are already familiar with the plan of the Missouri Jersey Breeders' Association to distribute desirable pure-bred bull calves to farmers and dairymen at the nominal price of $10. A good many dairymen have already taken advantage of this opportunity, but for every farmer interested in dairying who has requested one of these calves there are a hundred who need one.

Quite a number of the breeders who are members of our State Association are co-operating in this work. Nobody is making a cent out of this plan except the farmers who get the calves for one-fifth of their value. The committee handling the matter is hardly getting enough out of its share of the sales to pay expenses of postage, etc., the breeders are barely getting veal prices for their calves, and the whole thing is only made possible by the liberality of agricultural papers in publishing notices free of charge, and of the breeders in allowing their well-bred calves to be sold at such a price for the future benefit of the dairy interests of the state.

No breed association has ever undertaken a work of as much value to the farming communities as this plan of the Jersey Breeders' Association.

For a time we were somewhat behind with our orders, but when I would send a call for more calves breeders responded splendidly, and all who wished calves were supplied within a reasonable length of time. Now, as winter has come, the orders have fallen off, and we have a few calves listed running in age over three months. This should not be the case, and would not if dairymen appreciated the value of such calves.

I might state that the vote to adopt this bull calf distribution plan, which was taken at the last annual meeting almost a year ago, was not unanimous by any means. Some breeders felt that the calves would not be appreciated, and some had one reason and some another for opposing the plan. However, the majority decided to try the plan for a year at least. Some of the advocates of the scheme predicted that we would get orders far in excess of the available calves, believing if farmers could buy calves of this class at such a price the demand would be exceedingly great. We must admit the demand has not been what was hoped, although a good many calves have been sent out to a large number of highly-pleased dairy farmers.

If you want one of these calves now or later, I would advise that you send in your order at once, as some action may be taken at the next annual meeting within a few weeks. Send all orders and inquiries to the undersigned. ALBERT S. ENNIS,
712-21 Missouri Trust Building, St. Louis, Mo.

The Agricultural Department at Washington has intimated that new cattle dipping regulations will recognize the efficiency and superiority of the arsenic dip.

Forty pages in colors

WHAT EVERY FARMER WANTS
YOU CAN GET IT FREE

JUST drop us a post card and we will send you, **free**, the latest edition of our **Corn Book**, containing the best information from the highest authority on selection and care of seed corn.

You can get more and better corn without increased cost by following this book.

Every page illustrated and printed in colors.

The fact that this book also contains description of

The Deere No. 9 Corn Planter

the most highly perfected machine on the market, adds to its value.

Deere No. 9 Edge-Drop Planter
Highest Accuracy in Drop

Increased accuracy secured by the famous **Deere edge-selection drop**, means anywhere from ten to fifteen bushels per acre over the old style of machine.

Repeated tests have shown the above increase in favor of really accurate planting.

We have plates for all kinds of corn and other seeds. Instantly changed from hill to drill drop without changing plates.

Fertilizer attachment that distributes either in hill or drill.

Illustration here shows the regular runner, but stub runner or disc openers may be had on special order.

In fact, the **Deere No. 9** is strictly up to date in all real improvements.

Tamworth Swine Herd is headed by the Sweepstakes Boar at the leading Fairs in U. S. in 1907 and 1908. I handle more Tamworths than any two breeders in America. The hog to cross on your pony built pigs to increase size, vigor and quality.
W. WARREN MORTON, Russellville, Ky.

Heavy Hogs Not Fashionable.

The production of hogs of heavy weight, say 350 pounds and upward, is an unprofitable business. It is feeding against economy of production and it is feeding against the market. This, however, does not decrease the public interest in a heavy hog. On December 17th, at the St. Louis National Stock Yards, a hog was slaughtered by Armour & Co. which had weighed 1,000 pounds in the possession of Theodore Strobeck, of Brighton, Ill., who raised him, and actually weighed 980 pounds alive after being sold in the market at time of slaughter. His name was Baby Jim; he was a Chester White farrow over four years old, and after slaughter dressed 637 pounds, which is 65 per cent. The hog was sold to the packer on the basis of 9 cents a pound, dressed weight, which is $57.33, whereas had he been four first-class butcher hogs, averaging 245 pounds, he would probaby have sold at $8.55 per 100 pounds alive, amounting to $83.79. Furthermore, four butcher hogs averaging 245 pounds could have been fattened and finished for market on less feed than it took to make this 1,000-pound hog. Baby Jim was too large to be slaughtered, scalded and scraped as a hog, and he was slaughtered and skinned like a beef. All this will not prevent a few fine hogs from being brought by age and feed to heavy weights, and does not detract from the fame of the largest hog ever shipped to the St. Louis National Stock Yards or the feeder who did it.

Cold-pressed Cotton-seed Cake.

The stock feeder and dairyman are particularly interested in obtaining economical, digestible feeds that will produce superior results. One of the new feeds is based upon the old law that uncooked albuminous foods are more digestible than cooked albuminous foods, the egg for example. The feed referred to is cold-pressed cotton-seed cake. Professor H. R. Smith, of the Nebraska Agricultural Experiment Station, author of "Profitable Stock Feeding," and a feeder of champions, has fed cold-pressed cake, and as supplement to corn and corn stover in a recent steer feeding test gave the largest and most economical gains. He also recommended it for dairy cows and sheep. E. M. Robinson, of Timewell, Ill., reports a ration in steer feeding of 6¼ pounds of cold-pressed cotton-seed cake per day with 15 pounds of shelled corn and a good feed of clover hay, made four pounds gain per day for sixty days. Mr. O. R. Billings, of Simpson, Kas., made twelve pounds gain per month per sheep by feeding shelled corn and alfalfa hay with an addition of one-seventh of a pound per day of cotton-seed cake. He reported it to be the greatest pound maker he ever used. A price list of cold-pressed cotton-seed cake in wholesale, bed-rock, car-load or ton lots can be had by addressing Geo. B. Smith & Co., Dept K, Union Stock Yards, Chicago, Ill. Shipments are made from the nearest warehouse to the buyer.

Swill For the Hogs.

"Where refuse, grease, milk, whey and other things that go to make up swill are left in the barrel day after day, bacterial growths develop, fermentation occurs, and chemical changes take place which often more than counteract by their detrimental action any value that the swill might have. Such filthy barrels are the most natural breeding place for disease germs. Scours is often caused by such uncleanliness. A breeder with a filthy swill barrel need not consider it an act of providence if his pigs suddenly sicken and die. It is his own willful act that is responsible. A filthy swill barrel is not alone unsightly, but dangerous. It should not have a place on any farm. Boiling water and an old broom applied once a week will do much toward keeping it sanitary, and to an extent presentable."—From Coburn's "Swine in America."

A FINE KIDNEY REMEDY.
Mr. A. S. Hitchcock (clothing dealer), 890 Carrier Building, East Hampton, Conn., says if any reader afflicted with a kidney or bladder trouble will write to him he will direct them to the splendid home remedy he so successfully used. He is glad to do this and does not wish you to send him money.

The high cost of living can be traced to extravagant methods in buying. The credit system is largely responsible for the big retail margins.

ALL BUT THE SQUEAL."
An always good story of the big packing houses in Chicago is to the effect that they use all of the pig except the squeal. The wide-awake, thrifty farmer is learning that good farming requires him to use not only corn for feeding, but corn and the cob—with of course a dependable grinder. One of this sort is the Star Grinder, a simple sweep mill which users declare to be strictly all right in every respect and very satisfactory. It grinds not only ear corn but small grain, and is an all-round, durable machine that it is a satisfaction to own. Our readers should as a mere matter of information write to the Star Mfg. Co., 30 Depot street, New Lexington, Ohio, for their descriptive booklet.

Auto Bargains

700 HIGH-GRADE USED CARS ON SALE. THEY ARE BETTER THAN CHEAP NEW CARS AND COST LESS.

WHY THEY ARE BETTER Made of sound material, they are built to last; they are better, as is invariably proven, after a year's running than when new; besides, after being "worked in," there is no chance of trouble from faulty design. When you hear of a car lasting from six to ten years you will find that it is a high-grade make so referred to.

SOME OF THE MAKES WE OFFER With no interest in pushing any particular make we offer you the advantage of being able to select from all the reliable makes with the assurance that we do not deal in any but cars of known quality and worth, such as the Pierce Arrow, Stevens Duryea, Packard, Peerless, Rambler, Stearns, Lozier, Mitchell, Locomobile, White Steamer, Oldsmobiles and dozens of other high-grade makes, too numerous to detail in limited space here, but which are specified in our Bulletin (free on request).

WHY WE CAN SELL AT SUCH LOW PRICES We are the largest dealers in the world in New and Second-hand Automobiles, and constantly keep in touch with enthusiastic owners who get the advance models, which makes them anxious to dispose of their present cars with the least possible delay. This is where our prompt deal and spot cash methods enable us to buy cars at figures so low that we can afford to sell cheaper than any dealer we have ever encountered. Besides, buying and selling in such enormous quantities, we do not have to hold out for large profits on individual sales, preferring to rely for our remuneration on the volume of business.

CARS FOR PLEASURE and BUSINESS While in the large cities we sell mostly touring cars, roadsters and cars used in the pursuits of pleasure, we have come to realize the other field for the use of the motor car—that of light transportation—and are prepared to fill any requirement in that direction, so if you want a car for business or combination, write us your wishes and let us advise with you.

WE ARE SURE TO HAVE THE CAR YOU WANT Our Bulletin (free on request) contains a large list, with descriptions and prices of very many well-known makes, comprising

RUNABOUTS and ROADSTERS—
All Sizes and Makes . . $100 to $1,200
SMALL TOURING CARS . . $250 to $1,150
LARGE TOURING CARS. . . $500 to $3,000

Every car we sell leaves us only after it has been thoroughly overhauled in our own shops, and is guaranteed to be exactly as represented.

LEADING MANUFACTURERS OF DEHORNERS

The Speculation in Oats.

On June 30th, 1909, the Board of Trade at Chicago considered December oats were worth 44 cents a bushel; on July 31st, the price decreased to 38⅝ cents; on August 31st, 37 cents; on September 30th, 38⅝ cents; on October 30th, 39¾ cents; on November 30th, 39¼ cents; and on December 31st the trade closed at 43⅝ cents. The interest now centers on May, 1910, deliveries. On July 31st May oats sold at 40⅞ cents; August 31st the close was 39½ cents; September 30th the close was 41¼ cents; October 30th at 42¼ cents; November 30th at 42 cents; and December 31st, 45⅝ cents. Considering the large oats crop, the December advance in price was somewhat remarkable.

A Plea For More Stock and Better Stock.

It would be surprising if we only knew what a vast sum farmers and stock growers are annually losing by keeping scrub hogs and cattle. I am glad to note farmers in this country are beginning to come from under fogyism and bondage of scrub stock and are stocking their farms with pure-bred cattle and hogs. I believe the time is fast coming when the scrub hog and cattle will largely be eliminated from Southern farms and cease to be a millstone around our necks. Our Northern brothers have greatly improved their farms and made a handsome profit by keeping pure-bred hogs and cattle. Why not we? We certainly have more natural advantages than any other section. The cowpea, the king of all legumes, is at home with us. All clovers and grasses thrive here. We do not have to erect expensive buildings to keep our cattle comfortable. With these natural advantages it is ridiculous to think that so many Southern farmers scarcely keep any stock at all, while many who are keeping cattle are still content to hang on with bull-dog tenacity to the razorback hog and the scrub breed of cattle. I know of several farmers who have stocked their farms with good brood mares, that do all the plowing and draft work on their owners' farms and bring a net profit of $75 to $100 per year from colts. I had one farmer to tell me that he had one mare that had brought him $900 worth of colts during the last eight years and had never missed a single crop.

Many farmers could run a small dairy in connection with their general farming and thus convert their surplus feed into a more paying basis. I know of several farmers who have done this and have greatly improved their farms as well as received a neat income.

Some years ago Mr. J. Holmes was among the first to introduce thoroughbred hogs in this section. These cost him about $40 per pair. People in general thought he had lost his wits, and did much gossiping about the man who would spend $40 hard-earned dollars for two pigs. Since buying them he has time and again made his money back. He has sold a vast number of pigs at $7.50 and $10 each at weaning age. While he was getting this price for his pigs, those who laughed at him for paying $40 for two pigs sold their scrub pigs at $1.50 and $2.00 each.

We have made several feeding tests to see what difference there would be in weight of a scrub pig and a pure-bred pig at eight to twelve months of age. To make these tests the best grade pig of each variety was selected. These were always near the same age and and were given precisely the same kind of feed, same amount of feed, as well as the same attention. One test showed a net gain of seventy-three pounds more pork from the blooded pig at twelve months of age over the scrub pig at same age. Another test showed a gain of eighty-six pounds for the pure-blooded pig over the scrub pig, each slaughtered at thirteen months of age.

Brother farmers, if you are still hanging onto the scrub pig, make one impartial feeding test and see if you do not say farewell forever to Mr. Scrub Hog. I have also found that it did not pay to cross-breed pure-breds with the scrub variety or with other pure-bred varieties. Get one good breed, keep the quality up by introducing new blood of the same variety.—W. C. Crook, Huron, Tenn.

There are people on this continent who are paying 10 cents a pound for bread when the farmers are selling wheat at 2 to 2¼ cents a pound.

If You Have

Cattle, Hogs or Sheep to Market

Or Are Thinking of Buying Feeders—

Remember, that upon your choice of a commission firm may largely depend your profits. Any banker, and any live-stock shipper for whom we have ever done business, will tell you that

Clay, Robinson & Co. Are "O.K."

We invite your consignments, whether large or small. Whether you are a feeder who ships only an occasional carload, or a regular shipper, you may rest assured of first-class service and highest market value.

Our feeder-buying service is unexcelled. Send us your orders for anything you want in the line of feeding cattle or sheep, and save money and worry.

Reliable market information and advice cheerfully furnished. Write us at whatever market you intend shipping to.

End of a Mule Sale.

A remarkable instance of the ability of interest to "work while you sleep" was brought to light in December when George Scheffing, of Creve Coeur, St. Louis county, Missouri, paid Richard Stevens, a Clayton attorney, $700 in sattisfaction for a judgment of $1,019, $319 of which was interest. The original not was for $240.

George Scheffing told the following story: "Twenty-five years ago my father, Jacob Scheffing, bought a span of mules, and, not having the cash to pay for them, borrowed $240 from James Fitzgerald, a neighbor, and gave his note for the amount. Fitzgerald died shortly afterward, and the note passed tino the hands of his son, Marshall Fitzgerald.

"The son brought suit on the note in 1891 and a judgment was rendered in his favor for $645, the amount of the note, accrued interest and costs of the suit. This judgment was revived in 1894 and in 1897, costs and interest being added each time. The only payment my father made was $100 in cash. The judgment was again revived in 1902, and at that time the amount was $1,079. In 1903 Marshall Fitzgerald died, and his administrator, Lucius Hibler, collected $300 on the debt.

"The claim was turned over to Fitzgerald's sister, being then $838. The judgment was revived in 1905, and again last month for the sixth time. The last judgment was for $1,019. I offered to pay $700 in settlement of the claim to Miss Fitzgerald, and the offer was accepted."

Mr. Stevens said that since 1902 Scheffing has paid sufficient interest on the note to make the total amount paid for one original debt of $240, $1,343. This is a record price for a span of common working mules.

Honoring Cyrus Hall McCormick.

The Illinois Farmers' Hall of Fame, designed to commemorate the achievements of the great men of agriculture, was opened December 15th, when ceremonies in honor of Cyrus Hall McCormick, inventor of the reaper, were held in the auditorium of the University of Illinois.

The name of McCormick was honored by being the first to be enrolled in the Hall of Fame, and the climax of the ceremonies came when his portrait, by G. P. A. Healy, was unveiled by Muriel McCormick, the little granddaughter of the inventor, who released the cord which held an American flag over the picture.

A feature of the exercise was the presence of Mrs. McCormick, widow of the inventor, who occupied a seat of honor. Mrs. McCormick was visibly affected by the eulogies of her husband.

When Colonel Charles F. Mills, of Springfield, former President of the State Board of Agriculture, paid her a tribute for her assistance to the inventor, the audience, which filled the great auditorium, broke into thunderous applause. Once more she was cheered when Colonel Mills related her part in the decision of McCormick to rebuild the factory in Chicago after the great fire of 1871.

The sentiment of the ceremonies was that the heroes of peace as well as war deserve recognition. The prediction was made that other states would follow the lead of Illinois and signally honor their great men in agriculture It was declared eminently fitting that Illinois should pave the way in such an undertaking.

Trumans' International Winnings.

At the Chicago International Show of 1909 Trumans' Pioneer Stud Farm of Bushnell, Ill., again demonstrated that they import the very best Shire horses obtainable in England. Their four-year-old stallion, the magnificent Dan Patch (illustrated on page 14 of our November issue) was grand champion Shire stallion, and their famous mare, Wrydeland's Sunshine (also illustrated on page 14 of our November issue) was grand champion mare. Their four-year-old stallion, Dan Patch, was placed champion, three years old and over, and later grand champion, a feat never before equaled by a four-year-old Shire stallion at the greatest of all shows in the world. They also won first, second, fourth and fifth in aged stallion class; first and fifth, three-year-old stallions; second and fourth, two-year-old stallions; first, second and third, aged mares; and first, second, fifth, two-year-old mares; first and second, five best stallions; first and second, three best mares. Cup for best mare and colt. The show was the largest Shire exhibit ever held in the country, and clearly proves that Trumans' Shires are in a class to themselves. In addition to the regular prizes their Shires won seven cups and two English gold medals.

MOVING PICTURES

OF THE WONDERFUL WORLD CHAMPION

DAN PATCH 1:55

ABSOLUTELY **FREE** TO STOCKOWNERS

It is a New Invention that you can carry in your pocket and show your friends instantly, day or night, once or a hundred times. The original is the only moving picture ever taken of a World Champion Horse in his wonderful burst of speed.

A MILE OF 2400 MOVING RACE PICTURES OF DAN PATCH 1:55

and every picture shows the King of all Horse Creation as plainly as if you stood on the track and actually saw Dan Patch 1:55 in one of his Thrilling Speed Exhibitions for a full mile. 2400 distinct moving pictures taken of Dan in one minute and fifty-five seconds means twenty-one pictures taken every second all of the way around the entire track from the back seat of a high power automobile. You can see Dan shake his head to let his driver know that he is ready for a supreme effort and then you can watch every movement of his legs as he flies through the air with his tremendous stride of 29 Feet. You can see his Thrilling Finish as he strains every nerve to reach the wire, you can see his driver dismount and look at his watch while thousands of people crowd around, you can see his care taker force his way through the crowd and throw a beautiful woolen blanket over Dan to prevent his catching cold and then you can follow him up the track before the Madly Cheering Multitudes. As a Study Of Horse Motion it is better than the actual speed mile because you can see Dan right before you for every foot of the entire mile. When first shown to the public this marvelous picture caused people to stand up all over the theatre calling "Come on Dan"—"Come on Dan."

This Remarkable Moving Picture is the Most Realistic and the Most Thrilling ever presented to the public. I have taken a part of the Original 2400 Wonderful and Sensational Pictures and made them into a **Newly Invented Moving Picture** that you can carry in your pocket and show to your friends at any time, day or night. It does not need a machine, it does not need a curtain and it does not need a light. **It Creates a Sensation Wherever Shown.**

MY NEW MOVING PICTURES MAILED FREE TO STOCKMAN, postage prepaid, IF YOU ANSWER THESE THREE QUESTIONS

1st. In what paper did you see my Moving Picture Offer? **2nd.** How many head Each of Horses, Cattle, Sheep, Hogs and Poultry do you own? **3rd.** How many acres of land do you own or how many acres of land do you rent?

IF YOU ARE NOT A STOCKOWNER AND WANT THE MOVING PICTURES SEND ME 25 CENTS FOR POSTAGE, For Packing, etc., In Silver or Stamps and I will mail you this Wonderful Moving Picture of Dan Patch 1:55, The Fastest Harness Horse The World Has Ever Seen.

FARMERS, ATTENTION!

If you would prosper, diversify your crops. Every farmer and planter should grow better and more corn and other farm crops. Diversity is the road to prosperity and wealth. By special arrangement with this paper, the Ratekin Seed House of Shenandoah, Iowa, agrees to mail free to any subscriber a copy of their big illustrated Seed Catalogue and a sample of Diamond Joe's Big White Corn. This great book is worth dollars to every farmer and planter in the South. It's free to our readers. Write for it to-day. Address, Ratekin's Seed House, Shenandoah, Iowa, Box No. 387. (Mention this paper when you write.—Editor.)

Size in the Market Horse.

The size of the horse is no recommendation so far as speed is concerned, but it is a great item when it comes to general utility in the horse market. If the hundreds of thousands of trotting horses that are failures as racing machines had more weight, the mares would be in great demand for breeding to the draft horse, which is to-day the only horse that the market man can see any great future for.

Hundreds of thousands of light horses are sold on the markets from $70 to $160 per head, classed as Southern, that with the same style and condition and two hundred pounds more weight, would sell for $170 to $260, which is a straight $100 average more.

Experience has proven that the breeding combination of the heavy draft stallion with the small mare does not produce a draft horse or a good express horse; in fact, it sometimes produces a heavy-footed small horse, which is neither one thing or another. The small-horse style and finish have gone and the power of the draft horse is not obtained.

The horse-market buyer can see all the style and conformation there are in the horse at a glance, but he looks for bone and substance. Said a salesman: "We are looking for horses that can do an honest day's work. The wheel horses cost the most money. If not a full-weight draft horse, let us have the next best—a good, substantial express wagon horse, or a stout chunk that alone can pull a delivery wagon all day long. Most of the horses that are neither one thing or the other weigh from 1,000 to 1,100 pounds. Many of them are leggy and light middled, pretty good farm horses, but not good market horses, and are surprisingly without what the market calls 'class.'"

In conversation with a regular horse dealer held recently, he said: "These horses which sell at low prices are sired by stallions that, being grades, cannot reproduce themselves. It requires years and years of direct breeding to fix the characteristics of the horse; but country people buy a decent-looking grade colt, and, instead of a pretty good gelding coming to market, he is used for service at a small fee and the result is what you see."

We are having a revival in the horse market. Horses are selling high. The market reports so indicate. Not far in the future it looks as though there will be a demand for every good horse at a substantial advance on present prices, and the horses that will bring the money are the horses that will weigh from 1,250 to 1,600 pounds and have the power that goes with the weight.

At the English Royal Horse Show, Captain Borille, of the French Regiment of Cuirassiers, cleared a hurdle seven feet four inches in height with perfect ease. This is claimed to be the world's record for the high jump.

Lump Jaw

The first remedy to cure Lump Jaw was

Fleming's Lump Jaw Cure

and it remains today the standard treatment, with years of success back of it, known to be a cure and guaranteed to cure. Don't experiment with substitutes or imitations. Use it, no matter how old or bad the case or what else you may have tried—your money back if **Fleming's Lump Jaw Cure** ever fails. Our fair plan of selling, together with full information on **Lump Jaw** and its treatment, is given in

Fleming's Vest-Pocket Veterinary Adviser

Most complete veterinary book ever printed to be given away. Contains 192 pages and 69 illustrations. Write us for a free copy.

FLEMING BROS., Chemists, 318 Union Stock Yards, Chicago, Ill.

Small Harness Horses.

The first 2:20 trotter was the little 14½-hand mare Flora Temple, 2:19¾, and the first to trot a mile under two minutes was the small mare, Lou Dillon, that weighed in trotting condition a little over 800 pounds. The greatest campaigner of her day, Goldsmith Maid (2:14 at 17) weighed 850 pounds after retirement from the track, and but 820 pounds when in trotting condition. It is said of this mare that she trotted the best race of her life when nineteen years old, and on her twentieth birthday trotted a second heat in 2:14½. When retired to Fashion Farm, Trenton, N. J., it was as the fastest and the greatest of living trotters, the winner of ninety-five contested races, 332 heats in 2:30 or better. Was there ever a 16-hand horse that could endure the campaigning that this little mare did and retire sound? After her trotting days were over, when past twenty-two, she produced three foals, including the noted sire Stranger by the Morgan horse General Washington. There have been few, if any, more popular champion mares than the handsome little brown Nancy Hanks, 2:04, and she not only has a record as a trotter, but as a brood mare as well. The mare to reduce Nancy Hanks' record was the small and dainty Alix, 2:03¾. One of the most popular champion trotting stallions that ever lived, the inbred Morgan, Ethan Allen, 2:25½, was only fifteen hands high, and his best son, Daniel Lambert, one of the greatest perpetuators of trotting speed, was a little dark brown horse of fifteen hands, known as Simmons' pony. Other noted trotting horse sires of about the same size as George Wilkes were Dictator, Alexander's Abdallah, Strathmore, Alcyone and Wilton, 2:19¼.—The Horseman and Spirit of the Times.

The Proper Way to Sow Alfalfa.

The best way to sow alfalfa is to drill the seed in rows, and most growers prefer to sow the seed in drills six inches apart, and if a farmer buys a seven or eight-inch drill he is compelled to plant the way the drill is set. However, the Hoosier Grain Drill, manufactured by The American Seeding-Machine Co., Incorporated, Richmond, Ind., is an exception to the rule, because a farmer can change the spacing between the discs so as to plant his small grains seven or eight inches apart, and then sow his alfalfa six inches between the rows. This, we understand, is a feature to be found on no other grain drill than the Hoosier. When you buy a Hoosier Drill you get full value for your money, and it is sold under a guarantee that means much to the purchaser. Hoosier Grain Drills have positive force feeds, great strength, light draft, simplicity, and no complications. Open or closed delivery, single disks, double disks, shoe or hoe furrow openers, can be obtained on the Hoosier Drills. They can also be obtained in plain grain and combined grain and fertilizer styles. No matter where you live or what your seeding conditions may be, there is manufactured a Hoosier Drill that will do your work right. Send to the manufacturers today for a copy of their Hoosier catalogue, and ask for any special information you may want. After you have read this catalogue, go to your nearest implement dealer and insist upon seeing the Hoosier Drill.

No. 1 Red Globe onions were selling at St. Louis for 68 to 75 cents a bushel, late in December.

Get this Genuine Carborundum (Diamond) Tool Grinder on Free Trial

Sharpen your tools at my expense. I want to show you that the ancient grindstone is a back number and that the emery wheel is a menace. I want you to try positively free this Genuine Carborundum Farm Tool Grinder. Carborundum is the only true abrasive. **It will not draw the temper from steel;** it will sharpen the dullest tool in from 3 to 5 minutes, when the grindstone would take half an hour. Carborundum **never** wears out. It does **not** glaze over.

I want to send a few of these machines out on **Free Trial** in every part of the United States. I want to put one in every locality. I want you to clip off and send the coupon at the upper right hand corner of this announcement, and I will mail you at once my circulars explaining every detail of the offer I am making here.

I Don't Want You to Send Me a Cent of Your Money. I Don't Want Any Promise.

I merely want to place this Genuine Carborundum Grinder on your farm for a few days. Sharpen your dull axe, your dull scythe, your dull corn knives, your dull cold chisels, or hatchet, or any dull tool you have. See how quickly and how easily it is done. See how Carborundum (made of the substance of real diamonds) sharpens your tools in from one-fourth to one-twentieth of the time required by a grindstone and does not heat nor draw the temper. Do all this—give this great machine the most severe tests—then unless you think that you positively cannot get along without this Carborundum Tool Grinder, send it back at our expense. We'll ask no questions. We'll take it back without a word, and we'll pay the transportation charges. Now send the coupon. Let us tell you all about this wonderful abrasive and our free trial offer.

Remember—Carborundum is really manufactured diamonds. It is made from the very same substances which go to make up diamonds. Carborundum will scratch a diamond and cut glass like a knife cuts an apple. Send the coupon today and get full explanation of our **Great 10 Day Free Trial Offer.** Do this now. Do not delay.

COCKERINGTON TUG OF WAR—First-prize three-year-old Shire stallion at the Iowa State Fair of 1909. A first-class, good-quality representative of the English draft breed. Exhibited by Trumans' Pioneer Stud Farm of Bushnell, Ill.

LADY EFFIE—Champion Clydesdale mare at the Illinois State Fair of 1909. She won first in class for aged mares and champion also in a show of Clydesdales that was above the average. Exhibited by James Kennedy, of Utica, Ill.

Horse Notes.

Spirit of the West says: "Place the windows in front of the stall at least three feet above the horse's head. The sun should not shine directly into his eyes."

From Lexington, Ky., December 22d, it was reported that Mr. A. R. Long, of Kansas City, has bought of L. T. Anderson, of Maysville, Ky., the noted show and saddle stallion, Knigh of Point Au View, for $6,000. This is the highest price ever paid in the Blue Grass region for a similar animal.

Don't Have a Blind One

"VISIO" Wonderful Discovery

DISEASES of the EYE successfully treated with this NEW REMEDY.

AN ABSOLUTE CURE

for **Moon Blindness,** (Ophthalmia), **Conjunctivitis and Cataract, Shying horses all suffer from diseased eyes.** A trial will convince any horse owner that this remedy absolutely cures defects of the eye, irrespective of the length of time the animal has been afflicted. No matter how many doctors have tried and failed, use "VISIO," use it under our GUARANTEE; **your money refunded if under directions it does not effect a cure. "YOU PAY FOR RESULTS ONLY." $2.00 per bottle, postpaid on receipt of price. Visio Remedy Ass'n., Dept. C, 1933 Wabash Ave., Chicago, Ill.**

LET US TAN YOUR HIDE.

Mr. Stockman, what difference does it make to you when you send your hides away to be tanned and made up into coats, robes and rugs, whether the distance is less or more, so long as **"Crosby pays the freight"** both ways when three or more cow, steer or horse hides are sent in one shipment?

Why not send them to the oldest and largest establishment of the kind, where you will be sure of good results? In that way you can get better and cheaper fur goods than you can buy.

Figure on it and get our illustrated catalog, which gives prices and a lot of other useful information. Address

The Crosby Frisian Fur Company, Rochester, N. Y.

Please mention Nat. Farmer and Stock Grower.

$8,760,000,000!!

That's the Value of Farm Products for 1909—Isn't It Great?

Think of producing on the farms of the United States twice as much new wealth in one year as is represented by all the gold money in the world outside of this country!

No wonder our esteemed friend, Secretary James Wilson, of the Department of Agriculture, is jubilant.

It is a showing that every citizen is proud of, whether he had a hand in the production or not.

The most gratifying story told by these figures is that they represent a gain over the previous year of $869,000,000.

We are going ahead—going ahead rapidly. That is the best message we gather from this report of our results for 1909.

But, instead of being content with these figures, let us take them only as an indication of what our real possibilities are, and let us use them merely as a mile post in our climb to better things.

Let each of us, for instance, look back over our operations of 1909 to determine whether or not we did our share toward making this showing possible.

We all know that there are about 6,000,000 farms in this country. Did 6,000,000 advance improve, produce more wealth—or did one million, two million, or three million do all of this pushing and improving of methods to make a gain of $869,000,000 possible?

We ought to stop and think of what has made the gains of former years possible. We must stop to realize that this gain of $869,000,000 for 1909 is not due to so much more land under cultivation, but has been brought about primarily by better methods of cultivating the same land that has been cultivated before; by better methods of preparing the soil, sowing the grain and harvesting the crops.

Without the wonderful strides made in the development of farm machines, an $8,760,000,000-crop would be entirely out of the question.

And yet there is room for progress—the rules of 1909 farming are not the rules for 1910. New machines mean new advances and new wealth, Do you keep abreast—are you posted about these things?

About traction plowing—how to plow more acres, in less time, with less expense, for better, bigger returns:

How a good disk harrow will enable you to make better seed beds;

Why it's to your advantage to spread manure the right way—as soon as you get it—instead of spreading it after half its value is gone.

About the money-saving and money-making advantages of having a good, reliable, dependable gasoline engine on your place; how it will help to keep the boys at home; how it will save you a hired man's wages—and how it will more than pay for itself in twelve months.

What the right kind of a cream harvester means to you in increased milk and butter profits—and skim-milk calves;

Why a good feed-grinder means fatter stock;

How greatly to increase the value of the 1910 hay crop by using the right mower, tedder, baler, etc.

How to know all about harvesting machines;

How to get the most possible profit out of the stalks as well as out of the ears by harvesting your crop in the right way—at the right time;

How to know the ear-marks of a good wagon.

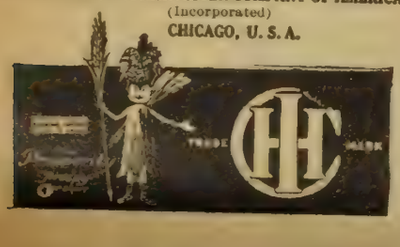
If any of these will help you, please secure a copy of our book—"Glimpses of Thrift-land." That tells the whole story briefly and in verses that you'll like. Then we have some books that are still more business-like—the I H C Almanac and Encyclopaedia, and Farm Science. Say which you are most interested in. All are free for the asking.

There is an International dealer near you. He will be glad to see you to hand you one of our new 1910 calendars, posters, catalogues or pamphlets on harvesting and haying machines and tools, and tillage implements, or any of the machines mentioned above.

Yours for a still bigger showing in 1910

Prosperity—Prospy for short

INTERNATIONAL HARVESTER COMPANY OF AMERICA
(Incorporated)
CHICAGO, U. S. A.



The Edison Phonograph on a Free Loan.

On another page of this issue, F. K. Babson, Edison Block, Chicago, is making a remarkable free loan offer on Edison phonographs. This offer does not require you to send one cent in advance. The phonograph is lent to you absolutely free, the only request being that you invite a few of your friends in to hear the free concert.

Mr. Edison has often expressed the opinion that he would like to see a phonograph in every home in the country. This free loan offer is fast making Mr. Edison's wish an actual fact. Mr. Edison has spent years and years perfecting the phonograph, and his close associates say it is his favorite invention. This splendid instrument is being offered on an absolutely free loan offer.

You do not have to send money in advance. In fact, it is unnecessary to send any money at all unless you decide to keep the machine. It is a real Free Loan. No mortgage, contract, or C. O. D. payment. You are not tied up in any agreement whatever, and you do not send in a single penny in advance. You may keep the machine in your home, entertain your family and your friends and neighbors. You may then, if you wish, return the outfit at the expense of the company.

The purpose of this offer is to give everybody a chance to hear the latest and best phonograph made. And you get to hear it under the very best conditions, right in your own home. You can pick out your records in advance and you can have all your friends in and give a concert. Mr. F. K. Babson, of Chicago, who has sold thousands and thousands of phonographs, says that this method gives the phonograph more publicity than any other, and that he can well afford to offer this free loan just to have you and your friends hear this machine. Very likely some of your friends will want to keep the phonograph on the remarkable terms of only $2.00 a month, or you yourself may decide to keep the phonograph. But you are under no obligations to do so and you do not have to try to sell the phonograph to your friends. Mr. Babson employs no salesmen, and he is willing to make this offer even if no one buys, just to have you and your friends see and hear this magnifient phonograph.

You should send at once for the free Edison catalogue and list of 1,500 Gold Moulded and Amberol Records. The Amberol Records are the longest playing records made, giving a performance on one record that will last four minutes. Full particulars of the Free Loan will be sent. You need not send a letter; a postal will do, or the coupon of the advertisement that appears in this issue. Address, F. K. Babson, Dept. 3131, Edison Block, Chicago, Ill.

The Big Red Apple.

At the National Apple Show held recently at Spokane, Wash., an apple exhibited by Post & Son, of Chelan, Wash., weighed 41 ounces and was 17⅛ inches in circumference. This apple, unfortunately, was disqualified owing to two small cuts caused by handling and packing. The first prize was awarded to Lorr & Ball, of Methow, Okanogan county, Wash., on an apple weighing 25 ounces and 16⅝ inches in circumference.

A MOST BEAUTIFUL PICTURE—"THE WOOING."

This is a most elegant and beautiful picture. The colors are delightful. It is the refinement of elegance in the treatment of the "Story of Love." This represents the companion picture to another picture entitled "Playing Two Games at Once." In order to hurry up old subscribers, to encourage new subscribers and to do something we are proud of, we are offering these two elegant 16x20-inch pictures to anyone who will send direct to us a postoffice money order for 50 cents to pay for one-year's subscription to The National Farmer and Stock Grower. This is a good farm paper. Read it over and you will find it to be interesting and instructive, and you will be delighted with the pictures; if not, we will refund the money.

SUBSCRIPTION BLANK—Cut It Out and Mail to Us.

The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Herewith please find 50 cents. Please credit up one-year's subscription to The National Farmer and Stock Grower and mail to me the two beautiful 16x20-inch pictures as advertised.

THE GUIDE POST TO PROFIT

CONSIGN YOUR LIVE STOCK TO CLAY, ROBINSON & CO.

NATIONAL STOCK YARDS, ILL.

We desire to invite stock raisers and shippers to make their headquarters with us at the St. Louis National Stock Yards. We have a splendid office and a superior working force in all departments. On December 28th, 1909, we topped the cattle market three times in one day. We obtained $7.25 for thirty-seven head, 1,224-pound steers shipped by Mr. F. J. Kallal, of Jerseyville, Ill. We sold twelve head of 1,340-pound cows at $6.00, and ten head, 640-pound heifers at $6.25. Each sale put a top on the market. We are making new records and ask stockmen to obtain the benefits of our top-notch service. See our general advertisement on page 13.

REMEMBER:

THE GUIDE POST TO PROFIT

CONSIGN YOUR LIVE STOCK TO CLAY, ROBINSON & CO.

NATIONAL STOCK YARDS, ILL.

A Ten-dollar Bill.

The old-time breeder, J. P. Vissering, Godfrey, Ill., writes: "If this were written on a ten-dollar bill it would scarcely be more valuable to you than the message it now contains. The hog is a marketable commodity of greater value than the grain he eats. Prices are soaring amongst the stars now. If you among others who curtailed their herds when prices were down now want to drop into line, listen: I am offering stretchy gilts bred to Big Prospect boars, summer and fall pigs, and a few boars fit for service, of the kind that every experience of farmers demonstrates to be more profitable. If you have so far failed to get the big-type Poland-Chinas, try mine. You take no chances, because you can return them after five-days' resting." Address, J. P. Vissering, Box 1, Godfrey, Ill.

NATIONAL STOCK YARDS, ILL.

Ship to the Best Market and the Best Firm on that Market. There is more competition at St. Louis for Native and Southern Cattle than at any other Market on the continent. The St. Louis Hog Market continues to grow, and is habitually 10 to 25 cents a hundred pounds higher than the Missouri River Markets. Sheep and Lambs sell at St. Louis to the advantage of the shipper.

WE KNOW THIS MARKET AND RECOMMEND IT ABOVE ALL OTHERS.

Don't hesitate to write or ship to

JAMES H. CAMPBELL,
National Stock Yards, Ill.

EXPERT SERVICE IN EVERY CLASS OF STOCK—SHIP US YOUR CATTLE, HOGS AND SHEEP.

The Great Bloomington Horse Sale.

On February 1st, 2d, 3d and 4th, 1910, 483 head of magnificent horses will be sold in the large Coliseum at Bloomington, Ill., which is well heated and fixed to accommodate 4,000 people. There will be sold 460 head of registered draft horses, and 150 of these are imported Percheron and Belgian stallions and mares that will land just in time for the sale. We have the largest collection of draft horses that ever went into an auction ring. Messrs. Stream & Wilson have sixty head of one and two-year-old stallions and mares just ready to ship from France, January 1, 1910, and also W. H. Ritter will leave France with fifty head about January 6, and land just in time with them for the sale. Among the next larger consignors are: Mr. Augstin with a large bunch of Percherons; Moots Bros. with imported Percheron mares right in their prime; Robert Burgess with a large bunch of imported ones; Finch Bros. with a large consignment; John C. Baker with the regular consignment of Percherons; and 105 other consignors with some of the very best of their herds. This means that we are going to have one of the greatest horse sales ever pulled off in the United States. It is a regular Fat Stock Show as well as a Horse Sale. It is the best place on earth for the beginner to come and pick from, for he can see them side by side and choose for himself. He will not have to go where there are only twenty to thirty for sale, but we actually have 483 horses that will go for the high dollar.

We will commence the sale on Tuesday, February 1, with fifty-one imported stallions and mares of W. H. Ritter at 9 a. m. We will sell all day and each evening from 7:30 to 10 p. m. We expect to sell 125 horses per day, and the last day, Friday, will be one of the very best days of the sale, as we have 100 head of as good horses as ever stood on four feet to offer at public auction. All road horses sold on the last day.

Now, to get a better history of the sale, just send and get a catalogue and see 483 horses, most of which are pedigreed, in one catalogue, and every animal for sale. Come to one of the nicest and cleanest cities in the United States and spend four days and see if you ever saw such a bunch of horses in your life.

We have the best of hotel accommodations, all within four blocks of the Coliseum, where the big sale will be held. It makes no difference how cold it may be; we can be comfortably heated if it is 20 below zero.

Come and see a real horse sale once. Write for catalogue to C. W. Hurt, Arrowsmith, Ill.

The St. Louis Horse Trade.

Messrs. Holland, Nugent & Maxwell Bros., holding horse auctions at the St. Louis National Stock Yards, report a more active business the last two weeks in December than they expected, and consider the New Year prospects to be very good. They have advices of a larger attendance of Eastern buyers promised, which indicates a strong demand for the better grades specially adapted for city work. They wish all horses to arrive during Sunday and Monday, so as to obtain the benefit of the Monday and Tuesday markets. This firm receives a large number of regular single car-load shipments, which come from careful buyers, and they are better able to keep these shippers thoroughly posted in regard to buying than if they shipped irregularly. Mr. T. H. Holland will give personal attention to correspondence. Address him and the firm at National Stock Yards, Ill.

The St. Louis Mule Trade.

At the close of the year, Messrs. Holland, Nugent & Maxwell Bros. advised their shippers as follows: "The mule trade is very good at the present, and all fat, finished mules are selling strong. If you have got a good load of mules, you can ship them with every asurance of finding a good market. We look for the mule trade to improve from the first of the year, and it will be more active than it has been the past six weeks." Messrs. Lan Morris and Ed Conway are the expert mule salesmen for this firm, and they are first-class in every respect, judges of mules, men and markets. Write and mention exactly what you have for sale and they will advise you promptly.

Jos. A. Maxwell Mule Co.

This is the pioneer firm of mule dealers of the St. Louis market, and their specialty is of the better class. Contracts are entered into for any number or grade of commercial mules, and satisfaction is guaranteed. Members of the firm also contract for cavalry, artillery, Cuban or Eastern horses. It is a safe firm to do business with, always upholding the highest traditions of the great market which they have had so large a hand in establishing. Address, Jos. A. Maxwell Mule Co., National Stock Yards, Ill.

St. Louis Live Stock Market.

During the year 1909, at the St. Louis National Stock Yards, the cattle receipts were 1,240,798 head, which is by 95,333 head the largest yearly arrivals at the market. The hog receipts were 2,473,245 head, showing a decrease of 86,782 head, compared with the highest record. This is the best hog showing of any market, the hog decrease at five principal markets being 3,166,177 head, as compared with the previous year. The sheep receipts were 775,567 head, being 96,425 head greater than the previous year, and by 87,671 head the largest yearly receipts at the market. Horse and mule receipts were 112,471 head, the largest number received at any market, and 3,078 head greater than the previous year.

Mr. A. S. Ennis, owner of Sunset Jersey cattle herd, has two fine registered bull calves for sale cheap. They are from splendid dairy cows of the best families, one in breeding near to Diploma's Bird, and the other a St. Lambert cow. He is also booking orders for S. C. Buff Orpington eggs. His business address is 712 Missouri Trust Bldg., St. Louis, Mo.

The last Elgin quotation for choice creamery butter in December, 1909, was 36 cents a pound.

NATIONAL STOCK YARDS, ILL.

Practical Barn Plans.

This is the name of the best book out. Every farmer needs it. It contains drawing, pictures, plans, specifications and everything necessary and up-to-date for a barn, stock shed, wagon shed, corn barn, smoke house, ice house, silo, dairy barn, or any other conceivable outbuilding on the farm. Not only one plan of each, but many of each are shown with all the latest inventions and contrivances for saving time, money and labor.

Each and every plan in the book is accompanied by a lengthy written description, explaining and giving the details of the drawings, and so worded and arranged, numbered and indexed, that it must be readily understood by anyone who reads it.

The price of this book is One Dollar, and we include one-year's subscription to The National Farmer and Stock Grower. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

With Only a Single Cow.

A cream separator will pay if one has but a single cow. True, the statement depends upon the amount paid for the machine, but this problem has been successfully solved by the American Separator Company, who have produced a cream separator that is truly a wonder, both in the work it does and the price at which it is sold. Only $15.95 for a complete separator, made of the very best material and of the latest design. It skims over a quart of milk a minute, and does it perfectly. This company offers to send the machine absolutely on trial, affording the opportunity to test and compare it with any other separator made. It is a model of workmanship and fully supports the motto of the company, viz.: "Not how cheaply can it be built, but how well can it be built and how cheaply sold."

For a small dairy, hotel, restaurant or even private family, it is just what has been needed. When a machine like this can be obtained for so low a price, then certainly no one making even a little butter will do so without a separator There is nothing laborious in operating it; any woman or fairly grown child can run it sitting down; while it is a most simple machine to care for. Being made and sold by the oldest exclusive manufacturers of hand cream separators in the United States is, in itself, a guarantee of quality, and anyone interested at all in cows owes it to himself to write to the American Separator Company, Box 1102,Bainbridge, N. Y., and ask for their $15.95 proposition. They will send it free, postpaid, together with their handsomely illustrated catalogue describing their full line of separators of all capacities and also explaining their system of selling direct to the user.

Yield of Mangels.

A farmer in DuPage county, Illinois, tells me his experience in raising mangels. He plowed up an acre of old blue grass pasture, and after spreading a thin coating of manure over it he applied 400 pounds of bone meal on it. He weighed off a crop of thirty-five tons from the acre. Farmers all around said he could not raise beets, but the result showed that it could be done, and with big profit, too. Beets need a well-conditioned ground to start with; and, to get both quantity and quality, plenty of organic matter, coupled with artificial fertilizers, is essential. The mistake is frequently made in attempting to grow turnips or beets on poor ground. A firm of onion growers, near Chicago, has this proposition well in hand. Their onion ground is heavily manured (forty tons per acre) every year. To prevent maggot or fungus, onions will be dropped next year and the land turned to sugar beets. That ground was plowed last fall, thoroughly disced and now is in as fine mechanical condition as any market gardener could ask for. It should produce an enormous crop of sugar beets.—L. C. Brown.

The Greatest Butter Record.

This is said to be the best record of any cow for a year, so far as butter-fat is concerned.

She is four and a half years old and her name is Hon. Missy of the Glen, 18,390.

She gave 14,591.7 pounds of milk in the year; the percentage of butter-fat was an average of 6.54.

The total amount of butter-fat produced in a year was 954.76 pounds, which, when salted and worked, represents 1,100 pounds of butter.

Hon. Missy of the Glen is a Newport, Rhode Island, aristocrat. Her home is owned and she was bred by Mr. H. A. C. Taylor, of Glen Farm.

Hon. Missy of the Glen is one of twenty-seven descendants of an imported cow, Polly del Epinel, 4,649. Her sire was an Advanced Register bull, but his name is not mentioned in the statement sent out by the American Guernsey Cattle Club.

The Hon. Missy calved on October 25th, 1908, but her test did not begin until December 1st and then continued a full year.

The lowest butter-fat content for any one month was in the first month —December—4.68 per cent,; the highest was the following October, when there was recorded the wonderful average of 9.07 per cent.

Hon. Missy was a good feeder. In October, when she produced 104.41 pounds of butter,-fat, she ate 511½ pounds of grain, besides corn fodder, beets and pasture.

She was an out-door cow in all kinds of weather. At first she was milked twice a day, but later three times a day. She was only out of condition three times in the year, then caused by sore feet, and she ended the contest in excellent condition.

This record is authentic. Every precaution was taken to verify milkings and butter-fat percentage.

The reason why she is called The Honorable Missy is because her record is above 1,000 pounds of butter in a year.

Later on we will try to obtain an illustration of Hon. Missy of the Glen.

Two-year-old Seed Corn.

A Woodford county, Illinois, correspondent writes: "My corn was badly frozen by the freeze on October 9, but I have a quantity of seed left over from the crop of 1908. Will that make good seed next spring?"

Corn of the 1908 crop was uncommonly good and sound. If our correspondent has kept his seed in a dry, well-ventilated storage, it undoubtedly will be all right for planting next spring. I have usually found that two-year-old seed did not germinate as vigorously as new seed, and tests run from 5 to 10 per cent. under what the same seed would test the year before.

The thing to do is to test this seed now, and if it runs as high as 80 per cent., keep it, and if better, fresh seed cannot be had, by all means use it. This seed no doubt is thoroughly dry, so that there is not much danger from freezing from now till planting time. Some careful farmers invariably save seed for two years, expecting to be caught some time with just the conditions we had in October. Stick by your old seed, but don't neglect to test it just the same. It is most satisfactory to know just how good seed is when we put it in the ground.

There is no occasion for serious alarm over the seed-corn situation, but greater care should be taken in both selection and tests. Seed corn shoud be tested now, and then tested critically a month before planting is started.—L. C. Brown.

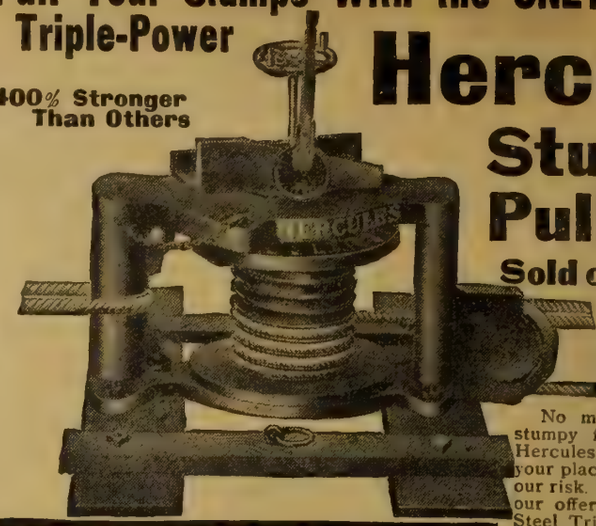
The 1909 Crop of Oats.

The bright, particular crop of the year 1909 was oats, the largest on record. The total was 1,007,353,000 bushels—200,197,000 bushels greater than in 1908, and 32.7 pounds to the bushel in 1909, against 29.8 the previous year. Illinois and Iowa are the grand states for oats—Illinois with 159,064,000 bushels and Iowa with 116,100,000 bushels.

Pull Your Stumps With the ONLY All-Steel Triple-Power Hercules Stump Puller

400% Stronger Than Others

Sold on 30 Days' FREE TRIAL



No more excuses for stumpy fields. Try this Hercules Stump Puller on your place for 30 days at our risk. Write NOW for our offer on the only All-Steel Triple-Power Stump Puller made.

Hitch On—The Stump is Bound to Come

The strength is there and the power is there. You may have had trouble with iron pullers, but this Hercules genuine steel puller is a different matter. It has 400% more strength than the best iron puller ever made, and with our triple-power attachment a one-third greater pull is developed. The Hercules is in a class by itself.

It is the only stump puller that is guaranteed for three years. The only stump puller made with double safety ratchets, making them doubly safe. The only stump puller having all bearings and working parts turned, finished and machined, reducing friction, increasing power and making it extremely light running.

Look At This Table

You will see why we have made the Hercules of steel. The table gives the strength per square inch of each different material. Steel is the only material for the Hercules.

Cast Iron	16500 lbs.
Copper	19000 lbs.
Bronze	36000 lbs.
Malleable Iron	40000 lbs.
Wrought Iron	47000 lbs.

Don't Risk Dynamite

It's dangerous and it's costly. Besides, it only shatters the stump and leaves the roots in the ground to grow again. The Hercules pulls roots and all, big stumps and small stumps, good sized green trees, hedgerows, etc. It is the machine for satisfactory work and keeping down the expense. Write us a postal now for free book and special 30-Day Free Trial Proposition, also low price to first buyers in each locality.

$15.95 AND UPWARD

THE LOW DOWN AMERICAN SEPARATOR

EXCELS ANY SEPARATOR IN THE WORLD

OUR LIBERAL TRIAL ENABLES YOU TO DEMONSTRATE THIS. While our prices for all capacities are astonishingly low, the quality is high. Our machines are up to date, well built and handsomely finished. Run easier, skim closer, have a simpler bowl with fewer parts than any other cream separator. Thousands of machines in use giving splendid satisfaction. **Write for our 1910 catalog.** We will send it free, postpaid. It is richly illustrated, shows the machine in detail and tells all about the **American Separator.** Our surprisingly **liberal long time trial** proposition, **generous terms of purchase** and the low prices quoted will astonish you. We are the oldest exclusive manufacturers of hand separators in America and the first to sell direct to the user. We cannot afford to sell an article that is not absolutely first class. You save agent's, dealer's and even catalog house's profits by dealing with us and at the same time obtain the finest and highest quality machine on the market. Our own (manufacturer's) guarantee protects you on every **American Separator.** We ship immediately. **Western orders filled from Western points.** Write us and get our great offer and handsome free catalog. ADDRESS,

THIS OFFER IS NO CATCH. It is a solid, fair and square proposition to furnish a brand new, well made and well finished cream separator complete, subject to a **long trial** and **fully guaranteed,** for $15.95. It is different from anything that has ever before been offered. Skims **1 quart of milk a minute,** hot or cold, makes thick or thin cream and does it just as well as any higher priced machine. Any boy or girl can run it sitting down. The crank is only 5 inches long. Just think of that! The bowl is a sanitary marvel; **easily cleaned** and embodies all our latest improvements. Gears run in anti-friction bearings and thoroughly protected. Before you decide on a cream separator of any capacity whatever, obtain our $15.95 proposition.

AMERICAN SEPARATOR CO., Box 1102, BAINBRIDGE, N.Y.

A Town Lot is Big Enough

Poultry raising possibilities were never better. Profitable on small or large scale. Geo. H. Lee knows. He started in a small way. He now has 3000 laying hens. He invented the Mandy Lee Incubator, the Mandy Lee Brooder, and all the appliances he could not buy. He experimented with his own money, not customers'. The

Mandy Lee Incubator

was offered to the poultry public when perfected, not before. Inexperienced can start with Lee's twenty years' successful work. Lee's "Chicken Talk," a book written by Mr. Lee himself, and his Incubator and Brooder catalogue are ready to mail. Both free. Send for them to-day. **There is no poultrymen's need omitted from this catalog. It is a complete showing of the things that made Mr. Lee a successful poultry raiser.**

GEO. H. LEE CO., 1156 Harney St., Omaha, Neb.

THE BEST POULTRY PAPER.

We are often asked which is the best poultry paper published in the United States, and the answer is, The Reliable Poultry Journal. There are other good papers, but this is the best. The subscription price of The Reliable Poultry Journal is 50 cents a year, and the subscription price of the **Universal Magazine** is 25 cents a year. We have made arrangements whereby we can send the **Universal Magazine** and The Reliable Poultry Journal, both papers, one year, for 50 cents. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Buffalo, N. Y.; New York City, N. Y.; Chicago, Ill.; Boston, Mass.; Kansas City, Mo.; Oakland, Cal.

One Gallon of Oil For a Hatch

One filling of the lamp; no heat waste; no danger with the

X-RAY INCUBATOR

Thermometer always in sight. Eggs need not be removed during entire hatch. Other incubators require frequent filling and consume three times as much oil as the X-Ray. We absolutely guarantee to hatch 100 chicks with one gallon of oil. The X-Ray controls the flame—burns high or low; generates just enough heat to maintain hatching temperature. Absolutely no waste. Others always use a strong flame and allow the surplus heat to escape.

The X-Ray Heats to Hatching Temperature in 15 Minutes

Others require 6 or 7 hours. Ventilation complete. Simply raise the lid—all hatching fumes rise instantly. The only really different incubator. Enameled-steel-covered; rosewood finish. Glass doors on top, lamp in center; flame control. Write now for free book and know the greatest of all incubators. Address

X-RAY INCUBATOR CO., 48th St., Wayne, Neb.

The New Turkey Book.

Many people are interested in turkeys who know very little about them. Turkey books of any value are scarce and expensive, but there is one which is particularly valuable. This book contains chapters as follows: How the Turkey Got Its Name; Description of the Seven Standard Varieties; The Care of Breeding Stock; Mating the Breeders; Hatching Eggs; Coops and Houses for Turkeys and Poults; and Remedies for Turkey Diseases. Well-known breeders have contributed special articles on their favorite varieties.

It also explains how to raise and condition turkeys; when to sell; how to kill, dress and pack for market to bring the highest price. The book contains seventy-two illustrations, including a frontispiece in natural colors of a pair of Bronze turkeys by the world's greatest poultry artist, Franklane L. Sewell. This alone is worth the money. There are ninety-six pages, 9x12 inches. The price of this book is 75 cents, and we cannot sell it for less, but we can credit one-year's subscription to The National Farmer and Stock Grower for that amount. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Profitable Age of Fowls.

The recent poultry press bulletin by Prof. Jno. Dryden, of the Oregon Experiment Station, gives in clear language the main points of the egg-raising business. Eggs cannot be expected from old hens. They lay sufficient eggs to make a showing, but not enough to pay expenses and a profit. In lots of mixed hens and pullets the old hens lose the money made by the pullets.

Prof. Dryden says: "It is a point in management that I wish to speak of here, one point in many that must be taken into account of poultry-keeping is to be made a success. It is a question of the most profitable age of the hen. Poultrymen, who have kept in touch with poultry investigations during the past few years are pretty well informed on this point, but the importance of this subject is not yet generally appreciated. The writer carried on for several years at the Utah Experiment Station a line of experiments with the object of determining the value of the hen at different ages for egg production. The same hens were kept year after year under similar conditions and a record kept of production and of food consumed. These experiments proved that the hen is different from the cow, which retains or improves her productivity with age. The first year was the most profitable, and there was a gradual decrease in productiveness each succeeding year. It is safe to figure this decrease at 25 per cent. each year. With average prices for food and for eggs it is not profitable to keep hens after they have finished their second year of laying. The first, or pullet year, is very profitable; the second will give a satisfactory profit, but during the third year the egg yield will seldom pay for the food consumed.

"These conclusions apply only, of course, where the eggs are held at market prices. A few fowls that have a special value as breeding stock should be kept longer, but the notion that 'the old speckled hen' is the good layer should not be cherished unless she is caught in the trap nest. The fact that she sings a joyful lay, paints her comb a brilliant red and scratches a vigorous scratch should not be accepted as sufficient grounds for commuting sentence.

It is safe to say that the poultry-keepers of this state would be many thousands of dollars in the pocket by rigorously killing off the hens every two years and replacing them with new stock—with the exceptions noted above.

"Where the pullets and hens are allowed to run together it will be necessary to mark them, otherwise it will be difficult to separate the old stock from the young when it is desired to market them. The usual method of marking is to punch a hole in the web between the toes when the chicks are hatched. This is easily and quickly done with a punch which may be purchased from the poultry supply houses for 25 cents. A number of different markings may be made in this way. Where the practice is to dispose of the hens every two years it will be sufficient to mark them every other year."

Poultry Notes.

The goose is becoming more popular in America as a table attraction. The markets report a demand at Thanksgiving and Christmas that exceeds that of a few years ago by one hundred per cent.

One reason why there are not many hens that will lay 200 eggs a year is because egg production has not been the breeder's purpose so much as feathers and notions. Some day a breeder will be able to sell a pullet with a guarantee that for one year at least she will lay 200 eggs or more, but that day has not come yet, neither has the hen or the breeder.

Poultry failures are few and of that few some are called failures because too much is expected. The profit of a hundred per cent. per annum is not enough for some people, and instead of judiciously and carefully increasing the stock and output the capital is decreased by selling off the useful pullets that are necessary for high averages in egg laying.

The old hen does not lay many eggs, but she wishes to live and have a good time; therefore she becomes a good singer, a scratcher, a chatterer and an all-around good performer as a mother. If she has been a superior layer and her life is prolonged for that reason, it is not reasonable to expect to keep it up. No matter what the record may have been, she cannot do it again. Poultry yards conducted for profit must limit the age to the end of the second year of laying.

At the Missouri Poultry Show held at the Coliseum of St. Louis in December, the entries consisted of 865 pigeons, 175 ducks, 100 geese, 150 bantams, 3,500 chickens, 150 turkeys and 26 pheasants.

At the Chicago Show was a large turkey, but it did not compete with Taft, the world's champion turkey exhibited at St. Louis. Taft is a bronze turkey gobbler, weighs fifty-five pounds, exhibited by S. C. Havens, of Shelbyvile, Ind., and was declared by the judges to be the largest turkey in the world as well as the finest, being built along the classy lines by which such fowls are judged.

The National Farmer and Stock Grower would take considerably more interest in poultry shows if a few fowls were exhibited alive and then were slaughtered in a dressed poultry contest. The meat production features are not sufficiently recognized to give us an exhibition of capons.

Make your live stock and poultry earn their keep.

Pratts
Poultry Regulator

will make your hens lay all winter, and keep them free from disease.

Pratts
Animal Regulator

will insure plenty of milk from your cows, enable your horses to do more work and make your hogs thrive.

There's no guesswork about it—we know that Pratts makes good—and we've thousands of letters to prove it.

They are not experiments, but have a record of over 37 years of success to back them up.

Nor do you take any chances. Pratts Regulators are all guaranteed with this

IRONCLAD GUARANTEE:

"If any fails to give results claimed your dealer will return your money."

Pratts Heave, Cough and Cold Remedy

A single day's treatment helps the worst case of heaves. It tones up the lungs and digestive organs, strengthens and soothes the nerves, and purifies the blood.

A "heavey" horse is worthless. Pratts Heave Cure makes him valuable. Sold in 50c. and $1.00 packages.

If your dealer doesn't have it, we'll send it prepaid on receipt of price.

Pratts Roup Cure

will save your poultry. It will also prevent this disease, if mixed with the drinking water. If your dealer can't supply you, send us 25c.—enough to make 15 gallons of medicine.

The Incubator For Business.

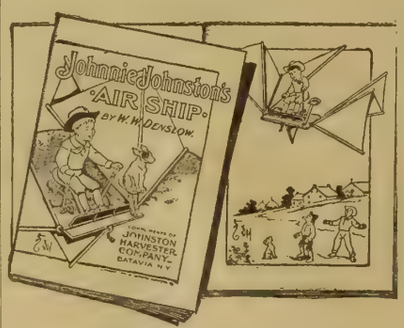
The incubator is a business proposition. We are advertising a few of the leading makes. They will be found on pages 19 and 20. We would like to specify the merits of each machine, but that is out of the question. The points of excellence are too numerous. But we repeat that the incubator is a business proposition. They were used in Egypt and China two thousand years ago. The mechanical incubator, with heat and ventilation regulated, is a modern invention. Twenty years ago the hatching was successful to a moderate extent and there were faults in every machine. Year after year improvements are made. Every manufacturer is a poultry keeper. Like the automobiles, the model of 1909 was better than that of 1908, and the 1910 machines contain every improvement. Poultry raising without incubators and brooders is only a profitable incident; it is not a business. With incubators people are now hatching out and selling thousands of young chicks. An acre of ground and a good working incubator with suitable buildings and a fair start of young hens, will enable anyone to sell eggs and poultry ranging upwards of a thousand dollars a year. It is just as easy to raise and fatten for market a thousand pounds of hens as it is to produce a thousand-pound beef steer; on the side of the hens and in their favor are 250 eggs to pay for their board and a profit. Hens should be sold after the second year of laying and not kept until they are exhausted as layers; they are then prime market fowls. The market is improving. As we write, top grades of fresh eggs are selling at wholesale in Chicago at 36 cents a dozen; in New York fancy eggs are up to 50 cents; Boston is selling the best at 48 to 51 cents. In Chicago old hens are selling at 12½ cents a pound live weight, and New York is paying 15 cents. The demand is greater than the supply. The chicken business is all right providing it is attended to as a business with the time, attention and investment that are necessary to conduct it. The incubator will hatch the fertile eggs so close that the few that are lost are just enough to keep the attendant up to the mark. Study the incubators; they are worth the money.

Ducks and Geese.

How to succeed with water fowl. This is an enlarged edition, revised and up-to-date. There are eighty pages, 9x12 inches. This is a fine book. A practical manual, giving full and authentic information and advice on the subject of breeding and raising ducks and geese for market, for breeders and for exhibitors. How to dress, pack and ship ducks to obtain the highest prices. A complete Guide to profitable duck and goose rearing.

The contents of the new edition include: Origin of the Duck; Development of the Duck Industry; Father of the Pekin Duck Industry in America; Comparison of Shapes of Ducks; How Best to Start; Profitable Pekin Ducks; Hints for the Amateur or Small Breeder; the Long Island Duck Industry; Results of Crossing; Pennsylvania Duck Industry; Shipping to Commission Men; Indian Runner and Rouen Ducks; Articles on Feeding, Housing, etc.; Duck Rearing Abroad; Domesticated Geese; Housing, Feeding and Rearing Geese; Goose Growing for the Farmer; Toulouse Geese; Crossing, etc.; Artificial Food for Water Fowl; Sebastopol Geese, etc.

The publisher's price for this book is 75 cents, and it cannot be sold for less, but for the price we can include one-year's subscription to The National Farmer and Stock Grower. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.



An Agricultural Airship.

Truly, these are indeed stirring times, and the wide-awakes on the farm are not to be left out when noses are counted for honors for progressiveness.

Had Darius Green lived in our day he could have turned the laugh on the scoffers who derided his efforts to fly and his ideas of aerial navigation, for, lo! the hour has come when the prophecy of Darius has been fulfilled, and the wisdom of

"The little chatterin', sassy wren"

seems to have been discovered at last, and men are actually taking unto themselves wings and flying away into the sky or wheresoever they have a fancy.

That such exploits are not confined to the city chaps may be a surprise to some.

To find a genius of the air on the farm whose achievements outclass even those of the now world-famous Wright brothers is still more astonishing, so that the aerial advantures and atmospheric exploits of Johnnie Johnston, who with simply the material obtained from a worn-out harvesting machine constructed a successful airship will be eagerly read by everyone who secures an account of how this wonderful young man accomplished his performance.

The account of his feat has been published in attractive form by the Johnston Harvester Company of Batavia, N. Y., and any reader of this paper who will write to the Johnston Harvester Company, mentioning this publication, will receive free on request a copy of the booklet entitled "Johnnie Johnston's Airship."

The story of this young man's travels in the air in company with his remarkable dog and the strange sights he witnessed as illustrated by the clever drawings of the celebrated artist, Mr. W. W. Denslow, which are printed in colors, will delight the young folks and everyone who owns, uses or has ever heard of the Johnston Harvester.

Johnston Harvesters are used all over the world in many strange lands by interesting people. What farm boy or girl would not like to visit these strange, interesting countries if he were permitted? Send for the booklet, a cut of which is shown herewith, and read how Johnnie Johnston did it. Address, Johnston Harvester Company, Box 117 B, Batavia, N. Y., and ask for a copy of Johnnie Johnston's Airship.

The National Horticultural Congress, San Juan county, New Mexico, had a surprising exhibit of apples, and a special gold medal was awarded to the exhibitors from that county.

Delta county, Colorado, received the award for county display of fruit at the National Horticultural Congress, besides winning many blue ribbons. It was remarked that the exhibit approached perfection in every respect.

G. W. Haight, of Oceana county, Michigan, is reported as having two and one-half acres of gooseberries. He took 1,200 cases of berries off this patch last season, bringing him a gross profit of $1,800 and a net profit of about $750. This patch has returned not less than $1,000 in sales for several years. The field is under very thorough cultivation. The bushes are sprayed two or three times each season and the ground is kept in splendid condition.

Mr. R. Breininger, of Monroe, Ind., is offering bred gilts and fall pigs of the Duroc-Jersey breed. He is owner of the Woodland herd of these favorite swine. These red hogs are making their mark on the market quotations. Mr. Breininger has good ones, and his stock is guaranteed as represented.

Our National Fruit.

As the potato is king among vegetables, the apple is easily queen among American fruits. No other kind is adapted to so varied climatic conditions. Nor is there any other fruit which varies so widely in kinds, that may be obtained practically fresh without cold storage during the entire year, or that has so large a part in the health of the race.

Before the age of cellars, our fathers gathered the apples and placed them in piles on straw, covered them with more straw and finally with earth. When there came a winter's thaw, the opening of an apple hole always disclosed fruit of a superior merit, the contact with the soil giving a fresh flavor not present in the cellar-kept fruit. But the latter method has superseded the former on account of convenience and of the fact that apples preserved under straw deteriorate very rapidly when exposed to air.

One farmer relates his experience in keeping apples thus: He had always kept them in open bins, but hearing much of the virtue of excluding air, he packed several bushels in a large, tight box and paced it in a store room. By and by a hard freeze came, and his fruit was frozen solid. Thinking it was ruined, he simply let it go for the time and depended upon his less choice but seemingly better cared for apples in the cellar. As spring approached he recalled the store room episode and investigated with the expectation of having to dump the apples all out. But no; they were in excellent condition, and he readily sold them at a fancy price. Had he disturbed them while frozen, they would have been ruined; but allowing them to thaw undisturbed in the tight box, the result was excellent.

An exchange states that if you wish apples to keep for a long time, wrap each in a piece of unprinted paper, as oranges are wrapped, and then pack in tight barrels or boxes. As this method of tying in paper, modified by suspending each head thus tied from the ceiling of the cellar, works nicely with cabbage, it is certainly worth trying with choice apples.

Those who have given it a trial are unanimous that a concrete floor is the best way to keep rats from the cellar. If you cannot fix it this season, plug up the holes with cement in which pounded glass has been substituted for sand.

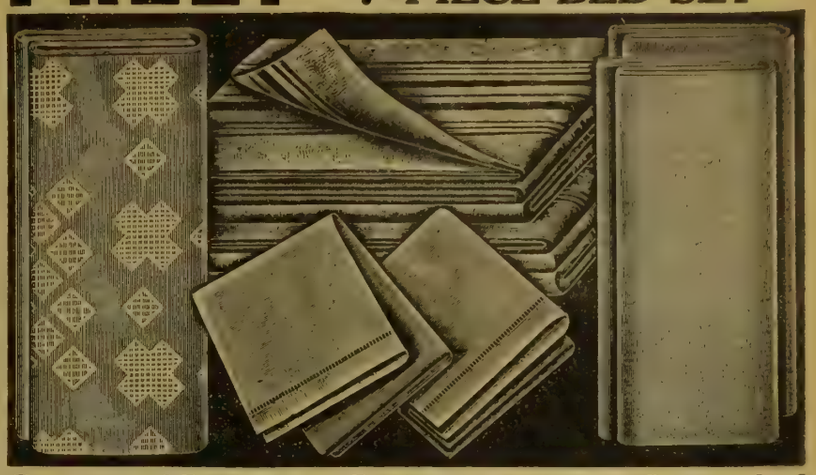
The uses of apples have quadrupled within the last decade; and this is only the beginning. We are fast learning to combine one of the most wholesome fruits into many dishes that our grandmothers would not recognize.

We soon tire of all other fruits when used daily. Even the peach becomes tiresome in a short time. But a choice apple is the best possible dessert, the best after-meal tonic. Apples eaten freely daily are much better than medicine to keep the system in good condition.

Specialists assert that a single season of neglect tells upon the apple tree, not only for the next season, but to a certain extent for life. We remark that a tree which bears excessively one year usually rests the next. Since the buds for next year were prepared during the season just closed, can we expect them to be of the highest grade when the strength of the tree was exhausted in maturing the crop of the present year? Judicious pruning, persistent spraying and sufficient food supply must be a part of the regular work of the apple grower.

Hang a piece of suet or fresh meat in the tree and watch the nuthatches and other winter birds breakfast upon it. Later, their dessert is gained from the insects on the tree trunk.—Bessie L. Putnam.

FREE! To Every Lady Reader This Beautiful and Durable 7-PIECE BED SET



Consists of 2 Blankets, 2 Bleached Sheets, 2 Bleached Pillow Cases and 1 Bed Spread—All Full Size Pieces

Here is an opportunity whereby every woman in the United States can get this useful, expensive, 7-piece Bed Set, **Absolutely Free.** This Bed Set consists of 2 Blankets, 2 Bleached Sheets, 2 Bleached Pillow Cases and 1 large, White Bed Spread—7 full size pieces in all. Escalloped Dishes.

When a food is escalloped it is usually cooked with bread or cracker crumbs and occasionally milk. Escalloped dishes are delicious and healthful. Why they are not more commonly used is a question, unless it is merely because people have not yet formed the habit of preparing them. Almost anything can be escalloped, and it is a most pleasing way in which to serve left-overs. A few favorite recipes for escalloped dishes will give the idea of escalloping to the novice, so that she can make use of them to serve any food in this way. A porcelain-lined pudding dish makes an excellent container.

Escalloped Tomatoes.—Cover the bottom of the dish with tomatoes and season with pepper, salt and a few dabs of butter; then add a layer of crumbs, next a layer of tomatoes seasoned as before, and keep on alternating tomatoes and crumbs until the dish is full, having the last layer one of crumbs. Bake for half an hour. The tomatoes supply sufficient liquid, so there is no need of adding any.

Escalloped Oysters.—Cover the bottom of the dish with plump oysters and season with pepper, salt and butter; add a layer of crumbs and alternate with oysters until the pan is full. Pour over all about a cupful of cream or milk to a quart of the crackers and oysters, though this may vary, depending upon the liquor of the oysters. Sprinkle the top liberally with pepper and butter and bake for half an hour.

Escalloped Potatoes.—Slice new potatoes, put in the baking dish and cover with milk. Add two tablespoons of flour dissolved in milk for every pint of milk used on the potatoes. Season with salt, pepper and butter. Sprinkle dry flour on the top of the potatoes and bake for an hour. Grated cheese added to potatoes prepared in this way gives potatoes a grating and they are delicious.—Janet Thomas Van Osdel.

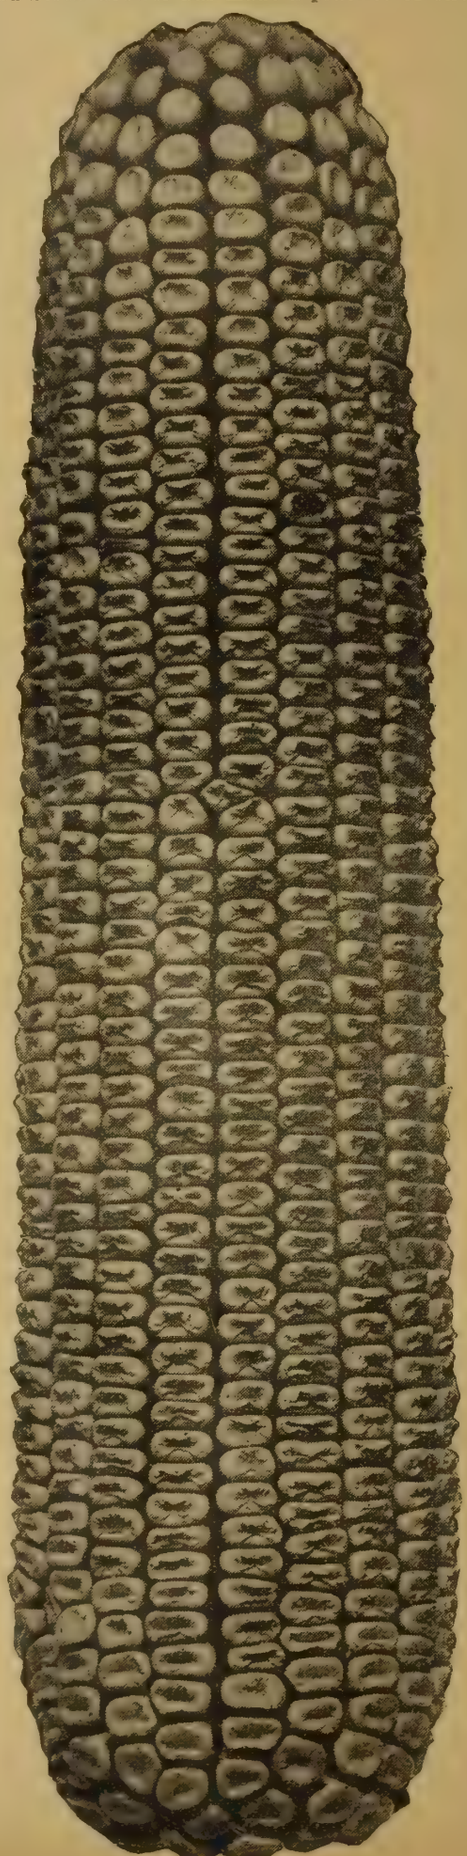
GRAND CHAMPION YELLOW DENT CORN.

Offered as a Premium by the Subscription Department of The National Farmer and Stock Grower.

During the past two years, at the proper season, The National Farmer and Stock Grower has made a practice of offering a small quantity of seed corn as a special subscription premium, and we have decided to do so again. For yellow corn we have decided to use the corn grown by Mr. D. L. Pascal, of Iowa. We will use his Reid's Yellow Dent Corn, which has been bred pure for sixty-two years. Mr. Pascal obtained his seed from the originator. He has won many prizes and trophies. The ear of corn which is illustrated here was produced by Mr. Pascal, and it has not had an equal. Mr. Pascal is a farmer, not a seed merchant. His corn sent us comes from the breeding blocks in which the Grand Champion Ear was raised, and is related to it. Properly planted, carefully cultivated in a good season under favorable conditions, there is a fair chance that a pound or two of this seed corn will produce show corn. It is worth the trial.



This ear of corn pictured here is 10¼ inches long, 7⅞ inches in circumference at a line three inches from the butt, and 6⅞ inches at a point two inches from the tip. It weighs 19 ounces, and although only nine rows of kernels are shown in the picture, it carries twenty rows of kernels. This is the ear of corn that won the Allee Trophy at Ames, Iowa, January, 1907, and was pronounced by two great corn experts, Prof F. G. Holden and Prof. A. D. Shamel, as being the best ear they have ever seen.

PREMIUM OFFER NO. 1.

For premium purposes we make this offer: Anyone sending us a postoffice money order for 60 cents will be credited with one-year's subscription to The National Farmer and Stock Grower and can select one pound of Pascal's Champion Yellow Dent Corn as a premium, to be sent postpaid by mail, and safe delivery guaranteed.

PREMIUM OFFER NO. 2.

Anyone sending us one dollar by money order or currency, will be credited with two-years' subscription to The National Farmer and Stock Grower, and will have the privilege of selecting two pounds of Pascal's Champion Yellow Dent Corn as a premium, to be sent postpaid, safe delivery guaranteed.

OUR PRIZE OFFERS.

Furthermore, if any of our patrons grow corn from premium seed corn furnished by us as a premium and exhibit ten ears of the same at their own State Fair or at any Interstate Fair, or at their own Agricultural College Corn Show—for every championship premium won by said corn we will pay the exhibitor fifty dollars; for every first prize twenty-five dollars; for every second prize ten dollars, and for every third prize five dollars, providing that these prizes are won during the year 1910 with corn grown by our subscriber from seed corn furnished by us to him as a premium.

THE STEEL LINING

THE NATIONAL SHOW OFFERS.

If any premiums are won at the National Corn Show of 1910 by corn grown by our subscriber from premium seed furnished by us, we will double the amount. Thus, ten ears of corn at a State Show winning a first prize will receive from us $25.00, and, if winning a sweepstake prize, will receive $50.00 from us. Then, if winning a first prize at the National Corn Show, the exhibitor would receive $50.00 additional from us, and, if winning a sweepstake prize, would receive $100.00 from us, or a total of $225.00 in all. All this is possible with ten ears of corn grown from the corn which we will send as a subscription premium.

SUBSCRIPTION BLANK.

Potash For Sale to All.

Farmers who farm on business principles and fertilize their soils as a manufacturer puts money into a plant—for investment—have never needed much argument to be convinced that "Potash Pays," as the German Kali Works puts it. The trouble for the farmer has been not only the price but the difficulty of getting Potash at any price. The manufacturers who compound complete fertilizers have heretofore absorbed it all and kept Potash away from the general trade.

All this has been changed, and thousands of farmers who farm for profit rather than for mere wages and a living will now be able to buy all the Potash Salts they need, in any quantity they want it, of local dealers everywhere. And not only this—but they can get it at lower rates than have ever before been charged.

This means that farmers can now invest in plant foods that they themselves buy and mix—fertilizers without fillers or make-weights—and put the money saved from interest, freight, excessive profits on fillers and mixing charges into so much more actual crop-making fertilizer.

The great German potash mines are now producing enough potash to enable the American selling agency to guarantee delivery of all that is required both by fertilizer manufacturers and by local dealers and farmers. Ask your dealer to carry these invaluable salts in stock. Tell him to write to the German Kali Works, Continental Building, Baltimore, for particulars and prices. And we recommend you to write to them also for their "Farmer's Note Book" and their valuable literature on fertilizing and cultivation. Mention what crops you are most interested in. It will pay you to do it. And see your dealer the next time you are in town.

Don't forget to mention The National Farmer and Stock Grower when you write to the German Kali Works, Continental Building, Baltimore, Md., when you write for a copy of the "Farmer's Note Book."

A High-dressing Steer.

During the International Show a beef steer that on account of being a three-year-old was not in competition, was for all that a show of itself. This was a grade Hereford steer weighing on foot 1,810 pounds, and sold to Swift & Company at $9.75 per 100 pounds, bringing a gross price of $176.47. This great steer dressed out 68 per cent. of beef, which Manager Russell of the Swift Cooler said was the record for beeves killed by his firm. This steer was fed by the Minnesota Agricultural College. In the slaughter test the carcass champion, an Angus two-year-old, dressed out 66.8 per cent.; the first-prize yearling, an Angus steer, dressed out 65.8 per cent.; and the reserve grand champion of the show on foot, Dr. Dwynn, a grade Angus, weighing 1,766 pounds alive, dressed out 66.1 per cent. It must be understood by our readers that there are no longer classes for three-year-old steers, for the reason that ideal beef cattle can be produced from steers that are yearlings and two-year-olds.

Need We Fear the San Jose Scale?

The San Jose scale has now been with us for a good many years and we have become more or less familiar with it. We have learned at least two things: One is, that we cannot entirely stop the ravages of the scale; the other is that our orchards can be made successful in spite of the scale.

It will, however, remain with us as an enemy to be watched and fought at all times. It is another reason for the fruit grower knowing all that can be learned about his business and especially all possible about the insects and fungoid diseases that assail his orchards and plantations.

The San Jose scale is an enemy that is most dangerous when neglected. It thrives and becomes mighty in the places where its presence is not known till it has covered the trees with millions of its kind that suck out the life that is in the trees. The writer saw an illustration of this in a neglected orchard in North Carolina. A New York man had purchased a good-sized piece of land and had planted it in peach trees. He had engaged a man in the vicinity of the new orchard to keep a general oversight of it. Then he let it alone for four years, at the end of which time it should commence to bring him a large income. When the writer and the Director of an Experiment Station investigated this orchard it was five years old and was dying with San Jose scale infestation. It was more than a total loss to its owner, for there would be the cost of digging out the trees. Its salvation was not possible.

Yet that orchard would have been saved easily if it had not been neglected. The San Jose scale is a pest that spreads but slowly and cannot do great injury the first year. It must have time in which to multiply and spread from tree to tree. If assailed at once it can be kept within bounds at least, but that is not the way it is handled by the man that neglects his orchard. We need therefore to fear it exceedingly where it is left to itself and is given an opportunity to spread at will.

Ten years ago it was believed that by passing strict inspection laws and enforcing them the spread of the San Jose scale could be checked. Many states passed laws providing for rigid inspection, and commissions were created and financed. But the scale spread in the face of inspections and in spite of the existence of commissions. The chief reason for this was that the scale does not confine its attention to our fruit trees, but thrives on many kinds of trees. The Osage Orange hedge is one of its best hosts. A state entomologist tells me that it is no longer possible to control it, for it has gotten into the forests.

Every Experiment Station in the country is now well supplied with literature on this scale, and also keeps up to date on the methods of fighting it. At the present time the lime-sulphur washes applied in the winter are the best known means of destroying the scale, and concerning these voluminous information can be obtained from the above mentioned sources.

December Strawberries.

The first strawberries of the season arrived at St. Louis December 14th. They were from Florida and arrived in two "pony refrigerators," each holding eighty quarts. They were sold at 75 cents a quart, which looks to be a premium price, as an average summer price is 10 cents a quart.

Apples and Insomnia.

A medical writer declares that the apple is such a common fruit that very few persons become familiar with its medicinal properties. The best thing just before going to bed, he says, is to eat an apple. "Persons uninitiated in the mysteries of the fruit," he continues, "are likely to throw up their hands in horror at the visions of dyspepsia which such a suggestion may summon up, but no harm can come even to a delicate system by the eating of a ripe and juicy apple before going to bed. The apple excites the action of the liver, promotes sound and healthy sleep and thoroughly disinfects the mouth. This is not all; the apple prevents indigestion and throat diseases."—Country Gentleman.

One Man Knew How To Buy Eggs

Here's the story of a man who knew how to buy eggs at 15 cents a dozen when they were selling for 30 cents everywhere in the city.

One day he drove out in the country and said to a farmer, "You are getting 12 cents for your eggs at the store—send them to me in town and I'll give you 15 cents a dozen."

He knew that these eggs sold to the local store for 12 cents, went to the city wholesaler at 18 cents, to the retailer at 25 cents, and finally to the consumer at 30 cents.

Bought from the farmer the eggs cost him 15 cents, but if bought through dealers they would have cost him 30 cents a dozen—and here's the point—HE GOT THE SAME EGGS.

Now this egg story explains how we sell the ECONOMY CHIEF CREAM SEPARATOR. We take the factory cost and add one profit, but the other dealers add a profit for the traveling salesman, the local dealer and the county agent.

We save you these useless profits and give you a machine that excels all others in these points:

SKIMMING—$1,000 is what we will pay the maker who will produce a machine that can outskim the Economy Chief according to our offer, and it has never yet been accepted.

CLEANING—There's only four simple parts in the bowl and you can clean the whole bowl in less than three minutes.

TURNING—Your boy or girl over twelve years old can run this machine—it works even easier than a coffee grinder.

But remember the egg story—then you will understand how we sold 40,000 separators last year and have built a factory so large—but the best way to tell you about this is to mail you our new book called "FACTS ABOUT OUR FACTORY."

This book is sent FREE—write a postal or letter at once and say, "Send me the FACTS ABOUT YOUR FACTORY."

The Economy Chief

We mail a trial package free to all who write.

It will give you instant relief, show you the harmless, painless nature of this great remedy and start you well on the way toward a perfect cure.

Then you can get a full-sized box from any druggist for 50 cents, and often one box cures.

Insist on having what you call for.

If the druggist tries to sell you something just as good, it is because he makes more money on the substitute.

The cure begins at once and continues rapidly until it is complete and permanent.

You can go right ahead with your work and be easy and comfortable all the time.

It is well worth trying.

Just send your name and address to Pyramid Drug Co., 92 Pyramid Building, Marshall, Mich., and receive free by return mail the trial package in a plain wrapper.

Thousands have been cured in this easy, painless and inexpensive way, in the privacy of the home.

No knife and its torture.

No doctor and his bills.

All druggists, 50 cents. Write today for a free package.

East Texas Fruits and Vegetables.

The busy country is where crops are marketed all the year round. The truck and fruit belt of Eastern Texas keeps vegetables, fruit and grain going forward from April to December and markets live stock and cotton during the twelve months of the year.

Farmers who are looking for new homes ought to take a look at Eastern Texas, particularly in the counties of Camp, Upshur, Wood, Smith, Rusk, Henderson, Cherokee, Nacogdoches and Angelina. This is a rich territory which is making records in fruit and vegetable growing that will surprise anyone who has not gone over the ground.

Eastern Texas was the first of the state to be settled and the last to be appreciated. It was first passed over by the stockmen, but they returned again to find the feed for their cattle, and now some of the largest feeding pens are in the counties named.

The country spoken of is all tributary to the St. Louis and Southwestern Railway, familiarly known as the Cotton Belt Route. This road has furnished an expeditious market outlet and made the development of the country possible and profitable. At first, Jacksonville and Tyler became famous as shipping points for vegetables and fruit, and then these industries spread until Eastern Texas became recognized for its true value. The crops are marketed in car-load shipments. Fruit and vegetable associations place the produce close to market, and economy and enterprise go hand in hand, with cash results. Considering these results, the land is very cheap.

The development of fruit growing and truck raising in Eastern Texas was rapid and extensive. This includes small fruits, which produce handsomely. East Texas peaches are several weeks earlier than those of Georgia or California; the berries of East Texas are in advance of those of Arkansas or Southern Illinios; the East Texas tomatoes, cantaloupes and melons fill up the gaps in market places, having fruit and vegetables for sale early and late. The hillsides are usually given over to peaches and the bottom lands to berries, vegetables, cotton, corn and other crops. The opportunities are boundless, and the regularity of the work appeals to farm labor more than it does in the sections where they have shorter crop and marketing seasons. Much more can be and ought to be said in regard to this great country, but space will not admit in this issue. Those who are interested should write to E. W. LaBeaume, 1408 Pierce Building, St. Louis, Mo., for a free copy of his Eastern Texas book. He is General Passenger Agent of the St. Louis and Southwestern Railway.

Country and Town Farming.

The other day an agricultural person from South Jersey, characteristically arrayed in elongated boots, trailing whiskers and a 1908 crop of hair, broke into the gladsome zone at the foot of Market street, and, after taking several hard ciders to satisfy himself that he was no longer in local-option territory, he started to climb the Market street hill.

He had not proceeded far before he came upon Contractor Vare's men, who were tearing up the street preparatory to laying the wooden block pavement, and, seeing a team of horses hooked to a plow, he stopped in apparent astonishment. First he looked, and then he looked again, and, scratching that part of his head where the hard cider was beginning to buzz, wabbled over to a policeman with a perplexed expression.

"Mr. Constable," said he, addressing the officer, "is that a man plowing over yonder?"

"It sure is," replied the policeman, with an indulgent smile. "Why do you ask?"

"Because you folks down here has kind o' got me ter guessin'," answered Uncle Joan. "It is too goshdasted late ter plant wheat, an' it's too early ter plow fer corn, an' I was wonderin' what in ther thunderation ye was goin' ter plant at this time o' year."—Philadelphia Telegraph.

Saw Your Own and Your Neighbor's Lumber.

The price of lumber is now high and still going up. Those of our readers who have an engine or good power will find it profitable to get a good saw mill and start a lumber-sawing business in your district. One of the best mills we know of is made by R. R. Howell & Co., of Minneapolis, Minn., and we suggest that you write them for their catalogue and prices.

Sweepstake Apple Prizes.

At the Second National Apple Show held at Spokane, Wash., November 15th to 20th, the sweepstake prize of $1,000 was won by H. B. Tronson and T. F. Guthrie with a car of Spitzbergs grown on their orchard near Eagle Point, Oregon. The second sweepstake prize of $500 was won by W. W. Sawyer, of Hillcrist Orchard, Sunnyside, Wash, by a 630-box car-load of Grimes' Golden.

Cabbage at $20 to $24 a ton were sold at St. Louis, late in December.

With large reservoirs, from $8. up. Warranted for 25 years. Cash or easy monthly payments. We trust honest people located in all parts of the world. Write for FREE catalogue of Steel Ranges, Heaters, Stoves, etc.

CENTURY MFG. CO., 634 R, East St. Louis, Ill.

KING ELLSWORTH—Weighing 1,750 pounds. A pure-bred Aberdeen-Angus two-year-old steer, fitted and shown at the Chicago International Live Stock Show of 1909, and declared to be the grand champion beef steer of the show. Exhibited by the Kansas Agricultural College, Manhattan, Kansas. Sold at the Chicago live stock market by Messrs. Clay, Robinson & Co. at 18 cents a pound to Messrs. Schwarzschild & Sulsberger.

GRAND CHAMPION PEN OF BARROWS at the Chicago International Live Stock Exposition of 1909. These barrows were Berkshires, and were fed and exhibited by the Iowa Agricultural College, Ames, Iowa; weighed 300 pounds, and were sold by Clay, Robinson & Co. at $8.65 per 100 pounds. Speaking of these barrows, Judge C. A. Kurtze said they were the best pen ever exhibited at the Chicago International Show. Their prominent features were the breed characteristics. They were perfect market hogs, and in conformation were up to the ideals of the breeder.

Increase Your Salary On a Farm of Your Own in the Growing Southwest

where the land is new and low priced, where seasons are long and winters mild, where you can grow two and three crops a year, where there are good markets, good people and good health.

Without framing it will last for several years. The illustration gives no idea of the size and beauty of the picture. We are using the AMERICAN BEAUTY ROSE PICTURE for the purpose of introducing our new publication, the UNIVERSAL MAGAZINE. This is a nice, bright, thirty-two-page, three-column publication, which will interest all the family. Send us 25 cents in silver for one-year's trial subscription to the UNIVERSAL MAGAZINE and we will send you free by mail one AMERICAN BEAUTY ROSE PICTURE securely packed in a tube, and safe arrival guaranteed. Address, HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

OVERFATNESS KILLS,

Shortens Life, Spoils Beauty, Brings Discomfort and Worry.

Usually an overstout person dies from ten to thirty years earlier than one whose weight is retained at normal. Excessive fat causes the victim to become enfeebled and ailing and to die prematurely. The morbid fat gathers within the ribs and hardens, causing fatty degeneration of the heart—danger of sudden death after climbing stairs, shock, running for a train, etc. The double chin which people are apt to regard as merely an annoying defect in beauty, is the sign of weak throat and voice, and is frequently the forerunner of catarrh, asthma or bronchitis. A big stomach denotes gastric and intestinal troubles. Large hips indicate ailments or weakness of kidneys, liver or other vital organs.

The victim of obesity becomes a sad, ailing, weak, ill-tempered person. The safe, reliable, guaranteed home treatment of Dr. Bradford will speedily effect a cure which will last the entire lifetime, bringing added years, attractive appearance, freedom from pains and discomforts, and real contentment. You can obtain a proof treatment, absolutely free, by merely writing to Dr. H. C. Bradford, D 75 Bradford Bldg., New York, N. Y. With this, the doctor will mail free, a convincing array of testimonials and his book of advice.

It is advised that readers of The National Farmer and Stock Grower who are overfat, or who have relatives or friends needing a reliable, perfectly safe treatment, take advantage of this unusual opportunity.

DEAFNESS CURED
By New Discovery

"I have demonstrated that deafness can be cured."—Dr. Guy Clifford Powell.

The secret of how to use the mysterious and invisible nature forces for the cure of Deafness and Head Noises has at last been discovered by the famous Physician-Scientist, Dr. Guy Clifford Powell. Deafness and Head Noises disappear as if by magic under the use of this new and wonderful discovery. He will send all who suffer from Deafness and Head Noises full information how they can be cured, absolutely free, no matter how long they have been deaf, or what caused their deafness. This marvelous Treatment is so simple, natural and certain that you will wonder why it was not discovered before. Investigators are astonished and cured patients themselves marvel at the quick results. Any deaf person can have full information how to be cured quickly and cured to stay cured at home without investing a cent. Write today to Dr. Guy Clifford Powell, 5778 Bank Bldg., Peoria, Ill., and get full information of this new and wonderful discovery, absolutely free.

Do You Know Jim Brown?

There is a man in Cleveland, Ohio, whom the good citizens of that town refer to as "James Brown, President of the Brown Fence and Wire Company," but several hundred thousand farmers in all parts of the United States call him Jim Brown, the Fence Man. If you don't know him, you ought to get acquainted. He makes a fence which has won for itself the name "The Fence That Lasts," because it is made of heavier wires, has heavier uprights a well as heavy horizontal wires, and because it is doubly galvanized. If you own land, you are interested in this fencing proposition. Get out your stub end of a pencil right now and write a postal to the Brown Fence and Wire Company, Dept. 45, Cleveland, Ohio, for Jim Brown's Common Sense Talk on Wire Fences. You'll be glad you did it.

VIOLIN FREE

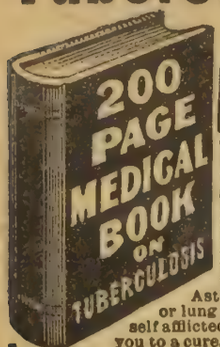
BLUINE MFG. CO.,
526 Mill Street,
Concord Junction, Mass.

David Rankin, Jr., a St. Louis capitalist, sold 200 acres of land for $250,000. The land is on the side of the rock road between East St. Louis and Belleville, Ill., and it has been held off the market for many years. This purchase was very likely brought about by the construction of a bridge for free traffic between St. Louis and East St. Louis.

During the month of December, in St. Louis county, Missouri, 144 acres of land at the intersection of the Clayton and North and South Roads were sold at $653 per acre. The land is part of the estate of the late Edward J. Gay, and was sold to a St. Louis syndicate. Twenty years ago such land was being sold at $125 to $175 per acre.

Tuberculosis Book FREE



This valuable medical book tells in plain, simple language how Tuberculosis can be cured in your own home. If you know of any one suffering from Tuberculosis, Catarrh, Bronchitis, Asthma or any throat or lung trouble, or are yourself afflicted, this book will help you to a cure. Even if you are in the advanced stage of the disease and feel there is no hope, this book will show you how others have cured themselves after all remedies they had tried failed, and they believed their case hopeless.

Write at once to the Yonkerman Company, 3713 Water Street, Kalamazoo, Mich., and they will gladly send you the book by return mail free, and also a generous supply of the New Treatment, absolutely free, for they want every sufferer to have this wonderful remedy before it is too late. Don't wait—write today. It may mean the saving of your life.

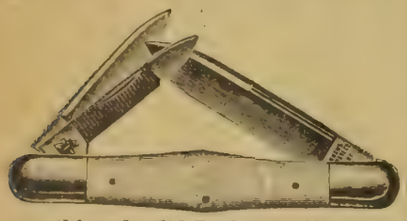
POCKET KNIFE SUBSCRIPTION PREMIUM.

This is a splendid three-blade pearl-handle Pocket Knife, three inches long, superior steel, imported. No better knife on the market. Directly one is seen and examined, everybody wants one. The subscription price of The National Farmer and Stock Grower is $1.00 for three years. Send us $1.00 and we will mail you The National Farmer and Stock Grower for two years, and in place of the third year we will give



you this splendid Pocket Knife. This will please everyone who gets it. Uncle Piper, subscription editor of The National Farmer and Stock Grower, has undertaken to eat his own head off if we fail to send out ten thousand of these knives in one month, and we don't wish to lose Uncle Piper that way. Address, THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

Dangerous to Get Near.

The teacher had been telling the class about the rhinoceros family. "Now, name some things," said she, "that are very dangerous to get near to, and that have horns." "Automobiles!" replied little Jennie Jones, promptly.—New York World.

GRAND SWEEPSTAKES WHITE CORN.

Offered as a Premium by the Subscription Department of The National Farmer and Stock Grower.

The fine ear of corn represented is the one which was sold for $250. It is of the variety known as Johnson County White Dent. It is the corn that won the highest awards at the National Corn Shows of 1907 and 1908. Mr. L. B. Clore, of Indiana, is the breeder, raiser, grower and exhibitor of this wonderful ear of corn. Mr. Clore has won so many sweepstakes prizes for corn exhibits that he has the high honor of being the recognized champion, and is barred from competition. He can select corn of his own raising and be sure to win the championship. At one Corn Show his winnings amounted to $7,536.50. Mr. Clore has very kindly furnished us with a small quantity of his Grand Sweepstakes Seed Corn for premium purposes. We offer it to our readers for experimental purposes. We have offered this same corn for two years with gratifying success. A fourteen-year-old boy in Georgia received a pound of this corn from us as a subscription premium and from it he raised a good stand and selected ten ears which won a $50 first prize at the Georgia State Fair. This office also awarded him $25.00, and the same corn is now in competition at the National Corn Show of 1909.

Mr. Clore habitually raises 90 to 100 bushels per acre. A pound of his seed is worth considerable money.

PREMIUM OFFER NO. 1.

For premium purposes we make this offer: Anyone sending us a postoffice money order for 60 cents will be credited with one-year's subscription to The National Farmer and Stock Grower, and he can select one pound of Clore's Grand Sweepstakes White Corn as a premium, to be sent postpaid by mail, and safe delivery guaranteed.

PREMIUM OFFER NO. 2.

Anyone sending us one dollar by money order or registered mail will be credited with two-years' subsription to The National Farmer and Stock Grower, and will have the privilege of selecting two pounds of Clore's Grand Sweepstakes White Corn as a premium, to be sent postpaid, and safe delivery guaranteed.

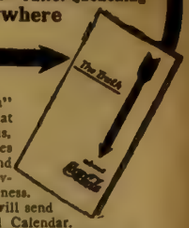
OUR PRIZE OFFERS.

Furthermore, if any of our patrons grow corn from premium seed corn furnished by us as a premium and exhibit ten ears of the same at their own State Fair or at any Interstate Fair, or at their own Agricultural College Corn Show—for every championship premium won by said corn we will pay the exhibitor fifty dollars; for every first prize twenty-five dollars; for every second prize ten dollars, and for every third prize five dollars, providing that these prizes are won during the year 1910 with corn grown by our subscriber from the seed corn furnished by us to him as a premium.

Whenever You See An Arrow Think of

Coca-Cola

The all the year round best beverage for all classes, ages and sexes.
Delicious—Wholesome—Thirst-Quenching
5c Everywhere



Our Free Booklet
"The Truth About Coca-Cola" tells all about Coca-Cola—what it is and why it is so delicious, wholesome and beneficial. It gives analyses made by scientists and chemists from coast to coast, proving its purity and wholesomeness. Send 2c for postage—and we will send you our 1910 Coca-Cola Girl Calendar.
THE COCA-COLA COMPANY, Atlanta, Ga.
Please mention Nat. Farmer and Stock Grower.

EARN Watch, Ring AND CHAIN

Order 20 pieces, when sold send $2.00 and we will positively send you the watch, ring and chain. WE GUARANTEE SATISFACTION. **ALTON WATCH CO., Dept. 538, CHICAGO**

THE MEXICAN RESURRECTION PLANT.

This is a great and pleasing novelty. Without water it dries up and is apparently dead. Place it in a shallow tank of water and it revives to a beautiful, living, fern-like plant. Let it dry out again and it curls up like a ball and can be kept for years. It will revive again directly it is placed in water. It requires no soil, no nourishment, no attention.

We have adopted the Resurrection Plant as a subsciption premium to the **Universal Magazine.** The magazine is most interesting and is published monthly. It is an illustrated publication, with genuine stories, splendid poetry and home reading. Send 25 cents for one-year's subscription to the **Universal Magazine** and we will mail you one of these genuine Resurrection Plants as a free premium.
Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

THE NATIONAL SHOW OFFERS.

If any premiums are won at the National Corn Show of 1910 by corn grown by our subscriber from premium seed furnished by us, we will double the amounts. Thus, ten ears of corn at a State Show winning a first prize will receive from us $25.00, and, if winning a sweepstake prize, will receive $50.00 from us. Then, if winning a first prize at the National Corn Show, the exhibitor would receive $50.00 additional from us, and, if winning a sweepstake prize, would receive $100.00 from us, or a total of $225.00 in all. All this is possible with ten ears of corn grown from the corn which we will send as a subscription premium.

SUBSCRIPTION BLANK.

Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen:—Herewith please find One Dollar to pay for two-years' subscription to The National Farmer and Stock Grower, for which please give me credit. You will please send me two pounds of Clore's Grand Sweepstakes White Corn as a premium.

Making Merry

At Mealtime, Means Good Appetite, Good Digestion, Good Cheer, Good Heart and Stuart's Dyspepsia Tablets.

Do You Use Them? If Not, Why?

DYSPEPSIA is the skeleton at the feast; the death's head at the festive board. It turns cheer into cheerlessness, gaiety into gloom and festivity into farce. It is the ghost in the home, haunting every room and hitting at every fireplace, making otherwise merry people shudder and fear. If there is one disease more than another that should be promptly attacked and worsted, it is DYSPEPSIA. It is the very genius of unhappiness, unrest and ill nature. In time it will turn the best man almost into a demon of temper and make a good woman something to be dreaded and avoided.

It is estimated that half of one's troubles in this world comes of a stomach gone wrong—of Dyspepsia, in short. Foods taken into the stomach and not properly cared for; converted into substances that the system has no use for and hasn't any notion what to do with. It is irritated and vexed, pained and annoyed, and in a little while this state of things becomes general and directly there is "something bad to pay." The whole system is in a state of rebellion and yearns to do something rash and disagreeable and a fine case of Dyspepsia is established and opens up for business.

If you were bitten by a mad dog, you would not lose a day in going to a cure; do you know you should be just as prompt with Dyspepsia? Rabies is a quick death; dyspepsia is a slow one; this is about all the difference. There is a cure for rabies and so there is for Dyspepsia, and one cure was about as difficult to discover as the other. Pasteur found out one and the F. A. STUART COMPANY the other, and it is no longer a secret, as it is made public in the wonderful Tablet, which so many are using and praising today. One writer says of it:

"Stuart's Dyspepsia Tablets are little storehouses of digestion which mix with the stomach juices, digest food, retingle the mucous membrane and its nerve centers, give to the blood a great wealth of digestive fluids, promote digestion and stays by the stomach until all its duties are complete."

Some cures are worse than the disease; they demand This, That and the Other and the patient despairs at the requirements; but not so with the Stuart Dyspepsia Tablet; they are easy and pleasant to take and no nausea or ill feeling follows. There is none of this "getting-all-over-the-mouth" like a liquid and making the remedy a dread. Another writer says:

"It matters not what the condition of the stomach, Stuart's Dyspepsia Tablets only improve the juices and bring quiet to the whole digestive canal, of which the stomach is the center."

Forty thousand physicians use these tablets in their practice and every druggist sells them. Price, 50c. Send us your name and address and we will send you a trial package by mail free. Address F. A. Stuart Co., 150 Stuart Bldg., Marshall, Mich.

The Historic Bird..

"Speaking of Christmas turkeys," said Sir Thomas Lipton in the Cedrick's smoking room, "reminds me of a Piccadilly club.

"A Devonshire man sent this club, about Christmas, a fine, large swan in a hamper. The hamper was addressed to the secretary, who notified the club members of the treat that was in store, and a special swan dinner was arranged for the 23d.

"The swan came on, at this dinner, looking magnificent — erect and stately on a great silver-gift salver. But tough! It was so tough you couldn't have carved the gravy. All perceived that they had been hoaxed.

"A few days later the sender of the swan dropped in at the club.

" 'Got my swan all right, I hope?' he said to the society.

" 'Yes, and a nice trick you played on us,' was the reply.

" 'Trick? What do you mean?'

" 'Why, we boiled that swan for sixteen hours, and when it came on the table it was tougher than a block of granite.'

"Good gracious! Did you have my swan cooked?'

" 'Yes, of course.'

"The other was in despair.

" 'Why, that bird was historic,' he groaned. 'I sent him up to be stuffed and preserved. He had been in my family for 200 years. He had eaten out of the hand of King Charles I.' "

Flowers For Little Folks.

There are numerous annuals well adapted to the juvenile hands, as they are cheap, easy of culture and bloom constantly throughout the season.

Yet to have the best results one must keep the blossoms closely picked, and this is an excellent method of teaching a child generosity. If you would have flowers, you must give them, and that freely.

Pansies are a general favorite, delighting in rich soil, with plenty of moisture. They flower best in spring and autumn, the hot sun causing the flowers to decrease in size during mid-summer.

The nasturtium is a favorite. Select the tall-growing varieties, mixed colors. All shades from light canary through orange, fiery scarlet, to rich bronze should appear, the series being entirely in harmony with each other. This plant enjoys the hot sunshine and blossoms until late. If branches are placed in water they will continue to flower for weeks.

Sweet peas are a perpetual delight, but should be planted as early as possible in spring. Do not wait for the ground to become dry, but thrust them in as soon as it can possibly be worked.

A bed of verbenas in choice colors is handsome, a few plants being of a trailing nature, filling an entire bed. Some of the white-eyed varieties, as scarlet, pink, and rose, thus marked, are especially fine.

Poppies make a rich display, their only fault being that they are too short-lived. When once planted, they will perpetuate themselves from year to year by self-sown seed. These are but a few of the many good annuals, any of which will prove pleasing if the child is given a little help in arranging and sowing the seeds.—Bessie L. Putnam.

Sewing Table Notes.

Keep a small piece of wax at hand to prevent the thread from knotting, and the emery ball to free the needles from rust.

Dull shears may be sharpened by drawing them over the neck of a bottle, closing down at the same time as though in the act of cutting.

A narrow velvet band of any becoming color with a bit of narrow lace sewed on one edge makes a very pretty finish for the neck, fastened with small pins.

If you happen to have several packages of sample dress goods of reasonable size, sew them into a cushion, brick-work fashion. First, arrange them according to harmony in colors, shading, alternate light and dark, or after the sunshine-and-shadow method. Then sew on the machine. By this method the work is speedily done and there is not trouble from seams ripping.

Keep two small bags hung on the lower part of the sewing machine, one to receive small pieces that can be used, the other for the waste bits. The latter can be removed to the rag bag when desired without the trouble of sorting.

In making a child's every-day dress line the sleeves with the same. Then when the days of patching come you have the patch already in place, ready to connect with the frayed place.

When working buttonholes on cloth that inclines to ravel, first stitch the slit around near the edge on the machine and then work in the usual manner.

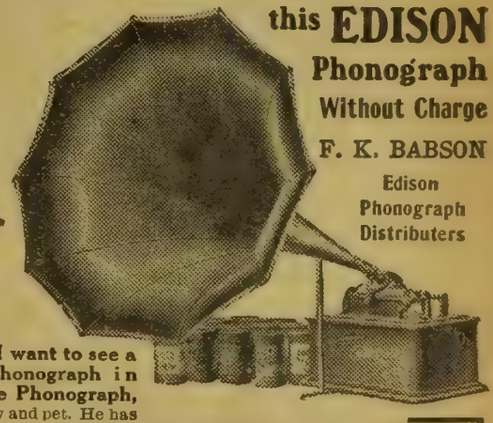
Instead of overcasting seams, try stitching again near the edge. The seams will look more finished and will be stronger, besides not tending to ravel.—Bessie L. Putnam.

A VEST POCKET FOLDING CUP.

This is intended for farmers, ranchmen and travelers. It is a steel cup that folds up like a telescope. It is full nickel-plated and holds a fair-sized quantity. We are sending out many as subscription premiums. Send us Sixty Cents and we will send you The National Farmer and Stock Grower for one year and one of these Pocket Folding Cups. Address, HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

Let Me LEND You this EDISON Phonograph Without Charge

F. K. BABSON
Edison Phonograph Distributers



LOOK FOR THIS TRADE MARK ON EVERY INSTRUMENT

Thomas A. Edison

Mr. Edison says: "I want to see a Phonograph in every American Home." For the Phonograph, as you may know, is the wizard's hobby and pet. He has worked and studied over it constantly until today it is a perfect musical instrument—the king of entertainers.

FREE LOAN! This Latest Style Edison Phonograph, the perfected model of the great Edison factory. You ought to hear it laugh, sing and play—side-splitting, beautiful, sentimental songs, vaudeville, opera—everything.

Lots of Fun With an EDISON PHONOGRAPH

Fun for the children, fun for the young folks, fun for the old folks, lots of fun and entertainment for every member of your family.

No one can listen to the stirring music of the world's greatest military bands, the popular "rag time" stunts, the monologist's hits, the side-splitting minstrel jokes, the old love songs and the best sacred music—no one can listen to this clean, wholesome, instructive and varied entertainment without being impressed and delighted. Think what an influence for good is good music. Think what an opportunity it is to be able to hear the world's greatest singers in grand opera roles, singing which would cost you $5 and even $10 for a seat at the grand opera in big cities. Think what an ever ready resource of entertainment and pleasure for your friends and guests is this instrument which talks and sings and plays right in your own home.

Don't you think you ought to allow your own family this pleasure, especially when you can do so without one cent of expense? I not only offer but consider it a privilege to lend you such a source of enjoyment. The latest style Edison Fireside Phonograph which I offer to lend you free is so different from the squeaking, scratching, rasping talking machines you have heard before, that I want to familiarize everyone with its charm, its simplicity, its perfect mechanism, and its tone quality.

Remember you have the opportunity of hearing the new **Amberol** records that play twice as long as other records.

Send for Our Catalog You can enjoy an Edison Phonograph in your own home free. And you can ship it back at my expense. **Send for a free catalog. Sign the coupon or write us now. Don't wait.**

F. K. BABSON, Edison Phonograph Distributers
Edison Block, Dept 3131, Chicago, Ill.
Canadian Office: 355 Portage Avenue Winnipeg, Canada

REMEMBER: I do not ask you to pay us one cent. I want to **lend** you this wonderful latest style phonograph absolutely **free**, and I only ask that you will invite a few of your friends to share with you a free concert of the finest music. Read my great free loan offer below:

My Offer: I will send to every reader of this paper a genuine Edison Fireside Phonograph. I will allow this phonograph to remain in your home while you and your friends enjoy all its varied entertainment—**without charging you one cent.** You may then return the outfit **at my expense** without having incurred any obligations whatsoever. **F. K. BABSON.**

My Purpose: I know when your friends once hear a genuine Fireside Edison with its perfect tone reproduction, they will want one. If they do not buy at once—they will send at some future time.

We cannot allow one cent discount from our **rock-bottom** price on the Edison. But I would like you to tell your friends of **our surprisingly** low prices, either for cash in full or for only $2 a month, without interest on deferred payments.

Edison Catalog FREE

To Preserve the Teeth.

A dental specialist recently remarked to me: "I tell people to take care of the gums and the teeth will be all right. Instead of polishing each tooth to an ivory whiteness and paying no attention to the gums, which is the common practice, place the brush at the top of the gums as high up as it will go and bring it down with a sweeping motion over the teeth. This keeps the gums toned up and prevents waste matter and tartar from forming at the base of the tooth. Clean them several times a day in this way. Ivory soap and pure warm water make as good a dentifrice as any that can be purchased anywhere. Occasionally they might be brushed with a solution of salt in warm water. Don't use the salt dry on the teeth, as persons sometimes do. This sometimes occasions a grain of the salt to lodge up in the gums and forms an acid which will surely make trouble. Use a brush of medium stiffness, keep it clean and discard it as soon as it begins to wear down or shed any bristles."

This same dentist recommends for an aching tooth caused by a gum boil or abscess, a raisin cut in two, heated and placed directly on the sore spot. If one application doesn't give relief, repeat until relief does come.—Janet Thomas Van Osdel.

Distant Relations.

"Are you related to Barney O'Brien?" Thomas O'Brien was once asked.

"Very distantly," replied Thomas. "I was me mother's first child—Barney was th' sivinteenth."—Chicago Daily Socialist.

"Many a great hope is erected on a small foundation."—Chicago News.

TO WOMEN WHO DREAD MOTHERHOOD!

Information How They May Give Birth to Happy, Healthy Children Absolutely Without Pain—Sent Free.

No women need any longer dread the pains of childbirth, or remain childless. Dr. J. H. Dye has devoted his life to relieving the sorrows of women. He has proved that all pain at childbirth may be entirely banished, and he will gladly tell you how it may be done absolutely free of charge. Send your name and address to Dr. J. H. Dye, 248 Lewis Block, Buffalo, N. Y., and he will send you, postpaid, his wonderful book which tells how to give birth to happy, healthy children, absolutely without pain; also how to cure sterility. Do not delay but write today.

MAY MANTON EMBROIDERY.

A Line of Nice, Useful, Up-to-Date Paper Patterns.

These paper patterns require only a hot iron to insure a perfect transfer on cloth. The way to do it is to lay the material to be stamped on a padded ironing board or table. Place the pattern over it with the printed side down and press over the entire surface of the paper with a hot iron, when a perfect outline will result.

Infant's Caps.

Please send all orders for these embroidery patterns to the **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

Cash Grain at St. Louis.

Grain shipped in car lots to St. Louis and sold by sample shows higher prices than Chicago speculative quotations. For instance, on December 31st, 1909, December corn sold at Chicago from $1.18 a bushel down to $1.12. The cash corn No. 2 sold at St. Louis at $1.29 and $1.30 per bushel. December cash corn closed at Chicago at 61¾ cents a bushel, and at St. Louis No. 2 cash corn was quoted at 63 cents a bushel. At Chicago, December oats were quoted at 43⅝ cents a bushel, and St. Louis cash oats sold at 45½ cents a bushel.

Milk is retailed in the cities for twice what it costs in the country, but milk is not the greatest example of distributors' profits.

Stomach Troubles Vanish Like Magic

Dr. Young's PEPTOPADS cure where medicines alone fail. They regulate the bowels, relieve soreness, and strengthen the nerves and muscles of the stomach in either sex. You can eat what you want and all you want without fear of distress. The cures effected are marvelous. If you have Dyspepsia, Indigestion, Sour Stomach, Distress after Eating, Nervousness, Dizziness, Heart Fluttering, Sick Headache, etc., send 10c to cover cost of mailing, and I will send you a $1.00 treatment absolutely free. It will relieve you immediately. Address DR. C. C. YOUNG, 18 National Bank Building, Jackson, Michigan.

Cement Workers' Handbook.

This book is designed to teach anybody how to work with cement; how to mix mortars of all kinds for all concrete purposes; how to make building blocks; how to build walls, floors, ceilings, walks, posts, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers.

For Sixty Cents we will credit one-year's subscription to The National Farmer and Stock Grower and send a copy of the **Cement Workers' Handbook.**

Paint Without Oil

Remarkable Discovery That Cuts Down the Cost of Paint Seventy-Five Per Cent.

A Free Trial Package is Mailed to Everyone Who Writes.

A. L. Rice, a prominent manufacturer of Adams, N. Y., has discovered a process of making a new kind of paint without the use of oil. He calls it Powdrpaint. It comes in the form of a dry powder and all that is required is cold water to make a paint weather proof, fire proof and as durable as oil paint. It adheres to any surface, wood, stone or brick, spreads and looks like oil paint and costs about one-fourth as much.

Write to Mr. A. L. Rice, Manuf'r., 62 North St., Adams, N. Y., and he will send you a free trial package, also color card and full information showing you how you can save a good many dollars. Write to-day.

Branch offices of the Association are being established in each state. Apply at once, giving full particulars. **The Veterinary Science Association, Dept. 12, London, Canada.**

MAY MANTON PATTERNS.

Very Elegant Fashion Service, With Full Instructions For Ordering and Making.

This is the very best pattern service, and we are very much pleased to obtain it for our friends and patrons. Every pattern is new and original.

Infant's Bishop Dress.

No. 6526.—The bishop dress is one of the simplest yet one of the best that the infant can wear. Its very simplicity means comfort while it also renders the dress easy to launder. White Persian lawn is the material illustrated and the trimming is frills of linen lawn, but dresses of this kind are made from all the soft, fine lawns and batistes that are adapted to babies' use, and can be finished with frills of fine lace or embroidery in place of the plain ones. Either long or short sleeves can be used, as preferred, and the neck can be finished with an underfacing or with a narrow band.

The dress is made with front and back portions that are gathered at the neck edge. The sleeves are in one piece each, gathered into bands, whatever their length.

The quantity of material required is 2⅛ yards 36, or 1⅞ yards 44 inches wide.

The Pattern 6526 is cut in one size only, and will be mailed to any address on receipt of 10 cents.

Boy's Bath Robe.

No. 6504.—Every boy is made happier as well as more comfortable by the possession of a bath robe. It includes patch pockets that are satisfactory and capacious. It is eminently masculine in effect, and it will be found comfortable for a lounging as well as a bath robe.

The robe is made in one piece. It is finished with hems at the front edges and is laid in one plait at each side of the front. There is a box plait at the back and the rolled-over collar is seamed to the neck edge. The sleeves are in one piece each, trimmed to simulate cuffs.

The quantity of material required for the medium size (fourteen years) is 4 yards 27, 3 yards 44, or 2¼ yards 52 inches wide, with 2¼ yards of banding, or one bath robe blanket.

The Pattern 6504 is cut in sizes for boys of ten, twelve, fourteen and sixteen years of age, and will be mailed to any address on receipt of 10 cents.

Fancy Waist.

No. 6528.—The fancy waist that includes a high, shaped girdle is one of the very newest. This one is exceptionally attractive and allows most effective use of different materials. In this case the waist is made of charmeuse, while the trimming pieces on the front, back and sleeves are of soutached net and the little frill or tucker is of chiffon. For the trimming portions, soutache braiding or embroidery or one of the beaded or bugled nets, or, indeed, any contrasting material can be utilized, and for the waist itself everything that is soft enough to be shirred successfully is appropriate. If liked, it can be made high at the neck by the addition of yoke and sleeves, and practical women will at once realize that this yoke and sleeves could take the form of a removable guimpe, so making the waist available both for evening and daytime occasions. The girdle is an especially noteworthy feature, and in this case is trimmed with buttons and braid ornaments.

The quantity of material required for the medium size is 2¾ yards 21, 24 or 27, ⅞ yards 44 inches wide, with one yard 18 inches wide for trimming portions, ¼ yard 44 inches wide for frill, 1⅛ yards 18 inches wide for yoke and long sleeves when these are used.

The Pattern 6528 is cut in sizes for a 32, 34, 36, 38, 40 and 42-inch bust measure, and will be mailed to any address on receipt of 10 cents.

Three-piece Skirt.

No. 6527.—Every possible variation of the tunic idea is being exploited just now, and here is a skirt that is simple in the extreme, yet which gives that effect. The upper portion is gathered, forming soft folds, and is finished with a wide hem or tuck, and the lower portion is a circular flounce joined to it under this tuck, so that, while there is the effect of a double skirt, there is less material required and less labor necessary for the making. All the pretty soft fashionable materials are appropriate, chiffon cloth, crepe de Chine, charmeuse, marquisette and the like, and even the slightly heavier cashmeres and materials of the sort. If liked, the lower edge of the hem, or tuck, can be finished with fringe or with trimming, and the skirt can be made more elaborate by applique of any sort, but just as illustrated the skirt is exceedingly smart, effective and practical.

The quantity of material required for the medium size is 7¼ yards 27, 6 yards 44, or 4 yards 52 inches wide; the width of the skirt at the lower edge is 4¼ yards.

The Pattern 6527 is cut in sizes for a 22, 24, 26, 28 and 30-inch waist measure, and will be mailed to any address on receipt of 10 cents.

Boy's Overcoat.

No. 6529.—The overcoat that is buttoned right up to the throat is the one that is best liked for small boys during the really cold weather. This model is finished with a becoming turned-over collar and is exceedingly smart in effect. It is essentially masculine, too, and consequently will delight the boy himself. It is closed in double-breasted style and held by big buttons, but otherwise is severely plain. There are the pockets, however, that are so essential to masculine comfort, and the coat is altogether a desirable one. All seasonable materials that are used for boys' overcoats are appropriate. The collar can be of velvet, as in this instance, of fur, or of the material, as liked.

The coat is made with fronts and back. The pockets are inserted and finished with overlaps. There are regulation two-piece sleeves, and the turned-over collar is joined to the neck edge.

The quantity of material required for the medium size (six years) is 3¾ yards 27, 2½ yards 44 or 52 inches wide, with ⅛ yard of velvet.

The Pattern 6529 is cut in sizes for boys of two, four, six and eight years of age, and will be mailed to any address on receipt of 10 cents.

Blouse With Over Waist.

No. 6530.—Certain variations of the over waist are among the latest developments of fashion, and here is one that can be utilized in a great many different ways. In the illustration it is made from a pretty fancy silk and worn over a blouse of chiffon, but over waists of chiffon over flowered and Persian silk, over lace and over lingerie blouses are among the newest departures of fashion, and this model can be utilized in that way quite as well as in the one illustrated. It can be made in one with this special blouse, or it can ge kept separate and worn over any other that may be liked. The short sleeves are cut in one with it and are exceedingly pretty and becoming. The blouse can be made either with plain or with fancy sleeves, but the fancy ones are distinctly novel and attractive, and any pretty material can be utilized. In this case the chemisette and cuffs are made of tucked chiffon, but they can be of lace, of embroidery, or of any material that may be liked, or the entire blouse could be made of the flowered or Persian silk already referred to and worn under chiffon. If this chiffon is made of the color to match the skirt, the waist will be one of the smartest possible for wear with the coat suit.

The quantity of material required for the medium size is, for the blouse, 3 yards 21, 2 yards 36 inches wide, with 1 yard of tucking, ¾ yard 21 or ⅞ yard 44 inches wide for puffs; for the over waist, 2 yards 21 or 24, 1⅞ yard 32, or 1⅝ yards 44 inches wide; for the trimming will be needed 2 yards of wider, 3½ yards of narrower banding.

The Pattern 6530 is cut in sizes for a 34, 36, 38, 40 and 42-inch bust measure, and will be mailed to any address on receipt of 10 cents.

Please be sure to give size of pattern ordered and write your own name and address clearly that no mistake can be made to cause delay.

Kindly address all pattern orders to Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

FREE TO YOU—MY SISTER

Free to You and Every Sister Suffering from Woman's Ailments.

I am a woman.
I know woman's sufferings.
I have found the cure.

I will mail, free of any charge, my home treatment with full instructions to any sufferer from woman's ailments. I want to tell all women about this cure—you, my reader, for yourself, your daughter, your mother, or your sister. I want to tell you how to cure yourselves at home without the help of a doctor. Men cannot understand women's sufferings. What we women know from experience, we know better than any doctor. I know that my home treatment is safe and sure cure for Leucorrhoea or Whitish discharges, Ulceration, Displacement or Falling of the Womb, Profuse, Scanty or Painful Periods, Uterine or Ovarian Tumors, or Growths; also pains in head, back and bowels, bearing down feelings, nervousness, creeping feeling up the spine, melancholy, desire to cry, hot flashes, weariness, kidney and bladder troubles where caused by weaknesses peculiar to our sex.

I want to send you a complete ten day's treatment entirely free to prove to you that you can cure yourself at home, easily, quickly and surely. Remember, that, it will cost you nothing to give the treatment a complete trial; and if you wish to continue, it will cost you only about 12 cents a week or less than two cents a day. It will not interfere with your work or occupation. Just send me your name and address, tell me how you suffer if you wish, and I will send you the treatment for your case, entirely free, in plain wrapper, by return mail. I will also send you free of cost, my book—"WOMAN'S OWN MEDICAL ADVISER" with explanatory illustrations showing why women suffer, and how they can easily cure themselves at home. Every woman should have it, and learn to think for herself. Then when the doctor says—"You must have an operation," you can decide for yourself. Thousands of women have cured themselves with my home remedy. It cures all old or young. To Mothers of Daughters, I will explain a simple home treatment which speedily and effectually cures Leucorrhoea, Green Sickness and Painful or Irregular Menstruation in young Ladies, Plumpness and health always results from its use.

Wherever you live, I can refer you to ladies of your own locality who know and will gladly tell any sufferer that this Home Treatment really cures all women's diseases, and makes women well, strong, plump and robust. Just send me your address, and the free ten day's treatment is yours, also the book. Write to-day, as you may not see this offer again. Address

SELECTED POETRY.

THE ARAB'S FAREWELL TO HIS STEED.

My beautiful, my beautiful, that standest meekly by,
With thy proudly arched and glossy neck and dark and fiery eye.
Fret not to roam the desert now with all they winged speed,
I may not mount on thee again; thou'rt sold, my Arab steed.
Fret not with that impatient hoof, snuff not the breezy wind,
The farther that thou fliest now so far am I behind;
The stranger hath thy bridle rein, thy master hath his gold,
Fleet limbed and beautiful — farewell! Thou'rt sold, my steed, thou'rt sold!

Farewell! Those free, untired limbs full many a mile must roam
To reach the chill and wintry sky which clouds the stranger's home.
Some other hand, less fond, must now thy corn and bread prepare;
Thy silky mane I braided once must be another's care.
The morning sun shall dawn again, but nevermore with thee
Shall I gallop through the desert paths where we were wont to be.
Evening shall darken on the earth, and o'er the sandy plain
Some other steed with slower step shall bear me home again.

Yes, thou must go. The wild, free breeze, the brilliant sun and sky,
Thy master's house—from all of these my exiled one must fly.
Thy proud, dark eye will grow less proud, thy step become less fleet,
And vainly shall thou arch thy neck thy master's hand to meet.
Only in sleep shall I behold that dark eye glancing bright;
Only in sleep shall I hear again that step so firm and light;
And when I raise my dreaming arm to check or cheer thy speed,
Then must I, starting, wake to find thou'rt sold, my Arab steed.

Ah! rudely then, unseen by me, some cruel hand may chide
Till foam wreaths lie like crested waves along thy panting side,
And the rich blood that's in thee swells in thy indignant pain,
Till careless eyes which rest on thee may count each starting vein.
Will they ill use thee? If I thought— But, no; it cannot be!
Thou art so swift, yet easy curbed; so gentle, yet so free;
And yet if haply, when thou'rt gone, my lonely heart should yearn,
Can the same hand that casts thee off command thee to return?

Return? Alas! my Arab steed! what shall thy master do,
When thou, who were his all of joy, hast vanished from his view?
When the dim distance cheats mine eye and through the gathering tears
Thy bright form for a moment like the false mirage appears?
Slow and unmounted will I roam, with weary foot, alone,
Where with fleet step and joyous bound thou oft hast borne me on;
And, sitting down by that green well, will pause and sadly think:
'Twas here he bowed his glossy neck when last I saw him drink.
When last I saw him drink! Away! The fevered dream is o'er!
I could not live a day and know that we should be no more.
They tempted me, my beautiful, for hunger's power is strong;
They tempted me, my beautiful, but I have loved too long;
Who said that I had given thee up? Who said that thou were sold?
'Tis false, 'tis false, my Arab steed! I fling them back their gold.
Thus, thus, I leap upon thy back and scour the distant plains!
Away! Who overtakes thee now shall claim thee for his pains!

—Mrs. Caroline E. S. Norton.

THE WRECK OF THE "HOBBLEDEHOY."

Ye wonder, loving landsmen, likewise ye seamen bold;
Come, listen to my story, 'twill mak' your blood run cold;
I'll tell of a ship which left our shores to cruise the ocean round,
With many a gallant seaman whose heart with hope did bound.

We steered from the old harbor and sailed up through the Sound;
Our crew were all on pleasure bent, for the Horse Island we were bound;
Our captain he took full command, giving orders loud and clear,
And told the mate to set the watch, and give the course to steer.

Our mate he was a landsman, at sea had never been,
And he thought the best we could do was to steer for Montgomerie Green;
He said the sea looked dangerous, no shelter to be found,
And cried, with horror in his eyes: "She's duntin' on the ground."

Though panic-struck, our gallant crew soon pushed about her head;
The captain cried to take a course straight for the lifeboat shed.
Before the breeze and flowing seas she bounded like a ba',
Till she was stopped by an awful bump against the pier wa'.

"Brave hearts," cried out our captain, there may be joys at sea,
But were I safe in Glasgow Lane, they may roar and roll for me;
This stupid ship was never trained, or never learned to sail,
She only tries to jump a dyke whene'er you twist her tail."

When we drew near the floating dock it blew a heavy gale,
The captain cried out in despair to cut away the sail,
"We have done all that men can do, no other can do more,
Let us steer for Sandy Bannatyne's slip and run the ship ashore."

To see her safely to the beach, the mate sprung to the prow,
When with a sudden lurch she sent him headlong o'er the bow;
The awful cry: "Man overboard!" caused every heart to freeze,
When back came gurgling through the briny: "I am only tae ma knees."

Great was the joy in Glasgow Lane when came our sailors bold;
The people ran from every side to hear the story told;
There was Sandy Scott and big "Red Hot" and the weans frae the school,
And running, too, came Andy Carr, who kept the town in fuel.

So our voyage is o'er, and we may rest awhile;
The captain, to escape arrest, went to a neighboring isle;
The mate fled to the country, where he was welcomed home with joy,
And still he tells his wondering friends of the wreck of the "Hobbledehoy."

—Murmurings by a Shell.

WHAT MIGHT BE DONE.

What might be done if men were wise,
What glorious deeds, my suffering brother,
Would they unite
In love and right,
And cease their scorn of one another!

Oppression's heart might be imbued
With kindling drops of loving kindness,
And knowledge pour
From shore to shore,
Light on the eyes of mental blindness.

All slavery, warfare, lies, and wrongs,
All vice and crime might die together;
And wine and corn,
To each man born,
Be free as warmth in summer weather.

The meanest wretch that ever trod,
The deepest sunk in guilt and sorrow,
Might stand erect
In self-respect,
And share the teeming world to-morrow.

What might be done? This might be done,
And more than this, my suffering brother;
More than the tongue
Ever said or sung,
If men were wise and loved each other.

—Charles Mackay.

MODERATION.

Some women's beauty is so great
They really do intoxicate,
And others are so plain, some think,
They, too, would drive a man to drink.
So if quite temperate we would be,
The proper thing to do, we see,
Is to permit our eyes to quaff
The charms that are but "half and half."

—Nixon Waterman.

The Unbeatable Exterminator

As an all-around Killer for destruction of Rats, Mice, Ants, Roaches, Bed Bugs, Crows, Hawks, Gophers, Squirrels, Chipmunks, Prairie Dogs, Wolves, etc., etc. Nothing so effective and economical as Rough on Rats, the old reliable, that never fails. Is not dangerous to handle. Poisonous only when eaten. Odorless and tasteless; can be mixed and disguised in many different ways to meet conditions. 10c., 25c. and 75c., at Druggists. E. S. Wells, Chemist, Jersey City, N. J.

Children's Money.

Not long ago a young man whom I knew to be earning a fair salary told me that he was down to his last nickel.

"It's not more than a month ago you showed me checks to the amount of three hundred dollars drawn in your favor," I replied.

"Yes, I know. But my money always comes in big lumps, and when I have a lot I just have to let it fly. I could mention a dozen things now that I could have done without, but it's too late to recall it now, and I'll have to beg, borrow or steal until my next bunch comes."

"Chauncey," I said, "weren't you taught anything about money when you were a child?"

"When I was a kid," he answered, "none of us handled money. Dad simply paid the bills. When I wanted a thing I got it and charged it up to dad. I'm still getting things when I want them, with the difference that it's yours truly who settles the accounts instead of dear old dad."

The right use of money is an important part of the training of children. If they earn their own money they will place a higher value upon it than if they are handed out whatever amount they need upon request. They will use their own earnings judiciously, planning how they can spend to best advantage. Among my friends is a mother who assigns certain tasks to each one of her children as soon as they are old enough, and for these duties well performed each little worker receives a stipulated amount. It is not a very large sum in any case, but each child uses what he earns for his small personal expenses, school books and the gifts which he gives. The parents pay the heavier expenses, but the handling of even this small amount of money is giving he children a training in values that should fit them to capably manage their own affairs when they are of age.

Another mother gives her daughter of fourteen an allowance which she considers ample to meet all of the girl's expensees. The girl keeps an account book, showing just where each penny goes. Her mother is her banker and holds her money when there is a surplus. Occasionally there is a deficit, as when the girl had a new coat, a hat and a pair of shoes to buy all in one week. As it was necessary for her to have her clothing, she was allowed to borrow the money at three per cent., to be paid within a certain time. It was from her father she borrowed. Bravely she denied herself many treats while in debt. "I can't go with you," she said, when invited to hear the Thomas Orchestra. "I'm in debt and I've got to get it all paid out of this month's allowance, for next month I must save for Christmas."—Janet Thomas Van Osdel.

Fast Colors and Pretty Goods.

Can you advise me what material would make pretty yet inexpensive dresses for a young school teacher? I was just graduated from Normal School last spring and have a position in the country, where I want to make as good an impression as possible. CARRIE LOTTA STILES.

Your desire will undoubtedly be gratified if you secure a certain cotton goods known as Simpson-Eddystone Prints, made by the Eddystone Mfg. Co., Philadelphia. These goods come in a variety of pretty patterns, and the material is exceptionally good quality. One of the most important considerations is that the colors are absolutely fast, so that they make very practical tub-dresses.

They are really very moderate in cost, yet they can be made up into as stylish gowns as costly materials. Among the colors that would undoubtedly be most suitable for you are the Fast Hazel Browns, Indigo Blues, and Black and Whites. They may be had at any reliable dry goods dealers.

Dear Sisters

If You Are Suffering From Any of the Ills That Woman Is Heir to Write Me for My

Professional Advice and Trial Treatment

which I send absolutely

FREE

I am a woman physician, have treated as a specialist all known woman's diseases and it is possible for me to help and cure you if you will only write to me and tell me of your troubles Believe me, sisters, I am a woman, a mother, a woman doctor who understands woman Nature and knows from personal experience and through the practice of my profession how to treat every symptom of pain and agony a woman can have.

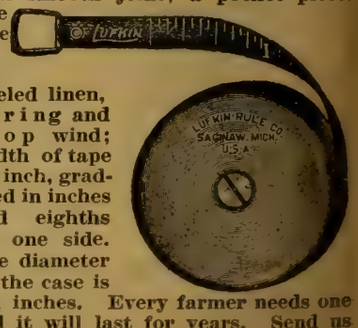
Is there anything wrong with you in a womanly way? If so, write me in confidence and **I will advise you free.** You have nothing to lose; all to gain Upon receipt of your letter in which you tell me of your trouble, I will diagnose your case and send you by return mail a plain and complete statement of what I can do for you and in which way it will be done. This I will do free of charge, including with this advice a **free trial** of my treatment specially prepared for woman's ills. Do not fail to write me today. A valuable medical pamphlet free to every woman applying for the treatment. Address **Dr. Luella McKinley Derbyshire, Box 524, Fort Wayne, Ind.**

Pratts New Poultry Book.

Pratts New Poultry Book is worth having as a gift, and many that we have to buy are not as good. It is written in the interest of Pratts Poultry Regulator, and that is good reading also. It is the farmer who can make the most money out of poultry, and this book is a manual of information concerning the raising of poultry for profit. Write to Pratt Food Co., Dept. F, Philadelphia, Pa., and ask for a free copy of "Pratts New Poultry Book."

TAPE LINE — A SPLENDID SUBSCRIPTION PREMIUM.

This is a five-foot Tape Line in a nickel-plated German silver case, with smooth joint; a pocket piece. The tape is enameled linen, spring and stop wind; width of tape ¼ inch, graduated in inches and eighths on one side. The diameter of the case is 1¾ inches. Every farmer needs one and it will last for years. Send us Sixty Cents and we will mail you The National Farmer and Stock Grower for one year, and we will also forward, postage paid, one of these fine Tape Lines. Address, THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.



SUBSCRIPTION PREMIUM — A POCKET COMPASS.

This is a true 1¾-inch Pocket Compass purchased from a reliable house. It is a fancy, nickel-plated, open-face, watch-shape Compass, with a silvered dial, and it weighs less than one ounce. Every farmer or ranchman should have one in his pocket. Send us One Dollar and we will send you The National Farmer and Stock Grower for one year, and we will also send you this Pocket Compass by mail postpaid. Address, THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

Helps to the Housewife.

Of brushes one can scarcely have too many, so manifold are the uses to which they can be put and so much better do they do the work than it can be done in the ordinary methods. The cheap four-cent ones are just the thing for cleaning the hands after milking or doing other disagreeable work. One of them should have a place in the sink ready for cleaning vegetables. Others will come in good play in cleaning sink, floor or oilcloth, removing every trace of soil from a creased surface much more quickly than a cloth. After the clothes have been put through the washer there are always soiled spots and creases to be removed. Use one of these brushes and a little soap and the dirt is quickly removed with the least possible injury to the fabric.

A cheap toothbrush is just the thing for cleaning cut glass or embossed material of any sort that will stand washing. Brass, nickel and other trimmings on stove or lamps may be quickly cleaned by it.

Stove blacking is put on much better with an old paint brush than in the old way, and this without soiling the hands. We recently heard of a girl who anticipated a new shaving set as a Christmas present for her father with the reason: "She just must have his old brush to black the stove, and could never hope for it unless she got him a new one." This was certainly "killing two birds with one stone," but it illustrates the point as to the household value of the brush.

Happy is the woman who can adapt one thing to two or more uses. One of this sort finds her pancake turner useful not only for the purpose indicated by the name, but to remove cookies from the tins, to turn potato cakes and other vegetables which she wishes to keep in shape, and in handling a fish that she is frying.

A labor-saver of a friend is a crock in which is kept a solution of concentrated lye. Into this are put her wiping towels and other soiled articles connected with dishwashing. If there is a milk bottle or a pitcher that does not yield readily to ordinary treatment, down it goes into the crock of diluted lye to come forth in a few hours bright and sweet. The dish cloths and towels are also kept white and sweet with very little hand labor. Of course, if there are small children in the family this method should not be thought of, at least not unless the crock is safely out of their way. But in a home of adults it has proved an easy method of keeping things sweet and clean.

Keep a few old papers where they are handy. When dressing a chicken one may be spread to receive the trimmings, which can easily be carried out in it when you are through. If meat spatters when frying, a paper laid in front of the stove will prevent the floor or carpet from getting soiled. If the cream spatters when churning, pin a paper around the top of the churn, letting the upper edge project high enough to catch it.

Papers are excellent to wear as chest protectors when going out on a windy day. Slip one between the plants and the window on a cold night.

When opening canned fruit, immerse the top of the can for a few minutes in hot water. This causes the cover to expand, and it can then be easily removed. This is much better than loosening with a knife, as this almost always bends the rim, and next time it is used it will not prove air tight.

Remember that all material canned in tin cans should be removed as soon as the can is opened. Tomatoes may be sealed in tin with an almost certainty of keeping, but it is dangerous to allow them to remain in the can after it is opened.—Bessie L. Putnam.

Christmas Conviviality.

At a dinner in Denver, Judge Ben B. Lindsey told a story about Christmas conviviality.

"There used to be an old fellow of 60," he said, "who got arrested about twice a week for conviviality. He was always haled before Magistrate Blank, and as the Magistrate was about 60, too, a queer kind of comradeship, almost friendly, arose between the two men.

"In the late autumn the toper was called away from Denver. He did not return till Chirstmas time. The convivial Christmas spirit in the crisp Denver air was, of course, too much for him, and the day after his return he was haled before the usual Magistrate on the usual charge.

"The Magistrate, in the green-festooned court room, felt kindly and forgiving.

"'Well, George,' he said to the prisoner, 'you are here again at last, eh?'

"'Yes, your honor,' said old George humbly.

"'You've been away some time, haven't you?'

"'Yes, your honor, nigh on to three months"

"'And how many times, George, did you get drunk during the period?'

"'I don't like to say, your honor,' old George faltered, 'before all these here people.'

"'Well,' said the Magistrate, 'take paper and pencil and write it down.'

"So George wrote, and the paper was passed up to the Magistrate, who looked at it and said:

"'Ah, well, it's the Christmas season; and since you were away three months, George, and only got drunk sixteen times, I'll let you off.'

"'Thank you, Judge,' said old George, as he left the dock. 'You looked at the paper upside down, though.'"

The Habits of House Flies.

In cold climates screen doors and windows are put away for the winter. The impudent flies that bring the germs of typhoid fever upon their feet from sewers and cesspools, to deposit them upon our food, have nearly all disappeared. How will they get a start again next year?

Like the bees, the bears and he squirrels, the house fly hibernates during the winter season. Probably 90 per cent. perish, but a few that are fortunate enough to find favorable winter quarters live until spring. When the days again become warm, these over-winter flies are attracted to stables and manure piles, where eggs are deposited that soon hatch into white maggots that in the course of ten days or two weeks change into flies. In a few days this new brood of flies is laying eggs in decomposing filth to still further increase its kind. Several generations are produced in this manner in a single summer, so that by the middle of August the fly nuisance is on again in full force.

Clean stables and the prompt removal of all filth and garbage will do much to lessen the swarms of flies about out-dwellings.

A careless nurse who throws the slops from the sick room of a typhoid patient where they may be visited by flies may be the means, through the assistance of the flies, of distributing the nuisance to the homes of all her near neighbors.—C. P. Gillette, Colorado Agricultural College, Fort Collins.

Potatoes at 43 to 53 cents a bushel were selling at St. Louis, late in December.

From Bakery to Farm

Soda crackers are a long time on the road to the country store, and from there to the country home. But

Uneeda Biscuit

—no matter how far they journey, never become travel worn. As you open their moisture proof protecting package you always find them not only store fresh, but bakery fresh—clean, crisp and whole.

A package costs 5c.

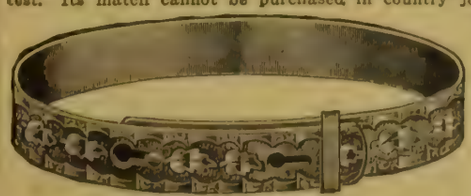
Money returned if not satisfied. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**



Universal Magazine Bracelet.

(From the Chicago Inter-Ocean.)

All readers of The National Farmer and Stock Grower who have sick friends, suffering from rheumatism or kidney trouble, will be interested:

FINDS NEW KIDNEY CURE

Dr. T. Frank Lynott, New York Specialist, discovers remarkable remedy.

At last a perfectly harmless and positive cure appears to have been found. Dr. T. Frank Lynott, formerly of the New York University, New York, later of the famous Bellevue hospital, and now a celebrated specialist in Chicago, has a very quick acting formula which has been approved by the best doctors.

The editor of The National Farmer and Stock Grower saw the above clipping from the Inter-Ocean and wanted to know of this new formula for curing kidney trouble.

Arrangements were then made by which Dr. Lynott offers National Farmer and Stock Grower readers a **free treatment.** Dr. Lynott, however, says that he proposes to give the free treatment only for a limited time to convince the public in every part of the United States of the positive wonderful efficacy of his treatment.

Furthermore, Dr. Lynott wants to make it clear that he has no "cure-all." He is a specialist in kidney and bladder diseases and rheumatism, so please do not write to him unless you have one of these diseases. If you write at once, both the medical advice and the medicine are entirely free.

The editor of this paper, The National Farmer and Stock Grower, feels that with such a free offer, anybody who stays sick with kidney trouble or rheumatism deserves to be sick.

I know that a good many free offers have been advertised where the public had to send money, **but this free offer really IS A FREE OFFER.** And remember that instead of getting an ordinary physician, you get the medical advice free direct from America's greatest of all specialists on these diseases. See Free treatment certificate at bottom of this page and get relief **right now.**

STOP!

Stop that back breaking, twisting, terrible, terrible unbearable agony! Oh, that awful, awful digging soreness—the back all bent—the joints stiff, the heart-wringing pain—*stop that pain RIGHT NOW!*

Yes, Write For the Free Treatment—

a **REAL Free Treatment** that will give you relief—relief at once—not next week, not tomorrow, but relief AT ONCE—**immediately** after starting the treatment. It is so **simple,** so mild, yet so scientific and so **sure**—this treatment for rheumatism, kidney and bladder trouble. Write now, today.

See the Free Treatment Certificate below—sign it and send it today. **No money—no obligation. At last you** can get relief, and, if you write at once, you get the treatment absolutely free. Just think—a genuine **free** treatment by America's and Europe's **leading** specialist—absolutely free—really and genuinely free **to convince the public.**

If you have Kidney Trouble, or Rheumatism (the cause of those pains), then **it's your loss** if you suffer any longer. When Dr. Lynott says free, he means free—not one cent to pay; and it is "up to you" whether you want the best medical advice and medicine all without a cent of cost. Don't miss this wonderful liberal offer. See the Free Trial Certificate at the bottom of this page.

Look at these poor sufferers all bent with nerve-racking pain—they are victims of kindey trouble; they think it is a rheumatic twitch. Friends say they grumble, but considering their awful pain, they bear up most bravely.

Oh, it is terrible that there should be such suffering, when you can be relieved so quickly, so surely, so simply, and **right now, free of charge.**

Writing of Dr. T. Frank Lynott, who gives the medical advice free, a brother specialist writes as follows:

"I have for years been considered an authority on urinary diseases, but I must confess my respect, my profound sense of esteem, for Dr. Lynott, whose wonderful success in treating urinary diseases has surprised us all. Dr. Lynott, by the way, is making a most remarkable free offer—the most genuine and generous offer ever made by a high grade physician. It seems to me the medical world ought not to be jealous of his success, but should praise him for what he has done and is doing for humanity."

Dr. T. Frank Lynott

whose photo is printed here, is, as you perhaps know, the world's greatest authority on kidney and bladder trouble and rheumatism. Never before has a physician of such high standing offered to treat patients by mail. But Dr. Lynott *wants* the people to get the benefit of this free treatment.

His cures have stirred America and Europe. In fact, Dr. Lynott received a special diploma on urinary diseases from the great New York University—of which the famous Bellevue Hospital, New York is now an honored part.

WATCH These Symptoms!

Trouble in the kidneys begins slowly, slowly. It creeps upon the unsuspecting patient like a thief in the night. Slowly, slowly, those stinging, racking pains foist themselves upon the sufferer; gradually, gradually the pains increase into a daily, nightly, constant, endless torture. Watch the symptoms, and cure yourself. Here are the principal symptoms of uric acid disease:

The Symptoms

1—Pain in the back.
2—Too frequent desire to urinate.
3—Burning or obstruction of urine.
4—Pain or soreness in the bladder.
5—Prostatic Trouble.
6—Gas or pain in the stomach.
7—General debility, weakness, dizziness.
8—Constipation or liver trouble.
9—Pain or soreness under right ribs.
10—Swelling in any part of the body.
11—Palpitation or pain around the heart.
12—Pain in the hip joint.
13—Pain in the neck or head.
14—Pain or soreness in the kidneys.
15—Pain or swelling of the joints.
16—Pain and swelling of the muscles.
17—Pain and soreness in nerves.
18—Acute or chronic rheumatism.

NOW THEN, This Certificate is FREE

You get the treatment, the medicine and Dr. Lynott's personal attention absolutely free, if you write at once. Instant Relief for those terrorizing pains!

Send no money—read the certificate, note that it puts you under no obligation. Dr. Lynott is glad to see a sufferer cured—write at once and get the free treatment.

JUST

Your Name and Address and the Symptoms

of your disease given by number. That is all Dr. Lynott wants. Read the free treatment certificate; read how it puts you under **no obligations** whatever; how it says specially and distinctly that you are not now nor later under any obligations whatever.

SEND NO MONEY—just write for the free treatment

REMEMBER:—This free treatment offer is LIMITED. Only a certain number will be taken, all under Dr. Lynott's personal care. If you answer this offer the first time you see it you are GUARANTEED the FREE treatment. So better send the free treatment certificate today, at once, and remember, you need INSTANT, IMMEDIATE relief from those awful pains.

DR. T. FRANK LYNOTT, 3103 Occidental Bldg. CHICAGO

If you have a friend suffering with kidney or bladder trouble or other uric acid disease, such as rheumatism, don't you feel that you owe it to your friend to tell him or her of this free offer?

Free Treatment Certificate

What is Your Name?.....
State plainly, Mr., Mrs. or Miss.

Your Address?.....

What Symptoms Have You?.....
Give numbers from table above—that is all

What is Your Age?.....*Married?*.....

Just fill out the above—nothing to sign, you see. Just answer the questions and be sure to give your name and address. You are under no obligations whatever. The **FREE** treatment will then be sent **at once, prepaid.** Cut out this certificate (or write a letter describing your symptoms) and **get INSTANT relief from those racking, rocking pains.** Address personally

HARDY, EVER-BLOOMING ROSES.

A Subscription Premium.

Farm papers seldom offer Flower Premiums, but the National Farmer and Stock Grower has decided to do so just this once. We are able to send out a collection of eight choice ever-blooming Rose Bushes to our patrons who will send in a special subscription during the month of February.

The Collection of Roses.

The collection consists of **Rhea Reid,** one that received the gold medal at the National Rose Society; the flowers are rich velvety red. Another one is **The Bride,** one that will thrive under most unfavorable conditions. The flowers are the purest ivory white. **Etoile de Lyon** is the most magnificent pure yellow rose, massive in size and beautiful in every stage of development. **Bridesmaid** starts with the first warm days of spring and requires but little care; the flowers are an exquisite clear pink, beautiful in form and highly frgrant. The **Papa Gontier** rose is a grand variety for outdoor planting, producing double flowers of clear, glowing crimson and blooms from June to late in the year. **Bessie Brown** is a charming, pure snow-white rose; the flowers are very large and it blooms profusely. **Champion of the World** is a rich, ivory pink, and without it no garden selection is complete; it is unequaled for size of flower, fragrance or beauty. **Crimson Rambler,** the last of the collection, is a bright crimson flower that covers the entire bush. It is valuable for decorative hedges, arches and screens. We cannot describe this beautiful collection, but we will guarantee them to please any lover of flowers.

OUR SPECIAL OFFER.

Send Us Sixty Cents. We will send you The National Farmer and Stock Grower for one year. We will send you direct by mail, postpaid, the full set of eight hardy, ever-blooming Roses. We will also send you a 16x20-inch picture entitled **"The American Beauty Rose."** The picture is most beautiful. There is a great bunch of roses resting on the white linen cloth of a table. It is glorious, magnificent. **Send Us Sixty Cents.** The paper can go to one address, the picture to another and the roses to another, or all three to one address.

ANOTHER SPECIAL OFFER.

We publish the Universal Magazine. It is a splendid publication, issued monthly. There are thirty-two pages, three columns to the page, illustrated stories, special articles, poetry, embroidery, patterns, etc. The subscription price is 25 cents a year. Send us Fifty Cents and we will send you the Universal Magazine for two years. We will also send you the full set of eight hardy ever-blooming roses as a premium. The rose plants will be sent prepaid by express. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

5 Cents a Copy. Published Monthly by The Hale Publishing Co. 50 Cents a Year.

ELLWOOD FENCE

MADE OF TOUGH SPRINGY STEEL

Weight in Fence is Strength

Do You Sell Your Stock By Guess? No—You Weigh Them

USE the same good judgment in buying fence. *Weigh it* and see what you are getting for your money. In Ellwood Fence you will find good value by this test.

The close 2-in. and 4-in. truss-brace mesh of the Ellwood Fence distributes strain over a wider area than do fences of more open construction, making a long-life fence. Also the hinged-joint construction at every second cable effectually protects the cross or mesh wires by throwing the shock upon the heavy cable wires.

THE HOTBED.

How to Construct It—Preparation of the Heating Material—Muslin a Substitute For Glass—Life of the Heat.

To prepare the hotbed, make a frame or box the size desired for it. The size varies, but the usual size is from 4½ feet to six feet wide and as long as desired. It is not a good idea to make the hotbed too wide, because it prevents the grower from easily reaching the center of the bed when weeding it. The frame can be made out of common one-by-six-inch lumber, but heavier material may be used if desired. After sawing off the pieces for the four sides, nail them together at the corners. Place this box over the place marked for the hotbed. At each corner and in the center of each piece, on the outside of the frame, sink or drive into the ground a two-by-four stake thirty inches long. Nail the hotbed box to these stakes. The box so secured to the stakes will not spread or slip up or down.

When the frame has been prepared as above, dig out the soil inside of it to a depth of twenty-four inches. While digging out his pit, it is a good plan to make it a little larger at the bottom than the frame above, so the heating material when placed in the pit will be under the whole surface of the area inside the frame.

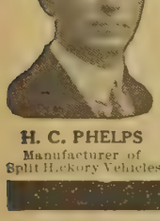
Into this pit place the heating material from sixteen to twenty inches deep. Care should be taken to tramp the manure down firmly and evenly so as to make the mass compact and smooth on top. On top of this put five or six inches of rich, well-crumbled, loamy soil. After the temperature of the soil has become somewhat uniform the seed may be planted. After planting the seed, care should be taken to see that the soil does not become dry, because if it does the young plants will likely be killed. The heating of the manure below causes the water to evaporate rapidly from the soil. This being the case, it is important to apply more water than ordinarily required in an outside bed. Probably more failures are caused in growing plants in the hotbed by injurious and improper watering than from any other cause.

In regard to the kind of material to use for heating, fresh horse manure is probably the best. In preparing the manure for the hotbed, secure the amount needed for it and place the same in a pile. When piling it up, put on enough water to thoroughly moisten the whole mass. If fermentation does not commence soon, it can be hastened by throwing on the pile a few pailfuls of hot water. When the manure has begun to heat well, turn over the whole mass into a new pile. This will make the heating of the whole more uniform. If necessary, add more water. The fermenting manure should not be allowed to become dry nor shoud it be made too wet. After the heating has become somewhat uniform, the manure can be put into the hotbed pit as described above. If the manure used is very fine and does not contain much straw or other litter, it is better to add some straw or other coarse material. This helps to make the heating more uniform and prevents the rapid fermentation of the manure, thus causing the heat to last longer.

The kind of covering to use for the hotbed depends on the material at hand. The regular cold frame sash may be used. The size most common in use is the three-by-six-foot sash. Where the cold-frame sash is not available, covering the bed with common muslin or white domestic gives very satisfactory results. It lets in sufficient light and holds the heat to some extent from passing off too rapidly. The muslin may be stretched over the whole hotbed in one piece, or small frames may be made the width of the cloth and size of the frame to which the cloth may be tacked. These frames can be made out of light lumber. Strips two inches wide by one inch thick will be sufficiently heavy. The frames may be mortised at the corners and nailed together, or small strap angle irons like those used on the bodies of carriages can be screwed on each corner, which will hold the frames firmly. On very warm days the frames may be raised to let out some of the excessive heat and more light in. On extreme cold nights an extra co ing may be thrown over the hot to prevent injury to the plants gr ing therein.

For starting plants for early ve tables, such as celery, cauliflow cabbage, onions, lettuce,, tomat and others, the hotbed offers an e means. Vegetables like radish lettuce and onions may be grown mid-winter use in the hotbed. Twe inches of manure in the hotbed ou to furnish enough heat to last six eight weeks.—J. E. Mundell, of N Mexico College of Agriculture.

Split Hickory—Let Me Pay The Postage To You



H. C. PHELPS
Manufacturer of Split Hickory Vehicles

No year in history has seen such splendid Split-Hickory-Vehicle Styles as this—or such low prices. I promise you also just as great savings on high-grade Harness. Just send me your name this season—right away, sure, for my new, big Free Book of over 125 styles to select from. Select just the made-to-order, direct-from-factory Split Hickory you want. I'll send it promptly on

Soil fertilit drainage, grain crops, gardenin truck growing, fruits, forestry, pru ing, grafting, budding, injurio insects, plant diseases, sprayin cattle, sheep, horse raising and fee ing, treatment for diseases, silos ar silage, poultry, handy rules and far cookery, are a few of the subject There are eighteen three-colun pages of index. If you look fo something you find it. We ha adopted this book as a subscriptio premium. Send One Dollar and w will send you **Practical Farming an Gardening**, postage paid, and Th National Farmer and Stock Growe for two years. This is a grand offe Address, Hale Publishing Co., 355 Vista Ave., St. Louis, Mo.

First Hogs to Go Above $9.00.

On Friday, January 7th, Robe Richardson, of Sangamon county Illinois, had sixty-one hogs of 28 pounds average on the Chicag market, and N. D. Beale, of Monon county, Iowa, sixty, also averagin 286 pounds. Clay, Robinson & Co sold both loads at $9.02½. The were the first hogs to ever sell ove $9.00 in January and for any tim since 1882. Clay, Robinson & Co are established at all the principa live stock markets.

The Favorite Corn Husker.

This Corn Husker is more largely d than any other on the market. have therefore selected it as a sonable subscription premium. It made for the right hand. The ok sets at any angle to prevent ncing. Opening or closing the all end of the plate adjusts a fit to y size hand and prevents chafing.

e improved shape of the plate and ther makes this hook the favorite. will send The National Farmer Stock Grower for one year and Favorite Corn Husker for fifty- cents. It takes five cents for iling and the Corn Husker is a free mium. Address, Hale Publishing , 3550 Vista Ave., St. Louis, Mo.

e Disk Drill and What It Has Done.

The disk grain drill has practically olutionized the method of sowing ll grains. Thousands upon thou- ds of acres, where it would be olutely impossible to put in grain the employment of old-style grain ls, have been transformed into den-hued grain fields by the in- tion of the disk drill. Not only is true, but the disk drill has les- ed the labor for both man and st. It has also enabled the ner to reseed his worn-out dows and run-down pastures. The ner nowadays who has a Ken- ky Disk Drill does not worry if his ds are trashy and the ground ered with pea vines, crab grass trash. He no longer worries if fields are muddy, or his ground is d and difficult to sow. He knows well that his Kentucky Drill will through it all, put the seed in the und and cover it well. The Ken- ky Drill is made in a wide range of es and sizes—plain and fertilizer y the American Seeding-Machine , Incorporated, Richmond, Ind., ose ironclad warranty protects ry purchaser. You can get in the ntucky line a drill that will do your k right, no matter what state or itory you live in. Send to the nufacturer for the Kentucky Drill alogue, read about Kentucky drills then call on your retail imple- nt dealer and insist on seeing the ntucky Drill.

Blue Grass.

Blue grass is justly popular in ne sections but it is not fully ap- ciated in others. A great deal been said about clover and lfa, but little is heard about the session by blue grass of some of principal qualities possessed by clover and alfalfa.

Alfalfa and clover are now known be very rich in protein, and this is constantly being impressed on minds of people interested in the duction of feed rich in protein. It has not also been widely ad- ised that blue grass, as grown in ne localities, contains as much pro- as does red clover, alfalfa and n certain grades of wheat bran. s is why the blue grass regions of ntucky have become famous for fine horses they produce. The blue grass provides the protein needed to make strong bones and muscles and sinews.

But the chemical make-up of blue grass differs in different parts of the country. In some states the protein runs down to about 11 per cent., while in others it runs to above 16 per cent. In Virginia is a region where the blue grass is exceedingly high in protein, running as high in that element as 17 per cent. This makes it the superior of wheat bran as a feed. The Virginia Station became interested in this phase of the blue grass question and secured samples of blue grass from many parts of the Union for the purpose of ascertaining the variation in protein content. New York, Pennsylvania and Wisconsin samples averaged over 16 per cent. in protein content. The samples from seven states averaged under 12 per cent. But even 12 per cent. protein is such a high content that it makes the grass containing it exceedingly valuable as a feed for any kind of animals.

The beauty about blue grass is the ease with which it can be grown in the regions adapted to it. In many localities it comes in naturally of itself as soon as the trees are cut away. It will stand any amount of freezing, and is thus far ahead of either clover or alfalfa. It is perpetual in the places it has conquered.

It is even present where it is not recognized. In much of the Middle West it is known as June grass, and many of the farmers that know it as June grass do not know that it is the famous Kentucky blue grass.

Some of the best fields of blue grass in existence are found in Missouri. At the University of Missouri, at Columbia, is a blue grass pasture that has obtained a wide reputation on account of the fine growth of grass annually developed. As a feed supplier it is of great value. The fact that it is so well grown at the place mentioned shows that it will do well in many localities not thought to be suited for it, as the water table at the university is estimated to be more than 200 feet below the surface. A well to get to living water has to be sunk at least 200 feet there, according to statements made to the writer when he was in that vicinity. Yet blue grass also grows where the supply of soil moisture is perfect.

Altogether, it should be impressed on all tillers of the soil that wherever possible blue grass should be substituted for the inferior grasses, many of which are low in protein content and high in proportion of indigestible fiber.

Reclean All Seed Grain.

A farm without a good fanning mill is not run up to its best opportunities. One can almost pick out the farms where mill have been used for several years by simply observing the different samples of grain. While I was down in Livingston county last week I stood for about an hour watching farmers unload oats. Some oats were clean and bright, while other loads were dirty and the grain was badly colored up. One need not ask which of these farmers had used mills and which had not. The evidence was right there.

To get the seed grain ready, take ample time and put on plenty of wind. Don't set the mill to run through forty to fifty bushels an hour. That kind of cleaning will not amount to very much in either grading or cleaning. Run slowly; feed slowly; ten bushels per hour is fast enough. Frequently seed grain should be run through two or three times, using a different set of screens and riddles with each separation. Clean out the well, and after it is cleaned out, clean it out again; also see that no water from the house or stable gets into it.

Don't wait until seeding time and then do this work, while you are "resting at the noon hour."—L. C. Brown.

Southwest farms are not only richer, but make their owners richer.

New Light on Water Absorption by Plants.

Scientific agriculture in the past has been carried on on the presumption that all the qualities of our economic plants were known. But during recent years many new qualities have been discovered in plants. One of the most recent is that plants are under some conditions able to absorb water through the epidermis of the bark; that is, through the outer layer of the bark. It is also asserted by some English investigators that the leaves are able to absorb water through this same outer covering.

The matter is really of great importance in regions where irrigation methods are necessary, but not always effective in giving the plants the supply of moisture they need. The ability of the plants to take in water as mentioned is said to be modified according as to whether the plant has enough water at its roots or not. A plant that is fully supplied with water through its root system will not take in moisture through its epidermis, while a plant not having a complete supply at its roots will take in moisture. This is evidently a provision of nature to keep alive plants that would otherwise perish.

Its greatest value lies in enabling a plant to absorb the dew that falls upon it. This may be regarded as a small matter by those that think of dew as a small affair. But really the dew that falls nightly is of great consequence. It means tons of water to every square mile of plants like grass and trees. Coming as it does in hot weather, it gives life and strength to the plants.

The fact that plants can thus absorb moisture may prove of value in those places where it is found extremely difficult to get water to penetrate the soil. A Californian that has much to do with the growing of grapes tells the writer that the fertilizing of the vines is extremely difficult in some of the dry vineyards because the water does not reach the roots. The vines also frequently suffer when the water is applied, because the texture of the soil is such that the water does not readily sink down to the roots.

But we notice that in some parts of the Pacific Coast the irrigating is being done by means of sprinkling, the water being thrown from great pipes onto the foliage first and then onto the roots. The results may prove more beneficial than would naturally be supposed. If the plants can be watered both through their roots and through their stems and leaves, it will prove a help in solving the problem.

In some parts of the Middle West the writer has observed a soil condition that makes root watering quite difficult. In several of the southern counties of Illinois the soil is fine and so compact that the moisture will not flow through it naturally. Soil moisture moves up and down more readily than it does laterally. The result is that irrigating by the furrow system would prove quite ineffective if it were tried. On such soils the irrigation by sprays would prove doubly beneficial, since it would place the moisture on the top of the ground and also on the leaves and stems of the plants to be watered.

Speculative Corn Values.

The corn crop is large, but prices keep up. The May option of Chicago was quoted at 55⅝ cents per bushel, and it slowly but steadily advanced until December 31st, when it closed at 66½ cents. A month later, on January 31st, it closed at 66⅜ cents, with the July option quoted at 66¼ cents and next September at 66⅛ cents a bushel. This looks like the future of corn is expected to be almost as strong as last year, notwithstanding the hundred-million-bushel increase in the crop total.

Speculative Oats Market.

The oats quality of the year 1909 has probably held up the market. On July 31st, on the Chicago Board of Trade, the consensus of opinion was that oats for May 31st, 1910, delivery was worth 40⅞ cents a bushel. On August 31st the figure declined to 39½ cents. September 30th the quotation was 41¼ cents. October 30th the price was 42¼ cents. On November 30th the figure was 42 cents. The December price was 45⅝ cents, and on January 31st, with four months to run, the price was 46⅝ cents. At the close of January, July oats was selling at 43¼ cents, and September at 40⅛ cents. The crop of 1909 is 1,009,353,000 bushels of oats, and is 200,000,000 bushels more than the crop of 1908, and yet oats prices are pretty good.

Sorghum is selling at St. Louis, wholesale, at 30 cents a gallon.

CREDIT Subscriptions.
◆ ◆ ◆
Three Years For One Dollar, Payable at the End of the First Year.

We desire to invite attention to our blank form at the end of this item, which can be filled out for subscriptions on credit. This is an invention of Uncle Piper, our subscription editor, who has guaranteed that every one of them will be paid when they are due. The subscription price of this paper is $1.00 for three years, and the bill for the subscription is sent to the subscriber at the end of the first year. When the bill goes out Uncle Piper generally slips in a list of handy premiums for the subscriber to select one, providing he pays the bill promptly, and the general result is that the bill is soon paid. When it comes to getting subscriptions from intelligent, high-class farmers, Uncle Piper is at the head of the class.

Minnesota Grown
CLOVER SEED
WHEN we say seed is "Minnesota Grown" we mean just what the words imply. Such seed, having been produced from plants which have endured the cold of winter and alternate freezing and thawing of spring and fall, is hardy and vigorous. By planting this seed, clovers may be established in northern sections where until recently, it was not thought possible for them to survive. Another important point is that clover grown from Minnesota Grown Seed in sections farther south is more productive, of greater vitality, and of better quality than from seed produced in any other section. Order your clover seed at once. It usually advances during the season and the demand may exhaust our supply.
26TH ANNUAL CATALOGUE
Considered the most informing and complete as well as the handsomest seed catalogue published in America. Every one of the 140 pages is filled with information valuable to the seed planter. No farm or garden is so large or so small that this book will not assist to greater profits. It is expensive and we cannot distribute them indiscriminately, but we send it free to those who wish to buy seeds.

Terms as easy as 10 or 15 per cent. of proceeds of pack, and as fast as sold, on factory until paid for. Write for free booklet.

THOS. M. BROWN, Springfield, Mo.

Development of School Agriculture.

The teaching of agriculture in the public schools is fast getting beyond the theory stage. In many of our states the Universities and Agricultural Colleges are taking a deep interest in the teaching of this science in the common schools. The effect is slowly making itself manifest.

Some of the states have appropriated money for the salaries of the men that are engaged in establishing agricultural instruction in the high schools, and even in the elementary schools. A few states have gone a little further and made annual appropriations to the high schools in which agriculture is being taught. A good example of this is the state of Louisiana, which has voted an annual appropriation of $500 each to certain high schools that put in courses of agriculture. Already about thirty schools have applied for the money and agreed to provide the proper instruction, and other schools are reported about to do so.

The list of what is being done in other states along the same line is too long to be repeated here. The Louisiana example is but an index of what is going on. It is the more remarkable because Louisiana is a Southern state, and the Southern States are generally classed as among those backward in development along agricultural lines.

Everywhere in the North great progress is being made, both in the urban and in the rural schools. It is felt that the city children need agricultural instruction as certainly as do country children. Perhaps they need it more, since the country children get a good deal of agricultural education in their own homes. It is true that this education is not generally of a scientific nature, but it at least enables them to understand practical agricultural operations much better than those that have never had the practical work to do.

The scientific foundation is needed in all the schools, but in the city schools the scientific foundation in agricultural instruction will be of transitory effect unless the practical operations are also taught. This is where the pinch is going to come in teaching agriculture in the city schools.

Its greatest good as taught to city pupils will be to equip them for some practical manual labor. The boys in the villages and cities are being injured by not having to work as do country boys. Yet if the city boys can be induced to take an interest in agricultural operations they will find enough to do. The vacant lots in the cities can then be made to bloom and blossom as the rose, and many an indigent boy will find an opportunity to make money in caring for the premises of those able to pay for the service.

One of the very great goods coming from the teaching of agriculture in the city schools will be the elevating of the occupation of the farmer in the eyes of the city-raised children. Multitudes of them are now brought up to think that it is a disgrace to be seen working in a garden. We need a campaign of instruction to the end of the ennobling of manual labor. The city boys that loaf about the street should be made to labor during a certain part of their school age.

The Sunberry — Improved Wonderberry.

Don't overlook the Sunberry, first named the Wonderberry. It is a product of the experimental farms of the renowned Luther Burbank, of California. This berry is a sensational plant. It has caused more excitement than even the spineless cactus. There are disputes about it and arguments by horticultural experts. Some say it is, others say it is not. We believe it is a case where farmers should judge for themselves. The seed is but 20 cents a packet or three packets for 50 cents. Buy it and try it. Form your own opinion about it; if it is not as represented, write to this paper and we will send amount of money to replace it. We will make the money good to any and all subscribers to The National Farmer and Stock Grower who are not satisfied. Last year we failed to test the Wonderberry. This year we will do so. See page 30 of this edition.

GRAND CHAMPION YELLOW CORN

Our readers are reminded that besides the premium offer of Grand Sweepstakes White Corn we are also offering the same prizes for Yellow Corn. Anyone sending us 60 cents

for one-year's subscription to The National Farmer and Stock Grower can select one pound of Pascal's Grand Champion Yellow Corn as a premium, or if he will send one dollar to pay for two-years' subscription he can select two pounds of Pascal's Grand Champion Yellow Corn as a premium. The same prizes are offered by us for Yellow Corn that we do for White Corn. See page 26. The reason we use the Pascal Corn is because Mr. Pascal has been breeding Reid's Yellow Dent Corn pure since he obtained it from the originator. Mr. Pascal has won many premiums, and his famous "Pascal Ear" stood for several years without a rival. We regard his corn the best in the world from which premium ears can be expected to be raised. We rely upon the purity and quality of the seed and the record already made. We hope our readers will avail themselves of the opportunity to experiment for themselves under favorable circumstances.

Please send all subscriptions to the Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Southern Cattle at St. Louis.

Recent sales: Six head Oklahoma Texans, 1,593 pounds average, at $5.40 per 100 pounds; fifteen Arkansas steers, 940 pounds, at $3.75; twenty-four Mississippi steers, 972 pounds, at $3.75; twenty-seven Mississippi cows, 666 pounds, at $3.05; seventeen Alabama cows, 536 pounds, at $2.90; thirty-five Alabama calves, 190 pounds, at $3.50 per 100 pounds. ELECTRIC WHEEL CO., Box 40, Quincy, Ill.

The Russian Wheat Crop.

We are reminded of the Russian wheat crop by the statement emanating from the United States Departmen of Agriculture, that after three short crops in succession, the yield for 1909 is one hundred million bushels in excess of all former records, and, in fact, the Russian wheat crop for 1909 is 783,000,000 bushels, against 737,000,000 bushels produced by the United States. Last year the combined totals of the two crops were 1,234,000,000 bushels, and this year the combined total is 1,520,000,000 bushels, an increase of 286,000,000 bushels from these two countries.

The United States Department of Agriculture also states that ten countries growing wheat, which usually produce 80 per cent. of the world's wheat crop, show an aggregate gain of 387,000,000 over last year. If this, as it appears, includes the gains in Russia and the United States, it indicates the largest world's crop of wheat by 136,000,000 bushels.

This of itself is not alarming, but it will probably put a stop to contemplated attempts to inflate the market. No matter how speculation is regarded, it is more than difficult to force prices upwards in the face of large supplies. Russia is an exporting country. The people eat bread not made of wheat. The United States can consume its own crop, providing prices are considered reasonable, and the export trade also is encouraged when the American grain can be placed upon the Russian basis.

The present conditions take out of the hands of speculators the power to conceal wheat, and it is very probable that during the next four months no one will make any serious attempt. If we take the general average as our example, 75 to 80 per cent. of the farmers have sold their wheat by February 1st, and it is very likely that it was well sold, and no one need have any regrets. The wheat crop is an international crop and finds its level when the surplus reaches the consuming markets.

Much Corn Left in Fields.

Corn did not dry out well last fall and many put off husking as long as possible, looking for more favorable cribbing weather. Then huskers were scarce and many fields were left, simply from the scarcity of help. I have never seen so many farmers "up in the air" over these corn matters. The season was long enough to have matured even the largest sorts of corn, still really there are but few cribs which I have examined that do not have more or less soft and even mouldy corn. A grain buyer in Central Illinois told me that although No. 2 is the standard grade, he did not take in very much corn that would grade No. 3; in fact, with one car grading No. 3 he would have ten running to No. 4, or no grade. This man contracts for a great deal of corn, but he says hereafter he will contract from no one who does not plant earlier corn.—L. C. Brown.

Turning Under Corn Stalks.

Getting rid of corn stalks on ground which is to be planted to corn again next season has been quite a lively subject at Institutes this season. Theorists say, by all means plow under the stalks. We all say it would be better if the stalks were plowed under, but the rub is to get them under deep enough to be out of the way of the cultivator shovels. In practice, burning the stalks has been found to be the most satisfactory, so far as working the ground; but it must be admitted that continuous burning of stalks and stubble is a detriment to the land. Some simply drag down the stalks and then plow them under, while others disc them down and then plow. If stalks are plowed under, better set the plows down deep and turn the furrow slice completely. This will probably put the stalks down deep enough so they won't bother.—L. C. Brown.

P & O

Canton Plows, Harrows, Planters Cultivators, Stalk Cutters, Beet Tools Listers, Potato Diggers, Etc.

POTASH

Delivery Guaranteed

Direct from the German Mines to Your Farm

Some fertilizer manufacturers may tell you that they will sell you potash cheaper than we will. We are offering carloads for cash direct from the German mines to the buyer at the lowest price ever quoted. If any one offers it to you for less than our price, before accepting his offer be sure that the manufacturer signs a contract with you absolutely *guaranteeing delivery of potash salts* and not some substitute in the shape of such mixed goods as he may have on hand at the close of the season.

You know how it has been in the past. If you are contracting for other fertilizers, be sure that the contract requires delivery of the potash at the same time with or before the delivery of the other goods. Do not accept the other goods until the potash is delivered. Do not depend on the assurance of the salesman. Write it in the contract. It will pay you to do so.

Low-headed Trees in the Orchard.

During these days when some advancement is being made in new orchards along more scientific lines, one often hears arguments against some of the things proposed and practiced by some of our best orchardists. One of these is against the low heading of fruit trees.

By a high-headed tree we mean one whose branches come out of the main trunk four or five feet above the ground, or, as the writer heard one man say: "High enough so that you can get a horse close to the tree in cultivating." By low-headed trees we mean trees headed near the ground, depending somewhat upon the variety. Peaches in one of our best peach-growing sections are headed practically at the ground, while apples are headed from twelve to eighteen inches above. It is of course possible to allow the fruit-bearing wood on what was at first a low-headed tree to be several feet from the original head, but with proper pruning from the start this trouble can be easily overcome.

An apple tree that is headed high is, in some respects for practical purposes, anything but high; for example, the chances are that such a tree will have the lower branches, at least, growing at almost right angles to the trunk, or, in other words, in a horizontal position. When such a tree is bearing a heavy load of fruit, these limbs will bend down and are very likely to break unless props are used. The use of props in an orchard is at least a sign of very poor orchard management in the past, and should be avoided. It is possible to train the high-headed tree so that the branches will have more of an upward growth, but it is a recognized fact that work done several feet from the ground is never as satisfactory as when done from a short ladder, or while standing on the ground.

In a low-headed, well-trained and pruned tree we have all the essentials for a profitable one, other things being right. We have a tree that is easily managed in regard to pruning, spraying, thinning and packing. Good labor for doing these things is always at a premium, and it goes without saying that the amount of time it takes for such an orchard is less than for a high-headed one. In the second place, it is a well-known fact that low-headed trees are far less subject to sun scald than high-headed ones. And the third reason is that when orchard heaters are used, the low-headed trees receive more benefit than the high ones. Especially is this true when a strong, cold wind is blowing. The writer has seen a notable example of this in a peach orchard where orchard heaters were used. During the coldest nights there was a heavy, cold wind, the consequence of which was that scarcely any fruit was borne about the 4½-foot mark, and just a little above this point a thermometer was located, which showed a temperature many degrees below the danger point. Below the 4½-foot mark there were plenty of peaches; in fact, some of them had to be thinned.—R. S. Herrick, Colorado Agricultural College, Fort Collins.

The Boycott Resolution.

At Denver, Colorado, January 21st, the Western Stock Association adopted a resolution which concluded with the following paragraph:

"The present movement to boycott the use of meat food is popularly supposed to be aimed at the packers, but in reality it is a blow at the stockman and farmer and is calculated to decrease production rather than materially to reduce prices."

The Farmers' Union Advocate of Wellington, New Zealand, says: "The great problem of the farmer is this: Getting the crop out of the farm without robbing the soil; getting money out of the crop and happiness out of the money.

The demand for alfalfa hay generally exceeds the supply.

Get this Genuine Carborundum (Diamond) Tool Grinder on Free Trial

Sharpen your tools at my expense. I want to show you that the ancient grindstone is a back number and that the emery wheel is a menace. I want you to try positively free this Genuine Carborundum Farm Tool Grinder. Carborundum is the only true abrasive. **It will not draw the temper from steel;** it will sharpen the dullest tool in from 3 to 5 minutes, when the grindstone would take half an hour. Carborundum **never** wears out. It does **not** glaze over.

I want to send a few of these machines out on **Free Trial** in every part of the United States. I want to put one in every locality. I want you to clip off and send the coupon at the upper right hand corner of this announcement, and I will mail you at once my circulars explaining every detail of the offer I am making here.

I Don't Want You to Send Me a Cent of Your Money. I Don't Want Any Promise.

I merely want to place this Genuine Carborundum Grinder on your farm for a few days. Sharpen your dull axe, your dull scythe, your dull corn knives, your dull cold chisels, or hatchet, or any dull tool you have. See how quickly and how easily it is done.

See how Carborundum—made of the substance of real diamonds—sharpens your tools in from one-fourth to one-twentieth of the time required by a grindstone and does not heat nor draw the temper. Do all this—give this great machine the most severe tests—then unless you think that you positively cannot get along without this Carborundum Tool Grinder, send it back at our expense. We'll ask no questions. We'll take it back without a word, and we'll pay the transportation charges. Now send the coupon. Let us tell you all about this wonderful abrasive and our free trial offer.

Remember—Carborundum is really manufactured diamonds. It is made from the very same substances which go to make up diamonds. Carborundum will scratch a diamond and cut glass like a knife cuts an apple. Send the coupon today and get full explanation of our **Great 10 Day Free Trial Offer.** Do this now. Do not delay.

The National Farmer and Stock Grower.

(Title Registered in U. S. Patent Office.)

Published Monthly
By THE HALE PUBLISHING CO.
Philip H. Hale, Managing Editor.
Claude A. Cour, Advertising Manager.

Charles H. Hopkins, 150 Nassau street, New York City, Eastern Representative.

Entered at Postoffice at St. Louis, Mo., as second-class matter in January, 1901.

Subscription Price in the United States, 50 cents a year, or three years for one dollar.
Office of Publication, 3550 Vista avenue, St. Louis, Mo. Bell Phone: Grand 400.

During the year 1909 hides and skins were imported to the amount of $103,800,000. In the year previous the imports of hides and skins amounted to $57,000,000. The increase of imports in 1909 appears to be due to the removal of the tariff; but the foreigners put up the price and derived the benefit of the tariff reduction.

Farm Journal and Horse Secrets.

We commend to our readers for their benefit page 15, which is devoted to the offer of Farm Journal of Philadelphia. For thirty years this paper has come to our desks as an exchange. It is truly called the cream of the agricultural press. The book entitled "Horse Secrets" is in keeping with the Journal, the condensation of horse knowledge in such form and language to carry conviction to the hearts and minds to the readers thereof. Those who accept the proposition will not regret it.

Three million dollars' worth of potatoes were imported into the United States during the year 1909 from England, Ireland, Scotland and Canada. The import duty is 25 cents a bushel.

Possibilities of Farming.

Mr. Jno. M. Wheeler, an experienced Kentucky farmer, has written a book in which he gives interesting data in regard to farming possibilities which will be found interesting. When the practical, up-to-date farmer combines the intensive farming theory with his own experience the result is worth buying, reading and studying. The book costs one dollar. Read the advertisement headed "Possibilities" and remit to Jno. M. Wheeler, R. 4 N, Winchester, Ky.

REPORT OF PROCEEDINGS of Twenty-sixth Annual Meeting of the Aberdeen-Angus Breeders' Association, held in Chicago, Ill., December, 1909, with picture of King Ellsworth, the grand champion steer of the Chicago International Show of 1909, on the front page. These proceedings show the association to be in a highly prosperous condition and the Aberdeen-Angus breed winning new laurels every year.

BOOK ON DAIRYING. Free book, issued by Lisle Mfg. Co., 376 Main street, Clarinda, Iowa. See page 22 of this paper. It relates to their advertised bargains in cream separators.

BURPEE'S SEED ANNUAL FOR 1910. Issued free to those mentioning this paper. It is of great value to the planter; relates to new specialties in grain, vegetables and flowers, particularly muskmelons, Lima beans, sweet corn, etc. There is also the Golden Orange Daisy and two new varieties of sweet peas.

FARM LEVEL CATALOGUE, explaining uses of farm levels in draining, irrigating, terracing, ditching, grading, road building, fencing, setting out orchards, etc. Address, Bostrom-Brady Co., 1107 Pine street, St. Louis, Mo.

THE MANAGEMENT AND FEEDING OF CATTLE by Prof. Thomas Shaw. Published by Orange Judd Company, 439 Lafayette street, New York City, N. Y., at $2.00 per copy. There are 496 pages, 5½x8 inches. This is the first book ever written that follows the calf to the butcher block or the dairy barn. Send to the publishers for new book list, including this one.

I. H. C. ALMANAC AND ENCYCLOPEDIA FOR 1910, issued by the International Harvester Company for fre distribution to readers of this paper. It is a booklet of eighty pages, containing information of value to farmers, including weather calendar, rates of postage, antidotes for poisons, first aid to the injured, statutory weights and measures to the bushel, etc. If it was not free it would be worth buying. Write for it.

THE LILAC, pamphlet issued by Wm. C. Barry, Mount Hope Nurseries, Rochester, N. Y., with list and illustrations of tested varieties.

HORSE SECRETS EXPOSED. The book advertised on page 15 by the Farm Journal, Philadelphia, is written by Dr. A. S. Alexander, a veterinarian of twenty-five years' experience. This book is fully up to representations and is very valuable. There are fifty-six chapters, sixty-four pages, all containing clear-cut inside facts about the horse, including exposures not heretofore appearing in print. Send 50 cents to Farm Journal, 1068 Cherry street, Philadelphia, for a copy of **Horse Secrets,** and they will send you for two years the paper that has been and still remains the greatest success in publications devoted to farm agriculture.

WILLIAM GALLOWAY COMPANY CATALOGUE shows how Galloway divides the melon between the manufacturer and the farmer. Two ways of buying—old and new. This is a splendid ninety-page catalogue of farm implements and machinery manufactured by one factory. Write to Wm. Galloway Company, 1289 Galloway Station, Waterloo, Iowa, and ask for it.

ROOFING CATALOGUE of Edwards Mfg. Co., makers of Reo Steel Shingles. Issued free, giving cost and particulars concerning the labor-saving and everlasting fire-proof roofing; also insurance against lightning by guarantee bond. In writing for this catalogue, address Edwards Mfg. Co., 939 Lock street, Cincinnati, Ohio, and ask for Catalogue No. 59.

FIELD AND GARDEN SEED CATALOGUE, 100 pages, containing prices and illustration of their guaranteed seeds by A. A. Berry Seed Co., Box 222, Clarinda, Iowa. See their free five-packet trial offer.

CHICKEN TALK by Geo. H. Lee, Omaha, Neb. Timely book written by a poultry and incubator expert and to be had free by writing for it. Explains possibilities of poultry culture better than many of the system books which cost a lot of money. Ask for it and be sure to address Geo. H. Lee, 1156 Harney street, Omaha, Neb.

GERMAN NURSERY CATALOGUE, issued by a first-class nursery and seed house. The Fruit Tree Department contains particularly good list including novelties in small fruits. We know that the company will be pleased to send their splendid catalogue to anyone interested in seeds or nursery stock. To those who mention this paper when writing they will send a free trial packet of their New Coreless Tomato Seed. Address, German Nurseries, Box 138, Beatrice, Neb.

SURE HATCH INCUBATOR BOOK. Free to all who write for it. Contains a large amount of valuable information concerning the incubating and brooding. Also contains particulars concerning bond issued by the Bankers' Surety Co., of Cleveland, Ohio, guaranteeing Sure Hatch Incubators. Write for free book to Sure Hatch Incubator Co., Box 40, Fremont, Neb.

HANDY WAGON WHEEL BOOK, issued to explain the benefits of using the low-down, wide-tire electric wheels. Easier on the team, easier on the man, gain in work done, saving in labor and expense. When narrow tires are stuck in the mud the wide tire, like the brook, goes on forever. Write to Electric Wheel Co., Box 40, Quincy, Ill., and ask for the Low-down Wagon Book.

KASTOR'S NEWSPAPER AND MAGAZINE DIRECTORY FOR 1910 contains full list and all possible arrangements of newspapers for economic advertising purposes, giving circulation, rates and all important information. Kastor & Sons' Advertising Co. have offices in the Laclede Building, St. Louis, Mo., First National Bank Building, Chicago, and Gumbel Building, Kansas City.

X-RAY INCUBATOR CATALOGUE. Contains the truth about incubators. They guarantee certain results, advance claims, every line being instructive and giving the reader confidence in incubation as a profitable basis for chicken farming. Write at once for catalogue. Address, X Ray Incubator Co., 48th street, Wayne, Neb.

FOLDING SAWING MACHINE CATALOGUE. Send your name for it. It is worth reading and worth looking up. Has been on the market for seventeen years. Double the work and less exertion than with the two-handled cross-cut saw. Write for Catalogue M 73 to Folding Sawing Machine Co., 158 E. Harrison street, Chicago, Ill.

MASTER WORKMAN BOOKLET. Issued in the interest of the Master Workman Two-cylinder Gasoline, Kerosene or Alcohol Engine. Write for it. Address, Temple Engine Co., 446 W. 15th street, Chicago, Ill.

WOVEN WIRE FENCE CATALOGUE, giving full description of their fencing for all purposes, from 13¾ cents a rod up. Write for free copy to Kitselman Bros., Box 261, Muncie, Ind.

FARM AND RANCH LANDS.

ARKANSAS.—Mr. Farmer: Why hold onto your high-price lands? We offer to you 720 acres of land, 300 acres in cultivation under fence, 420 acres in timber, three miles from town of 6,000 inhabitants. The best market in the South. Price, $17.50 per acre. Land is advancing every day. Two good dwellings, two good barns, five tenant houses. For further information write to **Jno. A. Culbreath,** Warren, Arkansas.

Colorado Irrigated Land

22,000 acres of irrigated Government land in Southeastern Colorado has recently been opened for entry under the provisions of the Carey act. The State of Colorado has contracted with the Two Buttes Irrigation and Reservoir Company to construct the irrigation works for the reclamation of this tract of land, which is located in Baca and Prowers counties, close to Rocky Ford and other proven districts. Water rights are of incontestable priority and title to land comes direct from the State.

Price of Land 50 Cents Per Acre
Perpetual Water Right $35 Per Acre

Payable $5.25 per acre cash, balance in ten annual payments. The tract is nearer Kansas City and Mississippi Valley markets than any other Carey act project. Land free from brush and stone, and soil will average 50 feet in depth. Altitude, 4,050 feet; climate best in State; rainfall 16 inches; crops, all grains, alfalfa, sugar beets, vegetables and fruit; no alkali. Local markets for everything.

No agents employed and no commissions paid. Farmers wanted, not speculators. For particulars write

THE TWO BUTTES IRRIGATION AND RESERVOIR CO., LAMAR, COLO.

MICHIGAN.—I sell Farms in Oceana, the best county in the United States; fruit, grain and stock. Write for list. **J. D. S. Hanson,** Hart, Mich.

MISSISSIPPI.—ALFALFA LANDS IN NORTHEAST MISSISSIPPI.—Our lands grow from three to six tons of Alfalfa per acre, and the hay sells for $15 to $20 per ton. Prices from $10 to $40 per acre. "Do you want to be shown?" Write to **J. W. Murfee,** Okolona, Mississippi.

MEXICO.

For Sale: Timber, Agricultural and Grazing Lands in Western Mexico, States of Michoacan, Sinaloa and Tepic. Fine timber. Soil of the best. Grows abundant crops. Plenty water. Climate excellent. Lands now cheap, $1.50 up, but upon completion of Southern Pacific R. R. now building will advance steadily.

For particulars address,
J. H. Cavanaugh & Co.,
Acaponeta, Tepic, Mexico,
or **J. H. Cavanaugh & Co.,**
P. O. Box 76,
Guanajuato, Mexico.

TENNESSEE.—Send for booklet on farming and full description and prices of lands for sale in the valley of East Tennessee, the healthiest climate and best lands in the country. Address, **East Tennessee Real Estate Company,** Morristown, Tenn.

TEXAS.—East Texas is the richest fruit and vegetable country on earth. It is also at present the cheapest. Write for particulars to **E. W. LaBeaume,** 1408 Pierce Bldg., St. Louis, Mo.

TEXAS.—One Thousand Acres; 75 per cent. agricultural, the balance grazing, with an inexhaustible supply of excellent water. Price, $15.00 per acre; half cash; deferred payments to suit the purchaser. Situated 10½ miles from Sabinal. Also **Twenty-six Hundred Acres,** 11 miles from Sabinal; about half agricultural, balance excellent grazing. Price, $7.00 per acre; half cash; deferred payments to suit the purchaser. **Fourteen Hundred Acres** grazing land, watered by springs. $3.50 per acre. All in Uvalde county, Texas. Address, **Albert D. Evans,** North Fort Worth, Texas.

GULF COAST Texas Land

$2 Per Acre Cash balance easy monthly payments, buys a fruit and truck farm in the gulf coast country of Texas. No interest, no taxes. Possession when first payment is made. Five acres of this ground intelligently handled can be made to produce as much actual cash as 50 acres of northern or eastern land.

FREE Our publication "The Homefinder" sent free for six months to land buyers and farmers. It is full of carefully compiled information about gulf coast land, cost of fencing, plowing, farm implements, etc., what and when to plant. Be sure to send us your name before you buy land. A post card will do. Write Today.

PROVIDENT LAND CO., Dept. 102 KANSAS CITY, MO.

VIRGINIA.—Farms for sale from the mountains to the sea. Stock, Grain, Fruit, Poultry, Fish and Oysters. Illustrated catalogue free. **Geo. E. Crawford & Co.,** Richmond, Va.

We Can Sell Your Property. Send description. **Northwestern Business Agency, Minneapolis.**

CASH FOR YOUR FARM OR BUSINESS,
No matter where you live. Write me today if you want to buy or sell any kind of Real Estate or business. **FRANK P. CLEVELAND, 7910 Adams Express Building, Chicago, Ill.**

FARM WANTED.—We want to hear from OWNER having good FARM for sale in good locality. State lowest price, as you will have no COMMISSION to pay. If you want to buy property of any kind it will be to your interest to write us. **American Investment Association,** 815 Palace Bldg., Minneapolis, Minn.

WESTERN CANADA

Senator Dolliver, of Iowa, says:
"The stream of emigrants from the United States to Canada will continue."

Senator Dolliver recently paid a visit to Western Canada, and says: "There is a land hunger in the hearts of English speaking people; this will account for the removal of so many Iowa farmers to Canada. Our people are pleased with its government and the excellent administration of law, and they are coming to you in tens of thousands, and they are still coming."

Iowa contributed largely to the **70,000 American farmers who made Canada their home during 1909. Field crop returns alone during year added to the wealth of the country close to**

$170,000,000.00

Grain raising, mixed farming, cattle growing and dairying are all profitable. Free Homesteads of 160 acres are to be had in the very best districts; 160 acres pre-emption at $8.00 per acre within certain areas. Schools and churches in every settlement, climate unexcelled, soil the richest, wood, water and building lumber plentiful.

For particulars as to location, low settlers' railway rates and descriptive illustrated pamphlet, "Last Best West," and other information, write to Sup't of Immigration, Ottawa, Can., or to Canadian Gov't Agt. {7}

J. S. Crawford, 125 W. 9th St., Kansas City, Mo.; C. J. Broughton, 412 Merchants Loan & Trust Bldg., Chicago, Ill.

A Most Useful Premium.

A farm on which there is not a sewing awl is in difficulties when work is most pressing. It is surprising how useful this little implement is. It is the Myers Famous Lock Stitch Sewing Awl. It is the only sewing awl made with a groove running the full length of the needle and has what is known as a diamond point. In order to sew leather or any heavy, thick material without breaking or cutting the thread it requires a needle with the groove running the full length of the needle. You might just as well have no groove in the needle as to have it only part of the way. With the Myers Awl you can sew old or new harness, saddles, carpets, canvas, tents, rugs, quilts, shoes, grain bags, and many other things. You can use any kind of thread in the Myers Awl, and it makes a lock stitch same as a sewing machine. It is very simple; a woman can use it as well as a man. It is one of the most practical devices ever invented. They are put up with two needles; one is straight and one curved, with a small screwdriver and wrench combined. Also a reel of waxed thread with each awl ready for use. Every teamster and farmer should own a Myers Lock Stitch Sewing Awl, as there is use for one in almost every household. The Myers Awl is nicely finished, the metal parts are nickel-plated, the needles and wrench are kept in the hollow handle, which has a screw top.

Anyone who will send One Dollar cash to pay in advance for two-years' subscription to The National Farmer and Stock Grower can select one of Myers' Lock Stitch Sewing Awls, which we will send by mail, postage paid, as a free premium. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Light and Agricultural Development.

In the progress of agricultural developments we have thought little of how much the supply of light counts. But everywhere now this question is being studied in its many phases. The light of the sun and the light from artificial devices is being rigorously investigated as to its effects on the growing of plants. Electric light, and even radium lights, are proving interesting as to growth effects.

As a general statement it may be said that it is being proved that light is everywhere effective in assisting plant growth. The aggregate amount of light received by a plant, combined with the volume of heat, determines the amount of plant growth secured in a season. This is why we find larger development of growth in the tropics than in the temperate zones.

How light affects vegetation is illustrated in the far North, where plants grow with great rapidity in the long days. The writer has been in regions so far north that the sun rose a little after two in the morning and set about ten o'clock at night in the summer time. There the vegetation had obtained as large growth by June as had the same vegetation a thousand miles south. This was due to the reception of light for twenty hours out of the twenty-four.

But too much light checks growth, and therefore we see the hothouse manager paint white streaks over his glass at certain times of the year to reduce the amount of sunshine that can fall on his plants. So also in the use of radium light it is found that some of the rays are so bright that they actually check the development of seeds and the growth of plants. Radium is the new and remarkable substance that has the power of emitting light and which has only recently been discovered.

Doubtless we have just before us a long series of experiments on the relations of light and plant growth, and most surely something of value to agriculture will be developed out of the mass of experimentation.

Relative to the effects of light on fruit trees, the Wisconsin Experiment Station some years figured out the amount of heat and light units each tree needs to bring it to leaf opening. It took the professors at the institution some years to discover the lapse of time on which the aggregate units were based. At first the amount of heat and light required for the development of a dormant tree to leaf opening was estimated as from the beginning of the year to leaf-opening time. Finally, however, it was found that the period must begin the previous year at about the end of July, when the leaf buds are fully formed. The amount of light and heat a tree receives in the summer and fall counts in the general aggregate, whose measure is only filled up with the development in the spring.

Sunshine is a fixed agricultural commodity. Those states that have a great deal of sunshine have at least one of the chief agricultural factors, which will some day be utilized to the fullest.

Limiting Cold Storage.

Limitations upon cold storage will do more harm than good. Cold storage is simply a control of temperature, and so far has been of great benefit to mankind—producers, transporters and consumers alike. The way to insure a famine is to do away with cold storage. This country cannot be fed without it. It has done more towards keeping the people regularly supplied with perishable goods than all other influences put together.

Injurious Restrictive Legislation.

According to the general theory of the office holder and legislator it is part of their duties to regulate people out of business. Many an honest man has been repressed out of legitimate business by well-meant but injurious restrictive legislation. Putting people out of business may not be the declared purpose of all restrictive legislation, but if often has the same effect. The movement to limit cold storage is not based upon a knowledge of cause or effect.

The arrival at Victoria, British Columbia, on November 26th, of 116 barrels of eggs from Shanghai, China, by steamer Empress of China was the first large shipment of eggs received in America from the Orient. China is a great egg-producing country, and they generally reach the seaboard markets at five to seven cents a dozen.

Seeds that Grow!

If you want the Best it is possible to Grow, such as you can rely upon to produce the Choicest Vegetables and Most Beautiful Flowers, you should try **Burpee's Seeds!**

WE shall be pleased to mail you, upon application, **Burpee's New Annual for 1910**,—long known as "The Leading American Seed Catalog." The first edition is more than four hundred thousand copies and yet it is too expensive **a book of 178 pages** to mail unsolicited except to our regular customers. With elegant colored plates and hundreds of illustrations from nature it tells plain truth and is a Safe Guide to success in the garden. Do you want a copy? If so, send your address to-day to

W. ATLEE BURPEE & CO., Philadelphia, Pa.

SEED CORN 153 BU. ACRE

Diamond Joe's Big White—A strictly new variety. None like it. It is the Earliest and Best Big White Corn in the World—Because it was bred for most Big Bushels, not fancy show points; because grown from thoroughbred inherited stock; every stalk bears one or more good ears; because scientifically handled, thoroughly dried and properly cured and had the most rigid examination. Big Seed Catalog FREE. It tells about all best farm, grass, garden and flower seeds grown. Write for it today.
Address, **RATEKIN'S SEED HOUSE, Shenandoah, Iowa.**

VERMONT FARM MACHINE CO., Bellows Falls, Vt.

Preparing Corn For Hogs.

In the corn belt, where corn is the principal hog food, and hogs one of the principal farm products, the best method of preparing corn for feeding to hogs is a question worthy of the attention of every farmer. The most common method of feeding corn is in the ear just at it comes from the crib. Other methods that are often used are shelling and soaking, grinding and feeding dry, grinding and soaking, and grinding together with the cob. It is estimated that it took a hundred million bushels of corn to feed the hogs of Iowa last year. To have shelled and ground this corn would have cost three million dollars. In order to find out whether or not such an expenditure would be justified, the Animal Husbandry Section of the Iowa Experiment Station conducted a series of experiments in which corn prepared in all these different ways was fed to both young and old hogs. These experiments, which were conducted during 1907 and 1908, produced some interesting and valuable results. The data and conclusions obtained from these experiments have been published in Bulletin No. 106. A careful study of this bulletin will be of great value to every hog grower in the corn belt, and give a definite basis on which to plan future feeding operations. Copies can be obtained from Director C. F. Curtiss, Iowa Experiment Station, Ames, Iowa, as long as the supply lasts.

Holstein-Friesian Records.

The last report of the Superintendent of Advanced Registry of Holstein Cattle states that 157 head were accepted as having given sufficient product to entitle them to entry in the superior class called "Advanced Registration."

These animals, of which one-third were full-aged cows, produced 63,251.5 pounds of milk in seven days, which averaged 3.46 per cent. fat. Each animal produced an average of 402.9 pounds of milk per week, which was figured to be seven gallons of milk per day per cow. The butter that could have been made from the butter-fat amounted to 16¼ pounds of butter per cow per day.

It must be remembered that the Advanced Registry includes the best cows of the breed; but when 157 cows can average seven gallons of milk a day it is a pretty good showing. In concluding his statement of the performance of these cows the Superintendent of Advanced Registry said: "It will be seen from these averages that Holstein-Friesian owners do not claim that their cows produce milk containing a high per cent. of fat; but they do claim that, owing to the very large quantity of well-balanced milk produced, no breed, no matter how high its average per cent. fat, can equal the Holstein-Friesian breed in butter production."

Kemp & Burpee Mfg. Co. SYRACUSE N. Y.

Cream From Canada.

The duty on imports of butter is six cents a pound, and the duty on cream is five cents a gallon. Four to five pounds of butter can be made from a gallon of cream, therefore so far as Canadian shipments are concerned, the duty on butter is reduced to about 1¼ cents a pound when arriving as cream. The port of St. John, in New Brunswick, is in an aggressive cream-shipping trade to this country, and the farmers of Maine are the first to ask for a consistent revision of the tariff. The Province of Quebec, in Canada, is also shipping cream in large quantities to this country.

Pratts New Poultry Book.

Pratts New Poultry Book is worth having as a gift, and many that we have to buy are not as good. It is written in the interest of Pratts Poultry Regulator, and that is good reading also. It is the farmer who can make the most money out of poultry, and this book is a manual of information concerning the raising of poultry for profit. Write to Pratt Food Co., Dept. F, Philadelphia, Pa., and ask for a free copy of "Pratts New Poultry Book."

Crime as a Revenue Producer.

During the month of December the Commissioner of Agriculture of New York state referred to the Attorney-General for prosecution 120 cases of violation of the agricultural law; 39 of these were on account of illegal sale of oleomargarine and 71 for adulteration of milk. From cases of violation of the agricultural law, penalties, costs and judgments as follows have been turned into the state treasury: In the year 1906, $28,509.-05; 1907, $28,911.65; 1908, $34,-767.14; 1909, $52,017.07.

Testing Iowa Cows.

In the Iowa Cow Culture Club Contest, which has been conducted for six months, about 140 cows were entered and about seventy of them produced less than thirty pounds of butter-fat a month. Of the remainder, twenty gave over thirty and under thirty-five pounds; thirteen gave over thirty-five and under forty pounds; sixteen gave over forty and under fifty pounds; fourteen gave over fifty and under sixty pounds; four gave over sixty and under seventy pounds; one gave eighty-eight pounds; one gave 101 pounds; and one gave 127 pounds. The three largest yields were from Guernsey cows.

Dairy and Creamery.

There are fifty-one creameries in Missouri out of 6,235 in the whole country, and seven cheese factories out of a total of 3,846.

The state of Arkansas is credited with 7 creameries; Oklahoma, 29; Texas, 36; Louisiana none; Mississippi, 1; Alabama, none; Georgia, 6; North Carolina, 2; South Carolina, 2; and Florida, none.

A St. Louis commission man said that eggs put in cold storage in March, April and May were better in a year than June, July and August eggs when they come into market.

To keep your live stock in prime condition—give them

Pratts

Animal Regulator

It's a wonder-worker. Keeps live stock healthy. Makes cows produce more milk. Insures fat hogs and builds up run-down horses.

Pratts

Poultry Regulator

is a guaranteed egg producer and disease destroyer.

Both preparations are absolutely guaranteed to do all that is claimed for them. No guesswork. No uncertainty.

Here's Pratts Guarantee:

If any fails to give results claimed, your dealer will return your money.

Pratts Veterinary Liniment

A strong, penetrating liniment that will quickly cure rheumatism, lameness and bruises. It can be used to blister if so desired by regulating the application. It is a necessity in every stable, and no live stock owner should be without a bottle. Prices, 25c. and 50c. per bottle, sent prepaid on receipt of price if your dealer cannot supply you.

Pratts Roup Cure

This old, reliable remedy is used by poultry keepers, not only to cure roup, but to prevent its appearance, by simply mixing it with the drinking water. Put up in 25c. and 50c. boxes. If your dealer doesn't have it, we will send it prepaid on receipt of price.

A New Pratt Book

Poultry Wrinkles—by Michael K. Boyer, poultry editor of the Farm Journal, author of Poultry Secrets, etc.

Pratts New Horse Book

A really valuable book for every one owning horses.

Either book free on request.

Pratt Food Company

Department F Philadelphia.

Best Dairy Cow Results.

We are informed, and mentioned in our last edition, that Princess Carlotta, a Holstein cow in the dairy herd of the College of Agriculture, gives more milk than any other cow in Missouri. In the last year's test she gave 18,405 pounds of milk. From this milk there were 618 pounds of butter-fat obtained, from which 727 pounds of commercial butter were or could have been made, leaving 15,000 pounds of skim milk and buttermilk. Her year's ration was estimated as costing $100.

From a butter-making and marketing standpoint the butter was valued at 32 cents per pound for the 727 pounds, amounting to $232.64, and 25 cents per 100 pounds for the skim milk adds $37.50, bringing the butter basis total income up to $270.14, leaving her a profit of $170.14.

From a milk standpoint, 7½ cents a quart being the prevailing retail price at Columbia, Mo., for good milk, the product of this cow is figured at $690, and the profit so much less after paying the feed bill.

From a St. Louis market standpoint the result would be entirely different. The 18,405 pounds of milk represent 2,141 gallons. If this milk was shipped and sold at wholesale dairy prices from the average dairy farm to St. Louis, it would sell at 12 cents a gallon for six months and 16 cents a gallon for the other six, average 14 cents for the year, and from this at least 2 cents a gallon would be paid for transportation, leaving 12 cents a gallon as the net price to the dairy farmer. The 2,141 gallons of milk would net the farmer $256.92 and the cow's profit would be $156.92 for the year, and still equal to the profits of three average milch cows in the state. The St. Louis retail prices are just as high for milk or higher than at Columbia, but the farmer does not retail his own milk, and if he did the cost of the retail organization would show up largely in the result.

They were perfectly right at the College farm in using the 3.41 per cent. product of this long-milking Holstein cow just the same as they would the product of a short-milking, high butter-fat percentage producing Jersey.

Cream Separation and Selling.

The extent to which cream separators are now used on farms almost passes belief when we consider that twenty years ago cream separators were only found on large farms devoted to butter-making or cream shipping, and then only on farms in which a large investment had been made in land, cattle, stables, barns, silos, and other accessories. For many years the cream supply of large cities, with few exceptions, was skimmed from off the tops of the cans of milk that came into the cities, and even to-day there is a strong suspicion that the milk which is shipped to market containing 4 per cent. or more of butter-fat, actually reaches the "ultimate consumer" 3 to 3¼ per cent. butter-fat or less, according to the requirements of the particular market that is furnished.

Milk has always been a manipulated product, and yet the dairy farmer who has made the most money in the past was he who was located close to a first-class condensary and sold whole milk, and the next was he who could ship his whole milk or cream to a dairy distributor in a city, and the dairy farmer who made the least money was he who sold cream to a creamery or who attempted to make dairy butter.

But recent conditions have changed all this. The butter-fat that farmers used to sell at 22 to 26 cents a pound is now selling at 30 to 36 cents a pound, and many a milk shipper in the milk zone finds himself not so well off as if he shipped the cream and kept the skim milk at home and made pork from it to sell on a high market. Formerly creameries were few and far between. Some states are largely engaged in dairying and butter-making, but others, even now, are not. The cream demands of cities are unsatisfied, and it is no longer possible to deliver a cream supply and a milk supply out of the same can. The new condition is a great inducement for farmers to separate their cream from the milk on their own farms and to sell the cream at their nearest and best market.

At a recent meeting of interests allied with dairymen, which was held at St. Louis, it was clearly stated that outside of what is called the milk zone, extending to about fifty miles around big cities, it was more profitable to separate and sell the cream than it was to ship the whole milk. Milk could be shipped fifty to sixty miles with more or less success, but cream could be shipped 250 to 300 miles, and wherever the supply is the farmers can get their money for almost any quantity of cream which they may be prepared to deliver once or twice a week at their nearest railroad station. The first point of delivery for the farmer to consider is his nearest local creamery, but failing to find one that can or will accept the cream from him at a fair price, he can communicate with the creameries of the greater cities that will take his product, and so start him into the business of selling cream. The new conditions account for the hundreds of thousands of cream separators now being sold in the country to farmers who are milking only a few cows, and another reason is that the cream separators are being improved in efficiency every year and are very reasonable in price. The dairy farmer's first necessity is cows; his second, a cream separator; his third, a silo. The market he has or can have any time he looks for it.

Dairy and Creamery.

Dr. Thomas Darlington, Health Commissioner of New York City, offered a reward for essays to be entitled "How can clean and wholesome milk be produced at the least cost for the New York market?" The second prize, a pure-bred Jersey cow worth $200, was awarded to an inmate of the Middletown Hospital for the Insane. Although adjudged to be a lunatic, he was a first-class dairyman.

A Philadelphia butter dealer is under arrest for selling butter which contained 30 per cent. of moisture. The legal quantity being 16 per cent., it appears that he washed it in and soaked it in and worked it in. So far as known to us, this is the limit of moisture in butter; but we may be mistaken.

At St. Louis it is claimed that during the month of January the milk dealers had to send to Chicago for milk. At the same time it was reported that Chicago was so short of milk that dealers refused to sell milk to families unless the said family included an infant.

In Eastern Ontario, Canada, last year, 1,070 new silos were erected by dairymen. This is going some. The Ontario cows average 2,800 pounds of milk per year, and there is a movement to bring the average up to 5,000 pounds. The sales will do much towards it.

We understand that one or more of the New York milk distributing companies will reduce the price to 32 cents a gallon by February 1st. This looks like a concession, but the price the milk producer receives is not over 16 cents a gallon.

We have a card from the Fred H. Field Holstein Company, owners of Dutchland Farms, Brockton, Mass., stating that their good cow April Denver gave birth to triplets, two heifers and a bull calf, and that all are doing nicely. In addition to the picture of the cow giving nourishment to the three calves and a vacant teat, showing only room for one more, the modest face of Colantha Johanna Lad, the "father," appears on the card. We are glad to see the sire recognized in a dairy tableau, and we entirely disapprove of the poem that begins "Everybody works but father." He, being "one-half the herd," is surely entitled to credit for one calf and a half.

Retailers were selling butter at 45 cents a pound that cost them 30 cents at wholesale. Then the crash came.

Plenty of Rain

in Arkansas and Eastern Texas. There is no "dry season" — no arid land to irrigate. You don't have to learn a new method of farming. Rainfall is always 30 to 40 inches and a serious drouth is unknown. You can grow the same crops, in the same way you do now, but—here's the advantage—you can raise *far bigger crops* on *much cheaper land*. Land that will yield $35 per acre in corn, $25 in wheat and as high as $75 in alfalfa can be bought *now*

In Arkansas and East Texas

at $5 to $25 per acre. Farmers there live in a mild climate. They work outdoors every month and often raise several crops a season. They have no expensive barns to build for there is very little Winter and stock can graze all year. With bigger crops, cheaper lands, good markets and no Winters to eat up their profits, it is easy to see why farmers there become independent in a few short years.

COTTON BELT ROUTE

You will never know how big the opportunities really are until you investigate. Send for free copies of our books about Arkansas and Eastern Texas. Post yourself on conditions. Take advantage of the low fares offered twice each month by the Cotton Belt Route. Make a trip down there to look around. It will be a start on the road to prosperity. Write today—tomorrow you may forget.

THE MADE-TO-ORDER CREAM SEPARATOR

The dairy farmer who buys a 1910 De Laval Cream Separator gets a machine that is really made especially to order for him.

First: Because the 1910 De Laval is designed and constructed, without sacrificing any vital feature, to meet the comments and criticisms gathered from over 1,100,000 dairy farmers to whom De Laval machines have already been sold.

Second: Because if he should offer to pay ten times the ordinary price he couldn't secure a closer skimming, a greater money, time and labor saving, a more durable, a more convenient or an easier running separator than the 1910 De Laval.

Lastly: Because every feature of the 1910 De Laval machine from top to bottom is just as the best mechanical as well as the most practical engineering demands that it should be.

The De Laval is the made-to-order cream separator without the made-to-order price. The De Laval catalogue tells the whole story. Ask for a copy.

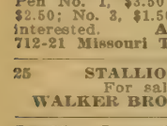
R., at Asylum Station, and has on hand at all times a nice lot of Jacks, Jennets and Stallions, all of the best blood, from six months to six years old, for sale at reasonable prices. Write for catalogue. Also Jersey Cattle.



THOS. H. EZELL, Prop.,
(son and successor to the late H. C. Ezell), Nashville, Tenn., Sta. B, R. F. D. No. 7.

Demand For Dairy Cows.

It is a great pity that more farms outside the milk-shipping territory are not devoted to the production of dairy cows for sale to farmers on the nearer-to-town dairy farms. Any farm that can offer a car-load of first-class, tuberculin-tested dairy cows, or springers, or bred heifers, that will develop into dairy cows is in a position to almost name his price for them. The cows should be grade Holsteins sired by pure-bred bulls. Take the half-breed Holstein and cross it again, and the three-quarter-bred animal looks very near perfection. There are farms on which milk production is profitable if a supply of good cows can be obtained; but there is no room to run stock cattle. Farther out in every state there are farms of less value, on which, if they could sell ten to twenty-five milch cows a year at prices ranging from $60 to $100 a head, the amount would be a large item towards a prosperous condition. It is a business which can be started with one bull and a few healthy cows. Let it be known where first-class heifers can be had and a shotgun will be necessary to keep the buyers away.

Three Big Papers, 70 Cents.

The National Farmer and Stock Grower; Twice-a-Week Republic of St. Louis, the oldest, biggest and best semi-weekly in the Southwest; and Farm Progress, the biggest semi-monthly farm paper printed, sent to any address a full year for only 70 cents. The subscription price of all these papers, if taken separately, would be $1.25. Send orders to the St. Louis Republic, St. Louis, Mo.

"Possibilities of An Hundred Acres of Land in the Wheat, Clover, Corn, or Potato Belt." A book showing a net return of $2,270, after deducting rental, labor and other expenses. Giving diagram of a model farm, model stock barn, model pens for separating and handling stock. First-prize article on wheat growing, first prize on feeds and feeding. How 63 bushels of wheat were grown to the acre; 240 bushels potatoes to the acre. How $1,800 will be realized from a crop of corn grown in 1909 on 30 acres. One bushel of wheat pays for it. Price of book $1. JNO. M. WHEELER, R. 4 N, Winchester, Ky.

MORE AND BETTER CORN. Instruction Book on Corn Growing issued for free distribution by Deere & Mansur Co., gives direction for selection of seed, buying corn for seed, test of seed ears, testing the planter, and other useful information for corn production, written by the highest authorities. Write to Deere & Mansur, Moline, Ill., and ask for Corn Book No. 7.

LOOK TO YOUR SEED CORN FIRST.

All the cultivating and harrowing in the world doesn't do a bit of good if your seed corn isn't right. Take no chances. Be sure of your seed and you won't be disappointed. G. D. Sutton—the Seed Corn Man of Mason City, Ill.—ships seed corn on approval. He offers to let you test his corn any way you like for ten days. Then if it isn't perfectly satisfactory, ship it back and your money will be promptly refunded. The G. D. Sutton Co. sell only the highest-yielding varieties, such as Favorite White, Improved Boone County White, White Dent, Reid's Yellow Dent, Improved Leaming (yellow). All their corn is carefully selected from their own fields, then dried by air shafts, steam pipes and electric fans. Write now to the G. D. Sutton Co., Dept. 7, Mason City, Ill., for their beautiful corn book and samples. It costs you only a postal to find out about the seed corn that is good enough to be shipped on approval.

DISTEMPER DANGEROUS.

The influenzas known under the various common names of distemper, colds, grippe, shipping fever, pink-eye, and other forms of germ troubles, are making constant trouble with the horses, and occasionally with dogs and sheep. An ounce of prevention has well-known value. Craft's Distemper and Cough Cure is a preventive if kept in the stables regularly and used two or three times a week as a condiment with the food. It slaughters the loitering germs before they have a stronghold on the animal. It is fully effective in curing these troubles if the animal becomes sick from neglect of prevention. Our readers should consult a druggist and always ask for Craft's Distemper Cure, made for many years by Wells Medicine Co., 17 Third street, Lafayette, Ind.

BLOODED STOCK NOTES.

The Manager of the National Feeders and Breeders' Show to be held at Fort Worth, Tex., March 14th to 19th, reports that entries are coming in freely and indications point to a record-breaking number. The closing date for entries is February 18th.

Trumans' Pioneer Stud Farm of Bushnell, Ill., have just received a shipment of draft horses by the steamship Minneapolis. They arrived in good condition. The consignment includes several noted prize-winning Percheron and Belgian stallions, and the balance of the importation is made up of an extraordinary lot of Shire stallions from two to five years old. Their 1910 catalogue, which contains portraits from life of upwards of 100 horses, is now ready for distribution, and a copy can be had by any of our readers who write for it.

Walker Bros. & Co., of Oklahoma City, Oklahoma, report that their last two sales of draft horses were three and four-year-old Percheron stallions—one in Oklahoma and the other in Texas. They were gray horses, and were bought at moderate prices. Walker Bros. are handling good stock.

Take a run to the Angus Ranch of J. P. Vissering, at Godfrey, Ill., on the Chicago and Alton Railway. It is but an hour from St. Louis. He has a strong collection of the breed and will give you the glad hand. You will not have to be a millionaire to buy a good bull or heifer.

The L. C. Mueller Poultry Farm at Wellsville, Mo., keep the best varieties of poultry and sell eggs and chickens at reasonable prices. They have good stock and will please their customers. Eggs for sale from Light Brahmas, S. C. Buff Orpingtons, S. C. R. I. Reds, Barred Plymouth Rocks, Brown, Buff and White Leghorns and Buff Cochins; also Toulouse and Emden geese and Mammoth Bronze turkeys.

Speculative Wheat Prices.

The wheat movement is larger than it was a year ago for the reason that there is more to move. The May option is usually the most interesting, because here comes the opening for speculation. By May 31st the wheat year is about run out. Last July 31st the May option for wheat was quoted at $1.05⅞ per bushel; by August 31st it had declined to 98⅛ cents; September 30th the price was $1.02¼; October 30th, $1.04¾; November 30th at $1.06¼; December 31st, $1.11½; and January 31st at $1.10½ to $1.10⅝. In the next three months all the action of the Chicago Board of Trade will be interesting.

Milk Producers' Association.

The February meeting of the Directors of the Milk Producers' Association will be held at the office of Mr. Wm. A. Fischer, Secretary, 409 Franklin avenue, St. Louis, Mo., on Monday, February 28th. The milk report and circular regarding other matters is sent direct to members in good standing.

HIGH GRADE USED Automobiles

IT PAYS TO BUY A HIGH GRADE USED CAR. THE FACT THAT IT HAS BEEN USED DOES NOT MAKE IT INFERIOR TO A NEW CAR; IN FACT, SO MUCH THE BETTER, FOR, AS A RULE, A CAR WORKS MORE SATISFACTORILY AFTER A SEASON'S USE, AND THEY LAST FOR YEARS, BESIDES COSTING LESS THAN CHEAP NEW CARS.

Missouri Draft Horse Breeders Organize.

At the meeting called for December 29th at Columbia, Mo., the draft horse breeders of Missouri met and organized the Missouri Draft Horse Breeders' Association.

Mr. J. F. Roelofson, of Maryville, Mo., was elected President for the ensuing year. Mr. E. A. Trowbridge, of Columbia, Mo., was elected Secretary-Treasurer. The objects of this association are as follows:

1st. It will greatly facilitate buying and selling by helping breeders to keep in closer touch with each other.

2d. That it will put the draft-horse business in a more prominent position by increasing interest in it.

3d. It will greatly aid the cause of the draft horse at the Missouri State Fair and may be the means of securing classes for Missouri-bred draft horses at that show.

4th. It will help to educate the farmers of Missouri to the value of the draft horse, thereby increasing the volume of business.

5th. It will put the draft-horse breeders on a foundation similar to that of the saddle horse breeders, who are now well organized.

Lastly. It will be a potent factor in legislation which will ultimately be aimed at the undoing of the poorer class of stallions now in service in this state. It is a notable and serious fact that many horses which do not fill the requirements of the law in other states have been sold into Missouri, where the horse breeders are as yet unprotected by law. These, along with many other benefits, may be derived from such an organization, and, as is always the case, organized effort is greater in any direction than individual effort.

After the election of officers, Dean F. B. Mumford, of the College of Agriculture, addressed the association upon the draft-horse question, pointing out the value of the draft horse as a market product and its place upon the average corn-belt farm. Following his talk were short talks by Mr. E. A. Trimmer, of Kirksville, Mo.; Mr. W. F. Eckles, of Green City, Mo.; also by President Roelofson and the Secretary.

The next meeting of the Draft Horse Association will be held at Sedalia during the State Fair, the exact date and place to be named later. At this meeting questions pertaining to the industry in Missouri will be discussed, and a large attendance is looked for.

It is a noticeable fact that a large number of draft horses are coming into Missouri at the present time, and that there is a great interest being aroused in draft horses throughout the state.

An annual fee of $1.00 per member is charged in order to pay the necessary expenses of the association. The association needs the co-operation of every person in the state of Missouri interested in draft horses. It is to their interest to become affiliated with this organization, since its object is the betterment of the draft-horse breeders in the state. Parties interested will please write to Mr. E. A. Trowbridge, Secretary, Columbia, Mo.

A Word For the Gray Horse.

Although Uncle Sam has stopped buying gray horses for army purposes, many dealers regret that the Percherons are now black instead of gray, which was once their strong color. The New York Herald mentions a contractor, Mr. William Bradley, who is building a Brooklyn subway, who has placed with a horse dealer an order for 400 horses, and all of them grays, and to weigh 1,500 pounds or better. Mr. Bradley is partial to gray horses, because, he says, they stand the heat better than dark-colored ones and show at a glance when they are neglected by their grooms. His contract is said to be the largest of the kind ever let upon the New York market, and one not at all easy to fill.

"The high price that has been paid for corn in Lexington in many years was reached when Josiah Moores, of the Brighton neighborhood, sold to T. H. Adams, of the same locality, two hundred barrels of corn at $4.50 per barrel, delivery to be made June, July and August, 1910. This deal sets a new mark for the last fifteen years."—Kentucky Farmer.

Without cold storage of eggs we would be treated to glutted markets for six months and famine markets the next.

Clay, Robinson & Company's LIVE STOCK REPORT

Published Weekly by CLAY, ROBINSON & CO.

THE LEADING LIVE STOCK COMMISSION FIRM OF THE WORLD

HAVING HOUSES AT

Chicago	South Omaha	Kansas City
Denver	Sioux City	South St. Joseph
East Buffalo	East St. Louis	Fort Worth

We publish from our Chicago office (but covering all markets) a paper which you ought to read regularly. It will add to your bank account to do so.

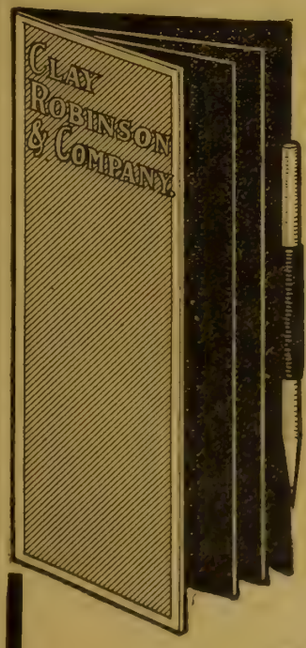
FOR ONLY FIFTY CENTS

(To cover actual cost of postage) we will send you for one year our weekly paper

THE LIVE STOCK REPORT

MONEY BACK IF YOU DON'T LIKE IT

The "Live Stock Report" is a 12-page weekly illustrated paper devoted to the markets, live stock, and agriculture generally. It is pithy, pointed and practical. You pay 50 cents to cover actual postage for a year and we will do the rest. If after receiving three issues of the Report you think it is not worth 50 cents per year to you, notify our Chicago office and *your money will be refunded without question.*



WE HAVE RECEIVED THOUSANDS OF UNSOLICITED LETTERS LIKE THESE:

O. E. HINTZ, Bunker Hill, Ill.: "Enclosed please find 50c for one year's subscription to the Live Stock Report. Your paper is getting more valuable every year and I think the live stock raiser or farmer who does not take it is behind the times."

J. C. COBB, President of the Bank of Odessa, Mo.: "I hand you $1 for two years' subscription. I would feel lost without the REPORT."

S. LEE, Aledo, Ill.: "Enclosed please find 50c, for a subscription. I consider the REPORT pre-eminently the best thing in this line."

Approximately 50,000 of the most successful live stock feeders, farmers and shippers in the U. S. regularly read the LIVE STOCK REPORT. It helps them and it will help you.

A NICE LITTLE PRESENT—EXTRA

As a special incentive to forward your subscription at once, we will send you free and postpaid this very convenient vest pocket slate memorandum book and pencil (see cut at left), handy for the farmer, housewife, school boy or girl, provided your subscription is mailed within fifteen days from the time you receive the paper containing this advertisement. Act immediately. There is no reason to hesitate, as our "money back" offer eliminates all risk.

Make all remittances payable to

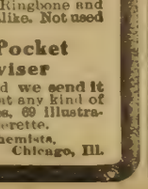
Bone Spavin



No matter how old the blemish, how lame the horse, or how many doctors have tried and failed, use

Fleming's Spavin and Ringbone Paste

Use it under our guarantee—your money refunded if it doesn't make the horse go sound. Most cases cured by a single 45-minute application—occasionally two required. Cures Bone Spavin, Ringbone and Sidebone, new and old cases alike. Not used on soft bunches. Write for

Fleming's Vest-Pocket Veterinary Adviser

Best book on blemishes, and we send it free. Read it before you treat any kind of lameness in horses. 192 pages, 69 illustrations, durably bound in leatherette.

FLEMING BROS., Chemists, 218 Union Stock Yards, Chicago, Ill.

Fable of the Horseshoe.

Do you know the German fable about the horseshoe? In the olden times, in a little village of Germany, a blacksmith was hard at work. The sound of the anvil attracted the attention of the devil. He saw that the smith was making horseshoes, and thought it would be a good idea to get his own hoofs shod. So the devil struck a bargain, and put up his foot.

The blacksmith saw with whom he was dealing and nailed a red-hot shoe on, driving the nails square into the devil's hoof. The devil then paid him, and left; but the honest blacksmith threw the money in the fire. He knew it would bring him bad luck.

Meanwhile the devil had walked some distance, and began to suffer the greatest torture from the shoes. The more he danced and kicked and swore, the worse the things hurt him. Finally, after he had gone through tht most fearful agony, he tore them off and threw them away.

From that time forward, whenever he saw a horseshoe, he would run off, anxious to get out of the way. The German peasantry all believe this story to-day, and one can scarcely find a doorstep or a barn door that hasn't a horseshoe nailed up.—The Horseman.

Clipping Farm Horses.

As a rule, farm horses are soft in spring, and when put at the heavy spring work they perspire a great deal more than would be the case if they were kept regularly at work during the winter months. As the hair is long, the moisture is held in it and dirt accumulates much faster than if the horse was covered with a short coat. This condition has led to the practice of clipping all farm horses in some communities before putting them at the heavy spring work, and the general opinion of those who have to do with such horses, both in working them and in the maintenance of their health, seems to be in favor of the practice of clipping.

As everyone should know, horses as we are acquainted with them at the present time, live very differently from their natural state. The wild horse was free to roam about and had very little to do except getting enough to eat. The horse, as we know him, is subjected to a great deal of hard labor and is fed and housed under conditions that nature evidently did not mean for him; consequently every provision should be made to keep him under these unnatural conditions in as healthful a way as possible.

Experience goes to show that a soft horse with a long coat of hair, if left to stand on a cold day after perspiring freely, or if stabled without ample protection on chilly nights, is apt to take cold and be subject to other ills resulting from these conditions. A long coat of wet hair does not dry out very quickly and requires considerable body heat to accomplish it. The argument is put forth by those who clip that the horse with a short coat of hair dries out very quickly and in that condition is much less liable to take cold than the unclipped horse wth a coat of wet hair.

We also reason that a man would not care to stand about on a cold day or try to rest at night with a heavy suit of wet clothes on, and that he would be much better off if he had on a light, dry suit, all of which seems to be very reasonable, especially as the weather is steadily becoming warmer and the heavy suit is a burden instead of a comfort.

The horse of to-day is healthier and a better worker than the horse of a century ago, but more is expected of him and he accomplishes more. If he is clipped in the early spring and a blanket is provided for protection whenever he is left to stand in the open on a day that is cold, or at night when put into the stable, he is better off than the unclipped animal.

It is further argued that the clipped horse makes a great deal better appearance than the unclipped animal in the spring, and there would seem to be no question but what that is true. It is also stated that the clipped horse is more easily cleaned and kept in good condition, which appears to be reasonable, too, for with a short coat of hair he accumulates much less dust and the excretions of the body thrown off through the pores of the skin have a much better chance to escape.

A long winter coat is an admirable protection for a horse when he is not at work, but when man takes him in charge and subjects him to heavy spring work after the winter months of rest, he surely ought to do everything to make life as healthful and comfortable for him as possible. It would seem to be the course of reason to give him a good clipping, and authorities at the present time are about united in favor of this course. The practice is getting to be a very general one throughout the country.

The Horse Wagon and the Auto Truck.

A very quiet but determined economic contest is being conducted between the delivery teams and auto trucks in the service of the packers. During the strike of teamsters a few years ago the auto trucks were brought into use and since then the packers have continued to buy horses and not failed to buy autos. The sentiment of the working forces is in favor of the horse, and if there had not been something in their favor besides their style the autos would have displaced them. It may be, however, that increasing trade finds room for both. In any event, time is necessary to determine the difference in the cost of equipment and maintenance of horse and auto truck service, and it may be a drawn contest after all.

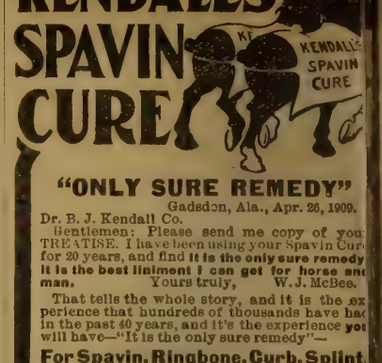
The Army-horse Contracts.

The Chicago Drovers' Journal states that contractors to supply the government with cavalry mounts and artillery horses find much difficulty in executing their contracts, as the horses suitable for government service are worth more for commercial use than the army prices. To maintain the efficiency of the military equipment the government will have to advance prices. The government has been tardy in recognizing the advance in prices of industrial horses and dealers outbid government contractors for horses available for agricultural and commercial use. The result of low government contract for cavalry mounts and artillery horses compels the contractors to accept a medium-grade animal for military purposes. Light harness bred horses make elegant cavalry mounts and active farm chunks fill the specifications for artillery animals.

Mares at a Premium.

Recent circulars issued by commission firms on the St. Louis horse market indicate that so far as the Southern horse trade is concerned mares are the best sellers by $10 to $15 per head. At the same time Chicago horse reporters were stating that mares for farm use, weighing

KENDALL'S SPAVIN CURE



"ONLY SURE REMEDY"

Gadsden, Ala., Apr. 26, 1909.

Dr. B. J. Kendall Co.

Gentlemen: Please send me copy of your TREATISE. I have been using your Spavin Cure for 20 years, and find it is the only sure remedy it is the best liniment I can get for horse and man. Yours truly, W. J. McBee.

That tells the whole story, and it is the experience that hundreds of thousands have had in the past 40 years, and it's the experience you will have—"It is the only sure remedy"—

For Spavin, Ringbone, Curb, Splint, Swellings and All Lameness

Sold By Druggists—$1.00 a Bottle, 6 bottles for $5.00. Keep it on hand always. Be ready for the emergency. Kendall's stops the pain, starts the circulation, penetrates and removes the cause of the disorders. Ask for a free copy of "A Treatise on the Horse." If not at dealers write to—

DR. B. J. KENDALL CO., Enosburg Falls, Vt.

1,300 to 1,500 pounds, were worth premium of $15 to $20 more t geldings. This indicates the tendency of the times. Horses are demand at prices which farmers consider satisfactory. To raise a to keep is economy and to raise to sell is profit. The city demand for geldings is not strong enough keep the prices even. Another indication is that farmers are buying heavier work teams than they did before by an average of 100 150 pounds to the horse.

On a farm it is very easy to do right thing at the wrong time.

What Every Farmer Wants

You Can Get It Free

Ask for Book No. 7.

JUST drop us a postcard and we will send you, **free**, the latest edition of our **Corn Book**, containing the best information from the highest authority on selection and care of seed corn. You can get more and better corn without increased cost by following this book.

Forty Pages In Colors

Every page illustrated and printed in colors.

The fact that this book also contains description of the

Deere No. 9 Corn Planter

the most highly perfected machine on the market, adds to its value.

Increased accuracy secured by the famous **Deere edge-selection drop**, means anywhere from ten to fifteen bushels per acre over the old style of machine.

Repeated tests have shown the above increase in favor of really accurate planting.

We have plates for all kinds of corn and other seeds. Instantly changed from hill to drill drop without changing plates.

Fertilizer attachment that distributes either in hill or drill. The illustration shows the regular runner, but stub runner or disc openers may be had on special order. In fact, the **Deere No. 9** is strictly up to date in all the real improvements.

Address **Deere & Mansur Co.** Moline, Illinois

Deere No. 9 Edge-Drop Planter Highest Accuracy in Drop

Horse Secrets" Exposes for the First Time The Secret Tricks of Horse Fakirs

Did you ever find a lemon in a horse's nose? How and why did it get there? What was the meaning of the ears being tied together with a fine silken thread? Perhaps you are half persuaded to buy a horse because you like his "ginger"? Are you re it is health and high spirits, or *is* it ginger—commercial ginger?

Are you sure you could tell the age of a horse by its teeth? Or would your experience be like that other man's, who d $3500 for a 17-year-old horse, thinking he was buying a 7-year-old? The horse had been Bishoped.

Horse buying and trading offer hundreds of opportunities and temptations to use trickery and sharp practice. There is only one way to meet it.

"Horse Secrets" Will Protect You

nake you horse-wise and crook-proof, and save you from being ated by dopes or tricks when buying, selling or trading. It ex- es and makes you acquainted with the tricks, dark and devious ys, and crooked methods of gyps and a certain class of unscrupu- s dealers. Many of the secrets of this book are now made public for the first time. No such collection of Horse Trading, Horse Buying, Horse Training, and Horse Feeding information has ever been published. It is impossible even in this large space to give a complete list of the secrets in this sensational book. Some of the topics of greatest importance are:

crets of Hiding Blemishes
utting a "heaver."
agging a "roarer."
rpentine and Gasoline tricks.
nnerving and Cocaine tricks.
ding a spavin.
de Bones.
ncealing sinuses.
n eye for an eye."
amining the ears.

Secret Ways of Changing Appearance of a Horse
The tail trick. Making a star.
Making black spots.
Curing the broken crest.
False measuring.

Buying Tricks
Diamond cut diamond.
Making a horse act mean.

Selling Tricks
The "widow" trick.
Landing a sucker.
The winter board trick.

Secrets of Stopping Vicious Habits
Stopping a switcher.
Wedging a cribber.

Secrets of Hiding Age
"Bishoping."
Blowing Air under the skin.

Tricky Sayings
An honest horse dealer.
A horse that was right there.
A sharper's smooth sayings.

Secret Ways of Inducing Action
Gingering.
Getting high knee action.
Keeping horse in the air.
Loose shoe trick.
Galloping past dodge.
Keeping horse on edge.

RM JOURNAL—"Unlike any other Paper." You Will Like It

FARM JOURNAL is the paper taken by nearly every busy, thrifty farmer, the who wants to know *for sure* about agriculture. They value it so highly that it is t year after year and is continually re-read and referred to. It is a departmental r with a convenient arrangement for the reader to find what he wants, and it *is* t he wants when he finds it.

The Farm, the Home, Horses, Swine, Sheep, the Cow and Dairy, Bees, Poultry, t and Garden occupy their proportionate share in every issue. Then there are the technical and material pages devoted to matters of the home—fashions, house- ing, recipes and bright, fresh reading for the younger members of the family.

FARM JOURNAL is a farm paper, but it is far more than this. It is for ybody outside a big city flat; it is equally at home in town, village, suburbs, or on the routes. It is for "humans," not fat hogs; fat hogs are all right, but they do not come

Every reader of this paper will enjoy and learn to love the FARM JOURNAL o its nearly 700,000 present subscribers, scattered all over the United States.

FARM JOURNAL need never be carried out of the house with the tongs. The rtising columns receive the most careful scrutiny of our editorial department and bars are up all the time against medical, deceptive, suggestive or nasty advertising ny kind whatever.

FARM JOURNAL is thirty-three years old, and has grown to be the leading farm home paper of the world. Its score of editors are men and women who write th their sleeves rolled up." They know what they are talking about, and can quit n they are through—a rare virtue. FARM JOURNAL is cream—not skim milk.

RM JOURNAL, 1068 Cherry St., Philadelphia

"Horse Secrets" has been prepared by Dr. A. S. Alexander, the famous veterinarian, who has had upwards of 25 years' experience in Horse-Breeding and Veterinary Science. He is the author of the first stallion service regulation and inspection regulation adopted and enforced in America. He is Professor of Veterinary Science at the University of Wisconsin. There is no more competent authority on horses anywhere.

How to Secure "Horse Secrets"

"Horse Secrets" is not sold separately. It may be obtained only in connection with the following offer:

"Horse Secrets" and subscription to FARM JOURNAL for two years, both for 50c

Those who have already subscribed for the FARM JOURNAL may have the book and paper sent to different addresses.

Campbell Commission Company

NATIONAL STOCK YARDS, ILL.

Ship to the Best Market and the Best Firm on that Market. There is more competition at St. Louis for Native and Southern Cattle than at any other Market on the continent. The St. Louis Hog Market continues to grow, and is habitually 10 to 25 cents a hundred pounds higher than the Missouri River Markets. Sheep and Lambs sell at St. Louis to the advantage of the shipper.

WE KNOW THIS MARKET AND RECOMMEND IT ABOVE ALL OTHERS.

Don't hesitate to write or ship to

JAMES H. CAMPBELL,
National Stock Yards, Ill.

EXPERT SERVICE IN EVERY CLASS OF STOCK—SHIP US YOUR CATTLE, HOGS AND SHEEP.

Horse and Mule Notes.

The market people cannot see any good in a coach horse unless it is a show horse, and then it is an interesting proposition.

At Fulton, Mo., in December, 1909, a mule dealer from the St. Louis market paid $250 a head for a total of 181 head of mules. In one week in November Callaway county, Missouri, sold 688 head of mules for a gross total of $131,690, which is an average of over $190 per head. The feeding of mules in Callaway county the fall of 1909 is placed at 2,000 head.

The Kentucky Farmer of January 13th said: "A. Warfield, a stockman of Macon, Ga., bought mules at Elizabethtown, Ky., last week, at prices the highest ever paid perhaps in Kentucky. He bought fourteen head from Claude Pemberton at $205 per head; a span from R. B. Park at $550; and a span from B. F. Craddock at $600. The latter span has taken premiums at the Kentucky, Tennessee and Illinois Fairs."

"With growing colts, combination rations of corn, oats and bran are better than either of these grains alone. Corn is hard to excel as a grain to maintain heat, and oats is good for bone and muscle."—Spirit of the West.

"We have never seen chunks weighing 1,200 to 1,400 pounds sold as strong as they are selling at the present time." This is an extract from a circular issued in January by a commission firm at the St. Louis National Stock Yards.

Spirit of the West says: "Young foals confined in box stalls will never develop the possibilities of their blood inheritance. Idleness and deterioration go hand in hand, and a young foal to develop symmetrical growth needs the free exercise of a paddock or pasture. If confined in a box stall, the youngster should be given regular daily exercise to develop strong bone and tendons that will make him an efficient horse when he reaches maturity."

A breeder of Percheron horses advertises that he has many mares, each weighing a ton; that he has full fifty American-bred Percheron mares in foal that are all young ages, broke to work, are of the right type and raised under satisfactory conditions. From this statement it would appear that first-class draft-horse breeding establishments in this country are more than possible, and that the money expended for imported horses has not been in vain.

"Above all things, don't neglect the feet of your colt; keep the surface of the part that comes in contact with the ground always level and the toe well rounded, so as to prevent the breaking the walls of the hoofs. A rasp and a few minutes' attention occasionally is all that is required, and as a result the youngster will travel true and with perfect ease to himself."—Spirit of the West.

A car-load of mature grade Belgian draft horses arrived and sold on the Chicago market and were disposed of at good prices. A pair of blacks, weighing about 3,200 pounds for the pair, was sold at $700. The entire load went East, principally to Boston.

The annual report of the Canadian Department of Agriculture places the number of horses in Ontario at 726,000, as compared with 615,000 in 1899.. Although the number of horses has increased only 111,000, or about 18 per cent. in the ten years, their value has jumped about 100 per cent.

Louis Pfaelzer, a veteran cattle buyer operating at the Chicago Union Stock Yards, died recently of pneumonia. He was operating on account of Eastern interests as far back as 1865. Up to the time of his death he was operating one of the largest independent packing plants in Chicago, and the business will be continued in the name of his sons.

At the St. Louis Stock Yards, the other day, a dealer remarked that he had sold many 15 to 15¾-hand mules in times gone by at $70 to $75 a head that now are readily worth $200 to $225 on the market.

Patchen Wilkes, son of George Wilkes, 2:22, sire of Joe Patchen, 2:04¼ and grandsire of Dan Patch, 1:55, died recently at Lexington, Ky., at the age of twenty-eight years. Death has also taken at the age of twenty-six years, Chimes, son of Electioneer and sire of The Abbot, 2:03¼, The Monk, 2:05⅜, and Fantasy, 2:06. Belle Hamlin, 2,12¾, a famous trotting mare, died at thirty years of age.

THE GUIDE POST TO PROFIT

CONSIGN YOUR LIVE STOCK TO CLAY, ROBINSON & CO.

NATIONAL STOCK YARDS, ILL.

We desire to invite stock raisers and shippers to make their headquarters with us at the St. Louis National Stock Yards. We have a splendid office and a superior working force in all departments.

We make a specialty of buying stock cattle and feeders for our customers. Our houses at Denver, Kansas City, St. Joseph and Omaha can buy stock to great advantage, that when fattened is sold at St. Louis, Chicago or Buffalo. We are also doing some satisfactory stocker and feeder buying for our customers at the St. Louis National Stock Yards.

Keep this house in mind when shipping cattle, hogs and sheep to the St. Louis National Stock Yards. Our force is second to none.

REMEMBER:

CONSIGN YOUR LIVE STOCK TO CLAY, ROBINSON & CO.

NATIONAL STOCK YARDS, ILL.

St. Louis Hog Trade.

On January 31st, at the St. Louis market, the best hogs were from Lincoln county, Missouri, weighed 240 pounds, and sold at $8.50 per 100 pounds. The bulk of the desirable hogs cost $8.25 to $8.40. Good light hogs, 125 to 160 pounds, sold at $8.00 to $8.25. Inferior stock sold at $6.00 to $7.50 per 100 pounds.

Col. James H. Campbell,

Erpert live stock salesman, is at the head of his own organization at the St. Louis market. He is one of the active men in the trade—an enthusiastic worker, knowing that he has a competitive market to back him. He is holding his old customers by splendid sales and making new ones all the time. Col. Campbell issues a circular every week of his own composition, containing his advice to intending shippers. Write for information to Col. James H. Campbell personally and consign cattle, hogs and sheep to Campbell Commission Company, National Stock Yards, Ill.

Sweet potatoes at 35 to 45 cents a bushel is cheap feed for the meat boycotters.

KING WEEDER CO., Richmond, Va

Clay, Robinson & Co. Sheep Sales.

Our readers will understand that the sales enumerated here were taken from the circular issued by Messrs. Clay, Robinson & Co. at the St. Louis National Stock Yards. They serve the double purpose of quoting the good deeds of the firm and the good prices at the market and relate to the latter half of January, 1910. We quote as follows:

"On January 17th we sold for N. A. Beatty, of Leeds, Mo., one double deck of yearlings, 270 head, averaging 73 pounds, at $7.75. This was extreme top for that day and 35 cents higher than any other sale made that day.

"On January 18th we sold for D. M. Carson, of Monte Vista, Colo., two double decks of lambs, 520 head, averaging 70 pounds, at $8.60, which was the extreme top for the day.

"On January 18th we sold for D. W. Rusk, of Windsor, Mo., one double deck of fed lambs, 279 head, averaging 72 pounds, at $8.60, also the extreme top for the day.

"On January 19th we sold for J. M. Carson, of Monte Vista, Colo., three double decks of lambs, 750 head, averaging 71 pounds, at $8.70, the extreme top for lambs that day.

"On January 20th we sold for W. F. Ullery, of Monte Vista, Colo., one double deck, 255 head, averaging 68 pounds, at $8.70, which is the extreme top of the market and 10 cents higher than any other sale.

"On January 24th we sold 282 lambs, averaging 71 pounds, for Abe Mathias, of Monte Vista, Colo., at $8.60, the same being 10 cents higher than any other sale made that day.

"On January 24th we sold 249 head of yearlings, which averaged 77 pounds, for Deitrich & McArthur, of Monte Vista, Colo. The price obtained for this lot was 45 cents higher than any other yearling sale made that day.

"On January 25th we sold 300 head of lambs, which averaged 67 pounds, at $8.35, for Deitrich & McArthur, of Monte Vista, Colo. This price was the extreme top for Colorado lambs that day.

"On January 26th we sold for A. P. Grout, of Winchester, Ill., 55 head of native lambs, which averaged 68 pounds, at $8.15, the same being the extreme top of any lambs sold that day."

"All quotations are at the price stated per 100 pounds." See advertisement of Clay, Robinson & Co. on page 13.

A First-class Commission House.

In consigning live stock for sale at the St. Louis National Stock Yards, remember the Evans-Montague Live Stock Commission Company. It is a successful firm, highly competent and persevering in the interest of their customers. The Evans-Montague Commission Company solicit consignments of cattle, hogs and sheep for sale on the market, and desire stockmen to take notice that the company has special buyers who select and buy stock and feeding cattle for their patrons. Address, Evans-Montague Commission Company, Box 68, National Stock Yards, Ill.

To Buyers of Mules.

The pioneer firm of mule dealers of the St. Louis market is the Jos. A. Maxwell Mule Company, and their specialty is of the better class. Contracts are entered into for any number or grade of commercial mules, and satisfaction is guaranteed. Members of the firm also contract for cavalry, artillery, Cuban or Eastern horses. It is a safe firm to do business with, always upholding the highest traditions of the great market of which they have been so largely instrumental in building up. For mule quotations, address The Jos. A. Maxwell Mule Company, National Stock Yards, Ill.

Free Trial of Stock Tonic.

There is really no secret about Stock Tonics—neither about their ingredients nor their effects on live stock. There is also no doubt about the usefulness of Stock Tonics. Their good effects are as certain as are the nutrient actions of feeds. In fact, the benefits of a rightly-compounded tonic are more certain than that of food.

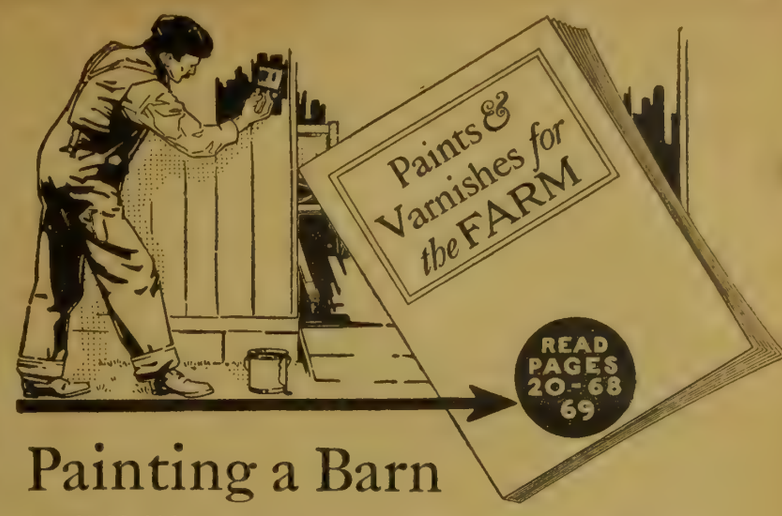
Feed sometimes nourishes and sometimes it doesn't. It depends altogether on the condition of the organs of digestion and assimilation. But a good tonic, used as intended, always acts with a stimulating and restorative effect on the functions that make nutrition possible.

The Wilbur Stock Food Company offers to demonstrate the certainty of benefits of their Stock Tonic, in every case, by giving away, in locations where they have no agent, a twenty-five-pound pail to any stock owner who will ask for it, accompanying the request by a statement of the number of head of stock he owns.

They have been making this Stock Tonic for twenty-five years and know absolutely what it will do. They run no risk in giving away the twenty-five pounds, as they are certain it will be its own best solicitor in the hands of the intelligent stock owner.

Every keeper of live stock ought to take advantage of the offer for his own satisfaction and profit. Write the Wilbur Stock Food Company, 939 Huron street, Milwaukee, Wis., stating the number of hogs, cattle and horses you own, or fill out the coupon attached to the company's advertising and send it with request for a pail of Stock Tonic, which will be sent promptly without any charge.

Horseradish is selling at St. Louis at $3.35 to $3.75 per barrel.



Painting a Barn

THIS 115 page book not only tells why Sherwin-Williams Commonwealth Barn Red is the best to use and why painting with the best paint will more than double a barn's length of service and diminish the cost of repairs. It gives full information on the painting of everything about the farm and tells *just what paint to use on what*—and its free.

SHERWIN-WILLIAMS

PAINTS AND VARNISHES FOR FARM USE

There is a Sherwin-Williams' Paint made especially for every purpose about the farm—whether you want to paint your buggy, enamel your kitchen cupboard, paint your implements, or varnish or paint the floors of your house. That's why, when you use Sherwin-Williams' Paints, you know you've got the right Paint for the job, no matter what the job may be.

This book contains a whole lot of useful information about painting on the farm that every farmer should have, and we'll send it to every farmer who'll ask for it—free.

The Sherwin-Williams dealer in your town can furnish you with a Sherwin-Williams' Paint for any purpose you require.

SHERWIN-WILLIAMS PAINTS & VARNISHES

Address all inquiries to 689 Canal Road, Cleveland, Ohio. In Canada, to 639 Center Street, Montreal.

SURE CURE AND PREVENTIVE

For Distemper, Epizootic, Influenza, Pink-eye, Catarrhal Fever, Coughs and Colds. One bottle of FRAZIER'S DISTEMPER CURE, a guaranteed cure, or your money back. This is a liquid, given on the tongue. Absolutely safe for Mares in foal, Stallions, Colts and all others at any age or under any condition. $1.00 bottle holds three times as much medicine as the 50c. size bottle. All drug stores sell "FRAZIER'S, or prepaid direct. On request, we will mail our 32-page horse booklet free.

BINKLEY MEDICAL CO., Dept. H, NAPPANEE, INDIANA.

Farm Horses Need Clipping

They do better work, keep in better condition, live longer and look better. The best horse authorities say that.

Use the STEWART No. 1

For Farm Use

The Stewart No. 1 Ball Bearing Machine is the best machine for use on farms. It lasts a lifetime without giving trouble because it's free from complicated and delicate mechanism. Working parts are inclosed and run in oil and all gears are cut from the solid steel bar and made file hard. It's easy to operate. Any man can clip horses thoroughly by simply guiding the knife while the crank is turned.

All horses should be clipped—farm horses especially. The heavy work which a farm horse has to do causes it to sweat and if he has a long, thick coat he is liable to colds and other ailments. A clipped horse dries out quickly, is easier to keep clean, feed does him more good, and he enjoys his rest more.

Price Complete $7.50 This includes six feet of highest grade flexible shaft and the Stewart One-nut Tension Knife. Your local dealer can supply. If not send $7.50 with your order to us and receive a Stewart No. 1 C. O. D. for balance.

Order Today, or Send for Catalog

Chicago Flexible Shaft Co. 182 Ontario St., Chicago

The strength is there and the power is there. You may have had trouble with iron pullers, but this Hercules genuine steel puller is a different matter. It has 400% more strength than the best iron puller ever made, and with our triple-power attachment a one-third greater pull is developed. The Hercules is in a class by itself.

It is the only stump puller that is guaranteed for three years. The only stump puller made with double safety ratchets, making them doubly safe. The only stump puller having all bearings and working parts turned, finished and machined, reducing friction, increasing power and making it extremely light running.

Look At This Table

You will see why we have made the Hercules of steel. The table gives the strength per square inch of each different material. Steel is the only material for the Hercules.

Cast Iron 16500 lbs.

Copper 19000 lbs.

Bronze 36000 lbs.

Malleable Iron 40000 lbs.

Wrought Iron 47000 lbs.

Don't Risk Dynamite

It's dangerous and it's costly. Besides, it only shatters the stump and leaves the roots in the ground to grow again. The Hercules pulls roots and all, big stumps and small stumps, good sized green trees, hedgerows, etc. It is the machine for satisfactory work and keeping down the expense. Write us a postal now for free book and special 30-Day Free Trial Proposition, also low price to first buyers in each locality.

Good Milkers of Cows.

Anyone who has had a large dairy herd knows how hard it is to get first-class milkers, who will draw the milk rapidly from the udder without hurting that delicate organ, and yet get every drop the cow is capable of giving. The cow is a sensitive creature and requires to be handled in a very gentle manner, and no portion of her body is as sensitive as the udder.

It is a great relief to the cow to have her overdistended udder relieved of the milk that is in it. How often have we stood in front of a cow who is being milked by a skilled and gentle milker (and no one unless he is gentle and sympathetic will ever make a really good milker) and seen the look of contentment which comes in the eyes of the cow; with half-shut eyes and dreamy look she gladly yields up the lacteal fluid we ask from her. She is prepared to do her part by man, and she asks in return that man do his part by her, by drawing the milk quickly but gently, not by unnecessary tugging at the teats, but by gentle, rapid pressure, with a downward movement of the fingers.

Good milkers are rare, and they are a priceless blessing on any dairy farm. It goes without saying that the cow should be milked regularly, and at the same hour each day, and always by the same milker. We all know that a change in the time of milking, or in the milker, means a decreased flow of milk until the cow becomes used to the ways of the new milker, and there is a bond of sympathetic confidence established between him and the cow.

In the matter of feeding and handling, much loss often occurs from lack of appreciation of the wants and needs of each individual cow. A proper ration may be compounded, but the duty of the feeder does not end here. It is folly to say that the cow can always be fed in proportion to her weight, or that all cows will do equally as well on a similar ration. Each cow has her own individual power of assimilation and taste, both of which must be considered and satisfied, if we expect her to do her best work and give us the greatest net profit. These will vary when cows have all been reared and bred on the same farm, as what will best suit the appetites and will be best assimilated by the cows is largely a matter of training.

The writer has obtained a slight measure of success in the handling and feeding of cows. He applies the laws as they affect the human race to the cow, and has attained the best results by so doing. The cow is, after all, our mother, the great foster-mother of us all. We should consider her as such, and treat her with the same kindness and consideration that a mother is entitled to at our hands. The writer tries to know each cow of the herd; to appreciate her wants and to supply them; to get at the peculiarities of each cow and cater to them; to establish a bond of sympathy between him and his cows. To say that cows have no affection for, and no memory of, their attendants, is all nonsense. The writer has seen many cases of both illustrated.

To make the greatest success of a herd, study the wants of each cow. Know such wants and supply them. Compound a ration that will best suit such wants and secure the greatest profit. Treat your cows kindly and they will readily respond thereto. Curry them daily; it is healthful and beneficial to the cow. Do not expose them to inclement weather in winter, nor to the hot rays of the sun and heat of summer, without proper protection or shelter. Feed them regularly, at the same time each day. Have them milked at the same hour, by the same man each day. Establish a bond of sympathetic friendship between you and your cows, and you will go a long way towards making them the most profitable bank account you can tie to.—Australian Dairyman.

THIS DEVICE WILL SAVE ONE-THIRD YOUR FUEL

On Any Gas, Gasoline, Kerosene or Distillate Engine

"The Hotter the Spark the Better the Combustion," is a well known principle of Gas Engineering. Batteries give out quickly, Spark Coils eat up current, and thereby cause endless expense and trouble—just when needed the most. Poor ignition from batteries causes misfires, slow ignition or combustion and thereby **increase your fuel expense by one-third to one-half.** You can **save this wasted fuel,** get the maximum power, by installing

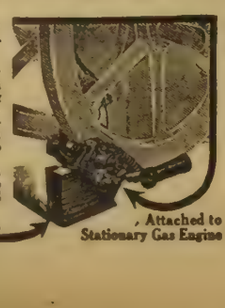
THE MOTSINGER AUTO-SPARKER

No Battery Needed to Start the Engine

Delivers a white-hot spark for a lifetime. This device is a simple, foolproof dynamo. It will continuously deliver an intensely hot spark with from 3 to 15 volts behind it (adjustable to suit). We don't know how long the Auto-Sparker will last, for those put out ten years ago are still "delivering the juice"—few have required repairs or replacements. See your dealer or write direct for prices and money-saving details. Learn how to run your engine for one-half to one-third your present cost; also how to charge storage batteries for ignition and lights.

TO DEALERS—The demand from those operating internal combustion engines of all kinds is so constant and certain that you can safely stock the Auto-Sparker. We protect you against loss by GUARANTEEING THE SALE. Ask us about it. (1)

MOTSINGER DEVICE MFG. CO., Box 351, Pendleton, Ind.



Attached to Stationary Gas Engine

For Selling Oleomargarine.

From Detroit, Mich., on December 18th, it was reported that John Hart, whose oleomargarine business had attracted considerable attention from the federal authorities, was sentenced by District Judge Swan to pay fines aggregating $1,800, a tax of $600, and to be confined in the Detroit House of Correction for one year and ten days for violations of the federal laws regulating the manufacture and sale of oleomargarine.

Chicago milk dealers are trying to raise the price of milk at retail from seven to eight cents a quart. The Borden Company is the goat that gets the blame for the raise, but Chicago regulators have so enhanced the quality of the milk sold that it is difficult for farmers and milk dealers to meet the requirements which practically call for pasteurized milk from tuberculin-tested cows and certified dairy conditions. Eight cents a quart for milk is cheaper than beer, coffee or tea. The trouble is that the producer gets too little and the distributor gets too much. The producer gets 3¾ cents a quart and pays the freight, and the distributor 4¼ cents; total, 8 cents.

If they do not breed it themselves, there would not be half as much typhoid fever as there now is amongst farmers and their families.

The Annoyance Of Flatulence

Many People Are Annoyed With Gas In The Stomach and Intestines.

Flatulence is due to the presence of gas in the stomach and intestines, which often rolls about, producing borborygmi, or rumbling noises in the intestinal system, and causes the victim of this trouble considerable embarrassment, when such noises occur while in company.

An analysis of gas from the stomach shows that it consists to a great extent of nitrogen and carbonic acid. It is therefore probable that some of the gas in the stomach consists simply of air which has been swallowed, although for the most part the source of flatulence is the gas given off from the food in the abnormal processes of decomposition.

In cases of chronic gastric catarrh, the secretion of gastric juice in the stomach is deficient, the food is digested slowly, and fermentation occurs with the evolution of gas.

Swallowed air, however, plays a more important part in causing flatulence or gas in the stomach and intestines than is generally supposed, and while food may be swallowed without carrying air into the stomach with it, fluids, especially those of a tenacious character, such as pea-soup, appear to carry down a great deal.

Flatulent distension of the intestines occurs when a large amount of gas or air, either swallowed or evolved from the decomposition of food, escapes from the stomach into the intestines through the pylorus. The enormous distension of the intestines and dilation of the stomach with gases, and the rapidity with which such flatulence occurs, has long been a puzzle to medical men, and has led some to think that the only possible explanation thereof is a rapid evolution of gas from the blood.

In the treatment of gas in the stomach and intestines, charcoal is considered by most physicians as the leading and most effective remedy. Carminatives, or medicines, such as peppermint, cardamom, sodium bicarb., etc., which expel the gas from the stomach in large volumes through the mouth, are resorted to by some people, but their use is disagreeable, and the frequent expulsion of gas through the mouth, most annoying, and after taking a remedy of this kind, one is compelled to remain out of company the rest of the day on account of the continued belching of air.

STUART'S CHARCOAL LOZENGES do away with the necessity of undergoing the disagreeable experience of belching or expelling stomach gases through the mouth, by completely absorbing every particle of gas or swallowed air in the stomach, and also in the intestinal system, which prevents colic, and over-distension with accumulated air.

These wonderful lozenges should be used for all cases of flatulence and decomposition of food in the stomach, as well as for bad breath resulting from catarrh, decayed teeth, or stomach trouble.

Purchase a box at once from your druggist for 25 cents, and send us your name and address for free sample. Address F. A. Stuart Company, 200 Stuart Building, Marshall, Mich.

"The average farmer will find plow-shares more profitable than mining shares."—Farm Journal.

READ THIS CHALLENGE OFFER

ON THE

Economy Chief Cream Separator

We believe the Economy Chief is the best and most satisfactory cream separator on the market today, regardless of price. We believe it to be the best in design, the closest skimming, the easiest running, the quickest cleaning; in short, the greatest separator value that money can buy. We have absolute confidence in the Economy Chief and we want every owner of cows to share this confidence with us. We want everyone interested in buying a cream separator to have an opportunity to find out for himself which is the best machine, which is THE SEPARATOR TO BUY.

HERE IS OUR CHALLENGE OFFER

Deposit in your local bank the price of the Economy Chief Cream Separator you want to try, or

Send us a letter of reference from your banker stating that you are a reliable person; then

We will ship to you at once, freight prepaid, the separator you order, with the understanding that you are to set it up and try it on your farm for sixty days. Give it the hardest kind of a test; if possible, try it alongside some other well known standard make, such as the Empire, United States or De Laval. Compare our machine in actual operation with any other. Note the amount of cream you get from each. Compare ease of running, time consumed in cleaning, and make any other comparisons you can think of. Never mind about the price; what you want from a cream separator is CREAM. If any other machine selling even as high as $85.00 or $90.00 will do better work, will skim closer, will give better satisfaction than our Economy Chief at $42.50, our advice to you is, buy the other machine and send ours back.

When you have finished your sixty-day test, if you are perfectly satisfied that you have the best separator on the market, write us saying that you want to keep the machine, and we will send you a bill for your separator and the freight charges we paid on it.

If at the end of sixty days you are not satisfied that the Economy Chief is the world's best separator, you don't need to even tell us the reason for your dissatisfaction unless you wish to; just drop us a line saying you don't want the machine. We will then send you a return address card to tack on the box **and we will pay you for your time and trouble in making the test, setting up the machine, repacking it and hauling back to the station. You set your own price. We don't want you to lose one penny in trying out the Economy Chief for sixty days.**

Note the Reduced Prices for 1910

WE RECOMMEND THE BIG 600-POUND SIZE

No. 23T51 New 1910 Economy Chief. Capacity, 250 to 300 pounds, or 120 to 145 quarts per hour. Price reduced to..... **$27.90**

No. 23T52 New 1910 Economy Chief. Capacity, 350 to 400 pounds, or 170 to 195 quarts per hour. Price reduced to..... **33.80**

No. 23T54 New 1910 Economy Chief. Capacity, 600 pounds, or about 290 quarts per hour. Price reduced to..... **42.50**

If you want to send cash with your order, as most of our customers do, you won't lose any of the benefit of the above CHALLENGE OFFER, for if at the end of sixty days you decide you don't want the machine, if you think after a sixty days' trial you can get along just as well without a separator, or if you have seen a separator in operation giving better results than the Economy Chief, just send it back at our expense, tell us how much we owe you for freight charges, hauling from and to the station, setting up and repacking, and we will promptly send you every cent of the purchase price, plus your bill.

This Is Our Challenge Offer and Our Whole Cream Separator Proposition!

FILL OUT THIS SPECIAL ORDER BLANK

☐ **CASH WITH ORDER.** If you are enclosing the full price, simply write the amount in this square.

☐ **CASH IN BANK.** If you have deposited the purchase price of the separator with your local banker, make an X mark in this square and enclose your certificate of deposit properly made out and signed by your bank.

☐ **BANK REFERENCE.** If you prefer not to send us the money, or to hold it in the bank subject to our order, make an X mark in this square and enclose a letter of reference signed by your banker, telling us that you are a responsible property owner.

☐ **FREE DAIRY GUIDE.** Nearly everybody has a copy of our big General Catalog or our Cream Separator Catalog, but if you have not and want more information before ordering, make an X mark in this space.

Better Farming

A John Deere Book

—*Just Out*

A Farmer Can Get It Free

IF interested in farming, get our FREE book called "BETTER FARMING." It tells all about—

Alfalfa	*Making Hay*
Dairying	*Fighting Frost*
Seed Wheat	*Silos*
Corn Crops	*Cultivation*
Stock Feeding	*Cotton Crops*
Art of Plowing	*Soil Fertility*
Boll Weevil	*Gasolene Engines*
Controlling Weeds	*Adjusting Plows*

Hired Help Costs Big Money.

Your land is high priced and hired help expensive. There is only one way to make big money—use implements that cut down the cost of your crops. Isn't it true that when you break something on a plow it is nearly always a cast part? Wherever strain comes on a John Deere Plow there you will find steel—tool steel. Take any plow that has had hard work for five years, put it along side of a John Deere which has been in service that long—and see the difference. Then there is no paint to cover up poor material. You can see the wear and the defects. The John Deere will be solid, staunch and ready for the hardest job. Then you begin to know that quality counts.

You can take pride in owning a John Deere—the standard plow of the world for two generations.

We will send you the 80-page, illustrated book free if you write and ask for

Package No. **7.**

Mention the package number *sure*, then you will get exactly the right stuff.

DEERE & COMPANY, MOLINE, ILL.

Hammond's Handy Atlas of the World.

This great Atlas contains 107 pages, 6x8 inches, is printed in colors and is bound in a durable red-cloth cover. It contains seventy full-page maps of every state and territory, with new railroads and towns. Every country in the world is shown by maps of the latest plates. We use this Atlas as a subscription premium. For One Dollar paid in advance we will send one copy of **Hammond's Handy Atlas** post free by mail and credit three-years' subscription to The National Farmer and Stock Grower. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Sheep and Wool Notes.

Don't rush into the sheep business. Get into it gradually. A small flock to start with and a large flock later on. No man, woman or child ever failed in the sheep business if they started with a small flock. A small flock for a farmer is twenty-five to fifty head; a small flock for a large farm is 200 to 300 head.

Edwards county, Texas, is claimed to have 300,000 goats rendered for taxation in addition to 78,000 sheep and 59,000 cattle. The Angora goat breeders of that county have recently organized with fifty-four charter members. The officers are Johnston Robertson, President; M. B. Epperson, First Vice-President; C. E. Daly, Second Vice-President; V. A. Brown, Third Vice-President; George W. Ellis, Secretary; J. D. Pepper, Treasurer.

Mrs. Wm. Jenkins, of Battle Mountain, Nevada, is reported as owning 60,000 head of sheep in twelve large ranches. She has three daughters also interested in sheep raising. She was left a widow seven years ago with 22,000 head, and the increase is due to her own management.

Prof. Dan T. Gray, Animal Husbandman of the Alabama Experiment Station, is advising Southern planters to raise sheep. He favors the Southdown and Dorset for crossing upon the common sheep of the South.

From a Wide Territory.

On a recent Monday, Clay, Robinson & Co. had among their other consignments shipments of cattle as follows: Seven car-loads from Illinois, two from Nebraska, two from Tennessee, one from Oklahoma, one from Missouri and one from Alabama. This serves to show the wide territory tributary to this market, and the equally wide popularity of the above well and favorably known commission firm. Their salesmen are all men who are thoroughly conversant with live stock conditions throughout this territory and who are striving to give their shippers the very best service in every particular. How well they are succeeding in that aim is best attested by their large and growing trade. It is said that "if a man once ships to Clay, Robinson & Co. he will keep on doing so," and they act upon the principle that a pleased customer is the best possible advertisement. See page 13.

An exchange reports that the average yield from the 35,000 cows in the 140 Norway cow-testing associations for the year 1907-8 was about 4,473 pounds of milk per cow.

ALL-STEEL STUMP PULLERS.

Notwithstandisg advanced prices of the raw material, the Hercules All-steel Stump Pullers will not be advanced in price. By a happy contract for steel bars and wire the Hercules Company secured enough needed for 5,000 stump pullers before the advance went into effect. This company offers thirty-day free trial, and on page 18 of this edition presents a tabulation showing the advantage of all-steel construction. Write for free book and special thirty-day proposition to Hercules Mfg. Co., 340 17th street, Centerville, Iowa.

"WORTH ITS WEIGHT IN GOLD."

"I have used some of your Absorbine. It is worth its weight in gold. I used it on a mule that was cut in barb wire. I was going to take her out and kill her, as she could not walk. I saw your advertisement, so I tried Absorbine and it cured the mule right away." The above is what A. C. Freeman, of Dixon, Calif., wrote as his experience with Absorbine. Write for booklet giving detailed information. Absorbine $2.00 at druggists or sent express prepaid upon receipt of price. W. F. Young, P. D. F., 106 Temple street, Springfield, Mass.

BEST TWINE MATERIAL.

The International Harvester Co. manufacture twine out of the best material that is to be secured. The binder cannot do work without good twine, and with the I. H. C. Company binder twine is a subject of the highest consideration. Good business methods have been employed in securing the material and their advertisements will explain the methods that enable them to offer the highest grades of Sisal and Manila fibres. These are made in the four highest grades of twine, namely, Sisal, 500 feet; Standard, 500 feet (which is made of pure Sisal); Manila, 600 feet; pure Manila, 650 feet; at comparatively low prices. The interest they have in the success of the farmers who use binders of I. H. C. manufacture causes them to be thus early in advertising their twine. It is understood that a considerable accumulation of twine made from low-grade Manila will be on the market this season, owing to the actual scarcity of the top-grade fibre.

$15.95 AND UPWARD

THIS OFFER IS NO CATCH. It is a solid, fair and square proposition to furnish a brand new, well made and well finished cream separator complete, subject to a **long trial and fully guaranteed,** for $15.95. It is different from anything that has ever before been offered. Skims **1 quart of milk a minute,** hot or cold, makes thick or thin cream and does it just as well as any higher priced machine. Any boy or girl can run it sitting down. The crank is only 5 inches long. Just think of that! The bowl is a sanitary marvel; **easily cleaned** and embodies all our latest improvements. Gears run in anti-friction bearings and thoroughly protected. Before you decide on a cream separator of any capacity whatever, obtain our $15.95 proposition.

THE LOW DOWN AMERICAN SEPARATOR

EXCELS ANY SEPARATOR IN THE WORLD

OUR LIBERAL TRIAL ENABLES YOU TO DEMONSTRATE THIS. While our prices for all capacities are astonishingly low, the quality is high. Our machines are up to date, well built and handsomely finished. Run easier, skim closer, have a simpler bowl with fewer parts than any other cream separator. Thousands of machines in use giving splendid satisfaction. **Write for our 1910 catalog.** We will send it free, postpaid. It is richly illustrated, shows the machine in detail and tells all about the **American Separator.** Our surprisingly **liberal long time trial proposition, generous terms of purchase** and the low prices quoted will astonish you. We are the oldest exclusive manufacturers of hand separators in America and the first to sell direct to the user. We cannot afford to sell an article that is not absolutely first class. You save agent's, dealer's and even catalog house's profits by dealing with us and at the same time obtain the finest and highest quality machine on the market. Our own (manufacturer's) guarantee protects you on every **American Separator.** We ship immediately. **Western orders filled from Western points.** Write us and get our great offer and handsome free catalog. ADDRESS,

AMERICAN SEPARATOR CO., Box 1102, BAINBRIDGE, N.Y.

Kansas Sheep Feeding.

A Kansas sheep feeder who marketed 1,000 lambs in one day which averaged seventy-five pounds and sold at $8.60 per 100 pounds told the Kansas City Drovers' Telegram how he fed them. He said: "My plan of feeding lambs is to turn them into the corn field. But I do not do this as many others do. I fence off about an acre of corn with a portable wire fence, and allow the lambs to feed there until that spot is cleaned up. Then when that is done I fence off another patch, and so on, till they clean up the whole field. The great trouble about turning them into the whole field is that they will run about all over it, and in that way they do not clean up so well as when they are given a small spot. They eat everything, corn, husks and all, and even pick up the loose grains from the ground. Then besides this feed I have another very good ration for them, just by way of a side dish, and a change. That is cowpeas. I raise cowpeas, and cut and cure them and stack them as I would hay. When cut at the right time and put up they make a most excellent feed. So while my lambs are on feed on the corn, I keep giving them these cowpeas, which they lick up clean. They seem to like them, and look for this part of the feed with eagerness. And the combination with the corn puts on fat very fast. The peas themselves make a very rich feed without the corn. But with it the combination is one of the very best I ever tried."

THE IMPROVED TONGUELESS DISC.

The thirty-days' trial offer is still in force. The Tongueless Disc, introduced five years ago, received a warm welcome and later improvements have brought it to perfection. It is called the Detroit American. See card on page 9 and write for big free book with all particulars. Warehouses are convenient to you, but address the factory, American Harrow Co., 9075 Hastings street, Detroit, Mich.

DON'T HAVE A BLIND HORSE.

We have heard only good report of Visio, the eye remedy that has been before the public but a little over a year. It has proved to be a great cure for moon blindness, cataract and other eye troubles of horses. It is a guaranteed preparation, a measure that no proprietor of a quack remedy would dare to adopt. Visio is a sure thing; it will cure any eye complaint that can ever be cured. Its price is $2 per bottle, and the money will be returned if it fails to effect a cure. See page 14.

HORSE OWNERS WANT RESULTS,

And they get it every time they buy a bottle of Frazier's Distemper Cure, or we will refund the purchase price. Our new size dollar bottle, holding three times the quantity of the 50c.-size bottle, is the most practical size for farmers and horse owners. Distemper, influenza, epizootic, catarrhal fever, coughs and colds cured in three to six days; it will also prevent these diseases from running through your stable, no matter how horses are exposed. Our thirty-two-page horse booklet sent free. Binkley Medical Co., Dept. H, Nappanee, Ind.

The Phosphate Problem in Our Agriculture.

The phosphate problem is one of the very serious ones in our agriculture, for the reason that the supply of phosphate seems to be limited to a certain fixed amount. This may not prove to be true in the light of future investigations, but is so at this time, for all practical purposes.

The recent action of the United States government in withdrawing from settlement 7,500 square miles of land, in Utah, Idaho and Wyoming, because of the presence of phosphate deposits, shows how the problem is looked upon from a national standpoint. This is declared to be the greatest known phosphate deposit in the world. Its extent makes us feel a little easier than before, for it will raise the limit of duration of the supply to fifty years, at the present rate of consumption. But the rate of consumption is likely to be steadily increased, in which case the duration of the supply will be considerably less.

For the most part the phosphate deposits are controlled by private interests, which are capable of being combined more or less successfully. It is understood that the action of the government in keeping the Western phosphate deposits out of the hands of private parties is due largely to the fear that controlling trusts will be formed that will make the deposits of immense value to a few but insure a very high price to the consumers.

It is felt necessary to keep down the price of phosphate as much as possible, to make its use popular with the people that should apply it to their lands. Its use means the increased use of other kinds of fertilizers, for many lands are so deficient in phosphates that it would be a waste of other fertilizers to apply them while the land was still deficient in the phosphate. From this viewpoint the makers of other kinds of fertilizers are interested.

It is doubtful, however, if the American people through their governmental organization will be able to greatly keep down the price of this valuable fertilizer. Phosphate trusts already exist, or, what is the same thing in effect, large areas of the best phosphate lands have been bought up by companies that are recognized as trusts. It may reasonably be doubted if the government lands will produce enough high-grade rock to make it impossible for the trusts to keep up the prices.

One of the most serious phases of the situation seems to be the disinclination of some of the big companies to sell the phosphate in its crude form, as they find it more profitable to themselves to combine it with other elements and compel the man that wants one element to buy all the others.

Phosphates are likely to be in the future at least high enough in price to make it necessary for every man that uses them to study the question and use these fertilizers only where they will do the most good. At the present time many men are using phosphates without knowing anything about their value to the land and crops. The man that puts on the phosphates on a mere guess that the land may need them is playing a game that may prove about as expensive as any other kind of gambling.

THE LID IS OFF.

Cream Separator Ad. in This Issue That Smashes the Record For Liberality.

Of all the wide-open, whole-hearted offers ever made by any firm, the ad. in this issue about the Economy Cream Separator of Sears, Roebuck and Co. is certainly the end of the limit.

We have seen some pretty generous offers in our time, but this one has everything we have ever seen completely backed off the map.

This firm doesn't seem to be content with having sold something over 200,000 of their Economy Chief Cream Separators within the last few years. They seem determined to have one of their machines on every farm in the country that possesses anything in the shape of a cow.

Talk about having confidence in goods—any firm that can make such an offer as this must be mighty certain that no other separator on earth can hold a candle to theirs in either close skimming, efficiency or endurance.

Unless you put on blinders and deliberately refuse to read this ad. it is our opinion that you will have to sit up nights trying to think of some reasonable excuse for not sending for the machine P. D. Q.

P. S.—Sears, Roebuck's ad. man says that if after reading this ad. you can think of anything that will make this offer any more "wide-open" than it is, please write him about it and he will put it in the next ad.

AMERICAN PUMPING MACHINERY.

"American" victories at the Alaska-Yukon-Pacific Exposition at Seattle are recorded in the following awards: All the grand prizes and all the gold medals given to pumps were awarded to American pumping machinery manufactured by the noted firm, the American Well Works, of Aurora, Ill. The whole country has been long familiar with the steady progress of this great corporation in improvements in pumping machinery and in all varieties of well supplies. The manufacturers are to be congratulated on their great success. Our readers interested in the pumping problem should write this company for their late Pump Catalogue No. 104, which is extensively illustrated and a mine of information on the subject of handling liquids of every variety. The company has numerous branches in different parts of the country from which it can furnish supplies on short notice, not only for wells, but for irrigation and mineral prospecting.

USE I H C BINDER TWINE FOR SURE-STEADY-ECONOMICAL RESULTS

DON'T experiment with binder twine of low grade or unknown quality. Sisal or high-grade Manila, bearing the I H C trade-mark, should be your choice.

You can be sure that they will stand the necessary strain. They have the quality and quantity of fiber in them that insures strength to spare.

Even-spun, smooth-running, no knots, thereby avoiding tangles in the twine box and consequent waste. These qualities give even tension—which means perfect binding and perfect tying.

Inferior binder twine is dear at any price. It means not only waste of time and poor work, but a waste of the twine itself, possible loss of crop at harvest time; and it is not always full length to the pound. Every ball of I H C twine is

Guaranteed to be Full Length

And every ball runs smooth and steady so you can use all of it.

Remember, we sell grain binders. Naturally, therefore, we are more interested in the quality of twine you use than the twine manufacturer who does not sell binders.

Stick to Sisal or Standard Sisal 500-ft. twine. If you prefer Manila, you economize by getting high-grade Manila 600-ft. or Pure Manila 650-ft. Don't be fooled by a low price. Low-grade Manila costs as much as high-grade Sisal, but isn't worth as much. 85 to 90 per cent of the farmers know. 85 to 90 per cent use Sisal and Standard. In any case, look for the I H C trade-mark to be sure of quality. Choose from any of the following brands: **Champion, Deering, McCormick, Milwaukee, Osborne, Plano, International.**

Better let your local agent know well ahead of time how much you will need. Meanwhile, if you want more interesting facts on binder twine write us for particulars.

Strawberries—An Every-day Luxury.

The family of the man who deems it cheaper to buy than to raise his own strawberries usually go without, or, at the most liberal calculation, get a bushel, which yield ten or fifteen quarts of canned goods, according to the number of meals of fresh berries which are appropriated for immediate use.

Every farmer's family is entitled to all the strawberries and cream they want during the season; and no more delicious, wholesome or easily-prepared dessert can be found.

Not one farmer in ten raises his own berries, though he is perfectly satisfied to have his family go scouring the fields in the hot sun hunting for the wild berries, perhaps trampling down many dollars' worth of meadow grass in the process.

Those who have given the fruit a trial usually come to consider a strawberry patch as much a part of the farm culture as the corn or potatoes. A small patch will net as much as an acre of wheat, and that without great labor and expense.

If there are children in the family or neighborhood to do the picking, the profit in ordinary years is assured.

Planting may be done in the fall or spring. If the latter season is chosen, it may be as soon as the ground can be worked or just after the fruit has ripened. If the former, it is best not to allow the plants to bear the next season, though they will attempt it.

A secret of success is in careful preparation of the ground. Light, well-drained soil is preferable. Be liberal with fertilizer, plowing it under. Plow and harrow the ground thoroughly. Mark out in rows three feet apart, planting two feet apart in the row.

If you use a wheel hoe in cultivating and you cannot afford to do without it, as the work is so much more quickly, easily and efficiently performed, it will pay to plant in rows both ways, then the cultivating can be done in both directions.

Do not hunt for new-fangled varieties. For the beginner the standard sorts adapted to your own region are very much surer as well as cheaper.

Do not make the mistake of planting only varieties which have imperfect blossoms. Some are pistillate, others have both stamens and pistils, and experts find that a combination of both sorts is apt to give the best results.

In planting, remember that the crown does not want to be covered with earth. It is best to place the roots in water for a few hours immediately before planting.

Cultivate until July, keeping the soil loose and the ground free from weeds. Trim off the first runners, thereby inducing strong growth.

The strawberry runners increase so rapidly that unless pruned to the proper proportions the plants will have soon increased like the worst weeds.

When freezing weather sets in, mulch with straw, marsh hay, corn stalks, or any other available material. This holds the moisture and also prevents the roots from heaving out in winter. The best mulch is well-rotted horse manure, and it should not be removed until late in the season. This holds the frost in the ground, and the plants are not so apt to start into growth prematurely, only to be cut off by a belated frost. Later it may be raked between the rows, fertilizing, conserving moisture and shutting out the weeds.—Bessie L. Putnam.

Winter Vegetables in Delicious Ways.

Fried Parsnips.—Pare or scrape parsnips and cut into quarters lengthwise. Put into boiling water to which salt for seasoning has been added, and boil for half an hour. After they have drained for a moment, dip the slices of parsnip into flour, then drop them into a hot buttered pan and fry until brown.

Creamed Onions.—Select small onions, remove the outer layer of skin and drop the onions whole into boiling water. Let boil for about ten minutes, then pour off the water and add fresh water. Repeat this until the onions are covered with their fourth water; in this let them boil tender for about thirty minutes. Then pour off the water and cover with milk in which a tablespoonful of flour for each cupful of milk has been dissolved. Add a tablespoonful of butter, a seasoning of pepper and salt and let boil until the milk thickens.

Turnips With Mutton.—We think this is the only way to cook turnips: Select a piece of mutton either from the shoulder or the breast for stewing; season with salt, cover with water and let cook for forty-five minutes. Pare one or two of the large yellow turnips (the yellow are much sweeter than the white, according to our experience), slice thin and add to the meat when it is half cooked. Cook for about forty-five minutes.

Creamed Carrots.—Wash, pare and dice carrots and cook in boiling water for about an hour. Heat two tablespoonfuls of lard and stir into it a like amount of flour. Let this brown, then add to the carrots a seasoning of salt and pepper and boil for a few moments until the liquid has thickened.—Janet Thomas Van Osdel.

Free Hides Cost More.

It appears that foreign hides of cattle imported into the United States cost 10.8 cents a pound in July, 1908, and advanced to 15 cents a pound by November, 1908. This information is from the Statistical Bureau of the United States Department of Commerce and Labor. We took the tariff off hides and no longer receive the duties for the support of our government and the protection of our people, and the hide dealers of South America, Mexico, Canada, India, Cuba and the principal European countries from which the hides were drawn quietly put up the price. The idea that free trade in hides means cheaper shoes can be set aside. The foreigner gets the benefit of the American free-trade law. In other words, the foreign hide has been equalized in cost to United States prices, not by paying a tax for the support of our government, but by putting up their home prices to correspond with our tariff-protected market. American hides are not cheaper. Foreign hides are dearer.

Remington
AUTOLOADING SHOTGUN

YOU don't have to bother to load a Remington Autoloading Gun. The recoil does all the work of ejecting the empty shell and throwing a loaded one into place. You pull and release the trigger for each of the five shots.

Pleasant to shoot because of slight kick. Absolutely safe because of the Remington Solid Breech Hammerless feature. Easy to handle and quick to point.

Try one on ducks or geese. You will agree with the sportsman who wrote "I wouldn't take a $1000 for my Remington Autoloader if I couldn't get another." Anyone can afford one, the price is so moderate.

If your dealer can't show you one, write us for catalogue and literature.

Essentials of Successful Egg Production.

1. A Good Breed of Fowls Properly Bred. For economic egg production alone the White or the Brown Leghorns are unsurpassed. For the general farmer and others desiring both meat and eggs, White or Barred Rocks, White Wyandottes and Rhode Island Reds head the list. Keep ony one breed and breed these by continuous selection for vigor and egg production.

2. The Use of No Hens After Their Second Laying Year. On an average, hens will lay 75 per cent. as many eggs during their second laying year as they will during the first. After this they will seldom lay enough eggs at market prices to pay for their feed.

3. The Ability to Hatch and Rear the Young Stock. For the general farmer and others keeping not more than one or two hundred general-purpose fowls, the natural method of hatching and brooding cannot at present be improved upon. For the man in the business of egg production, with fowls of the Leghorn type, incubators and brooders are a necessity.

4. The Fowls Must Be Properly Housed. A good poultry house is always dry inside and admits plenty of fresh air and sunshine without draughts. This is accomplished by having three sides tight and the south side largely open. Glass windows are only an unnecessary expense. The building should also be convenient and not cost more than one dollar for each bird it will comfortably house. In most sections of the state less than half this cost should be the maximum.

5. Proper Methods of Feeding. This consists in the use of a variety of the cheapest grains and mill products of good quality. When the fowls do not have access to insects, meat food of some other form is an absolute necessity. Lime, in the form of ground oyster shells, calcareous tufa, or old plaster, should be provided, together with plenty of green food and fresh water at all times.

6. Economy of Labor. This can be largely brought about by (1) the use of the colony house system of housing where the buildings can be moved instead of cleaned. (2) By the method of hopper feeding, so that the stock need only be fed once a week or once a month instead of several times per day. (3) By the use of a water system, which does away with the necessity of carrying water to the fowls and by giving the stock plenty of free range, both winter and summer.—Prof. Geo. M. Turpin, Poultry Husbandman, Utah Agricultural College.

The Winning Breeds in Australia.

The summary of the seventh egg-laying competition at Hawkesbury Agricultural College includes a paragraph entitled "Weather Conditions," as follows:

"The weather conditions of this year's competition, as well as of the three previous ones, have been mild, and with a very low rainfall. This has been in favor of egg production. The third competition was the only one of the series held under adverse conditions, and this was won by Silver Wyandottes. Since 1904 the conditions have been most favorable to White Leghorns, and although these have demonstrated their claim to the title of 'queens of layers,' yet the Silver Wyandotte and Black Orpington will be found their equals for a rainy day. We have had a run of dry years, and the White Leghorns have proved supreme. When the cycle of wet years returns, the Silver Wyandotte and Black Orpington will go far to divide honors with them."

Under the head of "Types, Breeds and Strains" we come to the following:

"These tests have narrowed down the best breeds to a small number. White Leghorns, Silver Wyandottes, Black Orpingtons, Buff Orpingtons, White Wyandottes and Langshans is surely not a formidable list to choose from, when it is considered that previous to these tests the intending poultry farmer was simply lost in bewilderment in turning his attention to any poultry book to find the extraordinary varieties of fowls, all described as being of equal repute, with very little to choose between them. Many such misconceptions have been cleared away."

In the single-year contest the first six winners were White Leghorns, and in the two-year contest the first five performers were White Leghorns.

Poultry Notes.

Hugh W. Smith, of Utah, with fifty breeding hens, Rhode Island Reds, sold stock and eggs for hatching to the amount of $915.95 in one year at an expense of $406.45. His profit of $10.23 per hen per year was due to the fact that he was a good handler of pure-bred poultry. This is an example of what can be done on a small piece of ground with stock that can be sold to breeders.

The way to make money out of poultry is to get into the business. The poultry business pays when prices are low and pays extravagantly when prices are high. No one can receive the high prices when they come without being in the business all the year round.

Read the incubator catalogues. They are good reading. There is education to be obtained from them. They will teach you more about poultry than you imagine. The catalogues are all free and would be cheap at a dollar each. See advertisements in this issue.

The Kentucky Farmer reports that Mrs. W. E. Combs, of Braxton, Mercer county, broke the Kentucky record by selling six turkeys for $23.

"Many who keep poultry overlook the importance of grit. Lack of grit means poor digestion and few eggs. A load of gravel near the chickens' home would improve the health and increase the egg yield on many a farm. I know it is claimed that the grit of commerce is the best, but the gravel is good enough grinding material. If you have never tried it you will be surprised how fast it will disappear when placed in a box where the hens can help themselves."—February Farm Journal.

One Gallon of Oil and One Filling of the Lamp for a Hatch with the X-RAY Incubator

The new incubator way saves oil because it doesn't waste heat. We control the heat—burn the lamp as high or low as wanted. Our automatic regulator acts on the burner, while other incubators burn the lamp high all the time. Never fill during the hatch; no need to regulate; automatic lamp does it all. Thermometer always in sight. Eggs need not be removed during entire hatch.

Built on an Entirely New Principle

Enameled-steel-covered; rosewood finish. Lamp is in center where it should be—not on side. Hot air radiates to heat all eggs alike. All heat saved and used. Machine raised to hatching temperature in 15 minutes. Real ventilation by raising lid—hatching fumes bound to rise.

Only Incubator of its Kind

It's crowding all others out because it runs as steady as a clock and produces certain results.

Try it 3 Hatches

Doesn't cost you a cent if not as represented. You'll never let it go, if you try it.

Write for Free Catalog and know all about the wonderful machine. Brooder on same heating plan—just as certain results. Don't buy either incubator or brooder till you read our book. Address

X-RAY INCUBATOR COMPANY, 48th Street, Wayne, Neb.

SENDS FREE REMEDIES FOR THESE DISEASES

Free Treatment for Kidney Trouble, Bladder Trouble or Rheumatism Sent Free to the Sufferer's Home—Legions Say They Cured Themselves With It.

ossible now to obtain what thou- is a sure home treatment for and dangerous uric acid diseases le, bladder trouble, or any ism; and so that those who

DR. LYNOTT

The doctor sends his great illustrated Medical Book describing these diseases as well as a full Letter of Medical Advice to all who write him.

suffer in this way may learn for themselves that the cure will prove effective in their own case, a free home treatment can be obtained by sending your name and address to the fortunate doctor who has the remedies.

Not a cent of money is asked of you, and where it says free it means free. The purity of the remedies is vouched for to the Government, and you are putting yourself under no obligations in any way.

Wonderful it is in stopping the torturing backaches of kidney trouble, in quieting the inflamed bladder and conquering the wrenching, grinding rheumatism. I am prepared to show letters from hundreds of people that it has done this. Some had been "old chronics" for years. The first relief they ever had was with the treatment I sent them free, just as I am now willing to send you or any other afflicted person a free home treatment.

So there can be no doubt about it I will give some of the leading symptoms of kidney, bladder and rheumatic diseases:

1. Pain in the back.
2. Too frequent desire to urinate.
3. Burning or obstruction of urine.
4. Pain or soreness in the bladder.
5. Prostatic trouble.
6. Gas or pain in the stomach.
7. General debility, weakness, dizziness.
8. Constipation or liver trouble.
9. Pain and soreness under right ribs.
10. Swelling in any part of the body.
11. Palpitation or pain around the heart.
12. Pain in the hip joints.
13. Pain in the neck or head.
14. Pain or soreness in the kidneys.
15. Pain or swelling of the joints.
16. Pain and swelling of the muscles.
17. Pain and soreness in nerves.
18. Acute or chronic rheumatism.

You can write me a letter describing your case in your own words, or, simpler still, fill out the coupon and send it to me. You have only to put down the numbers of the symptoms that afflict you and sign your name and address clearly. My address is Dr. T. Frank Lynott, 3103 Occidental Building, Chicago, Ill.

Let no victim of these diseases pass this offer by. It involves no money, and surely when a doctor is willing to go to the time and expense to send you a free treatment you should at least be willing to give it a trial. Do this, even though you, like thousands of others, are tired of past failures with other methods.

Write today.

Dr. T. Frank Lynott,
3103 Occidental Bldg., Chicago.

The New Turkey Book.

Many people are interested in turkeys who know very little about them. Turkey books of any value are scarce and expensive, but there is one which is particularly valuable. This book contains chapters as follows: How the Turkey Got Its Name; Description of the Seven Standard Varieties; The Care of Breeding Stock; Mating the Breeders; Hatching Eggs; Coops and Houses for Turkeys and Poults; and Remedies for Turkey Diseases. Well-known breeders have contributed special articles on their favorite varieties. It also explains how to raise and condition turkeys; when to sell; how to kill, dress and pack for market to bring the highest price. The book contains seventy-two illustrations, including a frontispiece in natural colors of a pair of Bronze turkeys by the world's greatest poultry artist, Franklane L. Sewell. This alone is worth the money. There are ninety-six pages, 9x12 inches. The price of this book is 75 cents, and we cannot sell it for less, but for the price we can include one-year's subscription to The National Farmer and Stock Grower. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Hums From the Hive.

Not one-tenth part of the farmers raise bees, though they have an abundance of pasturage which goes to waste. Fruit blossoms, clover fields and buckwheat would each be improved by visits from these insects.

A swarm of bees well cared for should make a hundred pounds of honey each year. Please do not compute from these figures that a hundred swarms would produce a hundred times this amount, for they certainly would not within the limits of the ordinary farm. While five or ten swarms would pick up enough from the average well-cultivated crops to make a good showing, a greater number would have to go so far for the material that the surplus products would be much smaller in proportion.

But a half dozen colonies might easily be kept by every farmer, the surplus honey more than compensating for the labor and interest on capital expended, while there would be that most delicious and wholesome of all saccharine foods in abundance for family use.

Bees are like any other live stock. The "scrub" is an expensive source of economy. The old-fashioned hive is another thing that should be used for kindling. Why compel the bees to store their product in a form that must be sold as "chunk honey" and at a great discount when neat one or two-pound boxes may just as well be offered to command the highest price in the retail trade?

Besides, there is more inconvenience, both to bees and to their owner, in collecting the honey, besides avoiding the inevitable waste which attends handling the large combs, with brood cells, and various other cullings to be made.

The modern hive with modern occupants can be purchased at reasonable rates. By introducing a good Italian queen and dividing the increase one may in a short time have an entire colony Italianized at the expense of but one queen.

If you do not want any more swarms, add extra supers, giving plenty of air and plenty of room for storing honey.

For building up a strong swarm that will be ready to work with a vengeance on the early fruit blossoms, feed bee candy or syrup regularly after the first warm days.

If the artificial feeding is commenced it must be kept up, else the bees, prematurely awakened, will fare worse than though left to manage matters in their own way.

Study the professional rules for grading honey and follow them closely. Then you will be able to advertise your product, with confidence in being able to make good. Local standards may do for local trade, but the highest prices cannot be reached without conforming to the higher standard. Yet your "seconds" will outsell much of the plain honey which has no make, no standard, no form, save that fashioned by the bees in the old-fashioned box hive.

Remember that when honey is first taken from the hive it is comparatively thin and watery, and should be allowed to stand a few days to "ripen" before being placed on the market. Customers expect it to be ready for use, and will condemn an otherwise first-class product which lacks this treatment.

Never keep honey in a cellar. It is prone to gather dampness and become thin. A cool, dry chamber or store room is an ideal honey room. If the ants annoy, scatter borax, mark a chalk trail around the honey store, or scatter tansy leaves. —Bessie L. Putnam.

Laying For Two Years.

At the Hawkesbury Agricultural College egg-laying competitions for two years they have compared the number of eggs laid by the same hens the first and second year.

One lot of forty pens, six hens in a pen, averaged 180 eggs per hen the first year and 124 the second.

One lot of fifty pens averaged 179 eggs per hen the first year and 127 the next.

The winning pen lay 1,474 eggs the first year and 1,150 the next.

Thirty-eight out of fifty pens produced over a thousand eggs the first year and only three the next.

In one-year contest eleven pens averaged over 200 eggs per hen per year, and in the next year not one did so.

The profit over feed the first year was $2.68 per hen; the profit the second year was $1.45 per hen.

MRS. HERRON BURIES THE HATCHET.

Dear Editor: It has frequently occurred to me that readers who are interested in poultry could help one another very much by giving their experiences through these columns—especially when they have had some serious trouble and have found a good remedy. We raise several hundred chickens every year. The last two years I lost a good many dollars' worth from Roup. I used many remedies, none of them successful, so I took to "using the hatchet," but found the treatment costly. I recently saw an advertisement for Walker's Roup and Cholera Cure and sent 50c. to Dr. Walker, Dept. B. 1, Lamoni, Iowa, for the treatment and out of 96 hens that had the Roup had I saved all but three. I can't speak too strong of the treatment, for it certainly does the work, and for bowel trouble among little chicks it just can't be beat. If more people knew about it they wouldn't lose so many of their little chicks with bowel trouble.

MRS. NELLIE HERRON, Eagleville, Mo.

Half Back and Away Back.

"How iss your boy Fritz getting along in der college?"

"Ach! He is half-back in der football team and all der way back in his studies."—Boston Globe.

Paint Without Oil

Remarkable Discovery That Cuts Down the Cost of Paint Seventy-Five Per Cent.

A Free Trial Package is Mailed to Everyone Who Writes.

A. L. Rice, a prominent manufacturer of Adams, N. Y., has discovered a process of making a new kind of paint without the use of oil. He calls it Powdrpaint. It comes in the form of a dry powder and all that is required is cold water to make a paint weather proof, fire proof and as durable as oil paint. It adheres to any surface, wood, stone or brick, spreads and looks like oil paint and costs about one-fourth as much.

Write to Mr. A. L. Rice, Manuf'r., 62 North St., Adams, N. Y., and he will send you a free trial package, also color card and full information showing you how you can save a good many dollars. Write to-day.

Practical Barn Plans.

This is the name of the best book out. Every farmer needs it. It contains drawings, pictures, plans, specifications and everything necessary and up-to-date for a barn, stock shed, wagon shed, corn barn, smoke house, ice house, silo, dairy barn, or any other conceivable outbuilding on the farm. Not only one plan of each, but many of each are shown with all the latest inventions and contrivances for saving time, money and labor.

Each and every plan in the book is accompanied by a lengthy written description, explaining and giving the details of the drawings, and so worded and arranged, numbered and indexed, that it must be readily understood by anyone who reads it.

The price of this book is One Dollar, and we include one-year's subscription to The National Farmer and Stock Grower. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

$3.50 Recipe Cures Weak Kidneys, Free

Relieves Urinary and Kidney Troubles, Backache, Straining, Swelling, Etc.

Stops Pain in the Bladder, Kidneys and Back.

Wouldn't it be nice within a week or so to egin to say goodbye forever to the scalding, ribbling, straining, or too frequent passage f urine; the forehead and the back-of-the-ead aches; the stitches and pains in the ack; the growing muscle weakness; spots efore the eyes; yellow skin; sluggish bowels; wollen eyelids or ankles; leg cramps; unatural short breath; sleeplessness and the espondency?

I have a recipe for these troubles that you an depend on, and if you want to make a uick recovery, you ought to write and get copy of it. Many a doctor would charge ou $3.50 just for writing this prescription, ut I have it and will be glad to send it to ou entirely free. Just drop me a line like his: Dr. A. E. Robinson, K 1174 Luck uilding, Detroit, Mich., and I will send it y return mail in a plain envelope. As you ill see when you get it, this recipe conains only pure, harmless remedies, but it as great healing and pain-conquering power. It will quickly show its power once you se it, so I think you had better see what it without delay. I will send you a copy ree—you can use it and cure yourself at ome.

RHEUMATISM

A CURE GIVEN BY ONE WHO HAD IT

In the Spring of 1893 I was attacked by muscular and inflammatory rheumatism. I suffered as those who have it know, for over three years, and tried almost everything. Finally I found a remedy that cured me completely and it has not returned. I have given it to a number who were terribly afflicted, and it effected a cure in every case. Anyone desiring to give this precious remedy a trial, I will send it free. Address,

Mark H. Jackson, No. 491 James Street, Syracuse, N. Y.

Mr. Jackson is responsible. Above statement true—Pub.

Tree Culture.

"Father has planted more than a thousand trees on this farm, and almost all of them have lived," said a woman whose father is still able to plant trees. It was partly a labor of love to thus make beautiful the old homestead on which he was raised and where he expects to die. Yet it has its commercial tinge as well. And though should he wish to sell, croakers will assert that the value of the farm is increased one hundred dollars, he well knows that there would be ten pleased with the place to one had the tree planting been omitted. More, he has not only increased the beauty of the landscape, but the comfort of all residents of the farm. Those trees are a fine place to rest during the noon hour. And in the heat of the day the shady pasture is a blessing to stock, one which the cows repay by better condition, hence more milk. It is a safe rule that any stock thrives better when comfortable, and the trees thus used are certainly a good investment.

We are apt to think that tree planting is beneficial only to the next generation. Some trees mature much more quickly than others, but even the oak, one of the less rapid growers, will attain goodly proportions in considerably less than a lifetime.

In selecting, natural adaptations should be first consulted. We may admire the sycamore, yet to attempt its growth except along some stream would be to attempt to thwart nature. Study the natural conditions, and, if new species are to be introduced, do it gradually. In many parts of the West the catalpa is deservedly popular, its quick growth turning money over in the hands of its owner in a few years.

In favorable locations there is no handsomer tree than the sugar maple and its growth is rapid, a slender sapling being in a few years a most symmetrical tree, supplying plenty of shade to the passer-by, and in a few years more it will furnish sap for the manufacture of that most delicious of sweets, pure maple syrup. Only those raised in its vicinity or having friends there know what this really stands for, so many spurious products having been placed on the market under the name of maple. Yet according to Dr. N. L. Britton, the natural habitat of the sugar maple is "In rich woods, Newfoundland to Manitoba; South, especially along the mountains to Florida, Nebraska and Texas." And since in these locations it has proved most satisfactory for roadside planting, it would seem that its field of usefulness might be much more widely extended. It is clean, comely at all seasons, but especially in spring, when covered with pendulous blossoms, and when the autumn tints give it a golden glimmer. Apiarists well know its worth as food for bees, and the wood is a favorite with cabinetmakers.

Many of the nut trees deserve more encouragement and propagation. The food value of the fruit is each year becoming more fully recognized. All of them have valuable wood, hence their growth is a good investment in the line of timber.

The thrifty German plants his apple cores along the roadside, that other travelers may be refreshed by the fruit. Can we not be equally liberal in the distribution of our good things? Then there are the flowering trees, the tulip, cucumber, magnolia and basswood, all valuable as well as pleasing. If we but look around, each locality has its own flora, which may be considerably extended. If you have never planted a tree, now is a good time to begin; and remember that you are not only planting for yourself, but for posterity.—Bessie L. Putnam.

A FINE KIDNEY REMEDY.

Mr. A. S. Hitchcock (clothing dealer), 890 Carrier Building, East Hampton, Conn., says if any reader afflicted with a kidney or bladder trouble will write to him he will direct them to the splendid home remedy he so successfully used. He is glad to do this and does not wish you to send him money.

SHOEMAKER'S POULTRY BOOK.

It's a real pleasure to receive a poultry book so complete and so artistically arranged as Shoemaker's Poultry Book and Almanac for 1910. It is so full of clear explanations and reliable suggestions for those engaged in the raising of poultry, that by carefully reading this accurate volume one could hardly go astray in this particular line of business.

Every point is carefully illustrated with correct, beautiful color plates—diagrams and sectional views are given. Excellent talks on incubators and brooders, together with the splendid general information, provides an authority that can be depended upon.

It is elegantly printed on fine stock. This poultry book is gotten out annually by C. C. Shoemaker, Box 715, Freeport, Ill., and will be sent to anyone postpaid on receipt of 15c.

ROUP AND ITS TREATMENT.

For the benefit of our readers who have their troubles with Roup, we are pleased to print a letter on page 24 from Mrs. Herron, Eagleville, Mo., who has had serious loss from this disease, and who gives her experiences through these columns, in hope that they may be helpful to others. The treatment she recommends is inexpensive, can be had promptly by sending to the address she gives, and is certainly worth a trial, as it is easier to prevent Roup than to cure it after once started among a flock.

FREE TO FARMERS.

By special arrangement, Ratekin's big 1910 seed catalogue, with a sample of "Diamond Joe's Big White" seed corn that made 153 bushels per acre, will be mailed free to every reader of this paper who are interested in the crop they grow. This big book tells how to make the farm and garden pay. It's worth dollars to all who plant or sow. Write for it and mention this paper. The address is Ratekin's Seed House, Shenandoah, Iowa.

SEEDS AND GOOD SEEDS.

Every farmer will be interested in the new seed catalogue just issued by R. H. Shumway, Rockford, Illinois. It contains hundreds of beautiful illustrations and is a perfect mine of information on all kinds of garden and flower seeds. Dr. Shumway has built up an immense business by giving every customer a **fair deal** and selling **good seeds cheap.** Send for his catalogue to-day. Address, R. H. Shumway, Rockford, Ill.

Deaf People Now Hear Whispers

Wireless Telephones for the Ears

They make the Deaf hear distinctly.

They are out of sight when worn. Wilson's Ear Drums are to weak hearing what spectacles are to weak sight.

They are sound-magnifiers, just as glasses are sight-magnifiers.

They rest the Ear Nerves by taking off the strain—the strain of trying to hear dim sounds.

And they can be worn for weeks at a time, because they are ventilated, and so soft in the ear holes they are not felt, even when the head rests on the pillow.

These little telephones make it easy for a Deaf person to hear weak sounds, just as spectacles make it easy to read fine print. And the longer one wears them the better the hearing grows. Because they rest up, and strengthen, the ear nerves.

By making the sounds louder, it is easy to understand without trying and straining. They make Deaf people cheerful and comfortable.

Wilson's Ear Drums make sounds strike hard on the center of the human ear drum, instead of spreading out weakly all over the surface.

Deafness from any cause, earache, buzzing noises in the head, raw and running ears, broken ear drums, and other ear troubles, are relieved and cured by these little wonder-workers.

A sensible book, about Deafness, tells how they are made, and has printed in it letters from hundreds of people who were deaf but who now hear.

Clergymen, Lawyers, Physicians, Telegraph Operators, Trainmen, Workers in Boiler Shops and Foundries tell how their hearing was brought back to them, almost instantly, by the proper use of Wilson's Ear Drums.

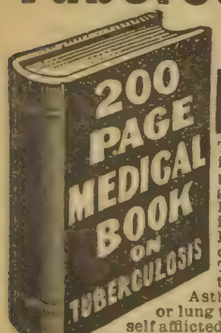
This book has been the means of making 326,000 Deaf people hear again. It will be mailed free to you if you merely write a post card for it today. Get the free book for proof. You owe it to yourself and to your friends to learn how to be well.

Write for it today to the **Wilson Ear Drum Co.**, 754 Todd Building, Louisville, Ky. (i)

Please mention Nat. Farmer and Stock Grower.

The retailer swears his profits are small; the wholesaler says his profits are insignificant; the transportation companies represent that their charges are very moderate; and the stockman and the farmer say that prices received by them are only fair, considering cost of production. But the ultimate consumer is raising a disturbance, because he is or was not getting enough for his money.

Tuberculosis Book FREE



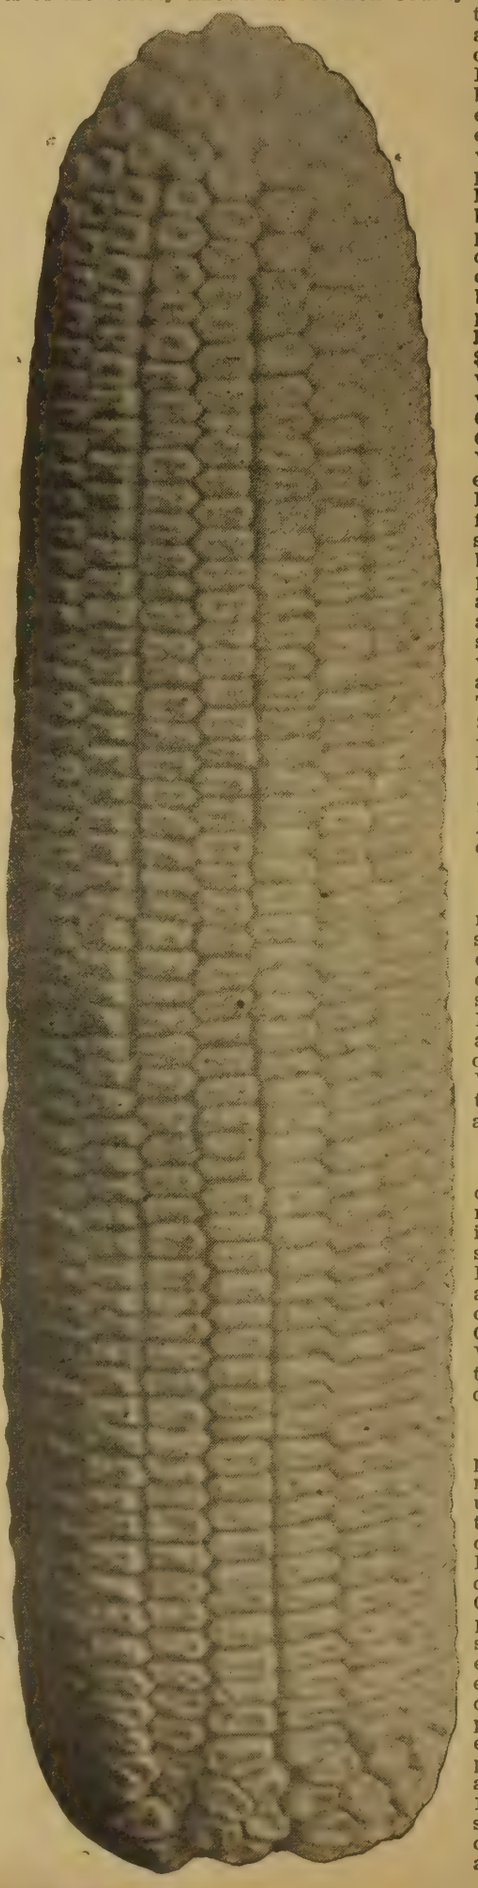
This valuable medical book tells in plain, simple language how Tuberculosis can be cured in your own home. If you know of any one suffering from Tuberculosis, Catarrh, Bronchitis, Asthma or any throat or lung trouble, or are yourself afflicted, this book will help you to a cure. Even if you are in the advanced stage of the disease and feel there is no hope, this book will show you how others have cured themselves after all remedies they had tried failed, and they believed their case hopeless.

Write at once to the Yonkerman Company, 3749 Water Street, Kalamazoo, Mich., and they will gladly send you the book by return mail free, and also a generous supply of the New Treatment, absolutely free, for they want every sufferer to have this wonderful remedy before it is too late. **Don't wait—write today. It may mean the saving of your life.**

GRAND SWEEPSTAKES WHITE CORN.

Offered as a Premium by the Subscription Department of The National Farmer and Stock Grower.

The fine ear of corn represented is the one which was sold for $250. It is of the variety known as Johnson County White Dent. It is the corn that won the highest awards at the National Corn Shows of 1907 and 1908. Mr. L. B. Clore, of Indiana, is the breeder, raiser, grower and exhibitor of this wonderful ear of corn. Mr. Clore has won so many sweepstakes prizes for corn exhibits that he has the high honor of being the recognized champion, and is barred from competition. He can select corn of his own raising and be sure to win the championship. At one Corn Show his winnings amounted to $7,536.50. Mr. Clore has very kindly furnished us with a small quantity of his Grand Sweepstakes Seed Corn for premium purposes. We offer it to our readers for experimental purposes. We have offered this same corn for two years with gratifying success. A fourteen-year-old boy in Georgia received a pound of this corn from us as a subscription premium and from it he raised a good stand and selected ten ears which won a $50 first prize at the Georgia State Fair. This office also awarded him $25.00, and the same corn was in competiton at the National Corn Show of 1909.



Mr. Clore habitually raises 90 to 100 bushels per acre. A pound of his seed is worth considerable money.

PREMIUM OFFER NO. 1.

For premium purposes we make this offer: Anyone sending us a postoffice money order for 60 cents will be credited with one-year's subscription to The National Farmer and Stock Grower, and he can select one pound of Clore's Grand Sweepstakes White Corn as a premium, to be sent postpaid by mail, and safe delivery guaranteed.

PREMIUM OFFER NO. 2.

Anyone sending us one dollar by money order or registered mail will be credited with two-years' subscription to The National Farmer and Stock Grower, and will have the privilege of selecting two pounds of Clore's Grand Sweepstakes White Corn as a premium, to be sent postpaid, and safe delivery guaranteed.

OUR PRIZE OFFERS.

Furthermore, if any of our patrons grow corn from premium seed corn furnished by us as a premium and exhibit ten ears of the same at their own State Fair or at any Interstate Fair, or at their own Agricultural College Corn Show—for every championship premium won by said corn we will pay the exhibitor fifty dollars; for every first prize twenty-five dollars; for every second prize ten dollars, and for every third prize five dollars, providing that these prizes are won during the year 1910 with corn grown by our subscriber from the seed corn furnished by us to him as a premium.

EASTER POST CARDS FREE

Send me two 2c stamps and I'll send you 10 beautiful Easter Post cards and tell you about my big SURPRISE. E. T. MEREDITH, 716 Success Building, Des Moines Iowa.

THE NATIONAL SHOW OFFERS.

If any premiums are won at the National Corn Show of 1910 by corn grown by our subscriber from premium seed furnished by us, we will double the amounts. Thus, ten ears of corn at a State Show winning a first prize will receive from us $25.00, and, if winning a sweepstake prize, will receive $50.00 from us. Then, if winning a first prize at the National Corn Show, the exhibitor would receive $50.00 additional from us, and, if winning a sweepstake prize, would receive $100.00 from us, or a total of $225.00 in all. All this is possible with ten ears of corn grown from the corn which we will send as a subscription premium.

SUBSCRIPTION BLANK.

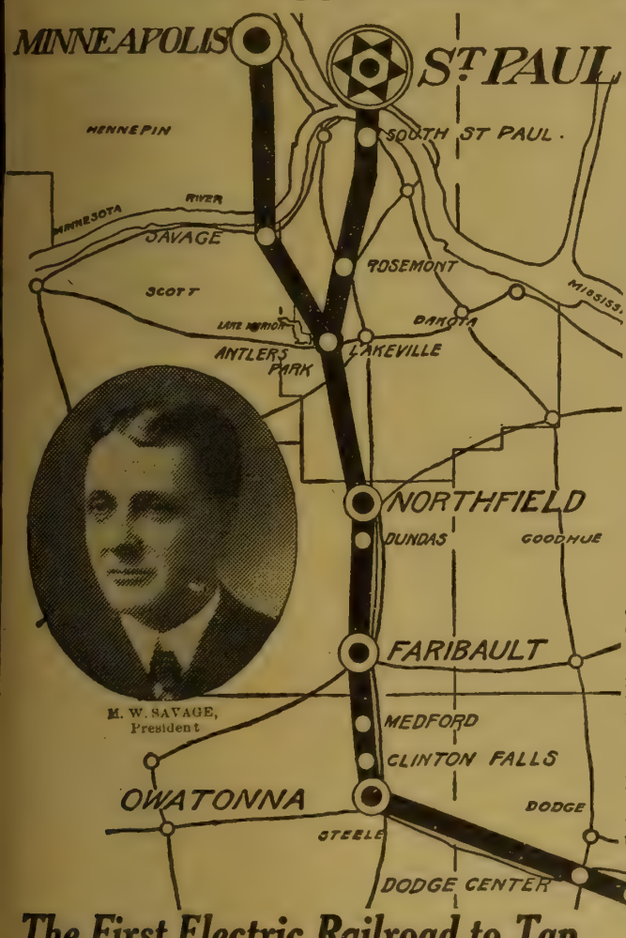
Growing Earlier Corn.

I do not remember a season when here was so much trouble from soft corn as we are having this year. It s a matter of so grave importance hat it is now being discussed at nstitutes all over the country.

The general opinion is that we have gone a little too far in the type of eed selected during the last five ears. We have been giving too nuch attention to size of ears, instead of other characteristics which ount in weight of shelled corn per ushel. Too many have the impression that big ears can be acclimated to even the northern sections of our corn belt, arguing that if such varieties as "Longfellow" will mature in these northern sections that it is only a question of acclimatizing to get "Reid's Yellow Dent" or "Boone County White" to mature under the same conditions. I will admit that these big varieties will give a larger yield if they mature. But usual conditions, north of latitude 42 degrees, are not favorable for maturing these late, big-ear sorts. They do mature once in a while, but that is only when we have unusually favorable conditions, but such a season should not be a guide for planting year after year. Most every practical farmer knows that the medium-size ears of any crop really make the most desirable and most dependable seed; still the biggest ears are taken, and that selection has been followed year after year. The result of this seed selection is alarming this season. Never have I seen so much fault-finding by grain buyers over the quality of the corn coming in, and never have I seen so much soft, inferior corn in farmers' cribs. It will hardly do to lay it to the season, for the same thing has happened three years out of five. When conditions become so bad that elevators are compelled to put in dryers in order to handle corn and get it in condition to market, it is time to change seed and grow earlier corn. If soft corn and general poor condition were found only in certain regions we might lay the blame to the seasons; but this year, Iowa, Missouri and Illinois all have an enormous amount of corn which really is not merchantable. Grain men are urging farmers to plant earlier corn next spring. That seems the sensible way to obviate the trouble.—L. C. Brown.

Electric Railroads Big Money-Makers

I Am Building the Dan Patch Electric Railroad and Offer You This Opportunity to Make Money With Me in This Enterprise



M. W. SAVAGE, President

I WILL GIVE YOU $1000 IN VOTING STOCK, FREE, IN ADDITION TO YOUR SMALL INVESTMENT.

I BELIEVE I can show you the best electric investment opportunity that ever came to your notice—I firmly believe it and I have backed up my belief by a $100,000 investment myself. I don't want you to say "yes" or "no" until you give me a chance to talk with you a little while.

If you've got some money that you want to place where it will bring you big returns, or if you want to invest a little each month out of your income, just pin your faith to **me** for a little while until I can lay before you an investment proposition that strikes me as a great, big money-maker for the people, and the indisputable facts bear me out in my judgment—I want you to have all the facts and then I believe you will want to put your money where it will work for you, and you only.

Now, the first thing to do is to send for my big 40-page "Book of Electric Railroad Facts," which I'll mail you free, and at the same time I also send you my other Book called, "Why Wall Street Rules With The People's Money." When you get these two books, which contain all the facts about the Dan Patch Electric Railroad and about me, personally, then I'm willing for you to sit in the quiet of your home and pass judgment on the whole proposition.

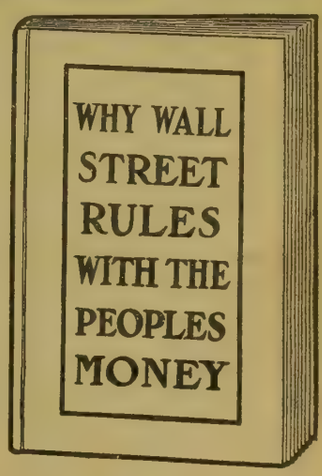
I just want you to have these two free books that will open your eyes about banks and Wall Street and investments in general; and when you get these two books I'll take my chances on whether you'll say, "Savage is wrong" or "Savage is right," and it won't interfere with our feelings or friendship if you never invest a dollar or never write me again. I offer you these two books free—I want to show you how you can make your money work and earn for you.

Now, just a minute, while I give you a few facts. Perhaps nine out of ten readers of this paper know me already, but to those who do not, I want to say that I've been doing a national and international business out of Minneapolis for the past 22 years.

My business is now the largest of its kind in the world—made so by the continued patronage of nearly three million thinking, progressive, hard-working farmers and stock-raisers.

These people are my friends and customers—many have already invested in my new enterprise—some from your own State and from every State in the Union and every Province in Canada.

I have built up a number of big enterprises here in the Northwest and now I'm building the biggest of them all. The



The First Electric Railroad to Tap the Wealth of the Great Northwest

Dan Patch Electric Railroad

Yes, the Dan Patch Electric Railroad, running from Minneapolis to Rochester, and back from Lakeville to St. Paul.

I am not merely "thinking" of building this Railroad; I am really building it now—grading on the first section is about completed and we have started grading on the last division from Owatonna to Rochester.

I am working to make this the best-constructed and biggest dividend-paying Electric Railroad in the country. High-class Electric Roads from New York to Spokane are great money-makers. I tell you all about it in my Big Book. This is the second time I have given the people a chance to share with me—my other enterprise paid 8 per cent in less than one year—the dividend checks were mailed out on June 1st.

Now is your chance to share with me in this enterprise—the greatest of them all. I will give you $1,000 in voting stock in addition to a small investment. I want to send you the estimated net-profit statement, showing how a $5,000 investment grows to $17,280.00. How a $1,000 investment grows to $3,456.00 in a single operating year. How a $500 investment grows to $1,728.00, and a $100 investment increases to $345.60 in a single operating year. This information is contained in my Big Book of Electric Railroad Facts. I want you to have it even though you never invest a dollar. And I am especially anxious for you to have my new Book, "Why Wall Street Rules With The People's Money."

Don't be backward about sending for these books. I want you to have them and they won't cost you a cent—they are free—some of these Wall Street secrets will open your eyes. I want you to see how the people's money works for Wall Street. I want to show you how to make your money work for you and for no one else. Send for the two books now.

M. W. SAVAGE, President, Minneapolis, Minn.

If interested I want you to send this coupon today—Do it NOW.

M. W. Savage,
President
Dan Patch Electric Railroad,
Minneapolis, Minn.

Dear Mr. Savage:—I don't know whether I'll invest any money or not, but would like to have you send me your two Books without any obligation on my part—"Book Of Electric Railroad Facts" and "Why Wall Street Rules With the People's Money."

General Farm Notes.

Mr. E. A. Swenson paid $52.50 for seventy first-prize apples at the Denver Apple Show and shipped them to President Taft. This is believed to be the highest price for a box of apples since 1850, when Oregon big red apples sold in San Francisco as high as $1.50 each. The fruit was raised on the farm of E. A. Fleming, at Silt, Colo., and is of the winter banana brand.

J. B. Wight says: "Briefly putting it, there is money in pecan growing for the one who knows his business and takes care of his trees. The careless and ignorant man, who thinks a pecan tree should be set and cared for as a post, can find other methods for throwing away his money that are just as satisfactory."

Best medium Missouri and Illinois wools are selling at St. Louis at 27 to 29 cents a pound.

TO WOMEN WHO DREAD MOTHERHOOD!

Information How They May Give Birth to Happy, Healthy Children Absolutely Without Pain—Sent Free.

No women need any longer dread the pains of childbirth, or remain childless. Dr. J. H. Dye has devoted his life to relieving the sorrows of women. He has proved that all pain at childbirth may be entirely banished, and he will gladly tell you how it may be done absolutely free of charge. Send your name and address to Dr. J. H. Dye, 248 Lewis Block, Buffalo, N. Y., and he will send you, postpaid, his wonderful book which tells how to give birth to happy, healthy children, absolutely without pain; also how to cure sterility. Do not delay but write today.

MAY MANTON EMBROIDERY.

A Line of Nice, Useful, Up-to-date Paper Patterns.

These paper patterns require only a hot iron to insure a perfect transfer on cloth. The way to do it is to lay the material to be stamped on a padded ironing board or table. Place the pattern over it with the printed side down and press over the entire surface of the paper with a hot iron, when a perfect outline will result.

Collar and Cuff Set.

No. 465.—Design for embroidering a high turned-over collar and cuff. The price of the pattern is 10 cents.

Chemise Embroidery.

No. 472.—Design for embroidering a chemise. Especially adapted to May Manton patterns. Price of the pattern is 10 cents.

Fancy Work Bag.

No. 463.—Design for embroidering a fancy work bag in heart shape. Price of the pattern is 10 cents.

Shaving Paper Case.

No. 468.—Design for embroidering a case for shaving paper. Price of the pattern is 10 cents.

Card Case Cover.

No. 474.—Design for embroidering a removable cover for a card case. The oval for the back is designed to contain an initial or monogram. Price of the pattern is 10 cents.

Attractive Veil Case.

No. 473.—Design for embroidering a veil case, which is very pleasing and satisfactory. Price of the pattern is 10 cents.

Please send all orders for these embroidery patterns to the **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

Things a Boy Can Make From Boxes.

There are possibilities in a box, a hammer, a plane and a boy when taken in combination that many a boy does not begin to realize. A boy can completely furnish his own room with boxes, and furnish it well, too, once he knows how to use his material. A simple beginning is a wood-box. For this take a long, rather shallow box of good width. Remove one of the sides and lay it aside to be used as the cover of the wood-box later on. The other side will form the base of the box. Nail two strips edge to edge on each corner, allowing them to project several inches below the base of the box. These corner strips give a neat finish to the box, reenforce it and provide legs so that the box is raised several inches from the floor. Attach the cover either with leather or iron hinges. A spool may be used for a knob for the cover. If the box is rough, it should be planed and sandpapered. Stain the box any desired color and give it a coat of varnish and it will be a sightly object. Neither stain or varnish is expensive and can be purchased from the one-half-pint size up at any hardware or paint store.

Another piece of furniture easy to make is a footstool. For this select a low box, plane and sandpaper it and finish off the corners with strips that project a few inches below the base Apply stain and varnish.

A desk for a boy's room can be made from two soap boxes and a few extra boards; plane them smooth and nail cleats in them at desired intervals; fit shelves on place of these cleats. The cover that has been removed can be hung on the box with hinges or a curtain may be hung over the opening, when all it completed. Place the boxes about three feet apart and cover the tops with boards fitted closely together and extending from end to end of the boxes. These top boards should also be planed smooth. Apply stain and varnish. The shelved boxes will form the container for books and papers, while the top, covered with a blotter, forms the writing desk.

These are only suggestions. The boy that gets started in box furniture will work out for himself combinations in dressers, wash stands, clothes racks, umbrella stands, magazine racks, kitchen cabinets or book cases with little difficulty.—Janet Thomas Van Osdel.

The Political Romance.

"Our friend, the Alderman, has had quite a number of political love affairs." "What do you mean?" "First he flirted with both factions, then he won a nomination, wooed fame, and now he is courting an investigation." — Kansas City Journal.

MAY MANTON PATTERNS.

Very Elegant Fashion Service, With Full Instructions For Ordering and Making.

This is the very best pattern service, and we are very much pleased to obtain it for our friends and patrons. Each pattern is new and original.

Circular Knickerbockers.

No. 6550.—Knickerbockers are always in demand during the cold weather. They mean perfect protection against searching winds and they are thoroughly comfortable and satisfactory to wear. They are well liked for the exercise suits that have become general and are, in fact, generally desirable. They can be made to take the place of petticoats for skating, tramping and any outdoor sports. These are circular, which means they are smooth over the hips, while they are comfortably full about the knees. They are closed at the sides and are easily adjusted. Serge is much liked for their making, flannel is used by a great many women, and those who do not care for so much warmth like pongee, satteen or silk, and often they are made with removable linings of lawn, the linings being made exactly like the outside but finished separately.

The bloomers are circular, the leg portions being joined at front and back, and they are fitted by means of short hip darts. The front and back portions are joined to separate bands and the openings are finished with over-laps.

The quantity of material required for the medium size is 4 yards 24, 3 yards 32, or 2 yards 44 inches wide.

The Pattern 6550 is cut in sizes for a 24, 26, 28, 30, 32 and 34-inch waist measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Blouse or Shirt Waist.

No. 6556.—Shirt waists made in tailored style, but finished with a frill at the left of the front, are new and smart. This one is so made, but the frill is removable, and can be used or omitted, as liked, and can be renewed without renewing the entire waist. The tucks over the shoulders are arranged close to the armhole seams in conformity with the latest style and on exceedingly becoming lines. There are two tucks at each side of the box plait at the front, and when the frill is used it is attached to an additional band, which is buttoned into place. Linen with the frill of handkerchief lawn makes the waist illustrated, but there are a great many fashionable waisting materials this season. Shirt waists of thin materials made in tailored style are greatly liked, the familiar madras and fabrics of the sort and more beautiful than ever, and such a waist as this one is equally appropriate for silk and flannel.

The waist is made with fronts and back. The tucks are laid on indicated lines and a neck-band finishes the neck. The collar is of the high turned-over sort, attached by means of buttonholes and studs. The sleeves are of regulation fullness but are finished with bands and rolled-over cuffs that are held in place by means of links. The frill is of graduated width and can be plaited or gathered.

The quantity of material required for the medium size is 3¼ yards 21 or 24, 2¾ yards 32, or 2 yards 44 inches wide, with ⅜ yard 21 or 24, ¼ yard 32, ⅛ yard 44 inches wide, or 1⅝ yards of ribbon 4 inches wide for frill.

The Pattern 6556 is cut in sizes for a 32, 34, 36, 38, 40 and 42-inch bust measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Fancy Yoke Night Gown.

No. 6546.—The simple night gown that is made with square yoke is always a desirable one, and this model suits all materials that are used for underwear, for it is just as appropriate for the dainty gown of batiste as it is for the heavy one of flannel or flanneiette. It can be made either high at the neck with the rolled-over collar or with square neck, and it can be made with long or three-quarter sleeves, and it consequently suits all tastes and needs as well as all materials. In the illustration it is made of nainsook and it is trimmed with lace banding and frills.

The gown consists of the square yoke, which is cut with front and back portions, fronts and back. It is gathered and joined to the yoke and the closing is made at the center front. The sleeves are of moderate fullness and are gathered into bands, whatever their length. The rolled-over collar is joined to the high neck, and when the square neck is used, the edge can be finished in any way to suit the fancy.

The quantity of material required for the medium size is 7¾ yards 27, 5 yards 36, or 4½ yards 44 inches wide, with 1¾ yards of banding and 2½ yards of edging.

The Pattern 6546 is cut in sizes for a 34, 36, 38, 40, 42 and 44-inch bust measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Girl's Dress.

No. 6553.—Closings at the left of the front make the latest feature of fashion, and children's dresses are shown so quite as well as the grown-ups. This one is essentially novel and extremely attractive. It is closed for its entire length with buttons and buttonholes above and below the trimming, invisibly beneath the trimming, consequently it can be opened out and laundered with perfect success and is especially well adapted to washable materials. Plaid Scotch gingham is the one illustrated, with trimmings of banding and buttons. Linen would be handsome so made, pique, and, indeed, almost all the simpler washable materials, while the model also can be used for the wools of immediate wear. Plaid wool material with trimming of black velvet ribbon is always smart and attractive, and suits the design admirably well. Blouse aid skirt portions are separate and are joined beneath a belt. The plaits over the shoulders give becoming breadth, and the plaits at the back and sides of the skirt mean graceful fullness.

The dress is made with blouse and skirt portions, which are joined and closed at the left of the front. The skirt is straight and the sleeves are made in one piece each.

The quantity of material required for the medium size (ten years) is 6¼ yards 24 or 27, 4⅜ yards 32, or 3½ yards 44 inches wide, with 2½ yards of banding.

The Pattern 6553 is cut in sizes for girls of six, eight, ten and twelve years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Misses' Dress.

No. 6549.—Such a dainty, pretty dress as this one is sure to find favor with every girl. It can be made either with the pretty round neck and short sleeves, as illustrated, or as shown in the back view, and it can consequently be utilized both for the evening and daytime wear. It will be found adapted to all the soft, fashionable materials that tuck so successfully. It is exceptionally graceful and attractive yet it is quite simple. The waist and the skirt are joined in semi-Princesse style, and any girdle or sash can be worn in combination, or the belt can be made of trimming and be complete in itself. In this case chiffon is trimmed with banding and with ribbon bows.

The dress is made with waist and skirt portions. The waist is made over a fitted lining and consists of the full portions that are finished by trimming bands and the little frill, or tucker, above them. The short sleeves are in one piece, but the long sleeves are cut with upper and under portions, and fit the arms snugly. When the high neck is needed, the lining is faced to form the yoke. The skirt is made with front, back and side portions. The front and back portions are tucked and cut in sections, but the side portions are plain and the trimming is arranged to give a tunic effect. The closing is made invisibly at the back.

The quantity of material required for the sixteen-year size is 3¼ yards 24, 7½ yards 32, or 5½ yards 44 inches wide, with 12 yards of banding, 1½ yards of ribbon and ¼ yard of chiffon for frill; 1½ yards of all-over lace for yoke and long sleeves.

The Pattern 6549 is cut in sizes for girls of fourteen and sixteen years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Please be sure to give size of pattern ordered and write your own name and address clearly that no mistake can be made to cause delay.

Kindly address all pattern orders to **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

"The bravest dentist isn't anxious to look into the jaws of death."—Chicago News.

FREE TO YOU—MY SISTER

Free to You and Every Sister Suffering from Woman's Ailments.

I am a woman.
I know woman's sufferings.
I have found the cure.

I will mail, free of any charge, my **home treatment** with full instructions to any sufferer from woman's ailments. I want to tell all women about this cure—you, my reader, for yourself, your daughter, your mother, or your sister. I want to tell you how to cure yourselves at home without the help of a doctor. Men **cannot** understand women's sufferings. What we women know **from experience**, we know better than any doctor. I know that my home treatment is safe and sure cure for **Leucorrhoea or Whitish discharges, Ulceration, Displacement or Falling of the Womb, Profuse, Scanty or Painful Periods, Uterine or Ovarian Tumors, or Growths; also pains in head, back and bowels, bearing down feelings, nervousness, creeping feeling up the spine, melancholy, desire to cry, hot flashes, weariness, kidney, and bladder troubles where caused by weaknesses peculiar to our sex.**

I want to send you a **complete ten day's treatment entirely free** to prove to you that you can cure yourself at home, easily, quickly and surely. Remember, that, **it will cost you nothing to give the treatment a complete trial: and if you wish to continue, it will cost you only about 12 cents a week or less than two cents a day. It will not interfere with your work or occupation. Just send me your name and address, tell me how you suffer if you wish, and I will send you the treatment for your case, entirely free, in plain wrapper, by return mail. I will also send you free of cost, my book—"WOMAN'S OWN MEDICAL ADVISER" with explanatory illustrations showing why women suffer, and how they can easily cure themselves at home. Every woman should have it, and learn to think for herself. Then when the doctor says—"You must have an operation," you can decide for yourself. Thousands of women have cured themselves with my home remedy. It cures all old or young, To Mothers of Daughters, I will explain a simple home treatment which speedily and effectually cures Leucorrhoea, Green Sickness and Painful or Irregular Menstruation in young Ladies, Plumpness and health always results from its use.**

Wherever you live, I can refer you to ladies of your own locality who know and will gladly tell any sufferer that this **Home Treatment really cures all women's diseases, and makes women well, strong, plump and robust. Just send me your address, and the free ten day's treatment is yours, also the book. Write to-day, as you may not see this offer again. Address**

MRS. M. SUMMERS, Box H - - Notre Dame, Ind., U. S. A.

More to the Point.

Mr. Golding—"So you want to marry my daughter. Do you think that you can support her in the style to which she has been accustomed?" Jack Winsome—"No, sir, but I can support her in a good deal better style than you lived in the first five years after you were married."—Somerville Journal.

A Blessing in Disguise.

Mrs. Post (looking up from paper)—"Here's sad news! It seems a Mrs. Bloodgood, who had just engaged our old cook, Delia Dolan, was run down and killed by an automobile on her way home from the intelligence office." Post—"She had a narrow escape from Delia."—Brooklyn Life.

FAT is Dangerous

Over-Fatness Shortens Life, Causes Heart Failure, Loss of Vigor, Kidney and Stomach Troubles. It Spoils Figure, is Uncomfortable, Unsightly, Burdensome.

REDUCE YOUR WEIGHT ONE POUND DAILY!

Proof Treatment FREE

Picture showing how my Perfected Treatment Reduces Fat

NOTE. Dr. Bradford is a diplomated, practising physician, licensed and registered by the State of New York; famous many years as a specialist in reducing fat and improving health by scientific, gentle, home treatment.

A Woman Can Earn $5000.00 A Year

LESSONS by MAIL

Learn Dressmaking at Home

We teach you by mail and equip you to command a good income or you can **start in business for yourself.** Many women nowadays are earning $100 a week—$5,000 a year by dressmaking. One woman, the head designer of Chicago's largest retail dry goods house, is said to receive **$10,000 a year.** Salaries of **$25 to $50** a week are common. **Become a Graduate Dressmaker.** The regular diploma of this College is issued to all who complete this course of lessons. **The American System** is most simple and complete in every detail. **These lessons** will teach you how to draft your own patterns and make your own clothes and enable you to dress far better at one-half the usual cost, also how to **design, draft, cut, fit, make, drape** and **trim** any garment, including children's clothing. This college is endorsed by leading Fashion Magazines—McCall's, Pictorial Review, Harper's Bazar, Paris Modes, etc., etc.

WHAT ARE THESE LESSONS WORTH?

Our students say: "I have made 25 waists (6 silk ones) all perfect fits." "I just saved the price of my course by making my own silk dress." "My husband surprised and pleased." "I believe your system of teaching is the best in use; it is fully worth $200 to anyone contemplating dressmaking." "I would not take $300 for what I have learned and do without it."

This book will be sent to you free. At an expense of thousands of dollars this college has published 100,000 of these **copyrighted** books to advertise the AMERICAN SYSTEM OF DRESSMAKING, and —while they last—will send you a copy **FREE.** Write for it today. One copy only to each woman. Requests filled in order received. Address,

American College of Dressmaking
355 Reliance Building, Kansas City, Mo.

SELECTED POETRY.

DADDY LONG-LEGS.

Gran-daddy Long-legs—I found him
A-sittin' on our garden wall.
I ast him won't he please move 'long,
But he jus' wouldn't budge at all!
An' where he is I want to sit,
Right where th' Honeysuckle Vine
Has saved a little place for me
So's I can smell it all th' time!

I guess he's wonderin' 'bout his legs—
He's got such lots of 'em, I spects
That w'y he don't get up an' go
'S 'cause he can't 'member which comes nex'.
An' mebbe he's got rheumatiz—
All Grandpas must have that, you see;
His legs look jus' like pent-up pins!
(My Grandpa's got some in his knee.)

But when I helped him, wif' a leaf,
He came an' walked right up my arm!
'At's why I put him on th' groun';
I guess it wasn't any harm,
'Cause then I 'splained it all to him,
How rheumatiz makes you go slow,
An' if he didn't hurry home
His supper'd get all cold, you know.
—Marie Louise Tompkins, in Harper's Weekly.

A MORNING THOUGHT.

Let me to-day do something that shall take
A little sadness from the world's vast store,
And may I be so favored as to make
Of joy's too scanty sum a little more.

Let me not hurt by any selfish deed
Or thoughtless word, the heart of foe or friend;
Nor would I pass, unseeing, worthy need,
Or sin by silence when I should defend.

However meager be my worldly wealth,
Let me give something that shall aid my kind,
A word of courage, or a thought of health,
Dropped as I pass for troubled hearts to find.

Let me to-night look back across the span
'Twixt dawn and dark, and to my conscience say
Because of some good act to beast or man—
"The world is better that I lived to-day."
—Ella W. Wilcox.

WINTER BLOOM.

The orchard is in winter bloom,
The boughs are garbed in white—
It seems that some of vague perfume
Should drift in through the night,
For as they were in early spring
The [illegible]
As [illegible] blossoming
As ever they were then.

The breezes [illegible] the petals down,
The [illegible]
The lights within the distant town
[illegible]
The [illegible] and bright and clear
As [illegible]
With [illegible] was truly here
With all the breath of May.

There is a [illegible] in the air,
The [illegible]
The bees on honey trails should fare
[illegible]
And drone along the orchard ways
Their amber hoards to bring
As [illegible]
That [illegible] each spring.

White magic, this, that loads the trees
With drooping strands of white
And paints the springtime ecstasies
Against the winter night.

But vainly do we wonder why
The breeze brings no perfume.
And vainly does it seek and sigh
Amid the winter bloom.
—Chicago Post.

OUR SAVIOR'S LAST WILL.

Hear what the Prince of Glory sayeth
To those who bear a Christian name.
His dying counsel, and his prayer,
His love, and heavenly will, proclaim:
"In very deeds are ye my friends,
If this be your unceasing care
To do whatever I command
And every breach of love forbear
As God, the Father, loveth me,
So have I loved and chosen you,
That ye shall one another love,
And that will prove your friendship true.
By this, your test, it shall be known
That I am yours and ye are mine.
If mutual love and sympathy
In all your words and actions shine."

These words spake Jesus to his friends,
And turned his eyes to heaven above,
Poured out his soul in prayer to God,
And still expressed his ardent love:
"Keep, Holy Father, through thy name,
These dear disciples of thy grace,
And as many as believe on me
Among the sons of Adam's race.
May they be one, as we are one,
From sinful variance hold them free,
That by their union all may know
That I, thy Son, was sent by thee."
Oh, Christians, hear your Maker's voice,
Obey his counsel and be wise;
Abandon strife, abide in love,
Unite and seek the heavenly prize.

Selection and Preparation of Meat.

Probably no part of the daily expenditure for food requires as much thought as the purchase of meat, for meat is expensive, and the difference in price of the different cuts is not always a guide to the difference in food values. Every housekeeper should make a careful study of a good meat chart and learn the location of the various cuts.

Meat is the name applied to the flesh of all animals used for food.

Beef is the meat of the steer or cow, and is the most largely consumed of all animal foods.

Veal is the meat obtained from the young calf. Veal should be thoroughly cooked. It is deficient in fat and has not much flavor; therefore, it is advisable to season it well and to add salt pork while cooking. Good veal is pink in color and has white fat.

Beef is digested easily, and a healthy stomach will digest it without any trouble.

Meat is comprised of fat, mineral matter, water and protein. There is about four times as much protein in a pound of meat as there is in a pound of milk. The color of meat comes from the matter which is found in the red corpuscles of the blood.

The most expensive cuts of meat come from the parts of the animal where the muscles are little used. These cuts are tender, fine grained and of a good flavor. On the other hand, those parts much used produce tougher cuts, but they are often very juicy and of fine flavor if properly cooked. The tough meat forms more than half the animal, but is just as nutritious as tender meat. While, in many cases, the tender cuts are desirable and preferable for people who have a large income, the cheaper cuts may be used to better advantage if well cooked.

At the Colorado Agricultural College the students are shown how to cook a cheap piece of meat so that it is nutritious, palatable and attractive enough to put on the rich man's table.—Mary F. Rausch, Colorado Agricultural College, Fort Collins.

A Much-married Lady.

"I want a license to marry the best girl in the world," said the young man.

"Sure," commented the clerk," that makes thirteen hundred licenses for that girl this season."—Puck.

Death to the Flies.

One day a butcher and a friend of his were talking about the flies destroying his meat, and he was saying he would give any man two shillings if he could do away with them.

Paddy was coming along, and said: "Begorra, give me the money and I will soon do away with them."

Paddy got the money and put it in his pocket. He went out to the middle of the street.

"Now, butcher," he said, "send them out one by one!"

It is reported that H. A. Halbert, of Coleman county, Texas, has on his farm a pecan tree of the soft-shell variety that brings him an annual revenue of from $200 to $300 from pecans and buds. The nut is large and full meated and he sells them at $1.00 per pound for seed. The buds are sold at 25 cents each for grafting.

AGENTS WANTED

We want men who are not actively engaged in business to act as our agents. We pay liberal cash commissions. Elegant Automobile $400, fully guaranteed. Splendid Motor-buggy $300, fully guaranteed. Write for free catalogue and agents' proposition. Only one agent wanted in each county.

SUNBERRY—THE IMPROVED WONDERBERRY

LUTHER BURBANK'S GREATEST CREATION. A Luscious Berry Ripening in Three Months From Seed

SEED 20 CTS. PER PKT. 3 PKTS. FOR 50 CTS. POSTPAID.

This is positively the GREATEST new Fruit and the best NOVELTY of modern times. These are facts which no one can get away from. The proofs are overwhelming in number and conclusive in character. Grown last year by 350,000 people.

Fruit blue-black like an enormous rich blueberry in looks and taste. Unsurpassed for eating raw, cooked, canned or preserved in any form. This great garden fruit is equally valuable in hot, dry, cold or wet climates. Easiest plant in the world to grow, succeeding anywhere and yielding great masses of rich fruit all summer and fall. The greatest boon to the family garden ever known. Leaves and branches are also used for greens and are superb. Everybody can and will grow it.

Luther Burbank of California, the world famous plant wizard, originated the Wonderberry and turned it over to me to introduce. He says of it: "This absolutely new berry plant is of great interest and value as it bears the most delicious, wholesome and healthful berries in utmost profusion and always comes true from seed."

READ my Catalogue for full description, culture, uses, etc. Also scores of testimonials from well-known and reputable people all over the country. Read the "Crime of the Wonderberry."

THE SUNBERRY is an improved form of the Wonderberry which proved so satisfactory last year. It is greatly superior to the original type, and I alone have genuine seed.

SEED **20c. per pkt.; 3 pkts. for 50c.; 7 for $1.00.** *Agents Wanted, $12,000 in cash offers.*

With every packet of seed I send a booklet giving **99 Receipts** for using the fruit, raw, cooked, canned, preserved, jellied, spiced, pickled, jams, syrup, greens, etc. It is superior for any of these uses. **Also a copy of my 152-page Catalogue with every order.**

MY GREAT CATALOGUE of Flowers and Vegetable Seed, Bulbs, Plants and Rare and New Fruits **FREE** to all who apply. 152 pages, 500 illustrations, and colored plates. I have been in business 35 years and have half a million customers all over the country. Complete satisfaction guaranteed to everyone. Do not fail to see the many great Novelties I am offering this year of which the **SUNBERRY** is the greatest ever known. *Address,*

JOHN LEWIS CHILDS, Floral Park, N. Y.

P. S.—This offer will not appear again. Write for Sunberry seed, and Catalogue at once.

Satisfaction

You require cotton dress-goods that will wear well and wash without fading.

Simpson-Eddystone Black & White Prints

— the calicoes of well-woven cloth, beautiful designs and absolutely fast color never fail to give solid satisfaction.

If your dealer hasn't Simpson-Eddystone Prints write us his name. We'll help him supply you.

The Eddystone Mfg. Co., Phila., Pa.
Established by Wm. Simpson, Sr.

Housework Gowns.

In planning one's morning dresses, dresses which are really to be worn when doing the housework, there are two big, important things to remember: First, select dresses which are easy to get into; second, have them smart and becoming in line. Of course, there are other little details well worth remembering, such as avoiding much trimming, having the material well adapted to the purpose of the dress and having the general style neat and trim.—Grace Margaret Gould, in Woman's Home Companion for February.

Learned in the Kitchen.

To keep the griddles smooth, rub them with a slice of raw turnip and make a little mop on the end of a stick and keep in your grease can for greasing the griddles, and there is nothing better than a small flat brush for greasing pans or moulds.

Here is an excellent and easy way for making beaten biscuit: One quart of flour, one heaping cook spoon of lard, one teaspoonful each of salt and sugar sifted with the flour, then mix up with enough cold water to make a stiff dough. Now run the dough through the meat chopper three or four times, then roll out and bake in a slow oven.

A teaspoonful of baking powder in mashed potatoes will make them light and fluffy if it is stirred well through them, and when making flour batter cakes the baking powder should never be stirred in until just before baking, as it will make the cakes much lighter.

To clean the coffee and tea pots, fill them with cold water, add to this a heaping teaspoonful of borax and boil until all the stain is removed, then rinse out with clear hot water and place in the sunshine, and there is nothing better than hot suds in which a tablespoonful of borax is dissolved for keeping the biscuit board and tables white and clean. The borax suds is excellent for cleaning the pantry shelves and the woodwork and floor of the kitchen, as it not only helps to whiten the wood and save labor, but the borax purifies and disinfects and is especially good to use in the pantry.

Old newspapers are invaluable aids in keeping the kitchen and pantry clean. Cut them in pieces about six inches square and keep in a convenient place; then use the pieces to wipe off greasy dishes, pans and skillets, and cover the plates most used around the table with news paper before preparing a meal.

Your oilcloth can be kept new-looking by going over it with a damp cloth and allowing it to become perfectly dry and then going over it with warm sweet milk in which a tablespoon of white sugar is dissolved.

When eggs are scarce, corn starch may be substituted for part of the egg in cakes or custards, and a teaspoonful of corn starch is equal to one egg, and in making cakes they are just as good if half butter and half lard is used instead of all butter.—A. M. H.

Simple Stenciling.

Stenciling is an easy form of fancy work which almost anyone can do, and the results are most pleasing when the stencil is applied to table runners, sofa cushions, curtains and draperies. The necessary tools are a sheet of blotting paper, a few thumb tacks, a brush with short and rather stiff bristles, a bottle of turpentine, oil paints of the desired colors and a stencil. This outfit is inexpensive provided the worker makes her own stencils, and this is advisable, as the bought stencils are expensive. The stencil patterns shown in magazines can be easily reproduced even by one who has little skill with the pencil. These should be traced or drawn on stencil paper, which costs about thirty cents a yard, and is a yard and a half wide. Then the stencils are cut out with a sharp knife. To be sure you have all the parts cut which you wish to show up in colors, place the stencil against a dark background and see if the outlines stand out as they should.

The stenciling may be done on any material. Burlap, Russian crash, cheesecloth, skrim, all of these take the stenciling beautifully. When applied with the oil paint thinned with turpentine, the coloring is permanent and will stand an ordinary amount of washing or cleaning. On a kitchen table or a board procured for the purpose, place first the blotting paper, then the goods to be stenciled, and on this the stencil, fastening them securely to the table by thumb tacks placed around the edge of the stencil. Squeeze from the oil tube a portion of the color to be used and add to it a drop of turpentine. Mix thoroughly, adding more of the turpentine if needed. With the brush apply this coloring to all the cut-out part of the stencil. It will take not less than twelve hours for this to dry.

For purple shades use mauve and add a little red, if a brighter shade is desired; to get a royal purple, mix a blue with the mauve; and to get a violet tone, mix a white with the mauve.

Use Prussian blue for blue shades, toning it down with white for a baby blue or with yellow for a turquoise. For red, get vermilion or crimson, toning down, when a more subdued shade is wanted, with black or shades of brown. Cadmium is used for the yellow centers of flowers, and when it is mixed with burnt sienna a burnt orange is the result. For a rich cream shade add a little white to Naples yellow, and for an ecru add burnt sienna and white to Naples yellow.—Janet Thomas Van Osdel.

Latest Idea in Evening Gowns.

Veiled effects are much the vogue in evening gowns, and, though at first the idea may seem a particularly extravagant one, yet, on the other hand, the lovely veiled gown may often provide the opportunity for using up, as a foundation, one's last year's silk or satin party gown. Perhaps the prettiest of these gowns this year are trimmed with artificial flowers, either in garlands or arranged here and there in rather normal-looking little bouquets.—Grace Margaret Gould, in Woman's Home Companion for February.

How to Buy Soda Crackers in the Country

Next time you go to the store buy enough Uneeda Biscuit to last till next market day. "But," you say, "will they keep that long?" Yes—

Uneeda Biscuit

are the soda crackers that come to you protected in sealed packages, so that you *always* have fresh soda crackers no matter how many you buy or how long you keep them.

5¢ (Never Sold in Bulk)

NATIONAL BISCUIT COMPANY

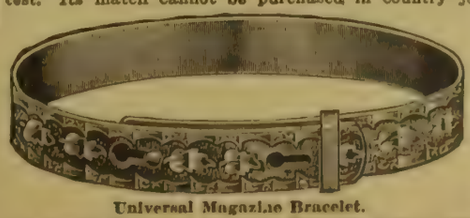
Laundering Table Linen.

The cheapest and most ordinary table linen may be made to take a sheen as beautiful as the finest damask by ironing in this way: After linen has been carefully washed, boiled and rinsed, wring dry as possible and roll up in a dry sheet and leave for one hour. Iron till thoroughly dry. The linen escapes the wear and tear of swinging on line and keeps its shape better.—From Woman's Home Companion for February.

The general farmer will not fail to feed this nation and a few other nations also; but he does not like to have wheat called high when he is selling it at two cents a pound or less.

The Universal Magazine Bracelet.

This is all the rage. And Adjustable Bracelet. The most elegant design and perfectly finished. It is not solid gold, but it is washed and plated and will stand the acid test. Its match cannot be purchased in country jewelry stores for any price. It is a duplicate of the latest Parisian creation made expressly for the purpose of using it as a subscription premium to the **Universal Magazine**. The **Universal Magazine** is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, fashions, patterns and poetry—a splendid publication for the money. To anyone who will send us a money order for 50 cents we will send the **Universal Magazine** for two years, and we will send one elegant **Universal Magazine Bracelet**, postage free, as a subscription premium. Money returned if not satisfied. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**



Universal Magazine Bracelet.

I Want to Send You This $3.50 Pail Free

I want you to know for yourself why

WILBUR'S STOCK TONIC

is fed by 500,000 stock raisers daily. I want you to see what it does for your horses, your milch cows, your hogs, your sheep and your poultry. I want to prove to **you** beyond all doubt, that Wilbur's Stock Tonic is a wonderful feed saver, fattener and positive preventive of disease. I want you to find out by actual test that my tonic **makes money for you** every time you feed it and there are **1240 feeds** in the pail I want to give you **free**. I don't want you to pay me one cent for this free pail. That's why I will send a 25-lb. pail absolutely free to you and to every reader of this paper, where I have no agent, who fills out and sends me the coupon below. Is my offer fair? Do you risk one cent by accepting this $3.50 pail **free?** Is it worth a 2-cent stamp to make $3.50? If so, just fill out this coupon and mail **today.**

F. P. Wilbur
President

WILBUR STOCK FOOD CO., 939 Huron St., Milwaukee, Wis.

What Others Say

Wilbur Stock Food Co.,
Milwaukee, Wis.
Gentlemen:—I have been feeding Wilbur's Stock Tonic for some time with best results. I feed it daily to horses, cows and hogs, and find it does everything you claim for it. I have fed other kinds but they are nowhere to compare with yours. I never expect to be without Wilbur's Stock Tonic.
Yours truly,
Perrysburg, O. F E FOX

Wilbur Stock Food Co.,
Milwaukee, Wis.
In regard to Wilbur's Stock Tonic, I can say I think it is all right. Before I used it I had two or three horses die and several sick ones but since I commenced using your Stock Tonic I haven't lost a horse or had one to be sick that I know of. I have been using it for the past two years. Yours truly,
(Signed) G. W. BEAVERS
Hurst, Ill.

Wilbur Stock Food Co., Milwaukee, Wis,
Dear Sir:—Your Stock Tonic is the best I ever used to bring up run down horses. I could not get my horses to improve until I commenced to feed your tonic. They are fattening up and I feed only half the grain I did before and my cattle are doing well, in fact everything I feed it to. Would not be without it again.
Yours truly, J. O. McNUTT. Warrens, Wis.

HARDY, EVER-BLOOMING ROSES.

The Most Delightful Subscription Premium Offered by a Farm Paper.

The National Farmer and Stock Grower has decided to send out a collection of eight choice ever-blooming Rose Plants to our patrons who will send in a special subscription.

The Collection of Roses.

The collection consists of **Rhea Reid**, one that received the gold medal at the National Rose Society; the flowers are rich velvety red. Another one is **The Bride**, one that will thrive under most unfavorable conditions. The flowers are the purest ivory white. **Etoile de Lyon** is the most magnificent pure yellow rose, massive in size and beautiful in every stage of development. **Bridesmaid** starts with the first warm days of spring and requires but little care; the flowers are an exquisite clear pink, beautiful in form and highly fragrant. The **Papa Gontier** rose is a grand variety for outdoor planting, producing double flowers of clear, glowing crimson and blooms from June to late in the year. **Bessie Brown** is a charming, pure snow-white rose; the flowers are very large and it blooms profusely. **Champion of the World** is a rich, ivory pink, and without it no garden selection is complete; it is unequaled for size of flower, fragrance or beauty. **Crimson Rambler**, the last of the collection, is a bright crimson flower that covers the entire bush. It is valuable for decorative hedges, arches and screens. We cannot describe this beautiful collection, but we will guarantee them to please any lover of flowers.

OUR SPECIAL OFFER.

Send Us Sixty Cents. We will send you The National Farmer and Stock Grower for one year. We will send you direct by mail, postpaid, the full set of eight hardy, ever-blooming Roses. We will also send you a 16x20-inch picture entitled **"The American Beauty Rose."** The picture is most beautiful. There is a great bunch of roses resting on the white linen cloth of a table. It is glorious, magnificent. **Send Us Sixty Cents.** The paper can go to one address, the picture to another and the roses to another, or all three to one address.

ANOTHER SPECIAL OFFER.

We publish the Universal Magazine. It is a splendid publication, issued monthly. There are thirty-two pages, three columns to the page, illustrated stories, special articles, poetry, embroidery, patterns, etc. The subscription price is 25 cents a year. Send us Fifty Cents and we will send you the Universal Magazine for two years. We will also send you the full set of eight hardy ever-blooming roses as a premium. The rose plants will be sent prepaid by mail. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

5 Cents a Copy. Published Monthly by The Hale Publishing Co. 50 Cents a Year.

and Stock GROWER

Practical Farming and Gardening.

This is a book of 500 pages, 6x7¼ inches to the page. It is a complete farmers' instruction book. The feeding chart is worth a ten-dollar bill to any stock farmer. Soil fertility, drainage, grain crops, gardening, truck growing, fruits, forestry, pruning, grafting, budding, injurious insects, plant diseases, spraying, cattle, sheep, horse raising and feeding, treatment for diseases, silos and silage, poultry, handy rules and farm cookery, are a few of the subjects. There are eighteen three-column pages of index. If you look for something you find it. We have adopted this book as a subscription premium. Send One Dollar and we will send you **Practical Farming and Gardening**, postage paid, and The National Farmer and Stock Grower for two years. This is a grand offer Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

The Reason Why.

Thousands of the most progressive farmers in every part of the grain-growing world are using Superior Drills. Why? Because you can sow any seed from the finest grass seeds to bush lima beans, you can sow any commercial fertilizer or granular lime, and it will sow it right and in quantities desired. You can reseed worn-out and run-down pastures and meadows. The Superior puts the grass seed under the sod without turning it. It is strong, light draft, accurate, and will do your work right. It sows evenly—every feed exactly the same amount. No skipping, no bunching, no choking. The Superior Disc Drill will run and do good work wherever a disc harrow will run. Stalks, mud, pea vines, crab grass and any other trash have no terrors for the Superior. "The name tells a true story." Drilled oats and small grains will withstand the drouth much better than when broadcasted. You can get a good stand of clover if you sow it in the spring at the same time you do your oats or wheat, because the young clover plants get a good stalky growth at a very critical time—when they need sun and air.

The Superior Drill is manufactured in many styles and sizes by The American Seeding-Machine Company, incorporated, Springfield, Ohio. Write them for a Superior catalogue; read it carefully. Go to your nearest implement dealer and ask him to show you a Superior, which is fully guaranteed to do your work.

Replanning Farms For Profit.

A recent bulletin issued by the United States Department of Agriculture, entitled "Replanning a Farm For Profit," deals with principles that are vital to successful farming in the corn belt. Few farmers realize the difference in income that may be produced on their farms by the systematic introduction and rotation of clover or other leguminous crops over the entire area of their tillable land. The planning of rotations to meet certain feed requirements and to grow crops which shall be the greatest income producers under given conditions is a problem that is not easily solved by all the tillers of the soil. The conservation of soil fertility by appropriate rotations, together with applications of manures and fertilizers in such manner as will maintain a permanent system of agriculture has been largely overlooked by farm owners in the past. Farmers' Bulletin No. 370 assists the farmer in solving these difficulties. It discusses a run-down farm in Illinois, and plans six different types of farming that may be substituted for the usual one of corn and oats now practiced, so as to raise the income all the way from two to five times as much as that commonly received, and at the same time increase the fertility of the soil. A copy of this bulletin may be had free on application to a member of Congress or the Secretary of Agriculture, Washington, D. C.

Benefits of Rural Phones.

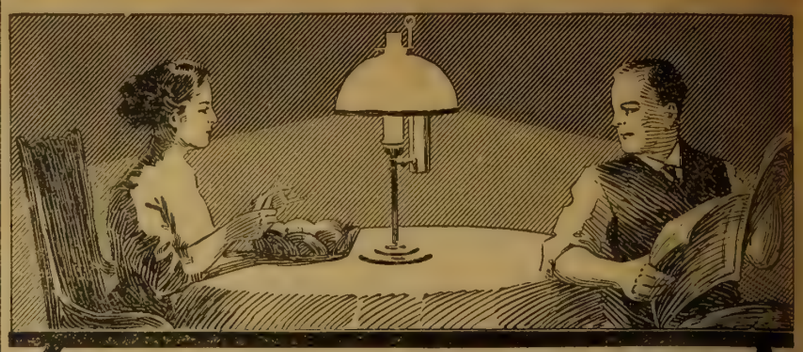
I do not know of anything that will come any nearer revolutionizing the home than the rural phone. It does not only add joy and pleasure to the home from a social standpoint; it is equally as beneficial from a business point of view. Our country is literally interwoven with rural lines. With at least one-half the farmers in this and adjoining counties in possession of a rural phone it is almost impossible for a skulking thief of any kind to commit a crime and escape. In case of accident we are able to get a doctor or other aid and at the same time remain at home to render what service we can. I know of several cases where the rural phones have been the means of saving dwellings and barns from fire. I also know where they have gotten assistance quickly in times of accident, and thus were the means of saving a life. We are in touch with several express and freight offices and can stand in our room and find in a moment's time whether we have freight or express at the office. We can also often have many things sent out from the stores that we would have to make a special trip after if it were not for the phone. Not only this, but the rural phone enables us to hear music and singing and will do much in this line to keep the boys and girls contented on the farm.

We organized our telephone company with each member putting up one mile of wire. This wire belongs to the company and cannot be removed without consent of the company. Each member owns his own box and is his own private property. The entire cost of one mile of wire and box only averaged $16 for each member. By paying a Central fee of 25 cents per month we get connection through Central to several hundred families. We also get free connection with the Cumberland Co. System. We only have from fifteen to twenty boxes on each sub-line. Each sub-line has its by-laws and all members must abide by them. Pleasure must always give away for business, and business for emergency or accidents.

I believe any neighborhood would do well to organize a rural phone company.—W. C. Crook, Huron, Tenn.

Three Big Papers, 70 Cents.

The National Farmer and Stock Grower; Twice-a-Week Republic of St. Louis, the oldest, biggest and best semi-weekly in the Southwest; and Farm Progress, the biggest semi-monthly farm paper printed, sent to any address a full year for only 70 cents. The subscription price of all these papers, if taken separately, would be $1.25. Send orders to the St. Louis Republic, St. Louis, Mo.



"Let's Not Buy Another Thing Till We Put the Fences Right"

THE far-sighted farmer will say that when temptations arise to let the ready money go for some luxury. The luxury is an *expense*; the good fence is an *investment*—a *producer*. A farmer is losing money fast until he has his farm fenced off into a sufficient number of fields to permit of the proper rotation of crops and the most advantageous pasturing of stock.

The fields of a farm are like the rooms in a hotel—the more rooms or fields, the more revenue.

AMERICAN FENCE Made of Hard, Stiff Wire of Honest Quality

is an investment that brings the most returns for the money paid out. It is made of a quality of wire drawn expressly for woven-wire-fence purposes by the largest manufacturers of wire in the world. Galvanized by latest improved processes, the best that the skill and experience of years has taught. Built on the elastic hinged-joint (patented) principle, which effectually protects the stay or upright wires from breaking under hard usage.

The Favorite Corn Husker.

This Corn Husker is more largely sold than any other on the market. We have therefore selected it as a reasonable subscription premium. It is made for the right hand. The hook sets at any angle to prevent slancing. Opening or closing the small end of the plate adjusts a fit to any size hand and prevents chafing.

The improved shape of the plate and leather makes this hook the favorite. We will send The National Farmer and Stock Grower for one year and the Favorite Corn Husker for fifty-five cents. It takes five cents for mailing and the Corn Husker is a free premium. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

The Larger Corn Stalk Borer.

In Circular No. 116, issued by the Bureau of Entimology of the United States Department of Agriculture, describing the ravages by the corn stalk borer, the preventative measures possible of application are stated as follows:

"Rotation is one of the best general preventatives of injury from insects affecting field crops. Experience has shown that where corn has followed itself upon the same field for two or more years there has been a much greater loss from the borer than where an annual change of crop has been practiced. This is especially noticeable where stalks or stubble from the previous year have been allowed to remain undisturbed throughout the winter. The moths, upon emergence in the spring, finding themselves surrounded by the young corn, commence egg laying at once and escape the dangers encountered in searching for another field of corn. A forced journey in search of young corn results in many of the females being eaten by birds or being destroyed because of rain, cold, or failure to find the object of their quest. A few moths will always succeed in their search, but the successful proportion will be greatly decreased by persisent crop rotation."

The larger corn stalk borer at work. Larva in lower part of corn plant preparatory to hibernation. Reduced in size, from circular, by Prof. George G. Ainslie, of Clemson Agricultural College, of South Carolina.

Another remedy, probably the best for this insect, is the thorough destruction, some time before the period of emergence of the moths in the spring, of all the stalks and stubble remaining in the field from the preceding crop. If all this trash can be disposed of before the opening of spring, the numbers of the pest must be greatly diminished, if not almost exterminated, for the only form in which the insect passes the winter is that of the caterpillar, and the only known location is in the lower tip of the corn root, snugly hidden. Some few may, however, be found to survive in the roots of the larger grasses mentioned above, and care should be taken in such cases to treat these in the same way. The method employed in disposing of the stubble and stalks will depend largely on the conditions in individual cases. If the stubble is cut low and the land is moderately heavy, a thorough deep plowing may suffice, an inch or two of well-settled soil being sufficient to prevent the escape of the adult moths. Bringing the stubble to the surface where it can dry will kill some of the contained larvae, but this method depends too much on the state of the weather to be trusted. By far the most effective plan is to remove the stubble from the field with a rake and burn it.

In the cane field the methods of treatment must be adjusted to correspond with the methods of handling that crop. The larvae commonly spend the winter in the trimmings and tops which have been discarded at harvest time because of immaturity. This refuse, left on the ground throughout the winter, becomes dry and inflammable and, if thoroughly burned before spring, enough larvae will be killed to insure at least temporary relief from the ravages of the borer.

Any method which will insure the complete destruction of the overwintering larvae, if persisted in and carried out simultaneously over large sections of the country, will effectually preclude serious damage from the insect.

Indiana Co-operation Oats.

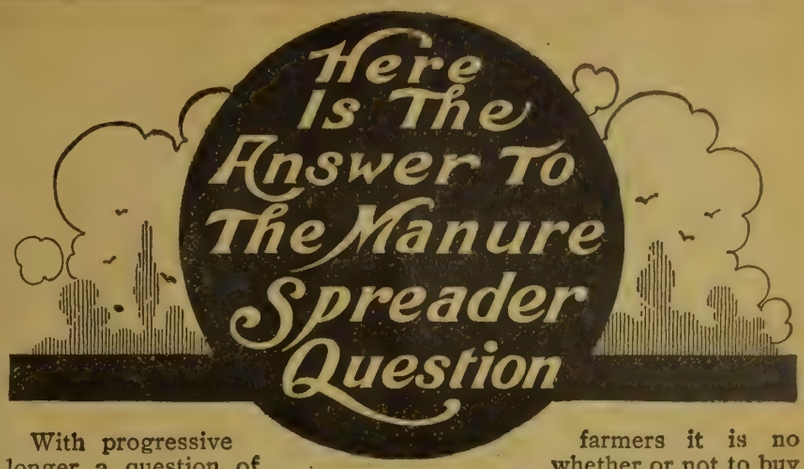
A summary of the results of all varieties tested in the co-operative experiments with farmers during the last five years, including upwards of 100 tests pretty well distributed throughout the state, gives the Great Dakota an average yield of 34.9; Silvermine, 34.8; Czar of Russia, 3'.1; Swedish Select, 32.7, and Early Champion, 25.2 bushels per acre, when all are compared upon the same basis. At the Experiment Station on small plots, Great Dakota made a five-year average of 55.1; Silvermine a five-year average of 52.4; Czar of Russia, 51.6; Swedish Select, 48.2.

Cotton Crop of West Africa.

Consul Colomon Berliner, of Teneriffe, Canary Islands, reports to the Department of Commerce that the West African cotton crop this season is estimated at 13,000 bales of 400 pounds each, as compared with 6,400 bales in 1908. The output of the gins is compact, neat bales of 400 pounds weight, which are easily handled, and have a density of 28 pounds per cubic foot. The Kano Railway will shortly reach the cotton-growing country of Northern Nigeria, and then developments may be expected, for which large funds will be required.

The Basis of Business.

Invesigators of market conditions and of the retail cost of food products should always remember that it is the duty of the seller to sell the goods he has to sell as high as he can, and it is the duty of the buyer to buy the goods he has to buy as low as he can. Business cannot be fairly conducted on any other basis.



With progressive farmers it is no longer a question of whether or not to buy a manure spreader. Good spreaders have already proved their value. The real question is—which one will net you the most profit?

The I H C line answers that question. Among the many styles and sizes, you will find one that just meets your needs.

I H C Manure Spreaders

embody all that is best in manure spreader construction—all that makes for greatest manure profits. They have strength in abundance to withstand the hardest usage; they are simple, sure and steady in operation; they work perfectly with fertilizer in any condition; they are exceedingly light in draft.

I H C manure spreaders are made in three styles; each style is made in three sizes, ranging from 30 to 70 bushels capacity. Corn King and Kemp 20th Century spreaders are of the return apron type; Clover Leaf manure spreaders have endless aprons. Two styles of feed are furnished—either ratchet or double pawl worm gear. There is an I H C to suit each requirement—large sizes for large operations, medium sizes for the average farmer, small sizes for orchards, vineyards—for every condition. I H C spreaders have lime hoods to spread commercial fertilizers; drilling attachments to distribute manure in rows. Whatever I H C spreader you buy will pulverize and spread manure or commercial fertilizer perfectly. You will find it durable, and it will net you big dividends on your investment.

Manure is the cheapest and best fertilizer but it must be handled and spread right or most of its value is wasted. You must have an I H C manure spreader to get 100 per cent value out of the manure. I H C spreaders are doubling the crops of others. The one that suits your needs will do it for you.

A CONTEST FOR BOYS.

Statement Concerning the Corn Growing Contest of 1910 For Boys Under 16 and Young Men Under 20.

For a number of years the State Corn Growers' Association, in cooperation with the State Board of Agriculture and the College of Agriculture has conducted a corn-growing contest among the young men and boys of the state. It began a few years ago with a few hundred and now it has reached into the thousands in its enrollment.

There are two classes—one for the young men and one for the boys. The Young Men's Class includes those under twenty years of age and over sixteen, and the Boy's Class includes those under sixteen and over ten years of age.

The boys' names are to be registered with Sam Jordan, at Columbia, Mo. who has direct charge of this feature of the work tris season. These young people can either register direct, or, a better plan will be to register with some organization or some bank or other business, and their names can be sent in by those with whom the boys register. Those registering should give name, age and postoffice address. There are no fees of any kind and every wide-awake young farmer should avail himself of this opportunity.

Last season the University sent free seed to about two thousand boys and young men of the state and the results were highly gratifying in nearly every case. Pure seed was thus scattered over many parts of the state and it has been demonstrated many times that pure-bred seed corn, everything else being equal, will produce from five to ten bushels more corn to the acre than the common scrub seed. Last season many banks and other business concerns took hold of this work and the number that are now reported as calling for literature on the contest indicates that scores of banks will take hold of the work this season. It is presumed that there is not a Farmers' Club in the state that will not take up the work, for it is recognized that this is the best way to arouse interest in improved farming.

It becomes a vital question with every business interest to help boost this work, and it is a fact that there are very few, if any, newspapers in the state that will not willingly give all the space to this matter that will be called for by those who are boosting this work.

Bigger crops spell more business for all concerned.

Brother farmers, push the thing along. Boys, write to Sam Jordan, Columbia, Mo., for particulars.

The United States Census.

Farmers and stockmen are advised and requested to answer all questions that are asked by the Census Enumerators. We are assured by the highest authority that these answers will not be used for any other purpose than that intended by law, which is to ascertain the increase in the population, agriculture, industries and resources of the nation since the last census.

It is emphatically declared that the information sought is used solely for general statistical purposes. It will neither be published nor used in any other way to disclose facts regarding any individual or enterprise. The census is not, never has been and can not be employed to obtain information that can be used in any way in the assessment of property for purposes of taxation or the collection of taxes, state or local, or for deportation proceedings, extradition measures, army or navy conscription, internal-revenue investigations, compulsory school attendance, child-labor law prosecutions, quarantine regulations, or in any way to affect the life, liberty, or property of any person.

Every ten years the census is simply taking stock of all its population, animals and resources, and it is absolutely necessary to obtain correct information from each family. It is received in the strictest confidence, and every official is bound under oath and extreme penalties not to divulge one word of the answers to the questions.

Pratts New Poultry Book.

Pratts New Poultry Book is worth having as a gift, and many that we have to buy are not as good. It is written in the interest of Pratts Poultry Regulator, and that is good reading also. It is the farmer who can make the most money out of poultry, and this book is a manual of information concerning the raising of poultry for profit. Write to Pratt Food Co., Dept. F, Philadelphia, Pa., and ask for a free copy of "Pratts New Poultry Book."

GRAND CHAMPION YELLOW CORN

Our readers are reminded that besides the premium offer of Grand Sweepstakes White Corn we are also offering the same prizes for Yellow Corn. Anyone sending us 60 cents for one-year's subscription to The National Farmer and Stock Grower can select one pound of Pascal's Grand Champion Yellow Corn as a premium, or if he will send one dollar to pay for two-years' subscription he can select two pounds of Pascal's Grand Champion Yellow Corn as a premium. The same prizes are offered by us for Yellow Corn that we do for White Corn. See page 26. The reason we use the Pascal Corn is because Mr. Pascal has been breeding Reid's Yellow Dent Corn pure since he obtained it from the originator. Mr. Pascal has won many premiums, and his famous "Pascal Ear" stood for several years without a rival. We regard his corn the best in the world from which premium ears can be expected to be raised. We rely upon the purity and quality of the seed and the record already made. We hope our readers will avail themselves of the opportunity to experiment for themselves under favorable circumstances.

Please send all subscriptions to the Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

The Problem of Milk Keeping.

The writer has had a great deal of experience in the handling of milk, from the standpoint of the producer, the seller and the user. Altogether the man that handles milk has his troubles, and they come from many quarters.

The writer has in mind one large city dairy that was accused of not having clean milk because it soured so quickly. It was asserted that the bacterial content must be very large because it soured quickly in any kind of temperature.

But, in course of time, this same dairy was put on a scientific basis and all the modern appliances were introduced. The improvement has been great. One would look only for commendation on that account. But does the dairy get it? Not quite. The other day a prominent citizen complained to the writer that the dairy must be putting formaldehyde in the milk or it would not keep so long, and he was asked to head an investigation. The health officer was enlisted and he said that the milk kept long because all the milk in that dairy was being sterilized, and it is not easy to sour sterilized milk in the winter time.

This illustrates the fact that milk is looked upon as a hard thing to keep, and so it is, as it is usually produced. But, after all, milk is not hard to keep if it is produced under the right conditions. Perfectly clean milk keeps for a long time, even in warm weather, and even without being sterilized. It is a fact well known to many that during the Paris Exposition, in 1900, milk was sent from Central Illinois to Paris, and was sold sweet at that Exposition, while milk produced the same day in the suburbs of Paris was sour before night. Yet the Illinois milk was not sterilized, nor was it doctored by any chemical. It arrived in Paris seventeen days after being drawn from the cow and showed acid two days later, or nineteen days from the cow.

The dairyman that produced that milk told the writer that he used very great care to have the cows clean and the stable clean and the milkers clean when the milk was drawn. The milk was bottled in bottles that had been sterilized and these filled bottles were put immediately into a refrigerator and shipped to Paris, refrigerator and all. Yet the milk in such a refrigerator does not get quite down to the freezing point.

It may be said that there is but one problem in the keeping of milk, and that is to keep the milk clean. This, though only one problem, is a very big problem. Where most milk is drawn, dirt is more common than anything else. It floats in the air and gets into the milk while it is on its way from the teat of the cow to the pail. Dirt is on the floor, on the clothes of the milker, on his hands, on the strainer, and even in the dish in which the milk is finally put. Is it any wonder that the development of the ferments begin at once?

The preservatives that are used in milk are but chemicals that the lazy use to offset the labor of having things clean. It takes time, money and effort to produce cleanliness about the dairy, and usually these three so expended have little commercial value. Therefore, the discouraging conditions that surround the milk producer, do not seem likely to be soon changed. Nevertheless, we must work for this means of preserving milk because cleanliness is the only right factor with which to attain this end.

Would Not Limit Time of Storage.

One thing which will interest farmers, and all other producers, is the opinion of Secretary Wilson, as expressed before the congressional committee investigating the cost of living and the effects of cold storage on high prices, that it could not do any good to place a limit by law on the time that perishable products may be kept in cold storage.

Congressman Coudrey asked whether "it would relieve the situation as to the rise in the price of foods if we were by law to limit the period of time that meat, poultry, butter, eggs, and other food supplies could be kept in storage?"

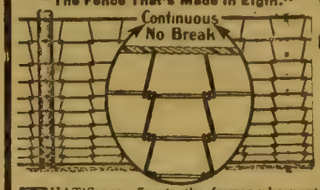
To this the Secretary replied: "I doubt if it would limit the time to such period only as that which the meat would be good when it was taken out, and the packers and all other merchants who use these refrigerators, must do the same thing."

At the Wisconsin Agricultural Experiment Association meeting, prize winter wheat was sold for $64 a bushel at the auction which closed the exhibit, half a peck bringing $8. Oderbrecker and pedigreed barley brought $60 a bushel, half a peck selling for $7.50. Swedish oats commanded $44 a bushel, half a peck being sold for $5.50. The best single ear of corn brought $6.50. Ten ears of Golden Glow corn sold for $26.75, and ten ears of Silver King for $16. These, of course, were all prize exhibits.

Advance Fence

STRAIGHT TO YOU on 30 DAYS' Free Trial

"The Fence That's Made in Elgin."



We pay the Freight and Guarantee Safe Delivery.

THAT'S our offer to the farmer who wants the best fence produced at the lowest price a lifetime fence can be made for. Advance Fence on the farm stands for system and Advance value in property. Advance Woven-wire Fence is the best-looking—strongest-constructed—longest-lasting fence produced. Made of Solid Wire with Continuous Stay wire. Not cut and spliced. A cut wire weakens and points stick out to injure stock. Get a trial order of Advance and note the difference. If it isn't O. K. on trial, send it back **at our expense.** That's fair, square business. **WRITE us for full particulars.**

The Land-owning Farmer.

The farmer that owns his own farm is more of a factor in the agricultural world than the man that farms rented land. This is true as a general proposition, but of course there are exceptions to be met with here and there.

Where the farms are most owned by the people living on them we find the greatest amount of real prosperity. In the newer regions we find more tenant farmers because the land is held in such large pieces that a good deal of capital is required to secure possession of a farm. In many of the older states the farms are small and cost nothing in the beginning. They were originally held in large tracts and were broken up into smaller farms as the members of families increased from generation to generation.

On these small farms the owners have not found it a difficult matter to make a living, for the reason that they have been able to do the work without a large outlay of money, and have produced their own living, in great part, from their own soil.

But where land is held in quarter sections, and each acre has reached a value of more than a hundred dollars, the aggregate value amounts up towards the twenty-thousand mark, including the value of buildings. There are few young farmers without farms that can raise that sum of money with which to purchase a farm. But they can rent such a farm and take their chances of making their living and the rent off the farm. But for the most part they do not make permanent improvements nor do they generally succeed in getting the owner of the farm to do so. They do not fertilize the soil for future crops, because they might be expending money for the benefit of some subsequent renter.

It is therefore to the advantage of all that the farms be generally owned by the men that till them, that the soil may be enriched and the buildings on the farms improved. The land-owning farmer is the independent farmer. He is the man that feels himself a part of the community in which he lives. He takes active part in its political and social life. He is the man that must set the pace and determine the thought of his community.

The land-owning farrmer stands up straight and is a strong factor in the great struggle that we always have in one form or another. Every chance should be offered him to exist. In Australia and New Zealand this fact is being so fully recognized that the governments are buying up large farms and reselling them in small farms to the men that aspire to own land, but have not the means by which to purchase large farms.

As farm tenantry grows, the land-owning farmer becomes less of a factor, and the community deteriorates. This is seen especially in its effects on the schools in communities where formerly the farms were tilled by their owners, but now are tilled by men that rent them on short leases. Their families are hardly more than flocks of birds of passage. Whatever we can do to change tenant farmers into land-owning farmers should be done, for the good of the nation.

A Move For Cheaper Bread.

A company is being formed in St. Louis for the avowed purpose of furnishing the people with cheap bread. They will sell the usual five-cent loaf for three cents. Other bakers say that it cannot be done, because the people demand quality, which cannot be put into a three-cent loaf.

Our Corn Premiums.

We would like to see a few sweepstake prizes won at the National Corn Show of 1910 by corn raised by one of our subscribers from seed corn sent out by The National Farmer and Stock Grower as subscription premiums. We are sending out seed corn from the breeding blocks of Mr. L. B. Clore, the champion seed corn grower of the world, and by Mr. D. L. Pascal, who has won many premiums. We have paid state prizes, but we have not had the pleasure of paying a national prize. See our prize offers.

GASOLINE PUMPING ENGINE
A Special Machine for a Special Purpose
A Lot of Power for a Little Money
This is the Engine for Pumping Large Quantities of Water for Watering Stock, Irrigating, Draining, Pumping out Mines, Quarries, Excavations or other places where a compact, powerful and low priced pumping outfit is wanted.
This Back-Geared Pumping Engine with Stuffing Box, as shown, ready to receive pipe connections, and capable of raising 260 barrels of water per hour to an elevation of 25 feet, 66 barrels to an elevation of 100 feet, or proportionate quantities to any height. F. O. B. Chicago
$100
It is so simple in design that any one can easily understand all its parts. The gasoline feeds by gravity from the large fuel tank which is mounted on the skids, with all connections made before it leaves the factory.
A complete pumping outfit assembled in one compact machine ready to receive the well connections and go to work just as soon as they can be attached. Cylinder, pipe and rod all fitted ready to screw together, for any lift from 25 feet to 100 feet, furnished for $45.
This is an emergency outfit which can be shipped on an hour's notice and can be set up in complete working order within an hour after it is received.
This engine was specially designed for pumping. It can also be used for running a grinder, fodder cutter, saw or other light machinery; but, where operating machinery is the principal work, our $75.00 2-H. P. general purpose engine with fluted cooler is cheaper and more suitable. Larger sizes at proportionately low prices.
If you need a small engine to operate "any old hand pump" our $37.50 pumping engine is just the thing.
Remember that these engines are manufactured by the company which made the steel windmill business. Thousands of these engines are in use.
AERMOTOR CO., 2508 12th St., CHICAGO

JOHNSTON
The corn crop is the most valuable of crops and the saving of every ear means money in your pocket.
The Johnston Corn Binder
is very simply and durably constructed, which gives greatest ease in drawing and most convenience in operating. The Johnston Corn Binder enables the farmer to harvest his crop, not only easily and quickly, but with the greatest economy.
EXCLUSIVE FEATURES ARE: An Automatic Gate which prevents the incoming corn from crowding while bundle is being tied. The pole placed between gearing and drive wheel gives perfect balance and direct draft. A large and powerful Main Drive-Wheel—Good Traction. Roller Bearings. Binder Attachment gear driven. No packers to knock off corn. And the widest band adjustment of any machine—binds 32 in. from butts, or as low as 18 in. Can also bind above or below the ears. All levers convenient to driver. In fact—
The Most Satisfactory Binder in Use

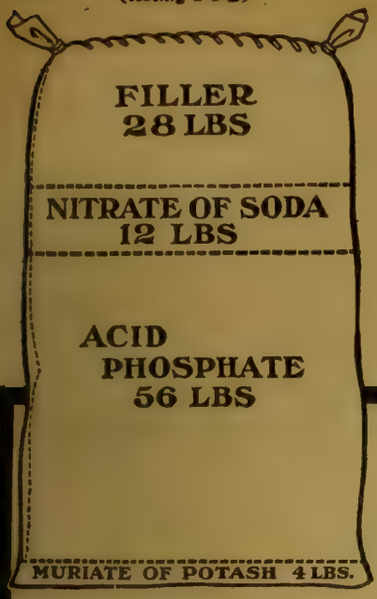
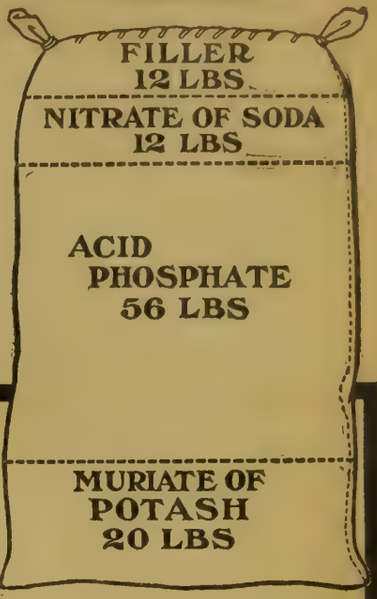
100 lbs. of an ordinary Fertilizer
(testing 2-8-2)



Needs Sixteen Pounds of Muriate or Sulphate of POTASH to make it a

Well-balanced Fertilizer
(testing 2-8-10)



If you prefer ready-mixed fertilizers, insist on having enough Potash in them to raise the crop as well as to raise the price.

Crops contain more than three times as much Potash as phosphoric acid.

It was found years ago that the composition of the crop is not a sure guide to the most profitable fertilizer, but it does not take a very smart man to figure out that a **balanced fertilizer should contain at least as much Potash as phosphoric acid.**

Insist on having it so.

If you do not find the brand you want, make one by adding enough **Potash** to make it right.

To increase the Potash 5 per cent., add 10 pounds of Muriate or Sulphate of Potash to each 100 pounds of mixed fertilizer; to increase it 10 per cent., add 20 pounds.

Talk to your dealer and ask him to carry Potash in stock or order it for you. It will pay you both, for **POTASH PAYS**

For particulars and prices write to

Corn Cultivation in Dry Times.

I find that no crop will pay a man any greater profit for the extra time in preparation and thorough cultivation than corn. On land that has a red-clay subsoil I have found that subsoiling, when done at the right time and in the right manner, will give from six to fifteen bushels more corn per acre. I have also experimented with deep plowing without subsoiling and find that it is not a good idea to turn up too much clay just preceding the corn crop. One can do deep plowing in fall and get much better results than to wait until spring. I find, unless subsoiling is done, that it is best to turn up but an inch or two of extra clay each year. I have also found from experience that the best working I can give my corn is to work it before it comes up. By so doing I am able to kill thousands of weed and grass seeds that are sure to germinate before the corn seed. Such cultivation also gets the surface of the soil in the best of condition to receive the coming corn shoots and enable them to come up uniformly. I do this cultivating with a fine-tooth harrow or weeder, generally running it over and across the field two or three times before the corn is up and twice a week until the corn is two feet in height.

One can go over six to eight acres daily and absolutely keep the corn perfectly clean.

Some farmers claim that corn must have a deep plowing with long shovels or bull-tongue plows when it is early. I have tried this method and find that it is more of a horse-killer than a corn producer. I find the time to do deep plowing is before the corn is planted and shallow plowing afterwards.

When corn gets too large to use weeders, we use small plows set to run very shallow, using these on cultivators. I continue to plow once every four to six days until the corn is silking and tasseling. When possible, I do not allow a crust to form after rains. Many farmers claim that it will not do to continue this cultivation when a drouth sets in. That is just the time I want to keep the cultivators running. I remember one year, while on father's farm, a severe drouth set in during the latter part of June and continued until the latter part of August, and during this entire period of sixty days we did not have enough rain to lay the dust. Our friends quit cultivating and warned father time and again that he would ruin his crop by cultivating it during the drouth; yet in spite of their repeated warnings he continued to plow the corn very shallow every four or five days. He repeated this shallow cultivation until the corn was silking and tasseling. At this period the drouth was broken. Our corn continued to grow and look thrifty and green right through the drouth, while our friends' corn, that was not cultivated, burned up. Father averaged fifty bushels of shelled corn per acre, while those who ceased to cultivate scarcely made their seed back. He sold corn at $1.00 per bushel to the very men who advised not to cultivate; yet they learned a valuable lesson.

We also find level cultivation to give better results than ridge cultivation. It not only gives larger yields, but leaves the land in better condition for the next crop.—W. C. Crook, Huron, Tenn.

The Forest Service of the United States Department of Agriculture is denying certain exaggerated statements regarding Eucalyptus tree-growing in California and claims that the misquotations are by land companies for the purpose of misleading the people. The department experts say there is promise of considerable success in the cultivation of Eucalyptus trees in many parts of California but there are many uncertainties connected therewith which should be taken into account.

FOR THE LAND'S SAKE! WHEN

Are You Going to IRRIGATE, DRAIN, DITCH or TERRACE That Farm of Yours?

HERE'S A GREAT BOOK FOR YOU, written by Bostrom himself, and entitled **"Soil Salvation."** It's a book of farm facts and land facts, learned during his twenty-five years of practical experience with irrigation, draining and terracing. You need this book, and we want you to have it; it's yours **free.** With its help and a Bostrom Improved Farm Level you'll save all the expense of a surveyor. You can do the work yourself.

BOSTROM'S FARM LEVEL is used and endorsed in every State in the Union. With the magnifying lenses in the Telescope you can read the Target a quarter of a mile away. **Simplicity, Accuracy, Durability, Guaranteed.** We include Tripod, Rod and Target, and full instructions. Price $15 and express charges. Shipped C. O. D. subject to examination if desired. Order direct from this offer.

WESTERN CANADA

What J. J. Hill, the Great Railroad Magnate, Says About its Wheat-Producing Power:

"The greatest need of this country (United States) in another generation or two will be the providing of homes for its people and producing sufficient for them. The days of our prominence as a wheat exporting country are gone. Canada is to be the great wheat country." J. J. HILL.

This great railroad magnate is taking advantage of the situation by extensive railway building to the wheat fields of Western Canada. Upwards of

125 Million Bushels of Wheat

were harvested in 1909, and the average of the three provinces of Alberta, Saskatchewan and Manitoba will be upwards of 25 bu. per acre. Free homesteads of 160 acres, and adjoining pre-emption of 160 acres at $3 per acre, are to be had in the choicest districts.

Schools convenient, climate excellent, soil the very best, railways close at hand, building lumber cheap, fuel easy to get and reasonable in price, water easily procured, mixed farming a success. Write as to best place for settlement, settlers' low railway rates, descriptive illustrated "Last Best West" to Sup't of Immigration, Ottawa, Canada, or to the Canadian Government Agent. (8)

J. S. Crawford, 125 W. 9th St., Kansas City, Mo.; C. J. Broughton, 412 Merchants Loan & Trust Bldg., Chicago, Ill.

Woolen Suits at $5.00 Each.

In the Missouri penitentiary, having decided to change the striped suits of clothes to raiment of light blue, thereby no longer degrading prisoners by their clothing, the warden purchased cloth for the new suits woven by the woolen mills at California, Mo., and the said cloth was made entirely from wool that was grown on Missouri sheep. The suits consisted of coats, pants, vest and cap and the net cost of all the material, not counting labor, was $5.00 per suit. The suits were made up in the penitentiary at the tailor shop, therefore labor was not charged up against them. The case we wish to make is this: That Missouri wools are good wools and quoted the highest in the market; the cloth was made and sold in the usual way; the linings, buttons, findings, etc., cost as much as any tailor would have to pay for them, and yet the material, including the protective tariff duties on wool and woolens, only cost five dollars. This for a good average, every-day, all-wool suit of clothes. That the suits were for convicts makes no difference; the convicts are as well or better dressed than many people who work in cities. When the high cost of living is under investigation it will be well to understand that the material for an all-wool suit of clothes can be bought for a five-dollar bill, notwithstanding the tariff on wool and woolens, which the President of the United States clearly says ought to come down.

CLAY, ROBINSON & CO.

We are requested to announce that Clay, Robinson & Co., live stock commission agents, have opened a new branch house at Fort Worth, Texas, under the management of Mr. Ireland Hampton, who is well and favorably known on account of his association with that market.

It is only a year since Clay, Robinson & Co. opened the house at the St. Louis National Stock Yards, yet their high-class service has placed them in the front rank of firms doing business at St. Louis.

The Fort Worth house completes the most thorough and up-to-date live stock commission firm in existence. The firm of Clay, Robinson & Co. can serve the interests of any buyer of stockers and feeders for final sale at any market and are in a position to advise shippers on the instant which is the best market for the time being. Shippers who wish to keep posted in regard to the live stock market can get full information by writing Clay, Robinson & Co. at either Chicago, Kansas City, South St. Joseph, East St. Louis, Fort Worth, Texas, South Omaha, Sioux City, South St. Paul, Denver, Colo., or East Buffalo, N. Y.

Great Hog Dressing.

We are in receipt of a letter from Mr. J. S. Patrick, of Bloomington, Ky., who gives the following particulars concerning the dressing of a very fine hog. He says:

"I have just read a history of the dressed-hog contest in your paper that took place at the Chicago International Show, and decided I would send you the gross and net weights of a very fine hog I killed January last. The hog was a grade Poland-China and weighed, gross, 854 pounds; dressed 506 pounds. So you can figure it out and see that it would have taken first prize at the contest, if it had been there, dressing nearly 88½ per cent., while 87.42 won the prize in the contest."

Treating Fruit Trees Girdled by Rabbits.

Rabbits have seriously injured fruit trees in many orchards by girdling this winter. Prof. J. G. Moore, of the College of Agriculture of the University of Wisconsin, says that when the girdle is only three or four inches wide the tree may be saved by bridge grafting. Trees with large patches of bark removed entirely around the trunk cannot be successfully treated, though those not too badly injured may be saved by special treatment.

Seeds that Grow!

If you want the Best it is possible to Grow, such as you can rely upon to produce the Choicest Vegetables and Most Beautiful Flowers, you should try Burpee's Seeds!

WE shall be pleased to mail you, upon application, **Burpee's New Annual for 1910,**—long known as "The Leading American Seed Catalog." The first edition is more than four hundred thousand copies and yet it is too expensive **a book of 178 pages** to mail unsolicited except to our regular customers. With elegant colored plates and hundreds of illustrations from nature it tells plain truth and is a Safe Guide to success in the garden. Do you want a copy? If so, send your address to-day to

W. ATLEE BURPEE & CO., Philadelphia, Pa.

SEED CORN 153 BU. ACRE

Diamond Joe's Big White—A strictly new variety. None like it. It is the Earliest and Best Big White Corn in the World—Because it was bred for most Big Bushels, not fancy show points; because grown from thoroughbred inherited stock; every stalk bears one or more good ears; because scientifically handled, thoroughly dried and properly cured and had the most rigid examination. Big Seed Catalog FREE. It tells about all best farm, grass, garden and flower seeds grown. Write for it today.
Address, **RATEKIN'S SEED HOUSE, Shenandoah, Iowa.**

RATEKIN'S 100 BU. OATS

Ratekin's Big Banner 100 Bushel White Oats—The biggest, prettiest, plumpest oat in existence. Side by side with common sorts they yield 100 bushels per acre where other sorts make but 25 to 35 bushels. Strong, stiff straw; sprangled heads; ripens early; never rusts, blights or lodges. **There is none like them,** and when our stock is exhausted there is no more to be had. **Samples Mailed Free.** Also our Big Illustrated Catalog of farm, field, grass and garden seeds. A postal card will bring them to your door. Address,
RATEKIN'S SEED HOUSE, Shenandoah, Iowa.

Price all complete, with our improved shearing head and 4 sets of cutting knives, is ONLY—
$9.75

DON'T SHEAR SHEEP WITH HAND SHEARS

It is slow—you don't get all the wool—you cut the sheep—and you make hard work of it for yourself.
Do your shearing with this **STEWART No. 8 SHEARING MACHINE**

This is the great enclosed gear shearing machine you hear so much about. Every gear is file hard, is enclosed, protected and swims in oil, doing away almost entirely with friction and wear. This machine turns easy, shears fast and gets all the wool. IT MEANS 20 CENTS WORTH MORE WOOL FROM EVERY SHEEP.

Your dealer can supply this machine, or send $2.00 and we will ship C.O.D. for balance. Write for our new 1910 book, "More and Better Wool." It is FREE. Send for a copy today.

Chicago Flexible Shaft Co. 182 Ontario St., Chicago

It must please and satisfy you or you can return it and we will refund all you paid.

THE SIMPLEX ROAD MACHINE.

Road machines are made so well and sold at such low prices, and, what is best of all, they are so useful on the farm that no progressive farmer can afford to ignore the idea of buying one. Send to the Russell Grader Manufacturing Company, 2443 University avenue, S. E., Minneapolis, and get full details of their Simplex Road Machine, which is advertised in another column in this paper.

HARD WINTER MAKES CLIPPING NECESSARY.

The hard winter just closing has caused horses to have a longer and heavier coat of hair on this spring than is usual. If put at the hard spring work in this condition they will naturally suffer a great deal. To clip them will be a great relief, as by taking off the extra long and heavy coat of hair they will be less prone to perspire freely on first going at the spring work, and what perspiration they do secrete will dry off quickly. If not clipped, they will perspire very freely and it will take a good many hours for them to dry out.

If clipped, they should be blanketed, providing nights are very cold, especially for a few hours after being put into the stable. In that time they will be dried off and will get better rest by far than the unclipped animals. See advt. of Chicago Flexible Shaft Company, 182 Ontario street, Chicago, Ill., and write for catalogue of horse-clipping machines.

GROWING HEAD LETTUCE.

The secret of success in growing head lettuce, according to a writer in the great gardening number of The Fruit-Grower, St. Joseph, Mo., is in planting the right varieties and getting the plants started early, so they will mature before hot weather sets in. Lettuce is a cool-weather plant, and the heading varieties are likely to run to seed if planted too late. It is a good plan to start in a hotbed and then transplant to the open when the weather is warmer. See advt. and prize offer of the Fruit-Grower on page 30.

A Most Useful Premium.

A farm on which there is not a sewing awl is in difficulties when work is most pressing. It is surprising how useful this little implement is. It is the Myers Famous Lock Stitch Sewing Awl. It is the only sewing awl made with a groove running the full length of the needle and has what is known as a diamond point. In order to sew leather or any heavy, thick material without breaking or cutting the thread it requires a needle with the groove running the full length of the needle. You might just as well have no groove in the needle as to have it only part of the way. With the Myers Awl you can sew old or new harness, saddles, carpets, canvas, tents, rugs, quilts, shoes, grain bags, and many other things. You can use any kind of thread in the Myers Awl, and it makes a lock stitch same as a sewing machine. It is very simple; a woman can use it as well as a man. It is one of the most practical devices ever invented. They are put up with two needles; one is straight and one curved, with a small screwdriver and wrench combined. Also a reel of waxed thread with each awl ready for use. Every teamster and farmer should own a Myers Lock Stitch Sewing Awl, as there is use for one in almost every household. The Myers Awl is nicely finished, the metal parts are nickel-plated, the needles and wrench are kept in the hollow handle, which has a screw top.

Anyone who will send One Dollar cash to pay in advance for two-years' subscription to The National Farmer and Stock Grower can select one of Myers' Lock Stitch Sewing Awls, which we will send by mail, postage paid, as a free premium. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Less Cotton in Egypt.

A synopsis of a lecture delivered before the Cairo Scientific Society on Egyptian cotton-growing has been forwarded to the Department of Commerce and Labor by Consul-General L. M. Iddings. It is based on the hypothesis that the country is waterlogged, causing the decrease in cotton production last season to 550,000,000 pounds, from an advance estimate of 700,000,000 pounds. As an example, it is cited that the best land on the state domains seven years ago is now the worst.

Milk Producers Meet.

On February 28th, at the office of the Secretary, Mr. Wm. A. Fischer, 409 Franklin avenue,, St. Louis, Mo., a Directors' meeting was held. The President, Hon. D. I. Furbeck, made his milk report, which was ordered printed and sent out to all members in good standing.

Nothing new developed at the meeting. The short attendance of Directors indicated that farmers are busy and cannot give up time to attend meetings, especially when prices are pretty good and there is little to complain of.

Payments by J. J. Schmidt, Flucom, Mo.; J. H. Morse, Valles Mines, were reported by F. X. Speidel, of Knorpp, Mo., representing the Bonne Terre Route.

Mr. Fred Goebe, of Addieville, Ill., who sells his product at the home station, sent in his own subscription to help the financial end of the association, which is away behind.

Mr. Furbeck paid over dues collected from two members on the 'Frisco Route. One is Mr. Thomas Shields, of Eureka, Mo., who is delivering certified milk which is sold in St. Louis daily, and who has a first-class herd of seventy cows, which are kept under highly sanitary conditions; the other—Mr. Wm. Beauchamp, of Pacific, Mo.—who is also selecting and building up a fine herd of dairy cattle and handling them upon the basis which produces a healthful and sanitary product. He has fifty cows, concrete silo and an up-to-date plant for milk production.

The members were pleased to meet their friend and former associate, Mr. C. A. Olmstead, of Shipman, Ill., who is now making contracts and establishing stations for the St. Louis Dairy Company. This is about the first time he has looked in on meeting day.

Menard Etter and Anton Hempen, of Carlyle, Ill., sent in their subscriptions in advance by Mr. Ben Schomaker, delegate representing the B. & O. shippers. They have always supported the association from the very beginning.

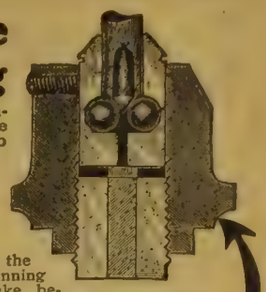
Another meeting of delegates representing milk producers on railroad systems will be held Monday, March 28th, when it is hoped that more delegates will attend and bring in the dues from members on their different routes.

The Conroy Piano.

The Conroy Piano is constructed of the finest material, is elegant in appearance, the action is superb, and the tone is brilliant and delightful. It is manufactured expressly to be sold direct from the factory to the home, without a cent of dealer's commissions, and guaranteed by the house that sells the best pianos in St. Louis and the largest number of them. Our readers who wish to purchase a piano should fill out the coupon on page 21 and send it in to Mr. Conroy. The free trial offer is bona-fide, money can be saved, and a splendid piano bought by writing to the Conroy Piano Company, 11th and Olive streets, St. Louis, Mo.

Our readers will obtain first-class Angora goats from our advertiser, Mr. R. C. Johnston, of Lawrence, Kansas, who has a prize-winning flock.

The Secret of the Empire's Ease of Turning



NO OTHER separator can turn easily, compared to an Empire, because no other manufacturer can use the one frictionless cream-separator bearing for the bowl spindle to rest on. That is an Empire patent.

In an Empire the bowl is supported by a single straight spindle, the point of which rests on the **curved surface of three balls.** (See illustration.) This arrangement not only prevents all friction at the spindle point, but avoids the necessity of any closed bearing around the spindle higher up—as all other separators must have.

This accounts for the Empire being known everywhere as the **easy separator.** A Frictionless Empire, for example, keeps running half an hour after you stop turning, unless you apply the brake, because the upper bearing is also ball-bearing—as frictionless as the bottom bearing. Other reasons: Light bowl, fewest bearings, simplest construction, best materials and workmanship. No chance of wear or getting out of adjustment—and no work; facts just as true regarding the Empire Disc.

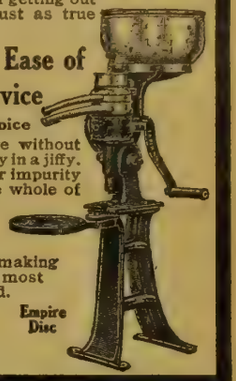
Lower Bearing

Frictionless Empire

Empires Beat Them All For Ease of Cleaning, Too—and Long Service

Different Styles—All Sizes—Widest Choice

A boy or girl can not only turn an Empire without effort, but **clean** it, making it absolutely sanitary in a jiffy. That's a **vital** point. Even a speck of cream or impurity that lodges in a crack or crevice will taint the whole of your next skimming. Empires are, first of all, **sanitary** separators.



Empire Disc

The Thing That Interests Dairymen

is not which Company **has made the most failures** in its attempts to make successful Cream Separators, or which Company has abandoned or discarded the most inventions because (by its own admissions) of the inferiority of those inventions, but

Which Has the Best Cream Separator in 1910.

The **United States Separator beat all of its competitors** and won the **GRAND PRIZE** at the Alaska-Yukon-Pacific Exposition, June to October, 1909.

The United States Separator beat all competitors at the Pan-American Exposition in 1901, in fifty (50) consecutive runs, with **ten different** breeds of cows and won the WORLD'S RECORD and continues to **hold** the WORLD'S RECORD in 1910.

The best breeders and leading dairymen everywhere use the UNITED STATES SEPARATOR.

Beautiful Illustrated Catalogue No 125 will give you all other necessary information.

VERMONT FARM MACHINE CO., BELLOWS FALLS, VT.

4

Scarcity of Milch Cows.

A meeting held at the Planters' Hotel, St. Louis, on Saturday, January 15th, was attended by representative men who were interested in dairy products. Milk producers were there, butter-fat shippers were there, milk receivers and distributors, railroad, industrial and freight agents, the State Dairy Commissioners and many others were there, all desirous of increasing the dairy output of the state of Missouri.

A number of short speeches were made, all pertinent to the purpose of the meeting, and finally the remarks turned upon the scarcity of good milch cows. It appeared that money could buy watches, diamonds, houses, lots and farms, because all were to be had at a fair price, but it is stated by a first-class authority that a hundred really good dairy cows, ready to start a dairy farm could not be obtained for love or money by scouring the United States except by buying out and moving one herd, in order to get cows to start another. There appears to be no base of supplies that will quickly fit up dairy farms, and although cows can be had here and there and developed as milkers they are not first-cass, ready-made dairy cows by inheritance.

This was certified to by men who were in the business and who were actually engaged in selling their own certified milk on the St. Louis market, and some of them were in possession of strictly first-class herds, brought together by careful selection and kept up by a process of testing and reserving profitable cows, and disposing of those which from the tests appeared to be unprofitable.

To raise dairy cows on the high-priced lands near the big cities is a difficult matter. Dairy farms are not large, and keeping a lot of calves, yearlings, two-year-olds and three-year-olds, besides the aged milkers, is a strain upon the small farms which few milk shippers can stand, and the consequence is that milch cows are always wanted and the supply is not equal to the demand for them. This also applies to other city milk-shipping districts.

This particular milch cow scarcity is in milk-producing cows—ocws that are long milkers, without any special call for high butter-fat content for the milk. It points directly to Holstein grade cows—cows that will conform to lawful milk standards in quality and to farm requirements in quantity,that will produce milk profitably when pastures are good for 10 to 12 cents a gallon net at the shipping station and produce milk profitably in winter when it nets the shipper 13 to 15 cents a gallon. There is a demand for such cows at $50.00 to $80.00 for the cow and calf.

Speaking to a stock yard commission man on this subject, he was not enthusiastic about getting people to devote their farms to producing milch cows. He said: "We sell a number of pretty good milch cows at $40 to $60 per head, but they come in mixed loads, and there is no place where a car-load could be picked up. We sell a good many old and dry cows for beef for a good price per pound, if they are fat, and for a mean price if they are thin. We sell more dry cows for beef than we do milch cows to go out into the country. The milk farmers must supply themselves by raising and buying milch cows near home."

Speaking about it to a commission man on Third street, St. Louis, he said: "The dairy calves that come in off near-by farms are mostly males, which are sold as soon as they can get rid of them. Good heifer calves are sometimes kept, but grade Holstein heifer calves are generally valued about $12.00 a head at the farm and are a good purchase for anyone who can raise them."

This brings us back to the opening for the production of dairy cows as a specialty with milk production in view. Good, healthy cows of any kind, a little Shorthorn blood preferred, bred to a good, pure-bred Holstein bull, will produce a marketable steer calf, or a good half-breed heifer calf to keep. Follow the process until the heifers are three-quarters and seven-eighths Holstein and the herd is established. The three-year-old heifers as springers will sell in car-load lots at the home farm at good prices, say $50 to $60 around. In the meantime the herd is just as good a money-maker as it was before. Cow for cow, calf for calf, yearling for yearling, the returns are better and the final result is good. The old, unimproved cows will be sold as the better cows grow up, and without a dollar additional cost the herd becomes valuable instead of a scrub herd.

In any country where there are cheap pasture lands young stock cattle can be raised to advantage; but there are large sections where stock cattle is the limit, and where beef steers cannot be brought to maturity or market perfection for want of fattening feeds; but wherever grass can be grown and forage can be raised a first-class dairy cow can be produced and raised economically to market perfection, and the market is waiting and wide open at highly profitable prices.

Calf Buyers' Combination.

The St. Louis Calf Buyers' Association is the latest combination. This is to offset the Poultry, Butter and Egg Exchange. The commission men wish to sell the calves of their customers as high as they can, and the buyers are trying to pay as little as they can. The combination will not last long if the commission men bunch the calves together and ship them to the stock yards. Then the calf-buying combination would go out of business.

It is the happy privilege of any man to tell the farmer how to farm. The time has come when it also appears to be a good idea for some one to instruct city people how to live.

Farmers, hold onto your land. It is very much easier to sell out than it is to buy in again.

CREAM SEPARATION.

Probably the most important subject on any farm to-day is cream separation. The production of milk for shipment to big cities is becoming surrounded with so many stringent regulations that the farmer producing milk for city consumption has more than the usual difficulties to contend with. City requirements would not be so unreasonable if they brought increased compensation with them. The requirements of milk delivery are such now that they call for certified milk in every instance, and if the producer who is a shipper could obtain net results commensurate with the outlay required for his part of the business he would be justified in accepting the situation and producing and delivering the highest-quality product because he obtained a good price for it.

But no. The five-cent, half-pint glass of milk which is retailed over the restaurant counter, or in the bar room, or the ten-cent glass of fermillac which is dispensed at the drug store, only produces the milk shipper one of the cents taken in, and all the money above the cent goes for freight, profit and handling. Between the delivery platform at the Union Station and the house-and-house delivery from the distributor's wagon there is always a difference of sixteen cents a gallon, and the larger the general milk production happens to be, the worse off the milk producer is, for in summer he nets an average of three cents a gallon less than he does in winter, and there is no season where his profits are at all commensurate with his outlay, notwithstanding he may make an honest living producing and shipping milk.

For many years, bad as it was, milk selling was the best outlet for dairy products. We doubt if it is so to-day. Butter-fat sold at 30 cents per pound and skim milk fed to hogs will beat almost any milk shipments to-day, and butter-fat can be shipped to creameries and the skim milk fed to hogs on farms which could not pay the freight bills on milk out of their proceeds, neither could they deliver sweet milk at cities so far away, neither could they produce enough milk on their farms to make up a daily shipment; but cream shipments to the creamery are not so restricted as to time or quantity, and many a farmer can sell two or three hundred pounds of butter-fat in a month who can not satisfactorily produce and market a milk shipment.

This condition comes home to farm-paper editors from the manufacturing side of the dairy business. We used to advertise every kind of dairy implement. We are now limited to cream separators. Butter-making is a farm burden, but cream shipping is an easy proposition. Why all these cream separators? Because the farmer finds it pays him to use them. They are as necessary on a farm as the plow, the seeder, the cultivator and harvester.

Certainly the conditions favor selling cream. At the Agricultural College they sold cream from the largest milk-producing cow in the state for the reason that it paid far better to do so than to ship the milk to the nearest large market. It is practically so throughout the state. The milk-shipping zones surround the big cities limited to about sixty miles, but outside and inside these zones comes the cream-shipping territory that has no railroad limits. To make a small farm pay under present conditions, cream shipping heads the list of general farming industries, and all it needs is, that the farmer shall fully equip himself with implements for the conduct of the business.

Other Cream Separators Merely Discarded or Abandoned De Laval Inventions

It is interesting and instructive to know that nearly, if not quite, every cream separator that has ever been made, and certainly all that are being made at this time, are merely copies or imitations of some type of construction originally invented or developed by the De Laval Company, and either not used by it because of something more practial or else discarded and abandoned in the course of De Laval progress and utilization of later improvements.

As earlier patents have expired some of their features have one after another been taken up by different imitators, so that at all times, as is the case to-day, every separator made in the United States or elsewhere in the world, utilizes some type of construction originally owned and developed by the De Laval Company, though some of them have never been commercially used by the De Laval Company because of their inferiority to other types of construction used by it.

The De Laval Company has always been forging ahead, with its many years of experience and the best of experts and mechanics the whole world affords in its employ, so that before any expiring patent might permit the use of any feature of construction by imitators the De Laval Company had already gone so much beyond that type of construction that it was then old and out-of-date in the modern De Laval machines.

All cream separator inventions by others have been of immaterial details or variations, upon which patents have been taken, if at all, more for the sake of the name than by reason of any real value or usefulness attaching to them.

The first practical continuous flow centrifugal Cream Separator was the invention of Dr. Gustaf de Laval in 1878, the American patent application being filed July 31, 1879,and issuing as Letters Patent No. 247,804 October 4, 1881.

This was the original Cream Separator—of the "Hollow" or empty bowl type—and it has been followed from year to year by the various steps of cream separator improvement and development, all De Laval made or owned inventions, the American patent applications being filed and letters patent issued as follows:

The original hand Cream Separator of the "Bevel Gear" type; application filed October 2, 1886, issuing as Letters Patent No. 356,990 February 1, 1887.

The original hand Cream Separator of the "Spur Gear" type; application filed January 17, 1887, issuing as Letters Patent No. 368,328 August 16. 1887.

The original Steam Turbine-driven Cream Separator; application filed December 8, 1886, issuing as Letters Patent No. 379,690 March 20, 1888.

The original "Tubular" shaped "hollow" bowl Cream Separator; application filed April 19, 1886, issuing as Letters Patent No. 372,788 November 8, 1887.

The original "Disc" bowl Cream Separator; application filed May 12, 1890, issuing as Letters Patent No. 432,719 July 22, 1890.

The original vertical curved or interlocking "Blade" Cream Separator bowl, covered likewise by the application filed May 12, 1890, issuing as Letters Patent No. 432,719 July 22, 1890.

The original "Bottom Feed" Cream Separator bowl; application filed July 24, 1889, issuing as Letters Patent No. 445,066 January 20, 1891.

The original "Suspended" bowl Cream Separaror; application filed August 21, 1893, issuing as Letters Patent No. 512,203 January 2, 1894.

The original "Star" or "Pineapple Cone" shaped series of cylinders Cream Separator bowl; application filed August 24. 1893, issuing as Letters Patent No. 521,722 June 19, 1894.

The original "Curved Disc" Cream Separator bowl; application filed January 18, 1905, issuing as Letters Patent No. 892,999 July 14, 1908.

The original "Split Wing" Tubular Shaft Cream Separator bowl; application filed April 29, 1898, issuing as Letters Patent No. 640,358 January 2, 1900—which invention, with a series of later improvements, is the type of bowl construction used in the De Laval machines of to-day, and still covered by protecting patents which prevent its appropriation by would-be competitors.

The patents thus enumerated are but a few of the more important of the more than 500 original Cream Separator patents owned, controlled and developed by the De Laval Company during its thirty years of creation and development of the Cream Separator industry throughout the world. They are recited because they show in the most illustrative and conclusive manner possible De Laval originality and leadership from 1878 to the present day.

In addition to these patent-protected features, the De Laval machines have within two years been mechanically re-designed and re-constructed in every part, from top to bottom, so that the new and improved line of De Laval machines are to-day, even more than at any past period, fully ten years in advance of any other cream separator made.

These are the Rock-of-Gibraltar-like separator facts against which the mere "word claims" of would-be competitors fade away like the mists of night before the rays of the morning sun.

Mill Creek Stock Farm.

The home of the noted Starlight family of Jacks and Jennets for the past thirty years, is located seven miles southeast of Nashville, Tenn., on the N. C. & St. L. R. R., at Asylum Station, and has on hand at all times a nice lot of Jacks, Jennets and Stallions, all of the best blood, from six months to six years old, for sale at reasonable prices. Write for catalogue. Also Jersey Cattle.

THOS. H. EZELL, Prop.,
(son and successor to the late H. C. Ezell), **Nashville, Tenn., Sta. B, R. F. D. No. 7.**

THE HUMAN SIDE OF TWINE.

When we drive home from the implement dealer with our little load of Sisal twine for the coming harvest, we do not often realize that we are giving that twine its final lift on the journey of many thousands of miles which it has taken months to make. Seldom do we appreciate when we give it its final resting place in the binder box that the first hands which touched it were those of a Maya boy or girl in far off tropical Yucatan, whose ancestors were a great civilized people, with temples and literature, centuries before Columbus came ashore in his red velvet suit.

Or, if it is Manila twine, the first step in its long pilgrimage was under the guidance of a bare-footed, brown-skinned little Filippino savage, who perhaps never heard of a binder, and whose views of agricultural implements are a pointed stone or a crooked stick.

Yet, if it were not for the industry of these two widely separated nations, the farmers of this rich state would still be obliged to bind their grain with old-fashioned wire, which never worked, or with untrustworthy cotton strand. In fact, the problem of twine was the problem of successful binding for years after the self-binder was an established fact.

It took many years and thousands of dollars to eliminate this primary drawback to the early grain growers of the country. One manufacturer alone spent $15,000 trying to make twine out of grass, $35,000 using paper as a substitute, and $43,000 on straw—all in the end to be discarded as unsatisfactory. Then, after searching the world with a close tooth rake, as it were, it was found that two fibres could be made to do the work—Manila and Sisal. The Manila—long, soft and even—had generally been used in multiple strands for making cable and cordage; while the Sisal—strong, pliable and smooth—was found to lend itself perfectly for the manufacture of a single-strand cord, such as the self-binder necessitated.

Then commenced a merry struggle between the distant races for the honor of supplying the twine which was to make His Majesty, the American farmer, the greatest food producer in the world. At first, owing to the established position of the Manila hemp trade caused by the cordage industry, the little brown brother in the Philippines forged ahead, but he made no progress in his methods of production, using the knife and block and other simple methods followed by his primitive forefathers in extracting the fibre. It was soon seen that Sisal would either be the ultimate material to supply this demand or the demand would not be filled. At this point of the race a number of clever, aggressive Yucatecans, educated in the sciences in this country and abroad, sprang into the game. They saw the future commercial possibilities of the neglected Sisal plant. At their own expense they built railroads into the arid, dry territories where henequen grew. They invented new machines, capable of cleaning 100,000 leaves a day, and soon began to compete on an equal basis with the Manila fibre.

The Spanish-American war temporarily advanced the price of Manila fibre to such an extent that good grades of Manila fibre commanded a price which was practically prohibitive for binder twine. Therefore, manufacturers of binder twine concentrated their energy and genius in the production of a perfect binder twine from Sisal. This required some adjustment of machinery and some change in methods, but manufacturers of twine succeeded so that the twine made from Sisal has for some years been as perfect and satisfactory as any binder twine ever made from any material. This has resulted in the increased use of Sisal, until during the past season not less than 85 per cent., and possibly 90 per cent., of the material which went into the manufacture of binder twine in the United States was Sisal fibre.

First-class binder twine can be made from high-grade Manila fibre, but it is very difficult to make even a reasonably good article of binder twine from low-grade Manila. Before the American occupation of the Philippine Islands, the Spanish officials at times exerted their arbitrary power for the purpose of maintaining the quality of the fibre which was produced by the natives. It was not an uncommon thing for the governor of a district to seize a quantity of inferior fibre and publicly burn it in the middle of the plaza. This was an object lesson to the natives to produce better grades of fibre. However, since the Americans tave taken possession of the Philippine Islands, no authority has been exercised and no influence exerted by the officials in connection with the quality of fibre. The result is a very much greater proportion of low-grade fibres than has ever been produced in previous years. Unquestionably, large quantities of this low-grade fibre will be used in the manufacture of binder twine for the harvest of 1910, and it is unnecessary to state that those who attempt to use twine made from this low-grade Manila fibre will have troubles of their own.

There may never be a famine in twine, but it is rather to the farmer's interest always to keep a weather eye on the future, and in this particular instance to secure his twine supply, whether it be Sisal or Manila, at as early a date as possible.

GREAT DISCOVERY.

I can cure Fistula and Poll Evil in horses. After years of experimenting I can easily cure these disagreeable diseases without use of the knife. Anyone can use it and cure their own horses. Cost of ingredients small. Send $2.00 for recipe with full directions. Address, **DR. D. L. DE VORE, Le Roy, Ill.**

GOOD BOOKS AND PAPERS.

HORSE SECRETS EXPOSED. Issued by the Farm Journal, Philadelphia. It is written by Dr. A. S. Alexander, a veterinarian of twenty-five years' experience. This book is fully up to representations and is very valuable. There are fifty-six chapters, sixty-four pages, all containing clear-cut inside facts about the horse, including exposures not heretofore apearing in print. Send 50 cents to Farm Journal, 1068 Cherry street, Philadelphia, for a copy of **Horse Secrets,** and they will send you for two years the **Farm Journal,** the paper that has been and still remains the greatest success in publications devoted to farm agriculture.

BELLE CITY INCUBATOR FOLDER. This explains the entire process of incubation from the receipt of the incubator to the delivery of the chicks from incubator to the brooder. Describes why they abandoned wood in the construction of incubators and brooders. It is a hot-water, 140-egg machine, explains how it is heated, the safety lamp, ventilation, etc. Explains cheapness of price also. Send for folder to Belle City Incubator Co., Box 74, Racine, Wis.

Mr. C. H. Miles, of Lawrenceville, Ill., is advertising some nice Collie pups of his own breeding and raising. We have a list of buyers from his kennels, stating that his pups give excellent satisfaction.

The rumored sale of the U. S. Cream Separator to the International Harvester Company is denied by the Vermont Farm Machine Company.

Potatoes are selling at St. Louis at 39 cents to $1.12½ a bushel. Michigan Triumphs top the market.

Packers and the Markets.

Officers of the National Packing Company have been indicted in New Jersey for some alleged violation of anti-trust laws. Of this indictment we have nothing to say. But we have a word to say about the live stock trade and the packers in general.

Our readers will remember that some years ago many newspapers and magazines were continually making the statement that there were but four great beef packers, and that they controlled the meat trade of the country. The agitators, writers and reporters could not find the other packers—they were not looking for them—but there were many others that could easily have been found by looking for them; but the intent was to make out a case against the great packers, Swift, Morris, Armour and Hammond, and the others were ignored or made little of.

But individual members of the big packing firms did not ignore their competitors. They brought them to the front; they bought several of them out, and in 1903 with the Hammond Packing Company (one of the four) they consolidated a lot of them under the name of the National Packing Company.

The houses absorbed were the Fowler Packing Company, with plants East and West; the United Dressed Dressed Beef Company of New York; the Anglo-American Provision Company, the St. Louis Dressed Beef Company, Hutchinson Packing Company of Kansas City, Ruddy Bros. & Co. of Kansas City, and several others. All this was fully set forth in the famous Garfield Report of the beef trade, March 3d, 1905. Mr. Garfield also discovered the Schwarzschild & Sulzberger Company and the Cudahy Packing Company, two large concerns outside the Big Four, and, including them, said that all of these collectively did but 45 per cent. of the beef business of the United States, although they did the bulk of the dressed-beef shipments to the East.

Now, six years later, comes the new discovery of the National Packing Company, as though it was a secret organization, although its list of stockholders was public property and officially recorded.

There are few farm and stock publications whose editors have had closer or more intimate connection with the live stock markets of the country than ourselves. We personally reported the yards and published every transaction in cattle, hogs and sheep on the St. Louis market for twelve years. We have silently investigated every important market, East and West, for twenty years, and we have no hesitation in saying that at no time have the big packers had less control of the markets than they now have. Stock raisers to whom we address this article can go on with their business with the full assurance that there are more markets than there were individual buyers thirty years ago, and more independent packers to-day than were all kinds of beef packers twenty years ago. The live stock markets have grown and multiplied and cities have been built up around them, stock farmers have prospered and ranchmen have grown rich, and to-day the market system for sale of live stock is the cleanest, most open and above board of any market for any farm product in the United States. The shipper of a single mixed car-load can find as many buyers as he has animals to sell; the shipper of a train of cattle can find more buyers than there are ranchmen able to ship a full train to one market, and if the ranchman is not satisfied to ship a train-load to one market he can divide them up with several markets. He can also ship on several days. There is no combination that he cannot get the best of.

The great packers can plead their own case before the courts. That is their affair. We are simply defending the openness, the competitive features and the value of the live stock markets and their freedom from control by any men or set of men, and we may all satisfy ourselves that the prices paid by these packers and all buyers, whether said prices be high or low, are all explained by the simple statement that if they could buy cattle, hogs and sheep for less money they certainly would do so. Stock raisers can be assured that their market system is all right, and it will pay them to come out of the brush and say so, for some day the State and National Legislatures, being misinformed, will cripple these markets and destroy a great part of their usefulness.

Clay, Robinson & Company's LIVE STOCK REPORT

Published Weekly by CLAY, ROBINSON & CO.

THE LEADING LIVE STOCK COMMISSION FIRM OF THE WORLD

HAVING HOUSES AT

Chicago	**South Omaha**	**Kansas City**
Denver	**Sioux City**	**South St. Joseph**
East Buffalo	**East St. Louis**	**Fort Worth**

We publish from our Chicago office (but covering all markets) a paper which you ought to read regularly. It will add to your bank account to do so.

FOR ONLY FIFTY CENTS

(To cover actual cost of postage) we will send you for one year our weekly paper

THE LIVE STOCK REPORT

MONEY BACK IF YOU DON'T LIKE IT

The "Live Stock Report" is a 12-page weekly illustrated paper devoted to the markets, live stock, and agriculture generally. It is pithy, pointed and practical. You pay 50 cents to cover actual postage for a year and we will do the rest. If after receiving three issues of the Report you think it is not worth 50 cents per year to you, notify our Chicago office and *your money will be refunded without question.*

WE HAVE RECEIVED THOUSANDS OF UNSOLICITED LETTERS LIKE THESE:

O. E. HINTZ, Bunker Hill, Ill.: "Enclosed please find 50c for one year's subscription to the Live Stock Report. Your paper is getting more valuable every year and I think the live stock raiser or farmer who does not take it is behind the times."

J. C. COBB, President of the Bank of Odessa, Mo.: "I hand you $1 for two years' subscription. I would feel lost without the REPORT."

S. LEE, Aledo, Ill.: "Enclosed please find 50c, for a subscription. I consider the REPORT pre-eminently the best thing in this line."

Approximately 50,000 of the most successful live stock feeders, farmers and shippers in the U. S. regularly read the LIVE STOCK REPORT. It helps them and it will help you.

A NICE LITTLE PRESENT—EXTRA

As a special incentive to forward your subscription at once, we will send you free and postpaid this very convenient vest pocket slate memorandum book and pencil (see cut at left), handy for the farmer, housewife, school boy or girl, provided your subscription is mailed within fifteen days from the time you receive the paper containing this advertisement. Act immediately. There is no reason to hesitate, as our "money back" offer eliminates all risk.

Treatment For Balky Horses.

One of the most trying experiences in the teaming industry is to have a horse balk when asked to move a load well within his ability. A horse that possesses a balky temperament is never safe in an emergency, and the driver is always anticipating trouble with his charge. The incorrigible balky horses of the rural districts find their way to wholesale markets where under the test of hauling a heavy truck wagon on a paved street with the wheels blocked the vice is immediately discovered. If the animal has been sold as serviceably sound, and guaranteed a willing worker and a cheerful puller, the buyer rejects his purchase and the horse is resold without any guarantee except clear title of ownership. Some horses have learned to balk by being overloaded and abused. Their courage has been overtaxed and they rebel disheartened at the task they are asked to perform. Other horses appear to balk from natural inclination and appear foaled full of innate stubbornness. Balking, like windsucking, cribbing, weaving and halter pulling, is a vice developed by natural inheritance. In breaking young horses to harness too much caution cannot be observed in asking the youngster to pull light loads to begin with. Balkiness is an attribute of equine meanness that when it manifests itself is sure to appeal to the evil disposition of the teamster. To know that a horse is well, has been humanely treated, and is only asked to perform that which he can do easily and have him refuse to do it naturally incites the driver to punish the animal. Beating a balky horse does not appear to reform him from the vice. When exhibiting a demonstration of his balky disposition the horse appears to be immune from the pain of punishment and stands beating without flinching. The animal appears to be under the influence of a spell in which he would rather die than obey the voice of his master. The balky horse cannot be conquered by brutal treatment, but may be induced to pull by many devices intended to attract his attention from his resolution not to pull. To lift the fore foot and pound on the shoe, to put a handful of grass or dirt in his mouth, to give him a lump of sugar or an apple to eat have all proved successful in some instances in inducing a horse to pull. To pass a cord around the pastern and pull the forefoot forward until the animal has to move is also a means of starting a balky horse. An electric battery manipulated by the driver gives an animal a shock from a source that he does not comprehend and is the latest device in treating incorrigible horses.—The Horseman.

Horse and Mule Notes.

The imported Shire stallion "The Swell," that was greatly admired at the Illinois State Fair last fall and was first-prize winner in his class, has been sold by Trumans' Pioneer Stud Farm to J. H. King & Son, of Walnut Grove, Ill. They have sold stallions to Messrs. King & Son continually since 1882.

E. T. Bedford's champion Hackney mare Hildred is now at John E. Madden's Hamburg Place, near Lexington, Ky., and may be bred this year to the trotting stallion Vice Commodore, 2:11, son of Bingen, 2:06¼, and Narion, by Arion, 2:07¾, out of Nancy Hanks, 2:04. It is to be regretted that Mr. Bedford's famous prize-winning high stepper has never as yet produced a foal.

Mr. M. W. Savage, proprieter of International Stock Food Farm, Minneapolis, says that his four-year-old Dan Patch mare, Rena Patch, out of Renline, by Online, promises to be something extra good. At Phoenix she paced a trial in 2:07 and after this a mile in 2:06 with the last half in 1:01.

European and East Indian officials are looking over the ranches and markets of Australia for the purpose of buying horses. They are also looking for cheap horses, which are hard to find on any market.

On February 5th, Trumans' Pioneer Stud Farm, of Bushnell, Ill., reported the delivery to Mr. E. M. Hoagland, of Prairie City, Illinois, a pair of imported Percheron fillies that are rising three-years old imported expressly for him. These fillies were purchased by Mr. H. H. Truman after he had looked through practically all of the leading studs of France. One of them is a first-prize winner at the largest show in France and the pair of fillies were considered by interpreters, dealers and shipping agents in France to be the best pair of rising three-year-old Percheron fillies that has left that country for a long time.

A Fine Jack For $1,500.

Mr. Thos. H. Ezell, of R. F. D. No. 7, Nashville, Tenn., who has advertised in The National Farmer and Stock Grower for several years, reports recent sales as follows:

"I wish to report the sale of my famous two-year-old jack, Ezell Headlight, to James M. Spurgeon, of Canton, Mo. Mr. Spurgeon has spent no little time or expense in looking for a herd jack, and had no hesitancy in stating to me before buying that this noted jack, Ezell Headlight, comes as near filling his requirements as could be found, and that he could not improve on him. He visited breeding farms through Tennessee twice and all through Missouri, and I wish to congratulate Mr. Spurgeon on his selection. I do not believe this jack has an equal in America, as I have been looking around myself for this kind of jack, and it is the only one I ever found as good, the price being $1,500. To-day I sold two more jacks to Mr. Johnson, to go to Indiana."

English Cotton Spinners.

According to the United States Consul General in London the published accounts of 100 cotton spinning companies in Oldham and other yarn producing districts, owning 8,395,630 spindles, show a net loss of $1,324,-038 for the year 1909. The operatives also suffered; their wages were reduced 50 per cent. and hours of labor shortened. The gravity of the situation is suggested by the Employers' Federation in their agreement to continue the curtailment of the consumption of raw cotton by shutting dwn their mills for a time or running still shorter hours.

KENDALLS SPAVIN CURE

The Age of Work Horses.

In a recent edition of the New York Herald it was stated that Mr. William Bradley has working on his contractors' wagons two horses fifty years. Jumbo, the older of the two, is twenty-six, and he has been working for his present owner twenty-three years. Spot is one year younger. He was foaled in 1885 and Mr. Bradley has owned him since 1888. Mr. Bradley estimates that their gross earnings during this long period of service have been upward of $20,000.

"A team with a man to drive it can earn $6 a day, and the horses alone are worth $4 a day." The two together never lost a week's work, all told, until last year, and neither of them ever cost a cent for repairs."

Counting only 250 working days as a yearly average, each horse would earn $500 a year, and in the forty-five years representing their combined service their earnings would aggregate $22,500. Assuming that the cost of keeping them was $200 a year for each horse, which is a very liberal estimate of the expense, the net earnings of the team would still be $13,500, or more than most race horses earn in a lifetime.

When Mr. Bradley bought his two-thousand-acre stock farm at Raritan, N. J., he thought it would be an act of kindness and justice to send the two old equine laborers down there and let them take it easy in pastures green as long as they might live. Much to his surprise, however, both horses began to fail as soon as they were sent to the country and turned out. Jumbo fell away two hundred pounds before it occurred to Mr. Bradley that the old horse was pining away for want of work. He and Spot were accordingly brought back to New York and used on a dump wagon again. The effect was almost magical in restoring their flesh and spirits.

For eighteen years Jumbo and Spot worked together as a team, but it became apparent a few months ago that Spot was too much for his mate, and so the older horse was sent up to Croton Lake, where Mr. Bradley is building the aqueduct, and there given lighter work in single harness. The old fellow missed his lifelong mate for several weeks, but has lately become reconciled, and now is thriving again. Spot is working on the Fourth avenue subway in Brooklyn with a fresh young mate, and his driver says that old as he is he can outpull any horse on the job.

"How much money do you suppose a stranger would have to put up to buy Jumbo and Spot?" the driver was asked.

"I don't know," was the answer, "but I'll bet it would take more money than Rockefeller could raise to get them."

Remedy For the Botts.

As a remedy for the bot-fly in horses, a correspondent advocates chopping up some potatoes, salting them well, and feeding them to the bot-afflicted animal. Not every horse will eat them, but if they will, relief follows, in less than an hour. The poison in the potato skin loosens, or kills, the small white worm causing the trouble. Potatoes are also recommended as instrumental in promoting the welfare of any mare that has not done well in foaling.—Australian Paper.

Feed For Horses.

As long as corn and oats are the principal grain rations used for horses there always will be a difference of opinion as to the economy and deficiency of each cereal. It is contended that oats excel in nitrogenous constituents to build up muscle and bone, while corn is highly carbonaceous and potential to build up fat and heat in animals. The attributes of each grain were tested by feeding forty-eight weeks two horses, one a ration of corn and the other a ration of oats, with the same amount of hay to each animal. When mixed timothy and alfalfa hay was used, corn was found to be equally efficient in maintaining the horse in prime condition as oats, and corn, when fed in the ear instead of shelled, was more economical.

DAN PATCH 1:55

ABSOLUTELY **FREE** TO STOCKOWNERS

It is a New Invention that you can carry in your pocket and show your friends instantly, day or night, once or a hundred times. The original is the only moving picture ever taken of a World Champion Horse in his wonderful burst of speed.

A MILE OF 2400 MOVING RACE PICTURES OF DAN PATCH 1:55

and every picture shows the King of all Horse Creation as plainly as if you stood on the track and actually saw Dan Patch 1:55 in one of his Thrilling Speed Exhibitions for a full mile. 2400 distinct moving pictures taken of Dan in one minute and fifty-five seconds means twenty-one pictures taken every second all of the way around the entire track from the back seat of a high power automobile. You can see Dan shake his head to let his driver know that he is ready for a supreme effort and then you can watch every movement of his legs as he flies through the air with his tremendous stride of 29 Feet. You can see his Thrilling Finish as he strains every nerve to reach the wire, you can see his driver dismount and look at his watch while thousands of people crowd around, you can see his care taker force his way through the crowd and throw a beautiful woolen blanket over Dan to prevent his catching cold and then you can follow him up the track before the Madly Cheering Multitudes. As a Study Of Horse Motion it is better than the actual speed mile because you can see Dan right before you for every foot of the entire mile. When first shown to the public this marvelous picture caused people to stand up all over the theatre calling "Come on Dan"—"Come on Dan."

This Remarkable Moving Picture is the Most Realistic and the Most Thrilling ever presented to the public. I have taken a part of the Original 2400 Wonderful and Sensational Pictures and made them into a **Newly Invented Moving Picture** that you can carry in your pocket and show to your friends at any time, day or night. It does not need a machine, it does not need a curtain and it does not need a light. **It Creates a Sensation Wherever Shown.**

MY NEW MOVING PICTURES MAILED FREE TO STOCKMAN, postage prepaid, IF YOU ANSWER THESE THREE QUESTIONS

1st. In what paper did you see my Moving Picture Offer? **2nd.** How many head Each of Horses, Cattle, Sheep, Hogs and Poultry do you own? **3rd.** How many acres of land do you own or how many acres of land do you rent?

IF YOU ARE NOT A STOCKOWNER AND WANT THE MOVING PICTURES SEND ME 25 CENTS FOR POSTAGE, For Packing, etc., In Silver or Stamps and I will mail you this Wonderful Moving Picture of Dan Patch 1:55, The Fastest Harness Horse The World Has Ever Seen.

Principles of Horse Breeding.

In a recent bulletin issued by Dr. A. S. Alexander, of the Wisconsin Agricultural College, he puts in few words the methods to be followed in the improvement of horses, as follows:

"The principles to be followed by farmers in improving their horse stock are: The use of sound, pure-bred sires of a particular breed, the use of sound mares, the feeding and care of the mare and foal, and the working of the stallions regularly. Dr. Alexander further urges the home production of pure-bred stallions to replace the grades, mongrels and scrubs too often used at present. He urges that grade horses replace scrubs in farm teams. The organization of community associations will greatly facilitate the promoting of horse breeding and the encouragement of the industry may be furthered by prizes at County Fairs for pure-bred stallions, mares and colts."

At the National Corn Show of 1909 U. P. Hesterly, of Villa Rica, Ga., won $75 for the best single ear of corn, any color, Southern zone; and H. S. Brandon, Normandy, Tex., won $75 for the best ten ears of corn, any variety, in Southern zone.

Top hogs at 10 cents a pound the highest price ever paid on the market.

Forty pages in colors

WHAT EVERY FARMER WANTS

YOU CAN GET IT FREE

JUST drop us a post card and we will send you, **free,** the latest edition of our **Corn Book,** containing the best information from the highest authority on selection and care of seed corn.

You can get more and better corn without increased cost by following this book.

Every page illustrated and printed in colors.

The fact that this book also contains description of

The Deere No. 9 Corn Planter

the most highly perfected machine on the market, adds to its value.

Increased accuracy secured by the famous **Deere edge-selection drop,** means anywhere from ten to fifteen bushels per acre over the old style of machine.

Repeated tests have shown the above increase in favor of really accurate planting.

We have plates for all kinds of corn and other seeds. Instantly changed from hill to drill drop without changing plates.

Fertilizer attachment that distributes either in hill or drill.

Illustration here shows the regular runner, but stub runner or disc openers may be had on special order. In fact, the **Deere No. 9** is strictly up to date in all real improvements.

SHERWIN-WILLIAMS PAINTS & VARNISHES

S-W Commonwealth Barn Red

A bright, handsome red for painting barns, outbuildings, fences, corn cribs, etc. It works freely under the brush, has great covering capacity and wears well. Is put up full U. S. Standard Measure, and so is more economical than the many short measure, poor quality barn paints sold at a low price.

Address all inquiries to 689 Canal Road, Cleveland, O.

In Canada to 639 Centre St., Montreal.

Sherwin-Williams Paint (Prepared) S W P

is made of Pure White Lead, Pure Zinc and Pure Linseed Oil, with the necessary coloring pigments and driers. All combined in correct proportions with the aid of powerful machinery of our own special design. There is no better paint made than S. W. P. It will cover more surface, look better and last longer than cheap mixed paints or hand mixed lead and oil. Put up full U. S. Standard Measure.

S-W Wagon and Implement Paint

A durable oil gloss paint made especially to withstand hard usage. There is the greatest economy in keeping your wagons and implements well painted, to protect the wooden parts against dampness and cracking and the iron and steel parts against rust. It brushes out evenly, covers well and is very permanent in color. Your farm equipment will last twice as long if kept well painted and will give you better service all the time.

S-W Brighten Up Finishes

Under this label we put up a complete line of paints, varnishes, stains and enamels for every use or surface in and around the home. Not one product for all purposes, but a number of different products, each one made especially for a particular purpose and the best for its purpose. Tell your local S-W Agent what you want to finish and he'll give you a Brighten Up Finish that will do the work well.

OUR REFERENCE IS EVERYONE WHO HAS EVER SHIPPED US A CONSIGNMENT—OUR GOOD WORK IS OUR REFERENCE.

JAMES H. CAMPBELL,
National Stock Yards, Ill.

EXPERT SERVICE IN EVERY CLASS OF STOCK—SHIP US YOUR CATTLE, HOGS AND SHEEP.

Holland & Nugents' Sale.

In announcing a special sale of harness, saddle and speed horses at the National Stock Yards for April 18, 19, 20, 21 and 22, Holland, Nugents & Maxwell Bros. say as follows:

"All of the commission interests in these yards will be united in making this the greatest sale of the year.

"We have without question the strongest horse market in the United States. At the present time the South affords the best market for road and saddle horses, and we furnish 75 per cent. of the horses they buy, and we are also in close touch with the buyers from all other states. These are certainly good reasons why you should consign your horses to this sale.

"Entries to catalogue close April 2d. For further information, write."—Holland-Nugents & Maxwell Bros., National Stock Yards, Ill.

To Buyers of Mules.

The pioneer firm of mule dealers of the St. Louis market is the Jos. A. Maxwell Mule Company, and their specialty is of the better class. Contracts are entered into for any number or grade of commercial mules and satisfaction is guaranteed. Members of the firm also contract for cavalry, artillery, Cuban or Eastern horses. It is a safe firm to do business with, always upholding the highest traditions of the great market of which they have been so largely instrumental in building up. For mule quotations, address The Jos. A. Maxwell Mule Company, National Stock Yards, Ill.

Good Mississippi Steers.

On March 1st, at the St. Louis National Stock Yards, twenty-two head of 1,145-pound steers sold at $6.25 per 100 pounds, and twenty-two head of 1,056-pound steers at $5.75 per 100 pounds. They were choice cattle, shipped to market by Greenwald & Champenois, of Lauderdale county. They were straight meal-fed cattle. It is not on record that Mississippi cattle ever sold any higher at any regular live stock market.

Hogs at Ten Cents a Pound.

On Tuesday, March 1st, two loads of hogs sold at the St. Louis National Stock Yards at 10 cents per pound. One load, consisting of 290-pound hogs, was shipped in by J. A. Fletcher, of Macoupin county, Ill.; and another load, which averaged 314 pounds, was shipped in by D.A.Jones, of Malvern, Ill. The price paid is the record at the St. Louis National Stock Yards.

National Feeders' and Breeders' Show.

The show dates are March 14th to 19th, at Fort Worth, Texas, during the meeting of the Texas Cattle Raisers' Association. The show is to be held at the Coliseum, near the Live Stock Exchange, and there is always an enjoyable, instructive time and a grand exhibit of beef steers, also breeding cattle, hogs, sheep, horses, jack stock and poultry.

Fancy Poultry and Eggs.

Albert S. Ennis, owner of the Sunset Jersey Cattle Herd, is advertising eggs for sale from his Buff Orpingtons, Buff Cochin Bantams, Bourbon Red Turkeys, Buff Ducks and Pearl Guineas. We are glad to indicate where guineas are to be had. According to the lecturer on poultry raising, they are in great demand, and in the city market represent every kind of game fowl.

Evans-Montague Commission Company

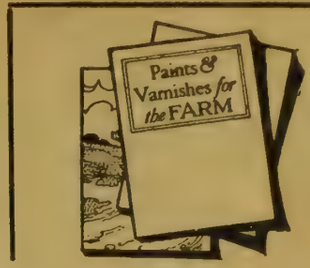
THE MEASURE OF SUCCESS attained by a SHIPPER OF LIVE STOCK depends largely upon THE COMMISSION HOUSE to which he consigns his CATTLE, HOGS AND SHEEP.

If you wish to receive TRUSTWORTHY AND RELIABLE SERVICE and have your consignments SOLD BY CAPABLE AND CONSCIENTIOUS SALESMEN, you cannot do better THAN PATRONIZE OUR HOUSE.

The Shippers' Interests ARE OUR INTERESTS, and our rapidly-increasing business IS THE STRONGEST TESTIMONIAL of our ability TO PLEASE OUR CUSTOMERS.

Evans-Montague Commission Company

Box 68,
NATIONAL STOCK YARDS, ILL.



WILLIAMS

FOR USE ON THE FARM

S-W Metalastic No. 2
A metal protective paint all ready to use. Is made of a combination of Graphite and other materials and Pure Linseed Oil, and has greater durability than many of the so-called graphite paints. It dries rapidly and gives a hard, impervious paint film that effectively protects the metal beneath. Just the paint to use on the metal parts of windmills, farm machinery, metal roofs, spoutings, iron fences and, in fact, on all metal surfaces exposed to the weather.

S-W Buggy Paint
will make your old buggy look like new. This is a Varnish Gloss Paint made to stand wear and tear and outside exposure. It colors and varnishes at one operation and vehicles finished with it can be washed without injuring the gloss or durability of the paint. S-W Buggy Paint is a high quality product and should not be confused with the many cheap mixtures on the market. Comes in full measure cans; nine handsome colors.

S-W Creosote Paint
is a moderate priced paint, just the paint for painting farm buildings, outhouses, fences, bridges, etc., in fact for protecting all kinds of rough wooden structures from the wear and tear of the weather. It is of splendid quality, spreads easily under the brush and wears well. It contains Creosote, which prevents the decay of the wood and has a very sanitary effect in buildings where poultry, horses and stock are kept.

The Market For Corn.

Corn is about holding its own. May corn at Chicago, June 30th of last year, was quoted at 55⅝c.; was 66⅜c. on January 31st, and closed at 66⅛c. on February 28th. Considering the large crop, the prices held up very well. Cash corn at St. Louis on November 30th was 59½c.; December 31st, 63c.; January 31st, 63c.; and February 28th, 62c. There is no indication of any decline in prices.

A First-class Commission House.

In consigning live stock for sale at the St. Louis National Stock Yards, remember the Evans-Montague Live Stock Commission Company. It is a successful firm, highly competent and persevering in the interest of their customers. The Evans-Montague Commission Company solicit consignments of cattle, hogs and sheep for sale on the market, and desire stockmen to take notice that the company has special buyers who select and buy stock and feeding cattle for their patrons. Address, Evans-Montague Commission Company, Box 68, National Stock Yards, Ill.

Dan Patch Moving Pictures.

These are the free gift of Mr. M. W. Savage, proprietor of the International Stock Food Farm at Minneapolis. All you have to do to get a set is to answer the advertisement on page 15. There are two sides to the set—one side full of information, and the other side showing Dan Patch as natural as life come tearing down the track. In addition to Dan Patch, 1:55, Mr. Savage owns Minor Heir, 1:59¼, and other world's champions. Everybody is interested in Dan Patch, and these moving pictures are very satisfactory and will last a long time.

Home-grown turnips selling at St. Louis for 35 cents a bushel.

Holstein Beef Cattle.

The Secretary of the Holstein Cattle Association has figured out to his own satisfaction that a Holstein is the equal of a Shorthorn steer as a beef animal. Let him feed a carload of Shorthorn steers and a load of Holstein steers of same ages, raised and fed under like conditions, ship them to market and obtain the market returns—then he will have facts as well as figures. The facts may not suit him, but he can say that the buyers discriminated against them. The best market for a grade Holstein steer is a calf market. Today we saw one sell, 160 pounds, at 9¾ cents a pound, $15.60, less 25 cents' commission, and $1.50 express charges.

Col. James H. Campbell,

Expert live stock salesman, is at the head of his own organization at the St. Louis market. He is one of the active men in the trade—an enthusiastic worker, knowing that he has a competitive market to back him. He is holding his old customers by splendid sales and making new ones all the time. Col. Campbell issues a circuar every week of his own composition, containing his advice to intending shippers. Write for information to Col. James H. Campbell personally and consign cattle, hogs and sheep to Campbell Commission Company, National Stock Yards, Ill.

The Trade in Oats.

On January 31st, at St. Louis, No. 2 oats were selling at 49c., and on February 28th the same grade was quoted at 46 to 46½c., and special qualities of white oats at 49c. The Chicago May quotation was 46⅝c. on January 31st, and 47¼c. on February 28th. July was quoted at 44⅜c.; and September, 41⅛c. The fine quality of the oat crop is helping the sale of it.

Pure Seeds and Adulterations.

During the year 1909 the United States Department of Agriculture examined and analyzed 359 samples of alfalfa seed bought in the open market, and, although 107 samples contained dodder, none were either adulterated or misbranded.

Of red clover, 630 samples in all, fifty-four samples contained dodder, which is less than 10 per cent., against 50 per cent. containing dodder the previous year. None of the seed was adulterated or misbranded.

Of 379 samples of orchard grass seed, eighty-five were found to be adulerated with seed of meadow fescue or rye grass, or both, this being practically the same result as during the previous year.

Of the 446 samples of Kentucky blue grass seed, fourteen only were wholly or in part Canada blue grass. This is less than half the adulerations found the year previous. Germination tests showed an average of 60 per cent. of the seed germinated.

Of the forty firms whose names were published as selling adulterated seed, none are advertisers in this paper.

A VALUABLE VETERINARY BOOK ABSOLUTELY FREE

A little book which our readers have seen mentioned frequently in advertisements and in live stock discussions, called "Zenoleum Veterinary Adviser," holds much that is of interest to farmers and stockmen, whether owners of few or many animals. It is valuable because it gives methods of treating along lines of the commonest troubles that all classes of live stock are heir to. The book is carefully indexed, and was designed primarily to show the relation of the celebrated Zenoleum Animal Dip and Disinfectant to domestic husbandry economy. Zenoleum has come to be a very popular thing among owners of live stock in every State in the Union, in Canada and other foreign countries. Its standing among high authorities appears from the fact that forty-five Agricultural Colleges unhesitatingly give it their recommendation.

The Zenoleum Veterinary Adviser shows in their own words just what the Professors and various directors connected with these institutions have said of it, and the suggestions they offer for its use. The most important fact is that the book is more conclusive than merely stating the uses of Zenoleum. It gives many descriptions of diseases and ailments, their causes and symptoms, etc., that could hardly be had in such compact and reliable form in any other book we can now call to mind. There are sixty-four pages, splendidly printed in large readable type, in a serviceable cover.

The book is free to any reader of this paper. Write to The Zenner Disinfectant Company, 174 Lafayette Avenue, Detroit, Mich., for it.

I believe readers who send for it will have cause to be gratified that I have called this matter to their attention. Take my advice and send for it right away.—Editor.

Concerning the Comet.

We hope that our readers will make a child's bargain with the comet, saying: "If you will let us alone we will let you alone." The comet will do us no harm, and no one need be scared about anything that may happen. Sensational writers and green astronomers get excited whenever a comet is seen in the heavens, and they forget that the Almighty is just as able to control the movement of a comet as He is to regulate the sun, moon and stars. Advanced astronomers know that comets are perfectly harmless, and they are able to calculate comet movements hundreds of years in advance. Halley's comet is a well-known visitor, of good habits, not a wandering straggler, liable to jolt against the sun or moon or earth without due notice, and comets' tails are only illuminated vapors or reflections.

The alarmists hunt up the many years in which comets appeared, and then string out a list of cheap disasters that happened and speak of them as though the comet was the cause.

Our readers may rest easy upon the statement that the greatest disasters in history did not occur in comet years, and we can prove it ourselves. The St. Louis cyclone, the Galveston flood, the San Francisco earthquake, the Mt. Peelee eruption, the Sicily earthquake, which we all remember—none of them were in comet years—and it is recorded that a comet once came within six times the distance of the moon, and that year was remarkably peaceful in the United States and not specially disturbed elsewhere. We have passed through comets' tails before without knowing it, and this time we may as well make up our minds not to fear imaginary evils.

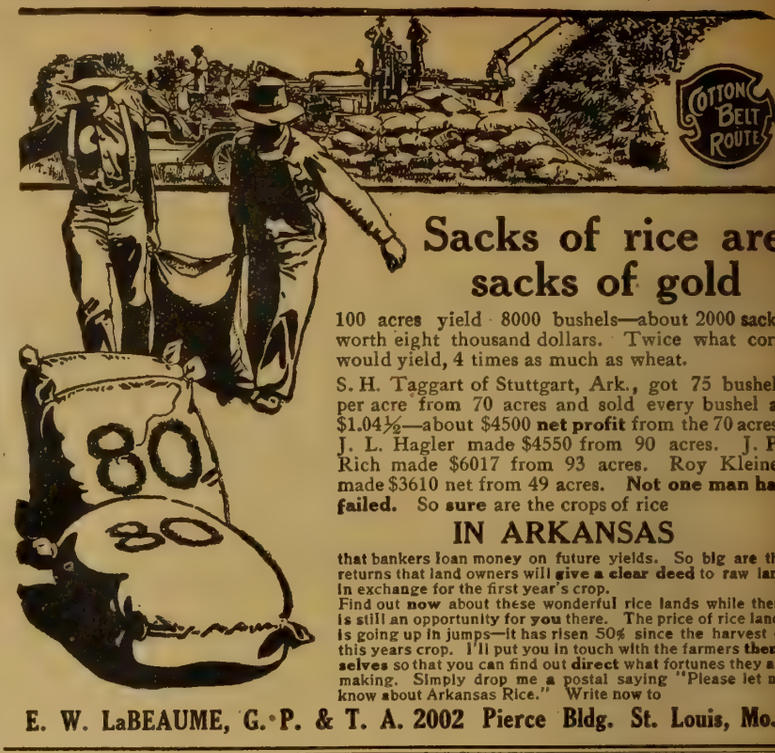
So far as this office is concerned, we have made up our minds to go on soliciting subscriptions and sending out subscription premiums just the same, or better than we did last year, including the roses which are advertised in this issue.

The Useful Farm Level.

In the equipment of the up-to-date farm are many comparatively inexpensive tools which are fully as necessary and as profitable to use as the larger and more expensive implements. In fact, it often happens that to the intelligent use of the smaller tools in economizing in the way of labor and repairing expense the farmer is enabled to materially increase his annual income. A very desirable and useful tool which is not found on all farms is a level. Such an instrument often comes in very handy and in many cases is a necessity if the work in hand is to be properly done. In ditching, some kind of level must be used. Going "by guess' will never assure the proper working of a land drain. And depending upon the improvised makeshifts which are sometimes resorted to is little if any better than mere guessing, so far as practical results are concerned. The human eye, when there is nothing to guide it, is very susceptible to error. Many a farmer who has tried to get along without a good level because of a trifling expense or trouble in procuring such an instrument has learned this to his sorrow. Faulty constructed drains are never satisfactory, and they eventually have to be relaid. This necessitates double expense, as the relaying requires as much time and labor as at first. But with a reliable level the matter of proper drain construction becomes a very simple operation. One is assured at the start that the grade desired will be had, and there is no chance of future trouble in its not working properly. Proper drainage is frequently the key to successful crop growing, and the use of a good level is the basis upon which such success should be founded.

But the use of the level on the farm does not begin or end with tile drainage. It has very many other practical applications. In fact, its uses are so varied and at the same time so important that even the farmer who has no ditching to do cannot afford to be without one. They are often wanted in extending a water pipe, locating a tank, providing for surface drainage, land grading, terracing, laying cement floors, stable gutters, yard paving and constructing walks and drives. The farm level with telescope attachment is also frequently needed in running farm lines, lining up fence posts, buildings, etc. It offers quick and reliable service in laying out lands, dividing and measuring fields, and many other little jobs about the farm which are so productive of better results in more efficient and profitable farm management.

A good farm level costs little compared wtih its worth and usefulness. Frequently it will pay for itself in one using, as it admits of economy in both labor and time and may save additional expense in providing the assurance that the work will not have to be done over again. We value our level as one of our most important farm tools, and would not like to try getting along without it. In this connection we desire to invite attention to the book entitled "Soil Salvation" issued free by the Bostrom-Brady Company, 1107 Pine street, St. Louis, Mo. It relates to all the uses of a farm level and is a very interesting publication.



Sacks of rice are sacks of gold

100 acres yield 8000 bushels—about 2000 sacks worth eight thousand dollars. Twice what corn would yield, 4 times as much as wheat.

S. H. Taggart of Stuttgart, Ark., got 75 bushels per acre from 70 acres and sold every bushel at $1.04½—about $4500 **net profit** from the 70 acres. J. L. Hagler made $4550 from 90 acres. J. P. Rich made $6017 from 93 acres. Roy Kleiner made $3610 net from 49 acres. **Not one man has failed.** So **sure** are the crops of rice

IN ARKANSAS

that bankers loan money on future yields. So **big** are the returns that land owners will **give a clear deed** to raw land in exchange for the first year's crop.

Find out **now** about these wonderful rice lands while there is still an opportunity for **you** there. The price of rice lands is going up in jumps—it has risen 50% since the harvest of this years crop. I'll put you in touch with the farmers **themselves** so that you can find out **direct** what fortunes they are making. Simply drop me a postal saying "Please let me know about Arkansas Rice." Write now to

E. W. LaBEAUME, G. P. & T. A. 2002 Pierce Bldg. St. Louis, Mo.

Pull Your Stumps

No excuse for stumpy fields. Hercules pulls them out, roots and all. Triple power attachment means one-third greater pull. The only Stump Puller with Double Safety Ratchets. **Only** one with all bearings and working parts turned, finished and machined, reducing friction, increasing power, making it extremely light-running. Hitch on, and any stump is bound to come

With This All-Steel, Triple-Power HERCULES STUMP PULLER

No slipping; no breaking. Made of *all steel*. The strength is there, and the power, too. You may have had trouble with iron pullers, but this Hercules genuine steel puller is a different matter. It has 400% more strength than the best iron puller ever made, and is in a class by itself. It is the *only* stump puller

Fully Guaranteed for Three Years

—to give perfect satisfaction. Also pulls good-sized green trees and hedgerows. It is the only machine for quick and satisfactory work.

Don't Risk Dynamite

It's dangerous and it's costly. Besides, it only shatters the stump and leaves the roots in ground to grow again. The Hercules pulls roots and all. Once the stump is out it stays out.

Get Our Free Books and Proposition

—to first buyers in each locality where we have no agents. Write at once to be sure of being first, and save big money. You need this Hercules and you can save big money by writing us at once. Just say: "Send me Free Stump Puller Books and special proposition." A postal will do.

HERCULES MANUFACTURING CO.
240 17th St., Centerville, Ia.

Value of Better Milk.

When cream is shipped to the creamery in cans, representing an average of 25 per cent. butter-fat and 75 per cent. sour milk, the farmer considers the sour milk as waste, and to the creamery man it is a minor but decided asset. It may appear as a factor in deciding the price of butter-fat which farmers receive, and from its disposition at the creamery something can be learned of its commercial value.

At an Iowa creamery a statement was made, showing money derived from buttermilk fed to hogs. At the creamery 405 pigs were bought at a cost of $3,501.35; five of these were lost, and thirty-nine, valued at $680, were on hand at the end of the year. The hogs were fed corn that cost $1,000, and buttermilk from the creamery. There were 361 hogs sold, which netted $6,634.11. Deducting the cost from the total value of hogs sold and on hand, we find that the creamery received $2,812.76 from its hog-feeding operations.

An expert figuring the amount of buttermilk the creamery would most likely have from an output of 325,023 pounds of butter a year, figures the value of buttermilk at 21 cents per 100 pounds, and states that so much may be realized under most circumstances by feeding buttermilk either to hogs and chickens.

University Dairy Herd Yields High Net Profit.

The management and records of the University dairy herd for 1908-1909 are presented in a new bulletin, No. 187, just issued by the University of Wisconsin Experiment Station. The bulletin states that this herd of twenty-six milch cows, representing five breeds, averaged 8,492 pounds of milk, containing 363.62 pounds of butter-fat, during the year 1908-1909. The average value of the production of twenty-five cows in the herd was $104.49, the cost of feed $41.05, and the average net profit $63.44.

The average production for this year, on the basis of a herd of twenty-seven cows, shows 7,457 pounds of milk, containing 315.7 pounds of fat, worth $85.49, giving a net profit over cost of feed of $47.79.

The best individual records were made by Double Time, a Jersey, of 689 pounds of butter-fat, yielding $131.19 net profit; and Johanna, a Holstein, that gave 411 pounds of butter-fat and $67.18 net profit.

Invents Milk Weigher.

A new device for sampling and weighing milk as it is drawn by a milking machine has just been invented by A. A. Johnson, an '07 graduate of the College of Agriculture of the University of Wisconsin, who is at present a principal of the LaCrosse County School of Agriculture and Domestic Economy at Onalaska. This device is believed to be of great importance to dairymen, many of whom are now using the milking machine in their dairies.

Coupons Pouring In!

Everybody Buying at the New Cut Prices

Your Coupon Is in the Lower Left Hand Corner of This Page. Fill It Out NOW!

We believe the Economy Chief is the best and most satisfactory cream separator on the market today, regardless of price. We believe it to be the best in design, the closest skimming, the easiest running, the quickest cleaning; in short, the greatest separator value that money can buy. We have absolute confidence in the Economy Chief and we want every owner of cows to share this confidence with us. We want everyone interested in buying a cream separator to have an opportunity to find out for himself which is the best machine, which is THE SEPARATOR TO BUY.

Here Is the Challenge Offer That Is Bringing in the Orders by Every Mail

Deposit in your local bank the price of the Economy Chief Cream Separator you want to try, or

Send us a letter of reference from your banker stating that you are a reliable person; then

We will ship to you at once, freight prepaid, the separator you order, with the understanding that you are to set it up and try it on your farm for sixty days. Give it the hardest kind of a test; if possible try it alongside some other well known standard make, such as the Empire, United States or De Laval. Compare our machine in actual operation with any other. Note the amount of cream you get from each. Compare ease of running, time consumed in cleaning, and make any other comparisons you can think of. Never mind about the price; what you want from a cream separator is CREAM. If any other machine selling even as high as $85.00 or $90.00 will do better work, will skim closer, will give better satisfaction than our Economy Chief at $42.50, our advice to you is, buy the other machine and send ours back.

REDUCED PRICES FOR 1910

WE RECOMMEND THE BIG 600-POUND SIZE

No. 23T51 New 1910 Economy Chief. Capacity, 250 to 300 pounds, or 120 to 145 quarts per hour. Price reduced to	$27.90
No. 23T52 New 1910 Economy Chief. Capacity, 350 to 400 pounds, or 170 to 195 quarts per hour. Price reduced to	33.80
No. 23T54 New 1910 Economy Chief. Capacity, 600 pounds, or about 290 quarts per hour. Price reduced to	42.50

When you have finished your sixty-day test, if you are perfectly satisfied that you have the best separator on the market, write us saying that you want to keep the machine, and we will send you a bill for your separator and the freight charges we paid on it.

If at the end of sixty days you are not satisfied that the Economy Chief is the world's best separator, you don't need to even tell us the reason for your dissatisfaction unless you wish to; just drop us a line saying you don't want the machine. We will then send you a return address card to tack on the box **and we will not only return all money sent us, but also pay you for your time and trouble in setting up the machine, repacking it and hauling back to the station. We don't want you to lose one penny in trying out the Economy Chief for sixty days.**

If you want to send cash with your order, as most of our customers do, you won't lose any of the benefit of the above CHALLENGE OFFER, for if at the end of sixty days you decide you don't want the machine; if you think after a sixty days' trial you can get along just as well without a separator, or if you have seen a separator in operation giving better results than the Economy Chief, just send it back at our expense, tell us how much we owe you for freight charges, hauling from and to the station, setting up and repacking, and we will promptly send you every cent of the purchase price, plus your bill.

THIS IS OUR CHALLENGE OFFER AND OUR WHOLE CREAM SEPARATOR PROPOSITION!

We think our Economy Chief Separator is the best machine in the world. We want to sell you an Economy Chief if you think the same as we do, not otherwise, and we make this challenge offer to give you a chance to find out all about the Economy Chief **at our expense** and to prove our confidence in our own machine.

IF THE MAKER OF ANY OTHER CREAM SEPARATOR IN THE WORLD BELIEVES IN HIS MACHINE AS WE BELIEVE IN OURS, LET HIM MAKE YOU THE SAME PROPOSITION WE DO.

That's all—Now fill out the Coupon!

FILL OUT THIS SPECIAL ORDER BLANK

☐ **CASH WITH ORDER.** If you are enclosing the full price, simply write the amount in this square.

☐ **CASH IN BANK.** You can deposit the purchase price of the separator with your local banker, to be held by him for a month while you are trying it. If you follow this plan make an X mark in this square and enclose your certificate of deposit signed by your banker.

☐ **BANK REFERENCE.** If you prefer not to send us the money, or to hold it in the bank subject to our order, make an X mark in this square and enclose a letter of reference signed by your banker, telling us you are a responsible property owner.

☐ **FREE DAIRY GUIDE.** Nearly everybody has a copy of our big General Catalog or our Cream Separator Catalog, but if you have not and want more information before ordering make an X mark in this space.

Buffalo Bill's French Friend.

An exchange says: "Buffalo Bill is fond of telling a story about a French prince that visited him on his ranch once, and they went out after birds. Buffalo William came back with a full bag, but when he asked the prince what he had killed he said proudly: 'Of ze bairds, none —zey are too difficile; but of ze vild cows and calves I 'ave nine ovair ze 'ill.'"

Better Farming

A John Deere Book

—Just Out

A Farmer Can Get It Free

IF interested in farming, get our FREE book called "BETTER FARMING." It tells all about—

Alfalfa	*Making Hay*
Dairying	*Fighting Frost*
Seed Wheat	*Silos*
Corn Crops	*Cultivation*
Stock Feeding	*Cotton Crops*
Art of Plowing	*Soil Fertility*
Boll Weevil	*Gasolene Engines*
Controlling Weeds	*Adjusting Plows*

Hired Help Costs Big Money

Your land is high priced and hired help expensive. There is only one way to make big money—use implements that cut down the cost of your crops. Isn't it true that when you break something on a plow it is nearly always a cast part? Wherever strain comes on a John Deere Plow there you will find steel—tool steel. Take any plow that has had hard work for five years, put it along side of a John Deere which has been in service that long—and see the difference. Then there is no paint to cover up poor material. You can see the wear and the defects. The John Deere will be solid, staunch and ready for the hardest job. Then you begin to know that quality counts.

You can take pride in owning a John Deere—the standard plow of the world for two generations.

We will send you the 80-page, illustrated book free if you write and ask for

Package No. 7.

Mention the package number *sure*, then you will get exactly the right stuff.

DEERE & COMPANY, MOLINE, ILL.

Cement Workers' Handbook.

This book is designed to teach anybody how to work with cement; how to mix mortars of all kinds for all concrete purposes; how to make building blocks; how to build walls, floors, ceilings, walks. posts, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers.

For Sixty Cents we will credit one-year's subscription to The National Farmer and Stock Grower and send a copy of the Cement Workers' Handbook. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Soy Beans and Cowpeas.

Indiana results of co-operative farm tests are published by Prof. A. T. Wiancko, Agriculturist of the Purdue Agricultural Experiment Station, as follows:

"Of the soy-bean varieties tested in the northern half of the state, Ito San yielded an average of 2,255 pounds hay and 18.3 bushels grain; Early Brown, 2,300 pounds hay and 19.6 bushels grain; Hollybrook, 2,728 pounds hay and 20 bushels grain; and Dwarf Early Yellow, 1,961 pounds hay and 13.7 bushels grain per acre. In the southern half of the state, Ito San yielded 1,998 pounds hay and 14.2 bushels grain; Early Brown, 1,975 pounds hay and 14.1 bushels grain; Hollybrook, 2,348 pounds hay and 14.4 bushels grain; and Medium Early Yellow, 2,690 pounds hay and 15.2 bushels grain per acre.

Of the cow-pea varieties tested in the northern half of the state, Early Blackeye yielded an average of 3,253 pounds hay and 12.4 bushels grain; Michigan Favorite, 3,585 pounds hay and 13.5 bushels grain; Whippoorwill, 3,546 pounds hay and 12.2 bushels grain; and New Era, 3,719 pounds hay and 12 bushels grain per acre. In the southern half of the state, Early Black Eye yielded 2,346 pounds hay and 10.2 bushels grain; New Era, 2,720 pounds hay and 9.2 bushels grain; Iron, 3,810 pounds hay and 7.2 bushels grain; and Clay, 3,779 pounds hay and 4.1 bushels grain per acre.

It will be observed that for grain production the soy bean is the best of the two leguminous crops, and for hay the cowpea is most productive.

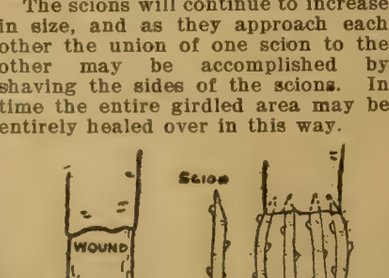
Bridge Graft in Early Spring.

Bridge grafting should be done in early spring, scions from healthy trees being selected, from twigs produced last season. The torn edges of the wound should be cut off smooth, and all badly-loosened bark removed. The scion should be cut half or three-quarters of an inch longer than the wound, and the ends of the scions pointed.

The scion may then be inserted under the edge of the bark, care being taken to have the cut on the scion made rather slanting, to give considerable space for it to unite with the bark of the tree. Several of these scions should be put in around the tree at intervals of not more than one and one-half inches. On small trees, three or four scions will be sufficient.

It is a good practice to paint over the wound areas with white lead, and they may further be protected by binding wtih cloth. Care should be taken, however, to see that the twine that holds the cloth is not so tight as to girdle the newly-set scions. After the scions have become firmly established, the cloth may be removed.

The scions will continue to increase in size, and as they approach each other the union of one scion to the other may be accomplished by shaving the sides of the scions. In time the entire girdled area may be entirely healed over in this way.



Grafting Not Always Needed.

In some cases bridge grafting will not be necessary. If the inner bark has not been removed by the rabbits, the tree may be saved by immediately protecting the girdled area before it has had time to dry out, by wrapping with cloth which has been treated with grafting wax. The inner bark will then form an outer bark, without serious injury. Where it can be used, this method is better than bridge grafting. Trees on which the bark has been removed along the sides and not entirely around the trunk, will be benefited by painting the wound. Before this is done, however, the rough edges of the bark should be removed so as to facilitate healing.

Cheap twine is not good economy

WE want every farmer in this country who uses our twines to go through the entire harvest season without one break in the field. We have set out to make that the standard test of all twines, and we believe that I H C twine comes nearer being such a grade than any other twine.

We have taken this matter the more seriously because we have stood back of the Sisal and Standard Sisal twines and the better grades of Manila ever since twine was made.

85 to 90 per cent of all the twine used is Sisal. It comes in a larger strand than the Manila twine; and, as all binders are adjusted to use this twine, the result has been that the bigger, stronger twine has proved more satisfactory in actual mechanical binding. Its only equal is the higher grade, higher priced Manila, which also bears the I H C trade-mark.

These two twines represent the highest point of excellence thus far attained in binder twine. You get the best when you ask your dealer for an

I H C Brand of Sisal—Standard Sisal—Manila or Pure Manila

You get a twine that has made its record in millions of wheat fields.

One that is guaranteed of standard length and standard strength.

One that is smooth-running; that works at a steady tension, without kinking or tangling in the twine box, and consequently without any loss.

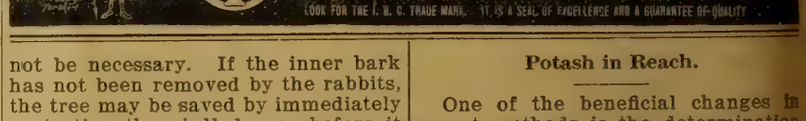
One that has the smallest percentage of breaks and that works well in binder knotter. Good binder twine is as important to you during harvest as good weather. You cannot regulate the weather, but you can pick your twine. If you want to be positive that you will have no twine delays, choose your twine—Sisal 500-ft.; Standard (which is made from pure Sisal) 500-ft.; Manila 600-ft., or Pure Manila 650-ft., from any of the following I H C brands:

Champion Deering McCormick
Milwaukee Osborne Plano International

These brands mean time-insurance for you during harvest.

Let your local agent know well in advance what your needs will be. The mills are working now. And if you want more interesting facts on binder twine, write us for particulars.

INTERNATIONAL HARVESTER COMPANY OF AMERICA, CHICAGO, U.S.A.
(Incorporated)



Potash in Reach.

One of the beneficial changes in recent methods is the determination on the part of the German Kali Works to place potash in the hands of the farmers in car lots of fifteen tons or more at bedrock prices. If one farmer cannot use that much to advantage, he can join others in co-operative buying and distribute it amongst the members. Potash has never had a full position in commercial fertilizers, and in all complete preparations it can be used to advantage and profit. See page 7 and write for prices, mentioning this paper.

$15.95 AND UPWARD

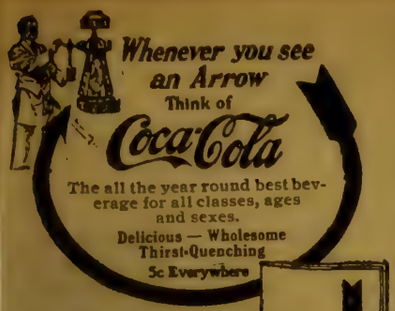
THIS OFFER IS NO CATCH. It is a solid, fair and square proposition to furnish a brand new, well made and well finished cream separator complete, subject to a long trial and fully guaranteed, for $15.95. It is different from anything that has ever before been offered. Skims 1 quart of milk a minute, hot or cold, makes thick or thin cream and does it just as well as any higher priced machine. Any boy or girl can run it sitting down. The crank is only 5 inches long. Just think of that! The bowl is a sanitary marvel; easily cleaned and embodies all our latest improvements. Gears run in anti-friction bearings and thoroughly protected. Before you decide on a cream separator of any capacity whatever, obtain our $15.95 proposition.

THE LOW DOWN AMERICAN SEPARATOR

EXCELS ANY SEPARATOR IN THE WORLD

OUR LIBERAL TRIAL ENABLES YOU TO DEMONSTRATE THIS. While our prices for all capacities are astonishingly low, the quality is high. Our machines are up to date, well built and handsomely finished. Run easier, skim closer, have a simpler bowl with fewer parts than any other cream separator. Thousands of machines in use giving splendid satisfaction. Write for our 1910 catalog. We will send it free, postpaid. It is richly illustrated, shows the machine in detail and tells all about the American Separator. Our surprisingly liberal long time trial proposition, generous terms of purchase and the low prices quoted will astonish you. We are the oldest exclusive manufacturers of hand separators in America and the first to sell direct to the user. We cannot afford to sell an article that is not absolutely first class. You save agent's, dealer's and even catalog house's profits by dealing with us and at the same time obtain the finest and highest quality machine on the market. Our own (manufacturer's) guarantee protects you on every American Separator. We ship immediately. Western orders filled from Western points. Write us and get our great offer and handsome free catalog. ADDRESS,

AMERICAN SEPARATOR CO., Box 1102, BAINBRIDGE, N.Y.



The Coca Cola Girl Calendar for 1910

Send us 2c for postage and we will send you our beautiful 1910 Coca Cola Girl Calendar and our interesting booklet "The Truth About Coca Cola". Tells all about Coca Cola—what it is and why it is so delicious, wholesome and beneficial. It gives analyses made by scientists and chemists from coast to coast, proving its purity and wholesomeness. Your name and address on a postal will bring you the booklet by itself.

THE COCA COLA COMPANY, Atlanta, Ga.

Irrigation From Heaven.

Irrigation as commonly applied by man is good, but irrigation in the form of rain out of heaven is better, when it is rightly distributed throughout the growing season. The washing off of the dust from the leaves of plants is a great help to their growth, as well as one way of actually giving water to a dry plant.

Dust in the air is exceedingly common throughout a large part of the earth, during the season when the ground is not covered with snow. In the West, where the winds blow almost continually in the summer time, the air is filled with a dry dust that permeates everything. Where there are frequent showers, vegetation is given a frequent washing off that counts for far more than we imagine.

Reports from the state of California tell of cement works that scattered fine dust through the air in such quantities that the trees and other plants for six miles from the cement works were covered with a very fine dust that filled the stomata of the leaves and prevented the processes of growth. It covered the leaves of the oak trees, the willow trees and the grape vines. The leaves of these plants were unable to shake it off, as did the leaves of the peach, the lemon and the orange, which have a glossy surface. This was not in accordance with reports from rainy regions, where the cement dust seems to have no effect on the leaves of plants. What was the difference? The difference was that in the rainy regions the leaves are washed often by the descending rains, while in the region in California affected as noted, the rains are too few and far between to effectually do the work, and the water at the roots of the vines and trees has no way to become a cleansing element at the surfaces of the leaves.

The good effects of irrigation from heaven are so pronounced that some of the irrigation plants in the Northwest are distributing their water not through furrows in the soil, but by means of pipes that gush out into fountains at various intervals. The water so applied is a close imitation of the irrigation out of heaven furnished by nature.

People that live in humid regions have much to be thankful for that they never realize. Every rain washes the air and precipitates all the dust. For days afterward the air is fit to breathe, and in breathing it the lungs of men and animals and the breathing pores of plants are not filled with dust particles, which often convey disease. We often hear people groaning at a rainy day, unmindful of the fact that it is one of the great blessings conferred on us by a kind Creator.

The irrigation of the land by surface distribution is good, and it is a wealth-producer, but in considering it we should not forget that other and greater system of irrigation that gives us the water in drops from above.

Nebraska Experience With Oats.

The Nebraska Experiment Station has issued Bulletin No. 113, entitled "Oats." It discusses rates of sowing and cultivation.

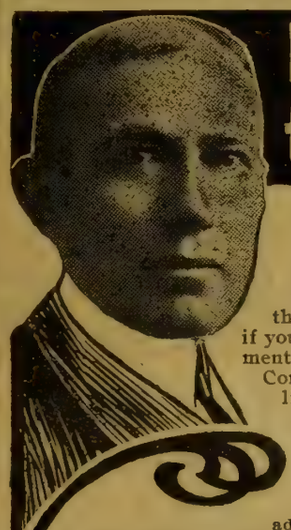
For six years twenty varieties have been tested, and about twelve of these have been tested for five years. The varieties can be summarized into early types and late types. The early varieties, which have ripened on an average July 11th, have averaged 53.9 bushels per acre, while the late varieties have ripened on an average July 20th, and have given an average yield of about 40.1 bushels, a difference of about 14 bushels per acre as an average for five years, in favor of the early varieties of oats. Sixty-day, Kherson and Texas Red, among the early varieties, are the ones most highly recommended. Among the late varieties, Lincoln Oats have given the best results.

Various rates of seeding Kherson oats have been tested since 1903. Results have shown that about eight pecks per acre give the best results when the Kherson oats are drilled and about ten pecks per acre when sown broadcast. However, the rate of seeding depends somewhat upon the variety of oats used. There is a table showing the relative size of grain in different varieties of oats, which demonstrates that with a small-grained variety of oats, like Kherson, eight pecks will furnish about as many plants per acre as fourteen or nineteen pecks of larger-grained varieties. Hence the rate of seeding depends a great deal upon the size of the grain. Counts have been made upon the different rates of seeding for two years to determine the number of plants and number of suckers or tillers produced per acre. Where the planting is thin the plants tiller freely, and almost as many heads per acre are produced where four pecks are used as where eight pecks are used, due to the stooling of the oats under thin planting.

Cultivation of oats has been practiced since 1898, experiments being conducted with plants sown in wide rows, twelve to twenty-four inches apart, also experiments where the oats have been sown with the regular drill and broadcast and afterwards harrowed with an ordinary smoothing harrow or weeder. It has not been found advisable to plant oats in drills wide apart except in a very dry season, when drilling twelve inches apart gave fair results. Where oats have been sown the ordinary way with a drill and harrowed from one to three times soon after the oats came up, an average increase in yield of 4.8 bushels for a period of seven years has resulted. However, where the oats were sown broadcast, harrowing has given a slight decrease in yield, due to the fact that many plants were destroyed in harrowing. It is recommended that oats be drilled and harrowed.

The Dry Farming Congress is issuing a semi-monthly bulletin, giving agricultural pointers without irrigation. Headquarters are at 214 Hutton Building, Spokane, Wash., with John T. Burns, Secretary. Dry farmers might send for a copy.

Horse-radish from the field is selling at St. Louis at $2.50 to $3.50 per barrel. Slyected, it sells at $3.50 to $4.00 per barrel.



Let Me Save You $150 to $200 and Pay the Freight on a CONROY PIANO

Cash or Credit

I will send to your home for 30 Days' Free Trial, freight prepaid, the sweetest-toned, finest-built piano in the world for the price, save you $150 to $200, guarantee the instrument forever, and let you buy it, if you wish after trial, for cash or on easy payment terms. That is my proposition on the Conroy Piano, and I claim that no more liberal offer was ever made by any responsible concern on a piano of standard make in the entire history of the industry.

$500,000 Capital

The *Conroy Piano Co.* is the largest piano concern of the Mississippi Valley. During the past quarter century, we have placed more than 100,000 Conroy Pianos in the homes of the people, and these world-famous instruments have invariably given perfect satisfaction. We are so sure of Conroy Quality that we stand back of every Conroy Piano with a lifetime $500,000 Guarantee. You are absolutely safe in dealing with us. Our long and honorable record proves it!

How We Save You Money

We are Piano Manufacturers. We sell direct to the user at only one small profit added to factory cost. We employ no Agents, Canvassers or Solicitors to follow you up and importune you for business. We save you all Jobber's and Retailer's Profits and Music Teacher's Commissions. As we cut out all "Middlemen" and deal direct with the purchaser, we can easily save you $150 to $200 and give you an instrument of superb tone quality, splendid material, guaranteed durability and wonderfully attractive style and finish.

How The Conroy Is Built

The Conroy Upright Cabinet Grand Piano is built of the finest materials obtainable in American and foreign markets. It is four feet eight in height, and double veneered cases in mahogany, walnut or oak. Each Piano is veneered inside with birdseye maple. It has the very finest of ivory keys; the finest German felts obtainable in the hammers; has a full steel bronze plate, and bushed tuning pins. It is, in every way, constructed as well as it is possible to build a piano, because we employ only the finest piano makers in the world. Is it any wonder that we are safe in giving a Perpetual Guarantee on a piano made like the *"Conroy?"*

My 30-Day Free Trial Plan

Conroy Pianos must sell themselves after a fair, full, free actual trial in your home. You take no risk whatever. Send me no money, but just ask me for my free catalog, (mail the coupon or a postal card or letter will do) then select the Conroy Piano you would like to try. I will ship it at once. Stool and Scarf Free. You keep it a whole month if neccessary. Play it yourself; have your family test it in any way they like. Let your neighbors enjoy it too. Get all the pleasure possible out of it for 30 days, and then, if you feel that you don't want to keep it, return it at my expense. You will not be a penny out of pocket.

Take Your Time To Pay

If you decide to keep the *"Conroy,"* pay me either cash or on easy credit terms. I will trust you and make the easy payments according to your circumstances. You needn't fear that I will make it hard for you to pay. I don't do business that way, I not only guarantee to save you $150 to $200, but will also give you the most liberal payment terms ever offered. So don't hesitate about buying a *Conroy Piano* because you can't pay all cash. I don't want a penny down unless it is convenient to you.

Milk Cure For Consumption.

Dr. B. J. Kendall, of Geneva, Ill., claims that large quantities of milk strippings will cure consumption. The last quart of milk from a healthy cow should be milked into a separate dish which rests in a larger vessel containing just sufficient warm water to prevent the strippings from cooling below blood heat. The cow should be thoroughly cleaned to prevent any dirt getting into the milk, so the patient can blow back the froth and drink at once without straining, as this cools it too much.

Begin by drinking nearly a pint in the morning and the same at night and increase the quantity gradually so that in 10 or 15 days a full quart will be taken twice a day. It should be taken immediately after milking, before it has had time to cool any. All should be taken that can be without too much discomfort and then rest two or three minutes and drink more and rest again, and so on until a full quart has been taken as soon as possible. In about fifteen minutes the patient should eat at the table such articles of food as are known to agree with the stomach. At noon eat as usual.

When the strippings are not allowed to cool below blood heat and taken immediately after it is milked, a full quart will be transfused into the circulation in a remarkably short time.

The Doctor says that the great secret of success with it is in taking it immediately after milking and not allowing it to cool below blood heat, takng a full quart morning and evening and having milk that is very rich. He prefers Jersey milk from a cow that is tuberculin tested.

Wishes an Investigation.

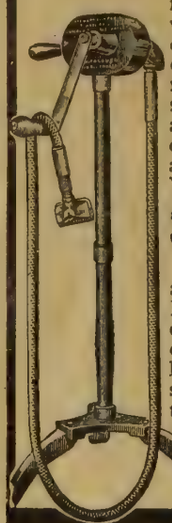
The President of a dairy company having wagon distribution of milk and butter, with establishments at Spokane, Walla Walla, North Yakima, Washington; Portland, Oregon; and Caldwell, Idaho, also having 100 or more milk stations at which milk is received from farmers, wishes the United States government to run his business for ninety days for the purpose of finding out if he is paying the farmer too little; if he is charging the ultimate consumer too much; if he is holding out more than a legitimate profit for himself; also if he is responsible for the alleged high cost of living. The gentleman is willing to submit to government regulation and to be kind to consumers and farmers. One word of advice we can give him, and it is this: Government officials can investigate; they are good at it; government officials can regulate other people's business; they can also restrain business, because all the laws restrain more than they regulate; but when it comes to conducting business—that is another matter. We hope the Pacific coast dairy distributor will not go away and have the government official to conduct the business, unless he expects to find it run into the ground when he comes back. The man who invites the government to run his business, even for ninety days, is in need of a guardian, unless he don't mean what he says.

Dr. Wiley and the Egg.

Dr. Wiley, the government chemist, says that the eggs are permitted to begin the process of growing stale before they leave the farm. He also said that the farmer should be taught to put his eggs on ice, if necessary, that almost every farmer could have an ice box in which eggs could be placed as soon as laid, so that they could be reduced to a temperature which would retard the process of decay. With good eggs to begin with, said the doctor, it is possible to keep them from six to nine months in cold storage and have them come out good to eat. "And yet," he added, "nine out of ten that come out of cold storage to-day; to my taste, are unfit to eat."

There is considerable clatter about the price of food products and after all is said and done the noisiest people know the least about the subject.

Clip Your Horses IN THE SPRING



It pays to clip horses in the spring. They dry out fast at night, rest well and do better work. You throw aside your heavy overcoat in the spring. Your horses cannot do it unless you help. In their natural state they could shed it at leisure as they had no hard work to do. By all means, clip them and if a cold night comes, blanket them until they dry just as you put on your overcoat if it gets cold. You can clip a horse in 30 minutes with this

$7.50

Stewart Ball Bearing Machine

The price of this machine is only $7.50 and we guarantee it to you for 25 years. It's the only ball bearing clipping machine; it's the only one that has gears all cut from the solid steel bar and made file hard; it's the only one that has all gears shut in away from dust and dirt where they run in oil; it's the only one that never yet failed to get praise from every man who buys it.

Get one of these machines from your dealer now or send $2 and we will ship C. O. D. for the rest. Remember, whether you buy it from your dealer or from us, it must please you or your money will be refunded without a question. Order one today or write for our big, new catalogue.

One Gallon of Oil For a Hatch

One filling of the lamp; no heat waste; no danger with the

X-RAY INCUBATOR

Thermometer always in sight. Eggs need not be removed during entire hatch. Other incubators require frequent filling and consume three times as much oil as the X-Ray. We absolutely guarantee to batch 100 chicks with one gallon of oil. The X-Ray controls the flame—burns high or low; generates just enough heat to maintain hatching temperature. Absolutely no waste. Others always use a strong flame and allow the surplus heat to escape.

The X-Ray Beats to Hatching Temperature in 15 Minutes

Others require 6 or 7 hours. Ventilation complete. Simply raise the lid—all hatching fumes rise instantly. The only really different incubator. Enameled-steel-covered; rosewood finish. Glass doors on top, lamp in center; flame control. Write now for free book and know the greatest of all incubators. Address

X-RAY INCUBATOR CO., 48th St., Wayne, Neb.

Hatching With Incubators.

The highest-priced incubator on the market is cheap to the poultry raiser, and the most defective incubator on the market is a better proposition than the motherly hen.

Farmers can raise poultry healthier, better and at less cost than anyone else. On the average farm, a poultry established on five acres will pay all feed bills at farm prices and then produce more clear money than any fifty acres devoted to grain growing.

The incubator is an ancient institution, but its modern usefulness on a commercial basis begins back only a few years. When incubators were first used they were defective and costly, since then there has been continual improvement in construction and the increased trade in them has permitted manufacturers to decrease prices to bring them within limits of profit to purchasers.

Formerly incubator manufacturers expected to sell but one machine to each person, whereas, some of their early purchasers are now their best regular customers. There are poultry plants using 50 to 100 incubators, whereas in the first place, it required several years to get used to the first one; there are farms hatching 20,000 to 50,000 chicks a year, where they use hens for laying and not for hatching.

There is the old saying that the best is the cheapest and it applies to incubators but to find out which is best is to study them all, compare the cost, read the reference, and the hatches and study the points of difference; it is an education that is worth very much more than it costs.

No farmer should buy an incubator except for the one reason that it will pay to do so. Poultry raising depends as much on the chick as cattle raising on the calf. One hundred chicks coming out of the shell can begin to lay in five or six months. In the meantime another crop and still another. A thousand pounds of chicken can be raised as cheap and in less time than a pound of beef.

Nature has provided the poultry for people who have but little capital. From the two-cent egg can be raised a pullet that will not cost twenty-five cents by laying time, will make three dollars' profit by two-years' laying, and then sell for seventy-five cents in the poultry market. With the hen as the setter is Kindergarten business, but with the incubator it can be brought to bring in clear profit on a few acres of ground to several thousand dollars a year.

The Chicken Lectures.

The people of St. Louis are turning out in great numbers to listen to lectures upon all farm subjects. At the Y. M. C. A. Hall, on Thursday, February 24th, three lecture halls were filled to overflowing to listen to Mr. T. E. Quisenbury, of Columbia, Mo., and to see the pictures which were shown upon the screen.

Among the exhibits was a dressed chicken, which he said was intended for Governor Hadley, of Missouri. This chicken was five months old, had been raised, fed and fattened for a total of 47 cents, and in the market on the day of the lecture it was worth $1.47. Here we have a dollar margin on a pullet between actual cost of raising and the retail selling price.

Mr. Quisenbury said that although he was not an old man, he well remembered the time when they used to drive from the home farm to the towns to sell eggs, and they sold as low as three cents per dozen, and even then the eggs could not be sold, and they had to carry them home again. So little were eggs valued in those days that on the return trips to the farm they would often take a few unsold eggs and throw them at a tree or fence-post, just to see if they could hit a mark.

Mr. Quisenbury was the principal speaker of the evening, but overflow meetings were held that were addressed by John H. Curran, Commissioner of Immigration; Herman Steinmesch, a St. Louis poultry expert; C. A. Morton, member of the State Poultry Board; L. M. Harris, John Small; S. A. Hughes, Immigration Agent of the 'Frisco Railway; and F. H. Lewis, of Crescent, Mo., who spoke on "Poultry Raising From the Standpoint of a Farmer." These meetings are being held at the expense of the St. Louis and San Francisco Railway for the purpose of attracting attention to the many openings for new dairy, poultry, sheep and orchard farms in Southwest Missouri, the country familiarly known as the Ozarks.

Write To Us And Get Acquainted

With What We Have to Offer A letter or postal—either one will do—then we'll send you our literature and valuable information on raising poultry to make money.

Racine Incubators turn healthy eggs into healthy chicks every time—and give the highest percentage of hatches. Write and get our proposition—our literature is free. Free Trial plan—best ever offered. Don't delay—Write for full information today.

RACINE HATCHER COMPANY, Box 82, Racine, Wis.

ANOTHER READER BURIES HATCHET.

Dear Editor:—"I notice Mrs. Herron's remarks in your last issue, and if it will help others, you may say I have used Walker's Roup and Cholera Cure for four years. I used to have lots of trouble with roup until I found this remedy. I have cured cases with it that were frightful. But I don't have any trouble any more. I give it right along as a preventive. If my birds catch cold or are exposed, I give a little in the drinking water and it stops it right away.

"I use it also for bowel troubles in little chicks—it's the best thing I ever saw. It makes them grow stronger and feather quicker." Readers can get it by sending 50 cents to the Walker Remedy Company, Dept. B 3, Lamoni, Iowa.

MRS. LOU HORNER, Davis City, Ia.

The Parcels Post Wanted.

The parcels post that the people desire is one that will carry a package at a fair rate from New York to San Francisco, from Seattle to Key West, from Minneapolis to Galveston, from one end of the country to the other, and from the middle to the outskirts of the United States. The people do not desire any contracted measures on routes four or ten miles long to please some storekeeper on a rural route, but a broad measure that will be useful to eighty millions of people in the big cities, the little towns and on the farms and ranches. The reason the people desire a liberal parcels post established is because in no other way can it be obtained. The postoffice is a government monopoly and as such should carry out its purpose, and not stand in the way of the development of business, by which alone can the country be developed and support the population that is destined to live upon it.

The Most Expensive Pig.

"A lecturer to the Royal Geographical Society, of England, has been telling of a Corsican pig which got into the wrong field," said W. G. Tillotson, of Manchester, England, who recently visited Washington, and caused a family vendetta in which hundreds of lives were sacrificed.

"The most expensive pig on record however," continued the Englishman, "was not Corsican, but American. It was caught in a fence on a Rhode Island farm on an election day in 1811. Its owner took so long in setting it free that he reached the polling place too late to vote. The lack of his vote meant the election to the State Legislature, by a majority of one, of a representative who was in favor of war with England. That Legislature elected, also by a majority of one, an advocate of the war policy to represent Rhode Island in the Federal Senate. And it was by a majority of one that Congress declared war in 1812. Even then England got the worst of the deal, but we have eaten up a good many American hogs since to get even."

POULTRY PROFITS DOUBLED

If you want $2 profit where you now get $1, either from eggs or poultry for market, simply send us your name and address and let us tell you the real poultry secret that has doubled the profits of poultry raisers. Its the only real way to poultry success. Make every fowl a profit earner. Write at once for this information whether you have 3 fowls or 300. It's free to you.

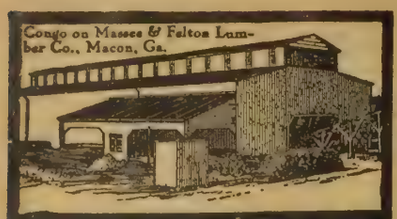
THE BEST POULTRY PAPER.

We are often asked which is the best poultry paper published in the United States, and the answer is, The Reliable Poultry Journal. There are other good papers, but this is the best. The subscription price of The Reliable Poultry Journal is 50 cents a year, and the subscription price of the Universal Magazine is 25 cents a year. We have made arrangements whereby we can send The Universal Magazine and The Reliable Poultry Journal, both papers one year for 50 cents, address, HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.



CONGO
NEVER-LEAK
ROOFING

Fully Guaranteed.

IN the center of every roll of Congo Roofing is a Guarantee Bond.

It is a *real bond* issued by one of the strongest Surety Companies in America. It guarantees Congo 2 or 3 ply *for 10 years.*

Of course such a Surety Bond is as good as gold.

The Congo guarantee means all it says. We could not wriggle out of its provisions if we tried. So we must make Congo Roofing so good that there will never be a complaint.

That is what we do and these guarantees hanging over our heads are your assurance that Congo is a real 10-year roofing.

Sample of Congo and copy of the Bond free on request.

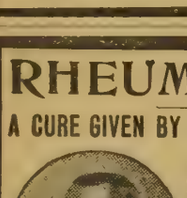
RHEUMATISM

A CURE GIVEN BY ONE WHO HAD IT



In the Spring of 1893 I was attacked by muscular and inflammatory rheumatism. I suffered as those who have it know, for over three years, and tried almost everything. Finally I found a remedy that cured me completely and it has not returned. I have given it to a number who were terribly afflicted, and it effected a cure in every case. Anyone desiring to give this precious remedy a trial, I will send it free. Address,

Mark H. Jackson, No. 491 James Street, Syracuse, N. Y.

Mr. Jackson is responsible. Above statement true.—Pub.

Morphine

TREATMENT SENT FREE ON APPROVAL

Before you pay a cent, we will convince you that Manine permanently cures any drug habit. Guaranteed not to contain Morphine, Laudanum, Opium or any other habit forming drug. No money required in advance, a full month's treatment sent to those afflicted without one cent of deposit. Manine has cured thousands, it will cure you. Give it a free trial. You are to be the sole judge and at our expense.

Manine Co. 172 Manine Bldg. St. Louis, Mo.

Postal Savings Banks.

We are in favor of the establishment of postal savings banks, providing they are true to name, and not postal storage houses. There is a great difference between banking and storage, although many people never think of it.

If the money is deposited to be stored only, that is storage, and it might just as well be stored in the ground; but if it is collected to be loaned out again for the benefit and development of the country, that is banking as it is conducted to-day.

Money in activity is what employs people in constructive enterprises and sets the commercial wheels moving, whereas, money taken and stored away limits enterprise and prevents improvement.

Banks collect money but they are not money storage houses; they are clearing houses and loaning agencies. Banks borrow money from those who have it to spare and reloan to those who need it for businesss purposes.

Putting money into the hands of the government for the purpose of storing it, and then taxing the people to pay interest on it is not a good proposition. The money ought at least to be utilized so as to be of as much benefit to the commerce of the country as if it were deposited in private banks and loaned out in the course of business.

Establishing postal savings banks for the purpose of collecting money and loaning money out again at a profit is true banking, whether it be done by the government or by banking corporations; but this brings us into hot water, because it would interfere with the banking institutions which are just as necessary to the people as the government itself, and it is not an easy matter to find a programme which is unobjectionable, so far as postal savings banks are concerned.

It must not be forgotten that the prosperity of the country is not a gift to the people on the part of the government. The government is a restraining force, not a developed. The government does not feed or clothe us, therefore it is best not to allow the government to deaden seven or eight hundred millions of dollars which in private hands would be an active and beneficial enterprising force.

The fear on the part of banking interests that the government is going to furnish a banking system to put private banking out of business is perfectly natural. If the government started manufacturing shoes the shoe manufacturers would have the same fear; but if the government will receive the money at the postal savings banks and loan it out again through private banks for beneficial enterprises, the government getting good security therefor, the business of banking in general will be increased instead of being injured, and the guarantee of the government to the depositors will bring into use much more money which now lies idle. With the provision that the money derived from deposits shall be kept in circulation and not taken away from the business resources of the country the postal savings banks can be a decided and welcome addition to the institutions of the national government.

Discarded Clothing.

Old clothes accumulate with wondrous rapidity, and before spring work rushes it is an excellent plan to sort them over and get them out of the way of the spring house cleaning.

Three piles at once suggest themselves—one to give away; one to remodel into wearing apparel, and one to work up into rugs or carpet rags, the waste going into the rag bag.

Care and judgment must be exercised in giving away discarded clothing. Yet when this is done the sensible woman will have no reason to feel affronted at the offer of cast-offs which offer good possibilities of being cut down for the little folks. Some are simply outgrown, and a moment's thought will locate the child which they will fit. The saving comes to double advantage—a saving in the cost of material and one in the time required for making it up, the latter being often the most valuable of the two.

Others can be remodeled for your own family. If parts are faded or soiled, select some appropriate dye and color them over, remembering that lighter colors than the original should not be chosen. In this way a fairly permanent color can be secured for wool or silk goods at small expense or labor, and the effect is that of an entirely new garment.

The passing of the carpet brings rugs more and more into prominence, and a really handsome rug can be made of rags—one which is as durable as it is comfortable.

The quickest way is to prepare the rags as for carpet, cutting them fully twice as wide. While woolens are to be avoided in making carpet, as they make a thick spot over which the warp soon cuts, they make the nicest kind of rugs, the Diamond dyes giving them much more permanent colors than on cotton goods, and the texture being richer in appearance as well as warmer.

Sew the rags on the machine, placing one end over the other about three-quarters of an inch and stitching a seam from the end. Without cutting thread, lap the other end of the right-hand rag just sewed and a new one and secure in the same way. When a strip as long as convenient to handle has accumulated, turn the work over and stitch along on the other end in the same way. This is quick work, as it is practically a continuous seam. Then cut the rags apart and wind. A large ball may be sewed by this process in a single evening.

If knit underwear is used, cut a little wider than the cloth rags and wind very loosely. It inclines to stretch in winding and as it shrinks back when taken from the loom a shorter stripe, making a curve in the edge, will result.

Four or five pounds will make a rug from a yard and one-half to two yards long and a yard wide. Allow two large balls for the center. These may be of old pants cloth or any solid or shaded dark color preferred. Select bright colors for the ends, finishing with a few inches of dark color. The beauty of this method is, that short bits which would make no show in a carpet are all right for the strips in a rug. Thus one may make a handsome pattern with almost no coloring unless it be for the fancy stripe. Avoid using too many bright colors. Shaded red and green combine nicely. If for a blue room, shades of blue and drab are effective. Brown and cream also combine nicely.

Have the weaver lay the warp in bunches of about six threads, skipping an equal space. She should furnish warp and weave for 35 cents to 50 cents per rug, according to size. Black warp is perhaps the best color, being strong and harmonizing with all colors.—Bessie L. Putnam.

Feeding Western Lambs.

There is a sheep-feeding station at the Independent Stock Yards, St. Louis, Mo., where sheep are held and fed for market. They are then forwarded for sale to the National Stock Yards. On December 24th, 1909, a consignment of lambs was received from Kansas City. They shrank two pounds in transit and weighed fifty-three pounds average on arrival at St. Louis. They were fed forty-seven days, and when sold at the National Yards on February 10th, weighed seventy pounds; had gained seventeen pounds and were in first-class condition to sell on the market.

WORLD'S GIANT TOMATO

This King of all tomatoes is largest and most productive ever offered. Engraving was made from photo of plant grown by J. B. Gilbert. It grew 18 feet high and produced 5 bushels of fruit, very large, smooth, few seeds, solid all through, red in color, ripening very early and continuing all summer.

We want every person who uses seeds to see our Seed Book and test our seeds and we will give sample packet this **Giant Tomato,** also 3 other great **novelties** free for trial:

1 pkt. 16 Day Radish. Earliest Round Red Radish in the world.

1 pkt. Gigantic Cabbage, Largest heading kind known, from Europe.

1 pkt. Wonderful Lettuce. Earliest, largest, tender and crisp any time. Heads often 3 ft. around.

For only 6c. postage and packing we will mail these **4 sample pkts.** and big **1910 Seed Book full of novelties, Seed Offers** and a **coupon,** good for a **10c.** selection from our Seed Book.

$3.50 Recipe Cures Weak Kidneys, Free

Relieves Urinary and Kidney Troubles, Backache, Straining, Swelling, Etc.

Stops Pain in the Bladder, Kidneys and Back.

Wouldn't it be nice within a week or so to begin to say goodbye forever to the scalding, dribbling, straining, or too frequent passage of urine; the forehead and the back-of-the-head aches; the stitches and pains in the back; the growing muscle weakness; spots before the eyes; yellow skin; sluggish bowels; swollen eyelids or ankles; leg cramps; unnatural short breath; sleeplessness and the despondency?

I have a recipe for these troubles that you can depend on, and if you want to make a **quick recovery,** you ought to write and get a copy of it. Many a doctor would charge you $3.50 just for writing this prescription, but I have it and will be glad to send it to you entirely free. Just drop me a line like this: Dr. A. E. Robinson, K 1174 Luck Building, Detroit, Mich., and I will send it by return mail in a plain envelope. As you will see when you get it, this recipe contains only pure, harmless remedies, but it has great healing and pain-conquering power.

It will quickly show its power once you use it, so I think you had better see what it is without delay. I will send you a copy free—you can use it and cure yourself at home.

With Extra Large All Copper Reservoir

A Perfect Baker Fuel Saver

The Range with a Reputation

These Prosperous Times Warrant The Best

of everything for the farmer—and the farmer's wife. You would not for a minute think of reverting to your grandfather's method of reaping grain with the scythe and cradle. Why then should your good wife suffer the annoyances and inconveniences of an old style cook stove, or cheap range. The best binder, mower, plow, or cultivator is none too good for your use—the best *Range* that money can buy is none too good for your WIFE.

The Great Majestic Range is indeed worthy of your most careful consideration. It is a ***Range with a reputation*** built on HONOR of the best materials—and while the first cost of a ***Great Majestic*** may be more than some others, it ***out-wears three ordinary ranges,*** and its ***Fuel Saving, Baking and Water Heating*** qualities make it much cheaper in the end.

Here are the reasons: The ***Majestic*** range is made of ***Malleable Iron,*** and ***Charcoal Iron.*** ***Charcoal Iron*** won't rust—***Malleable Iron*** can't break. They are put together with ***Rivets*** (not bolts and stove putty) making them absolutely ***Air Tight*** like an engine boiler. No heat escapes or cold air gets into the oven, thus needing only half the fuel used in other ranges. Heat, causing expansion and contraction is what loosens the stove putty, opens the joints and cracks the cast parts of cheap ranges. All joints in ***Majestic Ranges*** are riveted, (no stove putty used) are airtight, and stay that way. The Majestic isn't lined with asbestos paper covered with steel, but ***is lined with guaranteed pure asbestos board one quarter inch thick, covered with an iron grate,*** put there to stay—you can see it.

The reservoir is ***all copper,*** heated like a tea kettle through copper pocket (stamped from one piece of copper) setting against left hand lining of fire box. It boils 15 gallons of water, and, by turning lever, the frame and reservoir moves away from fire. This feature is patented and is used only on the ***Majestic.***

Remember these three important features: ***The material the Majestic is made of—the way it is put together—the reservoir***—then glance at a few of the other features posessed by the Majestic that follow:

The Great and Grand MAJESTIC Malleable and Charcoal Iron RANGE

All doors drop down and form perfect and rigid shelves. ***Malleable oven racks*** slide out, automatically holding anything they contain. ***Open end ash pan*** prevents shoveling ashes out of ash pit. ***Ventilated ash pit*** prevents floor from burning. ***Ash cup*** catches ashes that would otherwise fall on the floor.

No springs anywhere to weaken or get out of fix. It's the best range at any price, and should be in YOUR kitchen. It is for sale by the best dealers in nearly every county in 40 states. If you don't know who sells them in your vicinity, write us and we will tell you, and send you our booklet "The Story of Majestic Glory." Every farmer's wife who contemplates buying a new range should first read this booklet.

Body made of charcoal iron, can't break or crack

SELECTED POETRY.

THE FARM WIFE.

Where ends the road across the hill?
I do not know—I do not know;
But all day long and all the night
I long to go—I long to go!

It runs so straight beneath the sun,
So white beneath the moon;
It calls me from my work and dreams,
And I must answer—soon.

I bolt my door, I do my tasks,
I kiss my goodman's cheek—
Yet I can not bear my babe's laugh
For what the Road would speak.

Where ends the road? I only know
Here from the pasture bars,
It is familiar to the sun
And mistress to the stars.
—Reginald Wright Kauffman, in Lippincott's.

"LISTEN TO MY TALE OF WOE."

little peach in an orchard grew,
Listen to my tale of woe,
little peach of emerald hue,
farm'd by the sun and wet by the dew
grew, it grew.
Listen to my tale of woe.
ne day in passing the orchard through,
Listen to my tale of woe,
hat little peach dawn'd on the view
f Johnny Jones and his sister Sue,
hem two, them two,
Listen to my tale of woe.

horus:—
Hard trials for them two,
Johnny Jones and his sister Sue,
And the peach of the emerald hue,
That grew, that grew,
Listen to my tale of woe.

ow up at the peach a club they threw,
Listen to my tale of woe,
own from the stem on which it grew
ell the little peach of the emerald hue.
oor John! Poor Sue!
Listen to my tale of woe.
ow Sue took a bite and John took a chew,
Listen to my tale of woe,
nd then the trouble began to brew,
trouble that the doctor couldn't subdue,
oo true, too ture.
Listen to my tale of woe.

nder the turf where the daisies grew,
Listen to my tale of woe,
hey planted Johnny and his sister Sue,
nd their little souls to the angels flew,
oo-hoo! Boo-hoo!
Listen to my tale of woe.
at what of the peach of emerald hue?
Listen to my tale of woe,
hat was warm'd by the sun and wet by the
dew!
h! well, its mission on earth is through,
dieu! Adieu!
Listen to my tale of woe.

p through the turf where they laid them
two,
Listen to my tale of woe,
here sprang a tree of a kind we knew,
nd soon through its branches the zephyrs
blew,
-whoo! A-whoo!
Listen to my tale of woe,

And upon the trunk where all could view—
Listen to my tale of woe,
They cut the names of John and Sue,
And "Beware of Peach of Emerald Hue,
It slew! Them two!"
Listen to my tale of woe.
—Unknown Author.

THE MODERN MOUNTAINEER.

The shades of night were falling fast
(As has been mentioned in the past)
When through an Alpine village blew
A Climber with a retinue.
He did not bear through snow and ice
A banner with a strange device;
Nor did he roar "Excelsior!"
(As has been mentioned heretofore),
But tended strictly to his job,
Which was to gain the mountain's nob.

Behind him on the weary jog
There toiled a faithful blonde stenog.,
Likewise there puffed a not'ry pub.,
Provided by the Alpine Club,
Who saw the Climber did not cheat,
And swore him every thousand feet,
Roped to a yodeling Alpine guide
The trio scaled the mountainside.

At dawn the Climber topped the crag
And waved the Climbers' Union flag;
Dictated to the blonde stenog.,
Made affidavit, "S'help me, Bob!"
That he had gained the mountain's nob;
And Bill, the guide, to make things sure,
Was witness to his signature.
"That ought to hold the 'Show me' bunch,"
The Climber murmured. "Now for lunch!"
—Chicago Tribune.

OUR TOWN'S ON THE NASH-NAL ROAD.

Speakin' of the early hist'ry
Of our town and hereabout,
Always call to mind the "pike-days"
And the settlers comin' out,
When the ox-drawn, covered wagons
Kept a-comin' ev'ry day,
Men a-movin' home and fam'ly,
Goin' West to build and stay.

Then when folks were gettin' settled
And the town began to grow,
There were stages and the "pike-boys"
Takin' people to and fro;
Lines of Conestoga freighters
Stretchin' far as eye could scan,
Six and eight-strong, big-boned horses
Hitched to each blue-painted van.

Later came the "'forty-niners,"
Hope in ev'ry rugged breast,
Followin' the pike out yonder
To the trails that lead on West;
And the drovers with their cattle
Bound for markets in the East—
Folks say travelin' then through our town
'Long the old road never ceased.

There were many spacious taverns
When the host with air urbane
Welcomed travelers and "stagers,"
Dashing knights of whip and rein!
Generous kitchen, well-stocked taprooms,
And a' home-like atmosphere,
Makin' each guest feel thrice welcome
With the honest, rare good cheer.

But the "pike-days" are long past now,
The old landmarks in decay;
"Forty-niners," "stagers," "pike-boys,"
Are unknown along the way;
Yet, here runs the grand, old highway,
Where the country's traffic flowed,
And we still take pride in saying:
"Our town's on the Nash-nal road!"
—Frank Edwards, in Globe-Democrat.

ELEVATOR APARTMENT COW.

"If every family would keep a cow the living problem would be solved."—Gov. Hadley, of Missouri.

"Keep a cow," says Mr. Hadley,
"If you would reduce expenses."
We would do it very gladly,
If we could; but sadly, sadly,
Being chiefly in our senses,
We must ask this Hadley, "How
Can our family keep a cow?"

We don't live in Jefferson City,
Mr. Hadley—more's the pity;
For it is a dreamy village,
Full of gardens fat with tillage;
And with pastures fresh and fine,
Where you drive your "lowing kine."
Nay, we live (be still—my heart meant
Not to flutter thus with pride),
In a five-room bath apartment
On the upper western side,
By the Hudson, near the drive—
Recollect it, bath and five;
Four flights up, by elevator;
And the only dumb brute there
Is the very dumb dumbwaiter,
Which is oft our dumb despair.

We should like to keep a cow, sir,
But you'll have to show us how, sir,
You can pasture in a flat
Such an animal as that.

True, our neighbor, who is smitten
With the mania for pets,
Keeps a parrot and a kitten,
Much, indeed, to our regrets;
And there is another neighbor
Who is quite content to labor
With a bulldog on a rope
When she takes him out for scope.

But a cow—well, Hadley, now,
We're afraid there'd be a row
If we came around some morning
Absolutely without warning,
Leading by her nose a heifer
Hairy as a Kansan Peffer,
With her horns a foot in length
And a Samson in her strength.

We are very much afraid
That a pet like her, Oh, Hadley,
Wouldn't please the kitchen maid—
Though I'd do the milking gladly!

True, the roof might do for pasture—
But to get the critter up there?
You can go there now and cast your
Eyes upon our neighbor's pup there;
But a cow—now, you'll allow,
'Twould be different, for a cow!

As to feed—we raise no clover
In our window boxes yet.
Though we'll go and look them over
In behalf of such a pet
For her forage. As for corn,
Which is food for cows and man,
Well, we raise it in the can
On the doubly dump dumbwaiter,
Sometimes on the elevator—
Which evokes the darky's scorn.

But, alas! we're playing hob
Here with agricultural notions;
Cows prefer it on the cob,
Not in fried and buttered potions.

After all, dear Mr. Hadley,
Being from Missouri, you
Ought to come and show us. Madly
We entreat you, Hadley—do!

Now—show us how to keep a cow
In a flat where we are at.
—Robertus Love, in New York Sun.

IT WAS SURELY PASTEURIZED.

"And is your milk pasteurized?" asks the prospective customer of the dairyman.

"Sure," he replied. "My boys pasteurize the cows every morning."—Chicago News.

Wanted To the women of Ohio, Indiana, Illinois, Michigan, Wisconsin, Minnesota, Illinois, Iowa, Missouri, Nebraska and Kansas, who will send me the names and addresses of ten or more substantial farmers who own their land, together with three 2-cent stamps, to pay for packing and mailing, I will send you the finest lithographed calendar, 2½ feet long, ever produced, and a nice little surprise present. This calendar is one that anyone will be proud to own. Little effort is necessary in order to send ten names. If you can send 25 or more, I will send you, in addition to this pretty calendar, a more substantial present, worth any woman's appreciation.

Deaf People Now Hear Whispers

Wireless Telephones for the Ears

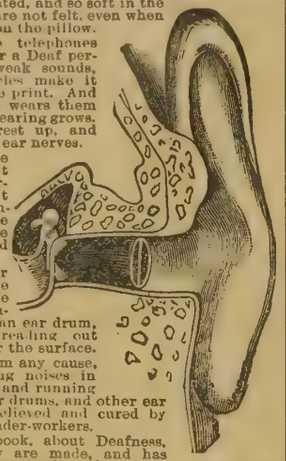
They make the Deaf hear distinctly.

They are out of sight when worn. Wilson's Ear Drums are to weak hearing what spectacles are to weak sight.

They are sound-magnifiers, just as glasses are sight-magnifiers.

They rest the Ear Nerves by taking off the strain—the strain of trying to hear dim sounds.

And they can be worn for weeks at a time, because they are ventilated, and so soft in the ear holes they are not felt, even when the head rests on the pillow.



These little telephones make it easy for a Deaf person to hear weak sounds, just as spectacles make it easy to read fine print. And the longer one wears them the better the hearing grows. Because they rest up, and strengthen, the ear nerves.

By making the sounds louder, it is easy to understand without trying and straining. They make Deaf people cheerful and comfortable.

Wilson's Ear Drums make sounds strike hard on the center of the human ear drum, instead of spreading out weakly all over the surface.

Deafness from any cause, earache, buzzing noises in the head, raw and running ears, broken ear drums, and other ear troubles, are relieved and cured by these little wonder-workers.

A sensible book, about Deafness, tells how they are made, and has printed in it letters from hundreds of people who were deaf but who now hear.

Clergymen, Lawyers, Physicians, Telegraph Operators, Trainmen, Workers in Boiler Shops and Foundries—tell how their hearing was brought back to them, almost instantly, by the proper use of Wilson's Ear Drums.

This book has been the means of making 326,000 Deaf people hear again. It will be mailed free to you if you merely write a post card for it today. Get the free book for proof. You owe it to yourself and to your friends to learn how to be well.

Write for it today to the Wilson Ear Drum Co., 891 Todd Building, Louisville, Ky. (1)

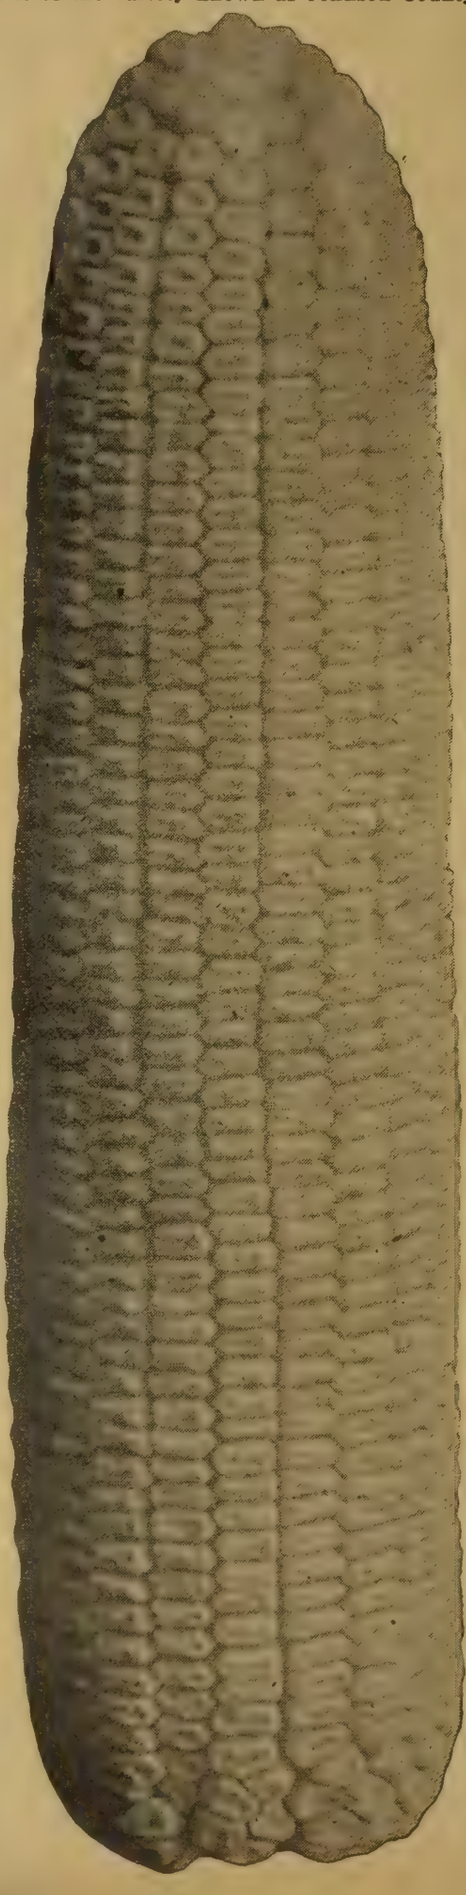
MEAD CYCLE CO., Dept. F138, Chicago

GRAND SWEEPSTAKES WHITE CORN.

Offered as a Premium by the Subscription Department of The National Farmer and Stock Grower.

The fine ear of corn represented is the one which was sold for $250. It is of the variety known as Johnson County White Dent. It is the corn that won the highest awards at the National Corn Shows of 1907 and 1908. Mr. L. B. Clore, of Indiana, is the breeder, raiser, grower and exhibitor of this wonderful ear of corn. Mr. Clore has won so many sweepstakes prizes for corn exhibits that he has the high honor of being the recognized champion, and is barred from competition. He can select corn of his own raising and be sure to win the championship. At one Corn Show his winnings amounted to $7,536.50. Mr. Clore has very kindly furnished us with a small quantity of his Grand Sweepstakes Seed Corn for premium purposes. We offer it to our readers for experimental purposes. We have offered this same corn for two years with gratifying success. A fourteen-year-old boy in Georgia received a pound of this corn from us as a subscription premium and from it he raised a good stand and selected ten ears which won a $50 first prize at the Georgia State Fair. This office also awarded him $25.00, and the same corn was in competiton at the National Corn Show of 1909.



Mr. Clore habitually raises 90 to 100 bushels per acre. A pound of his seed is worth considerable money.

PREMIUM OFFER NO. 1.

For premium purposes we make this offer: Anyone sending us a postoffice money order for 60 cents will be credited with one-year's subscription to The National Farmer and Stock Grower, and he can select one pound of Clore's Grand Sweepstakes White Corn as a premium, to be sent postpaid by mail, and safe delivery guaranteed.

PREMIUM OFFER NO. 2.

Anyone sending us one dollar by money order or registered mail will be credited with two-years' subscription to The National Farmer and Stock Grower, and will have the privilege of selecting two pounds of Clore's Grand Sweepstakes White Corn as a premium, to be sent postpaid, and safe delivery guaranteed.

OUR PRIZE OFFERS.

Furthermore, if any of our patrons grow corn from premium seed corn furnished by us as a premium and exhibit ten ears of the same at their own State Fair or at any Interstate Fair, or at their own Agricultural College Corn Show—for every championship premium won by said corn we will pay the exhibitor fifty dollars; for every first prize twenty-five dollars; for every second prize ten dollars, and for every third prize five dollars, providing that these prizes are won during the year 1910 with corn grown by our subscriber from the seed corn furnished by us to him as a premium.

Stomach Troubles Vanish Like Magic

FREE to Every Man or Woman

Dr. Young's **PEPTOPADS cure** where medicines alone **fail.** They regulate the bowels, relieve soreness, and strengthen the nerves and muscles of the stomach in either sex. P. & M. AGENCY, 143 Elk St., PALMYRA, PA.

THE NATIONAL SHOW OFFERS.

If any premiums are won at the National Corn Show of 1910 by corn grown by our subscriber from premium seed furnished by us, we will double the amounts. Thus, ten ears of corn at a State Show winning a first prize will receive from us $25.00, and, if winning a sweepstake prize, will receive $50.00 from us. Then, if winning a first prize at the National Corn Show, the exhibitor would receive $50.00 additional from us, and, if winning a sweepstake prize, would receive $100.00 from us, or a total of $225.00 in all. All this is possible with ten ears of corn grown from the corn which we will send as a subscription premium.

SUBSCRIPTION BLANK.

Please mention Nat. Farmer and Stock Grower.

Caring For Men's Clothes.

The piece bag will often furnish enough material for several nice neckties, and they are quickly and easily made by ripping up an old tie and using as a pattern for a new one, and an old tie can be freshened by rubbing with an old toothbrush dipped in gasoline.

The best way to clean the dust from coats and pants is to hang them over the line and beat the dust out with a small cane, then lay them out smoothly on the table and brush the cloth until free from dust before trying to remove any spots from the cloth, and in cleaning the fabric the rubbing must be brisk and light, as hard rubbing is ruinous in cleaning clothes.

If the knees of pants get to looking baggy and bad shape, lay a damp cloth over all of the knee portions of the pants on the wrong side and press until the cloth is dry, then turn right side out and fold in the center and press from top to bottom over the damp cloth. If the edges of sleeves and pants legs are becoming worn, rip out the hems and turn them up far enough to conceal the worn part and run skirt braid on the underneath side and press carefully.

When pants, coats or vests become soiled enough to be washed, there is no better way to clean them than to put them in a strong Pearline suds, but the suds should be beaten to a nice lather before the garments are put in and they should be allowed to soak for at least a half hour before washing out.

It is best to remove the buttons before washing the garments and sew them in place again after the cloth is pressed, and the buttonholes will look much better if they are basted together before the garment is washed; and if they are worn, it is a good plan to run a strong thread around them and work over this, like making a new buttonhole.

When pressing black goods it is best to place on an ironing board covered with black satteen or any black goods, as white usually leaves an unsightly lint on the goods, and if the work is carefully done from beginning to end, the garment will come through the cleaning process looking almost like new.—Martha.

Caring For Convalescents.

"Chattering and gossiping visitors have no place in the sick-room," asserts Dita H. Kinney, R. N., Superintendent of the U. S. A. Nurse Corps, in the Woman's Home Companion for March, "and to save the patient from such friends is an important duty of his nurse. A few agreeable, low-voiced and judicious persons make a pleasant break in the monotony of an invalid's life, and are great aids to cheerfulness, but care must be used regarding the number admitted—never more than two at a time—and a fatiguing succession must be avoided.

"In early convalescence great care should be taken not to strain or tire the eyes. If not conscious of fatigue, the patent may read a little while at a time, but he should be so placed that the light will fall over his shoulder on the book or paper, and not shine directly into his face. He may be read to, as anything which interests and entertains him is a help.

"Convalescents are peculiarly sensitive to cold, because of their lowered vitality. They should always wear light woolen garments next the skin, and convalescent children should sleep in flannel.

"Changes of scene and climate are valuable aids to recovery. After suppurative diseases, like hip disease or empyema, a long stay at a warm seashore is beneficial; after acute diseases, choose a warm, sunshiny place which is easily accessible and where there are plenty of creature comforts. It may be either seashore or inland. After whooping-cough and diphtheria the sea air is beneficial; after a long fever, the mountains are best."

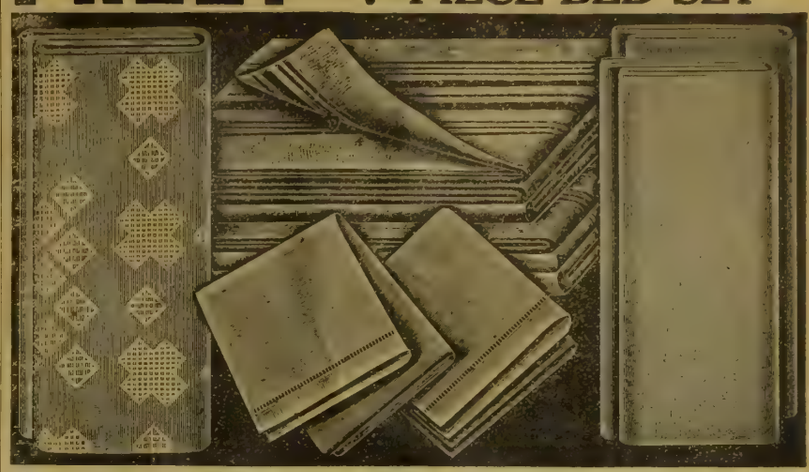
Exercise and Breathing.

"Limited breathing capacity is one of the most common physical ills," says Dr. Jean Williams in Woman's Home Companion for March. "Poor breathers are found not only among the sick of the earth, but also among the moderately well. All chronic invalids are poor breathers, and it is quite likely that they never would have been invalids if they had been good breathers.

"Now here is the connection between good breathing and exercise. In order to be a good breather it is necessary to have sufficient lung capacity. Suitable exercise broadens and deepens the chest, gives freer capacity to the lungs and better fits them for their important task of supplying oxygen to the body and relieving it of the deadly carbonic acid.

"When in the fresh air, breathing deep, we absorb enough oxygen to saturate the blood. If we are exercising briskly at the same time, we absorb more oxygen, and are, therefore, just so much better off."

FREE! To Every Lady Reader This Beautiful and Durable 7-PIECE BED SET



Consists of 2 Blankets, 2 Bleached Sheets, 2 Bleached Pillow Cases and 1 Bed Spread—All Full Size Pieces

Here is an opportunity whereby every woman in the United States can get this useful, expensive, 7-piece Bed Set, **Absolutely Free.** This Bed Set consists of 2 Blankets, 2 Bleached Sheets, 2 Bleached Pillow Cases and 1 large, White Bed Spread—7 full size pieces in all. Limiting Production.

The Greeks who raise currants for home consumption and foreign shipment are studying ways and means to reduce excessive production. In four months ending December 10, 1909, they exported 168,622,841 pounds. The total crop was estimated at 380,000,000 pounds.

ITCH-ECZEMA FREE TRIAL

(Also called Tetter, Salt Rheum, Pruritus, Milk-Crust, Weeping Skin, etc.)

ECZEMA CAN BE CURED TO STAY, and when I say cured, I mean just what I say—C-U-R-E-D, and not merely patched up for awhile, to return worse than before. Now, I do not care what all you have used, nor how many doctors have told you that you could not be cured—all I ask is just a chance to show you that I know what I am talking about. If you will write me TO-DAY, I will send you a FREE TRIAL of my mild, soothing, guaranteed cure that will convince you more in a day than I or anyone else could in a month's time. If you are disgusted and discouraged, I dare you to give me a chance to prove my claims. By writing me to-day you will enjoy more real comfort than you had ever thought this world holds for you. Just try it, and you will see I am telling you the truth.

DR. J. E. CANNADAY,

1100 Park Square, Sedalia, Mo.

Could you do a better act than to send this notice to some poor sufferer of Eczema?

References: Third National Bank, Sedalia, Mo.

Reliable Beyond Question

This is a statement from the bank of my home town, where I have done business for years.

THIRD NATIONAL BANK,

Sedalia Mo. Jan.-1-1910.

TO WHOM IT MAY CONCERN:-

Dr. Cannaday, of our city is a physician, making a specialty of ECZEMA. We have handled his business exclusively for one year and eighty four days. His patients deposit their money with us, in their OWN NAME, to be paid to the doctor, if his treatment is satisfactory. If we remember correctly, we have been called upon by only FOUR of his patients for their money, and it seemed then, that the fault was more with the Express Companies than with the treatment failing.

Considering the number of cases he treats, we regard his success as remarkable. We consider him perfectly reliable, and assure those placing their money with us a fair, square, business deal.

Yours truly,

After La Grippe

"I had suffered several weeks with LaGrippe. Had pains in my head and eyes. It felt as though there was a heavy weight on the top of my head, until it seemed that my brain would burst. I was so nervous that I could not rest or sleep. When I dozed off I would awake with a sudden jerking of my whole body. Dr. Miles' Nervine, Heart Remedy and Nerve and Liver Pills cured me. A number of friends have since realized the same benefits."

MRS. ALVIN H. LOCKS,
Seabrook, N. H.

The after effects of LaGrippe are often more serious than the disease, as it leaves the system in a weakened condition that invites more serious troubles, such as pneumonia, etc.

Dr. Miles' Restorative Nervine

should be taken for some time to thoroughly restore nerve strength.

Dr. Miles' Nervine is sold by all druggists. If the first bottle does not benefit, your druggist will return your money.

MILES MEDICAL CO., Elkhart, Ind.

The Carpetless Floor.

This is surely coming, into the home of the middle class as well as of the rich. If we cannot afford the elegant polished floor, there are now so many ways of procuring a neat and serviceable substitute; and for cleanliness and ease in keeping it in order, those who have banished carpets have no desire to return to them.

Many, too, have the foundation for a healthful floor without realizing it. A white ash that had been carpeted for thirty years was last season remodeled in a simple way which has proved very serviceable. After cleaning it with clean water it was thoroughly sandpapered. This must be carefully done, for if it is not rendered very smooth, dust will cling, and the ease in keeping it in order be sacrificed, to say nothing of the loss in appearance. The cracks were then filled with a prepared crack filler, after several trials, according to directions for a home-made filler of bits of newspaper and paste. The latter is durable, the objection being that it is difficult to work into the cracks, lumps often pulling out as we endeavor to smooth them down.

The prepared fillers usually turn white when dry; consequently some coloring matter must be worked in. We painted over it when dry with a yellow paint colored the desired shade by mixing in dry burnt sienna. When this was dry, boiled linseed oil, applied hot, was rubbed over with a bit of flannel, and in a few minutes it was rubbed in thoroughly with a piece of burlap. The more it is rubbed the better the result. In a couple of weeks the second coat was given, and once a month later kept it in good repair.

It is quickly swept by tying a bag of Canton flannel or other soft cloth over the broom, sweeping and dusting being thus done at the same time. The rugs are quickly and easily cleaned, and, all in all, we have no desire to return to the heavy, dust-gathering carpet. The great trouble is, that the crack filler inclines to crack when the floor is wiped with water. Another time we will use putty, which is cheaper, and recommended by some as satisfactory. The prepared filler is perhaps all right where a varnish is used, but the oil soaks in instead of protecting it.

While this has proved satisfactory for the living room, not spotting every time a bit of snow is tracked in, and not so slippery as to endanger one's life and costing very little to keep in repair, the greater part of the gallon of oil originally purchased still remaining, though the room is a large one, there are more beautiful ways of preserving the natural wood, some of them perhaps as durable. At least we are inclined to experiment with some of the standard varnishes for the best room another time. One thing about the oiled floor—it is spoiled for some of the more showy finishes, in case they prove as serviceable; or at least it will have to be shaved off before applying other dressing. So one should consider well in selecting. For hard wood, oil is most durable, though less showy than the finer finishes. It is also cheap.

For soft woods, of course a different treatment is necessary. The best plan is to get circulars from several different standard dealers and compare their claims. Then finish up a small room first and test the matter, unless you have some acquaintance who has had the necessary experience. Anyone can prepare their own floors unless they are badly worn. Filling the cracks reduces the moth problem to a minimum. The natural-wood finish adds much to the appearance of the room, though even paint is handsome; and the problem of house cleaning becomes much more simple, the home much more sanitary.—Bessie L. Putnam.

A GOOD CLUB COMBINATION.

Through the generosity of the publishers of the Farm and Home we are enabled to furnish two good papers for the price of one. One paper is this paper, The National Farmer and Stock Grower, and the other is the great semi-monthly paper, the Farm and Home. Farm and Home is just what its name indicates—a spicy, practical, up-to-date magazine. It covers everything that pertains to the farm, big or little, in country or village. It gets right down to business; is full of snap and go.

For the family it gives the best, newest and most reliable jottings upon household problems, cooking recipes, fashions and dressmaking, embroidery, boys and girls, mothers and daughters, fathers and sons.

Pure, bright, clean, reliable all the way through. Profusely illustrated; popular in both country and town.

Send us Fifty Cents by money order or new one-cent postage stamps, and we will send Farm and Home and The National Farmer and Stock Grower for one year. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Cabbage-growing Experiments.

The difficulty in obtaining seed that can be relied upon to reproduce its kind with certainty and to produce vigorous plants that will mature to perfection, is very clearly exemplified by some experiments in raising the Jersey Wakefield cabbage at the grounds of the Pennsylvania State College.

Jersey Wakefield cabbage is one of the standard sorts; it is listed in every catalogue, and it is known and grown wherever vegetable gardens are to be found. The Pennsylvania Agricultural College obtained seed from twenty-five different seed-growing houses and proceeded to sow it, observing every point, from sowing, germination, transplanting, to the harvesting and marketing.

They tested two years in succession, planted the same day, on the same land, all conditions being equal, and the result indicated marked variations within the variety.

In the conclusions the experimenters state that the lack of uniformiy in this variety shows the importance of exercising the utmost care and skill in selecting cabbage seed.

The experiment distinctly points to the necessity for germinating tests previous to the time of sowing. If the seeds germinated, the degree of vigor of the young plants in the seed-bed did not indicate the value of plants at maturity. Some small plants that first appeared lacking in vigor really developed to the better class of plants and symmetrical heads. Some very favorable beginnings made coarse and untrue headings.

Three of our advertisers had seed in this test—Messrs. H. W. Buckbee, Rockford, Ill.; W. Atlee Burpee, Philadelphia; and Northrup, King & Co., Minneapolis—and all their seed was reported as producing strong and vigorous plants, good, marketable heads, maturing in good season and true to type.

FREE BOOK ABOUT CANCER.

THE LEACH SANATORIUM, of Indianapolis, Ind., has published a book on cancer, which gives interesting facts about the cause of cancer; tells what to do in case of pain, bleeding, odor, etc., instructs in the care of the patient, and is in fact a valuable guide in the management of any case. The book is sent free to those interested who write for it, mentioning this paper.

PILES Quickly Cured

Instant Relief, Permanent Cure—Trial Package Mailed Free to All in Plain Wrapper.

We want every man and woman suffering from the excruciating torture of piles to just send their name and address to us and get by return mail a free trial package of the most effective and positive cure ever known for this disease, Pyramid Pile Cure.

The way to prove what this great remedy will do in your own case, is to just fill out free coupon and send to us and you will get by return mail a free sample of Pyramid Pile Cure.

Then after you have proven to yourself what it can do, you will go to the druggist and get a 50 cent box.

Don't undergo an operation. Operations are rarely a success and often lead to terrible consequences. Pyramid Pile Cure reduces all inflammation, makes congestion, irritation, itching, sores and ulcers disappear—and the piles simply quit. No knife and its torture. No doctor and his bills.

For sale at all drug stores at 50 cents a box.

We Treat You 30 Days FREE

Blood Poison can never be cured with mercury or potash. You might as well know this first as last. Medical authorities say so. The most these drugs can do is to drive the blood poison back into the system and smother it for several years. Then when you think you are cured, pitiful mercury symptoms will break out, and you find that your bones have been rotting all the while. Your teeth will begin to loosen and your tissues, glands, brain and vital organs will show the terrible destructive power of the mercury and potash. Locomotor Ataxia, Paralysis, Imbecility and Premature Death are then almost inevitable. Any medical authority will corroborate these statements. The remarkable vegetable Obbac Treatment does not drive in the

Blood Poison

but drives it out. It positively contains no mineral poisons whatever, so that once cured by the Obbac Treatment you never run the terrible risk of having your bones soften, your nerves collapse, your teeth fall out, your kidneys degenerate or your brain weaken. The Obbac Treatment is a marvel, producing remarkable changes in only 30 days. This is why we offer to any blood poison victim living, no matter how bad a case, a

30-Day Treatment FREE

You want to be cured and cured quick—not poisoned with mercury and potash for years. A 30-Day Treatment is yours for the asking. You will open your eyes at what it will do for you in a month. We treat you free for a month. Just write to us and get the treatment free. Then if you are satisfied it is the most remarkable treatment you ever took, you can continue if you wish. Never in your life will you ever again have such an opportunity for a complete cure, as is given you by this

Great Obbac Treatment

This is a square deal. You sign nothing, no notes, make us no promises, except to take the treatment.

The wonderful Wasserman Test, the only blood poison test known to scientists, proves that the body is completely purified by the Obbac Treatment, and that mercury and potash do not cure blood poison. Sit down and write to us, giving a full history of your case in detail. We will treat your letter as a sacred confidence. Consultation and advice free. We will send you also the remarkable book, "Driving Out Blood Poison" free.

This is the very best pattern service, and we are very much pleased to obtain it for our friends and patrons. Each pattern is new and original.

Fancy Work Aprons.

No. 6563.—Simple aprons that are attractive at the same time are the best possible ones for busy women. Here are two that are different in style but both of which serve their purpose admirably well. The one to the left is somewhat simpler and is extended to cover the back of the skirt as well as the front, consequently, it keeps the skirt protected at the back as well as the front. The apron to the right includes a frill and somewhat more elaborate pockets. It is held by ties also, and is attractive as well as practical. Satteen is a favorite material for the making and such material as mohair is much in vogue but the aprons will be found appropriate for gingham, percale, linen, silk, every material that is suited to such purpose. In the illustration the plain apron is made of satteen but the apron with the frill is made of white lawn.

The plain apron is cut in one piece. It is circular and finished with a belt. The bib is separate and attached to the belt and the pockets are arranged on indicated lines. The fancy apron also is circular but is finished with a frill and is gathered at its upper edge to make slight fullness. It is finished with a belt to which ties are attached.

The quantity of material required is, for plain apron, 2⅛ yards 24, 1¾ yards 36 or 1½ yards 44 inches wide; for the fancy apron 2⅝ yards 24, 1⅝ yards 36, 1⅜ yards 44 inches wide.

The Pattern 6563 is cut in one size only, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Tucked Over Blouse.

No. 6557.—The over blouse is such a pretty, useful, becoming little garment that each new one must be heartily welcomed. The latest includes certain features that are all its own. Here is an excellent example. It is made with short sleeves that are cut in one with it and these sleeves are fitted snugly under the arms to do away with all unnecessary fullness at that point. The over blouse can be made of thicker or thinner material as liked, to match the skirt or in contrast but it is especially to be desired made from chiffon cloth, or similar thin material, in color to match the skirt, or coat suit, and worn over a guimpe of contrasting material. For these last, Persian silks, fancy nets, tucked materials and the like are greatly in vogue, but the simple lingerie blouse is in every way appropriate.

The over blouse is made with front and back portions only. In this instance it is finished with bands of silk, but any preferred banding can be used on neck and sleeve edges. It can be stayed at the waist line and allowed to extend a few inches under the skirt or be cut off and joined to a belt as liked. Any guimpe can be worn in combination.

The quantity of material required for the medium size is 2⅜ yards 21 or 24, 1⅞ yards 32 or 1¼ yards 44 inches wide with 2 yards of banding.

The Pattern 6557 is cut in sizes for a 32, 34, 36, 38 and 40-inch bust measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Girl's Dress.

No. 6553.—Closings at the left of the front make the latest feature of fashion and children's dresses are shown so quite as well as the grown-ups. This one is essentially novel and extremely attractive. It is closed for its entire length with buttons and buttonholes above and below the trimming, invisibly beneath the trimming, consequently it can be opened out and laundered with perfect success and is especially well adapted to washable materials. Plaid Scotch gingham is the one illustrated with trimming of banding and buttons. Linen would be handsome so made, pique, and, indeed almost all the simpler washable materials, while the model also can be used for the wools of immediate wear. Plaid wool material with trimming of black velvet ribbon is always smart and attractive and suits the design admirably well. Blouse and skirt portions are separate and are joined beneath a belt. The plaits over the shoulders give becoming breadth and the plaits at the back and sides of the skirt mean graceful fullness.

The dress is made with blouse and skirt portions which are joined and closed at the left of the front. The skirt is straight and the sleeves are made in one piece each.

The quantity of material required for the medium size (10 years) is 6¼ yards 24 or 27, 4⅝ yards 32 or 3½ yards 44 inches wide with 2½ yards of banding.

The Pattern 6553 is cut in sizes for girls of 6, 8 and 10 and 12 years of age and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Please be sure to give size of pattern ordered and write your own name and address clearly that no mistake can be made to cause delay.

Kindly address all pattern orders to **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

LAND MATTERS.

The Sunny Slope Farm, near Emporia, Kas., owned by Mr. C. A. Stannard, is for sale. The price for 970 acres is $60,000, or about $62 an acre. It is one of the finest properties in Kansas and gives a line upon land values in that vicinity.

FREE TO YOU—MY SISTER

Free to You and Every Sister Suffering from Woman's Ailments.

I am a woman.
I know woman's sufferings.
I have found the cure.

I will mail, free of any charge, my home treatment with full instructions to any sufferer from woman's ailments. I want to tell all women about this cure—you, my reader, for yourself, your daughter, your mother, or your sister. I want to tell you how to cure yourselves at home without the help of a doctor. Men cannot understand women's sufferings. What we women know from experience, we know better than any doctor. I know that my home treatment is safe and sure cure for Leucorrhoea or Whitish discharges, Ulceration, Displacement or Falling of the Womb, Profuse, Scanty or Painful Periods, Uterine or Ovarian Tumors, or Growths; also pains in head, back and bowels, bearing down feelings, nervousness, creeping feeling up the spine, melancholy, desire to cry, hot flashes, weariness, kidney, and bladder troubles where caused by weaknesses peculiar to our sex.

I want to send you a complete ten day's treatment entirely free to prove to you that you can cure yourself at home, easily, quickly and surely. Remember, that, it will cost you nothing to give the treatment a complete trial: and if you wish to continue, it will cost you only about 12 cents a week or less than two cents a day. It will not interfere with your work or occupation. Just send me your name and address, tell me how you suffer if you wish, and I will send you the treatment for your case, entirely free, in plain wrapper, by return mail. I will also send you free of cost, my book—"WOMAN'S OWN MEDICAL ADVISER" with explanatory illustrations showing why women suffer, and how they can easily cure themselves at home. Every woman should have it, and learn to think for herself. Then when the doctor says—"You must have an operation," you can decide for yourself. Thousands of women have cured themselves with my home remedy. It cures all old or young. To Mothers of Daughters, I will explain a simple home treatment which speedily and effectually cures Leucorrhoea, Green Sickness and Painful or Irregular Menstruation in young Ladies, Plumpness and health always results from its use.

Wherever you live, I can refer you to ladies of your own locality who know and will gladly tell any sufferer that this Home Treatment really cures all women's diseases, and makes women well, strong, plump and robust. Just send me your address, and the free ten day's treatment is yours, also the book. Write to-day, as you may not see this offer again. Address

AMERICAN JEWELRY CO., Dept. 10, Chicago

Mme. Schumann-Heink, the celebrated singer, purchased 500 acres of San Diego county, California, land for $20,000. The property is in the beautiful El Cajon Valley, and includes fine lemon and orange ranches. It is known as Villa Caro Ranch. The singer will erect a home for her children. She does not intend to retire from the concert stage, but expects to pass as much of her time as she can spare superintending improvements. She has boys who may not be singers, and the next best occupation is farming.

In England a recent law tends towards cutting up lands into smaller holdings and letting tenants buy it on easy payments. Up to date, about 64,000 acres have been acquired at an average price of about $78.00 an acre.

From Springfield, Ill., on January 12th, it was reported that a record price for farm land in Sangamon county had been reached when Edward Watts paid $241 an acre for a tract of 199½ acres, seven miles west of Springfield. The total consideration was $43,075.50.

It is not generally known that in the year 1850 the state of Texas sold to the United States one hundred million acres of land at ten cents an acre. This land includes the eastern half of what is now New Mexico, all of the neutral strip, now a part of Oklahoma, and a strip running north and south in Western Kansas, in Colorado. At a conservative value of ten dollars an acre, the land is now worth $1,000,000,000. At the time the sale was made the land had hardly been explored. Texas was in great need of money, and thirty years later sold large bodies of land at 50 cents an acre.

The Beauty Of Firm Flesh

Lies In The Power Of Rich Blood To Keep It Ever Clear And Clean.

Stuart's Calcium Wafers Free.

The secret of firm, strong, supple flesh is— good, rich, constant flowing, blood. When hollow cheeks appear and hidden pigments make the eyes look like burnt holes in a blanket, the blood is sick and out of tune.

The effect of impure and pure blood is seen at once on the face.

Impurities fill it with poisons, the flesh harbors these poisons, and the lungs cannot eliminate them as they should.

It needs a purifier. Stuart's Calcium Wafers give to the blood through the same channels as food all the strength and stimulus necessary to remove the impurities and to make rich corpuscles which will feed the body or fight its enemies.

Time was when poor blood purifiers had to be used, such as herbs and roots, powdered minerals, etc., but thanks to latter day achievement the Stuart process gives to the system the full rich strength of Calcium Sulphide, the greatest blood purifier known to science.

These little powerful wafers are prepared by one of the most noted expert pharmaceutical chemists in the world, and so far as science is concerned no expense has been spared to make them perfect.

They contain Quassia, Golden Seal and Eucalyptus, each a most powerful aid to the blood of man.

Thousands of people use these wafers with religious zeal, and their testimonial evidence is an unfailing source of interest to one who reads it.

Melancholy marks every suffering woman, yet one should be armed with this knowledge and make up one's mind to try Stuart's Calcium Wafers at once. Every druggist carries them. Price 50c., or send us your name and we will send you a trial package by mail free. Address F. A. Stuart Co., 175 Stuart Bldg., Marshall, Mich.

Don't forget our Rose Premiums. They are hardy plants and will beautify your home.

How About the Pruning?

We find many people that believe in pruning, and a few that do not. As a general proposition, pruning is necessary to give the best results with fruits. Those that argue against it say that pruning is not according to nature. True, but the fine apples, peaches, pears and other fruits are not according to nature. If we let nature have her way we will get only small and indifferent fruits, such as we now find growing wild. But for two thousand years man has been pruning and cultivating fruit trees and getting new and better fruits all the time.

As to time of pruning, we find a radical difference of opinion. The writer once heard Professor Bailey say that to increase wood, prune in the summer; to increase the production of fruit, prune in the winter. Some horticulturists have the saying, "Prune when your knife is sharp;" that is, any time.

The idea has become quite fixed that winter pruning is best because the pruned tree has time to heal before the movement of sap begins in the spring. But how much healing can a tree do when all development is at a standstill? The fact is, early spring pruning is probably as good as any other, and is even better than at certain other times of the year. In the spring there is an exudation of tissue constructing substances, which quickly cover up the wound and seal the pores. There is another advantage in pruning in the early spring, which is the absence of fungous disease germs to get into the wounds.

It is advantageous to prune trees every year instead of pruning once in a dozen years, as is the practice of some. In such cases the tree is not generally pruned till it has become overgrown with useless wood. Then the pruning has to be so vigorous that the tree is mutilated. Great limbs have to be cut off, and the vitality of the tree is sometimes so affected that it takes years to recover or does not recover at all. Pruning a little each year relieves the necessity for mutilation. It keeps the tree in good growing shape, and gives fruit every year.

In pruning the most essential thing to know is the nature of the plant and what each cutting off will result in. Sometimes a person who does not know the nature of the grape, or some like plant, will prune off the parts that carry the fruit buds and so destroy fruitfulness for that year. It is therefore a mistake to send into the orchard or grapery to do pruning a man that knows only how to handle a knife and saw.

There is no secret about pruning, and no rules can be given, because the requirements differ with every variety of tree and plant, and with every individual tree and plant. A slow-growing peach tree does not require the severe pruning that is given the rapid-growing peach tree, and any peach tree generally requires more pruning than an apple tree, provided each is pruned annually.

It is necessary to keep the plants from producing too much wood, which decreases fruitfulness, and the trees and plants should be kept opened up to the air and sun.

Dairy and Creamery.

Ayrshire cattle breeders are in large enough numbers in Wisconsin to organize an association. The officers elected were: President, Fred Tschuddy, Monroe; Vice-President, A. J. McNab, Black River Falls; Secretary-Treasurer, A. G. Austin, of Janesville.

A LOAD OF NEW MEXICAN YEARLING WETHERS SOLD AT ST. LOUIS.

On February 17th, at the St. Louis National Stock Yards, Messrs. Clay, Robinson & Co., live stock commission agents, sold 221 head of Mexican yearlings, averaging 76 pounds, at $8.55 per 100 pounds, which was the highest price ever paid for such stock at any market west of Buffalo. These yearlings came originally from New Mexico and were consigned by Messrs Payne & Roembach, of Colwich, Kansas, who are extensive feeders of Western sheep. On February 15th Clay, Robinson & Co. sold for the same firm 246 yearlings, averaging 74 pounds, at $8.45 per 100 pounds, being top that day by 10 cents per 100 pounds. They also sold for them on February 14th a double deck of the yearlings of 76 pounds average at $8.35 per 100 pounds, up to then 20 cents per 100 pounds higher than previously sold for on the St. Louis market. Messrs. Clay, Robinson & Co. will be glad to send their sheep report of the St. Louis market to any sheep raiser or feeder. The postoffice address is National Stock Yards, Ill.

OUR NEW SAW MILLS

Are the Sensation of the Year. The result of the greatest practical and scientific mechanical minds in saw mill construction. A mill without an equal on the Globe. The mill that is revolutionizing the entire saw mill business. The simplest, lightest running, fastest cutting, and easiest mill to handle in the world. Original in design, result of over 30 years painstaking experiments; observation and practical tests. Sold on 30 days free trial. Just try the mill—that's all we ask—it costs you nothing—we take all the risk. BIG PROFIT in sawing lumber with our up-to-date Saw Mills. Keep your engine earning money all the year. Now is the time to buy when the price of lumber is going up. Write today for catalog K and prices

R. R. HOWELL & CO., Minneapolis, Minn.

I WANT A MAN - ARE YOU MY MAN?

I WANT A MAN who knows the profit in buying, selling and feeding by weight, who will be the first one to get the benefit of the introductory price on my **Steel Frame Pitless Farm Scale**, which I have just patented. This 5 ton scale has new compound beam and beam box, free. To such a man who will help me continue my **45 years fight** against all scale and imple-ments trusts, I will send a scale entirely on approval with full information and no obligation to keep if not exactly as represented in writing. The first man gets the introductory price.

Reputation

Over sixty-five years' reputation is back of every yard of

Simpson-Eddystone Silver-Grey Prints

These exceptional calicoes are widely used for cotton dresses because of their fast color, pretty designs and enduring quality of cloth.

If your dealer hasn't Simpson-Eddystone Prints write us his name. We'll help him supply you.

The Eddystone Mfg. Co., Phila., Pa.
Established by Wm. Simpson, Sr.

The First Garden Work.

Have you looked through the seed-box and made out your list of new seeds needed? This should not be postponed until planting time. The seedsmen are then apt to be rushed, and delay when the ground is ready is a costly one; besides, too often some variety which you prize most highly will be gone and you are forced to accept a substitute.

Strive to extend the varieties each year. There is a pleasure in working among new plants, especially when we feel that we are enriching our table supply. By this I do not mean to grasp the novelties. These are usually high-priced, and some of them do not prove satisfactory. Better leave this experimenting to the nurseryman and the rich man and be ready to use those which remain after the culls have been sifted out and the prices cut in half.

But there are many garden luxuries practically unknown to the majority of farmers who really think that they have a creditable vegetable garden.

Celery is one of the luxuries which is too often cut out or ignored. Some who do not like it on first trial will, if they persist, come to regard it in the proper light—one of the most delicious as well as wholesome of vegetables. Others think it too difficult to grow and excuse themselves on the plea that "it is cheaper to buy it than to raise it." This is a false premise, and one which is seldom put into practice. The farmer who does not grow his own celery usually does without.

It is really no more difficult to raise enough for family use than of cabbage, and the variety is most convenient. Some who hill up their potatoes find it convenient to plant celery in the trenches thus half formed, the early crop of potatoes being out of the way by the time the blanching process becomes necessary.

Peppers are a wholesome relish not appreciated by the masses. While the more pungent sorts are fine for flavoring other vegetables, the large, mild-flavored ones combine in many relishes and salads.

So few grow their own melons, yet even in the Northern States some of the early ones succeed well. If you have never before given space to them, do not omit a dozen hills, studying to select a variety adapted to your own climate. They like rich, mellow soil, fertilizer from the cow stable or poultry yard applied in the hill working wonders for them as well as for the cucumbers and cabbages.

Cauliflower has a delicate flavor, which is an agreeable change from plain cabbage. Just imagine you want some of the vegetable desserts as well as the substantial fare and try a few hills.

Lima beans are quite distinct in flavoring, and for soups are unsurpassed. The bush varieties are as easily raised as any of the more common ones, and are so prolific that they are among the most profitable.

Too many buy their popcorn, or worse, the popcorn balls, forgetful of the fact that they should be independent of the tradesman for this most delicious treat. If the little folks are given a plot in one corner of the garden or corn field, and expected to do the cultivating, and enjoy the results, there will be less discontent with farm life.

Plant a succession of lettuce and radishes and thus have them in prime condition during the entire summer. There is no reason why the farmer's table should not show an abundance of garden delicacies at all seasons, save the fact that he is careless or oblivious to the fact that such a bounteous store is freely offered.—Bessie L. Putnam.

SOUVENIR PANSY POST CARDS

Special Offer—One packet of **Kramer's 20th Century Giant Pansy Mixture**, price 15c, together with eight of these beautiful cards in colors, for only **14 cents**. Order at once. Illustrated Catalogue of everything for the garden, free. Mention this paper

I. N. KRAMER & SON, Cedar Rapids, Iowa

Sweet Peas.

Whatever we have or do not have in the line of annuals, the sweet pea is always a worthy accession. While there are many new varieties, the old pink-and-white is still one of the best colors. In selecting seed, named varieties usually give the best results, and if the purse is limited, select a few colors only which harmonize nicely. Blanche Ferry, the popular pink-and-white; Dorothy Eckford, pure white; and Lady Grisel Hamilton, large lavender, are among the best.

Of course, a mixed packet will give greater variety at less cost, and is often highly satisfactory. The lighter-colored varieties may be told by the color of the seed. These will not so well endure very early planting as the darker ones, the latter starting nicely if put in the ground as soon as it is possible to work it.

Dig a trench six inches deep, twice that if you are disposed to fertilize, and give the plants the best possible showing. Use only thoroughly dry stable manure and mix it well with the soil to within six inches of the surface. Plant the seeds in double rows an inch apart, zigzagging the seeds in the rows. Cover with two inches of earth and pack the soil firmly. The support can be most easily placed at this time, though if preferred it may be furnished after the plants are up.

Do not allow the ground to cake. As the plants attain to the second leaf, gradually work in the soil around the roots until it is level. This secures a system of deep rooting, and they are less affected by summer drouth.

Keep the soil loose by frequent hoeing. Do not water the plants unless it is very dry, and then do it thoroughly, completely drenching the soil. Never allow seed-pods to form. They exhaust the plant's vitality and practically destroy it as a bloomer.—Bessie L. Putnam.

To Wear in the Hair.

"A pretty hair novelty is a band of gold embroidered in delicate silk," says Madame Riche in the Woman's Home Companion for March, "sometimes pink, sometimes blue, but always in the same color as the gown with which it is to be worn. This band is long enough to run from ear to ear across the soft, low pompadour which is now the vogue. Fancy buckles and sometimes embroidered buttons finish both ends. Under these hair-pins are fastened to hold the band in its proper place."

Stock Up with Fresh Soda Crackers

Instead of getting a large package of ***loose*** soda crackers that soon grow stale—stock your pantry with small ***tight*** packages containing

Uneeda Biscuit

Fresh soda crackers every time you eat—the last as fresh as the first—because they are placed in moisture proof packages the moment they leave the oven.

We also furnish this watch in fully guaranteed **SOLID GOLD FILLED** case for $7.95. State kind wanted.

Silver at $5.95 or Gold at $7.95. Address **R. E. CHALMERS & CO.**, 353-355 Dearborn St., **CHICAGO, ILL.**

(From the Chicago Inter-Ocean.)

All readers of The National Farmer and Stock Grower who have sick friends, suffering from rheumatism or kidney trouble, will be interested:

FINDS NEW KIDNEY CURE

Dr. T. Frank Lynott, New York Specialist, discovers remarkable remedy.

At last a perfectly harmless and positive cure appears to have been found. Dr. T. Frank Lynott, formerly of the New York University, New York, later of the famous Bellevue hospital, and now a celebrated specialist in Chicago, has a very quick acting formula which has been approved by the best doctors.

The editor of The National Farmer and Stock Grower saw the above clipping from the Inter-Ocean and wanted to know of this new formula for curing kidney trouble.

Arrangements were then made by which Dr. Lynott offers National Farmer and Stock Grower readers a **free treatment.** Dr. Lynott, however, says that he proposes to give the free treatment only for a limited time to convince the public in every part of the United States of the positive wonderful efficacy of his treatment.

Furthermore, Dr. Lynott wants to make it clear that he has no "cure-all." He is a specialist in kidney and bladder diseases and rheumatism, so please do not write to him unless you have one of these diseases. If you write at once, both the medical advice and the medicine are entirely free.

The editor of this paper, The National Farmer and Stock Grower, feels that with such a free offer, anybody who stays sick with kidney trouble or rheumatism deserves to be sick.

I know that a good many free offers have been advertised where the public had to send money, **but this free offer really IS A FREE OFFER.** And remember that instead of getting an ordinary physician, you get the medical advice free direct from America's greatest of all specialists on these diseases. See Free treatment certificate at bottom of this page and get relief **right now.**

STOP!

Stop that back breaking, twisting, terrible, terrible unbearable agony! Oh, that awful, awful digging soreness—the back all bent—the joints stiff, the heart-wringing pain—*stop that pain RIGHT NOW!*

Yes, Write For the Free Treatment—

a REAL Free Trial Treatment that will give you relief—relief at once—not next week, not tomorrow, but relief AT ONCE—**immediately** after starting the treatment. It is so **simple,** so mild, yet so scientific and so **sure**—this treatment for rheumatism, kidney and bladder trouble. Write now, today.

See the Free Certificate below—sign it and send it today. **No money—no obligation. At last** you can get relief and, if you write at once, you get the treatment absolutely free. Just think—a genuine **free** treatment by America's and Europe's **leading** specialist—absolutely free—really and genuinely free **to convince the public.**

If you have Kidney or Bladder Trouble or Rheumatism (the cause of those pains), then **it's your loss** if you suffer any longer. When Dr. Lynott says free, he means free—not one cent to pay; and it is "up to you" whether you want the best medical advice and medicine all without a cent of cost. Don't miss this wonderfully liberal offer. See the Free Trial Certificate at the bottom of this page.

Look at these poor sufferers all bent with nerve-racking pain—they are victims of kindey trouble; they think it is a rheumatic twitch. Friends say they grumble, but considering their awful pain, they bear up most bravely.

Oh, it is terrible that there should be such suffering, when you can be relieved so quickly, so surely, so simply, and **right now, free of charge.**

Writing of Dr. T. Frank Lynott, who gives the medical advice free, a brother specialist writes as follows:

"I have for years been considered an authority on urinary diseases, but I must confess my respect, my profound sense of esteem, for Dr. Lynott, whose wonderful success in treating urinary diseases has surprised us all. Dr. Lynott, by the way, is making a most remarkable free offer—the most genuine and generous offer ever made by a high grade physician. It seems to me the medical world ought not to be jealous of his success, but should praise him for what he has done and is doing for humanity."

Dr. T. Frank Lynott

whose photo is printed here, is, as you perhaps know, the world's greatest authority on kidney and bladder trouble and rheumatism. Never before has a physician of such high standing offered to treat patients by mail. But Dr. Lynott *wants* the people to get the benefit of this free treatment.

His cures have stirred America and Europe. In fact, Dr. Lynott received a special diploma on urinary diseases from the great New York University—of which the famous Bellevue Hospital, New York is now an honored part.

WATCH These Symptoms!

Trouble in the kidneys begins slowly, slowly. It creeps upon the unsuspecting patient like a thief in the night. Slowly, slowly, those stinging, racking pains foist themselves upon the sufferer; gradually, gradually the pains increase into a daily, nightly, constant, endless torture. Watch the symptoms, and cure yourself. Here are the principal symptoms of uric acid disease:

The Symptoms

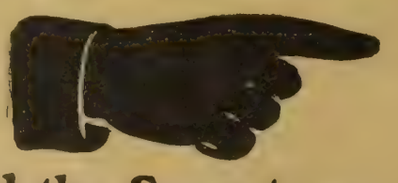
1—Pain in the back.
2—Too frequent desire to urinate.
3—Burning or obstruction of urine.
4—Pain or soreness in the bladder.
5—Prostatic Trouble.
6—Gas or pain in the stomach.
7—General debility, weakness, dizziness.
8—Constipation or liver trouble.
9—Pain or soreness under right ribs.
10—Swelling in any part of the body.
11—Palpitation or pain around the heart.
12—Pain in the hip joint.
13—Pain in the neck or head.
14—Pain or soreness in the kidneys.
15—Pain or swelling of the joints.
16—Pain and swelling of the muscles.
17—Pain and soreness in nerves.
18—Acute or chronic rheumatism.

NOW THEN, This Certificate is FREE

You get the treatment, the medicine and Dr. Lynott's personal attention absolutely free, if you write at once. Instant Relief for those terrorizing pains!

Send no money—read the certificate, note that it puts you under no obligation. Dr. Lynott is glad to see a sufferer cured—write at once and get the free treatment.

JUST Your Name and Address and the Symptoms



of your disease given by number. That is all Dr. Lynott wants. Read the free treatment certificate; read how it puts you under **no obligations** whatever; how it says specially and distinctly that you are not now nor later under any obligations whatever.

SEND NO MONEY—just write for the free treatment

REMEMBER:—This free treatment offer is LIMITED. Only a certain number will be taken, all under Dr. Lynott's personal care. If you answer this offer the first time you see it you are GUARANTEED the FREE treatment. So better send the free treatment certificate today, at once, and remember, you need INSTANT, IMMEDIATE relief from those awful pains.

DR. T. FRANK LYNOTT, 3435 Occidental Bldg. CHICAGO

If you have a friend suffering with kidney or bladder trouble or other uric acid disease, such as rheumatism, don't you feel that you owe it to your friend to tell him or her of this free offer?

Free Certificate

What is Your Name?.....
State plainly, Mr., Mrs. or Miss.

Your Address?.....

What Symptoms Have You?.....
Give numbers from table above—that is all

What is Your Age?..... *Married?*.....

Just fill out the above—nothing to sign, you see. Just answer the questions and be sure to give your name and address. You are under no obligations whatever. The **FREE PROOF** treatment will then be sent at **once, prepaid.** Cut out this certificate (or write a letter describing your symptoms) and **get INSTANT relief from those racking, rocking pains.** Address personally

LAST CHANCE FOR ROSES.

The Most Delightful Subscription Premium Offered by a Farm Paper.

The National Farmer and Stock Grower has decided to send out a collection of eight choice ever-blooming Rose Plants to our patrons who will send in a special subscription.

The Collection of Roses.

The collection consists of **Rhea Reid,** one that received the gold Medal at the National Rose Society; the flowers are rich velvety red. Another one is **The Bride,** one that will thrive under most unfavorable conditions. The flowers are the purest ivory white. **Etoile de Lyon** is the most magnificent pure yellow rose, massive in size and beautiful in every stage of development. **Bridesmaid** starts with the first warm days of spring and requires but little care; the flowers are an exquisite clear pink, beautiful in form and highly fragrant. The **Papa Gontier** rose is a grand variety for outdoor planting, producing double flowers of clear, glowing crimson and blooms from June to late in the year. **Bessie Brown** is a charming, pure snow-white rose; the flowers are very large and it blooms profusely. **Champion of the World** is a rich, ivory pink, and without it no garden selection is complete; it is unequaled for sze of flower, fragrance or beauty. **Crimson Rambler,** the last of the collection, is a bright crimson flower that covers the entire bush. It is valuable for decorative hedges, arches and screens. We cannot describe this beautiful collection, but we will guarantee them to please any lover of flowers.

OUR SPECIAL OFFER.

Send Us Sixty Cents. We will send you The National Farmer and Stock Grower for one year. We will send you direct by mail, postpaid, the full set of eight hardy, ever-blooming Roses. We will also send you a 16x20-inch picture entitled **"The American Beauty Rose."** The picture is most beautiful. There is a great bunch of roses resting on the white linen cloth of a table. It is glorious, magnificent. **Send Us Sixty Cents.** The paper can go to one address, the picture to another and the roses to another, or all three to one address.

ANOTHER SPECIAL OFFER.

We publish the Universal Magazine. It is a splendid publication, issued monthly. There are thirty-two pages, three columns to the page, illustrated stories, special articles, poetry, embroidery, patterns, etc. The subscription price is 25 cents a year. Send us Fifty Cents and we will send you the Universal Magazine for two years. We will also send you the full set of eight hardy ever-blooming roses as a premium. The rose plants will be sent prepaid by mail. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

5 Cents a Copy. Published Monthly by The Hale Publishing Co. 50 Cents a Year.

and Stock GROWER

Practical Farming and Gardening.

This is a book of 500 pages, 6x7¼ inches to the page. It is a complete farmers' instruction book. The feeding chart is worth a ten-dollar bill to any stock farmer. Soil fertility, drainage, grain crops, gardening, truck growing, fruits, forestry, pruning, grafting, budding, injurious insects, plant diseases, spraying, cattle, sheep, horse raising and feeding, treatment for diseases, silos and silage, poultry, handy rules and farm cookery, are a few of the subjects. There are eighteen three-column pages of index. If you look for something you find it. We have adopted this book as a subscription premium. Send One Dollar and we will send you **Practical Farming and Gardening**, postage paid, and The National Farmer and Stock Grower for two years. This is a grand offer. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Traction Plowing.

The Bureau of Plant Industry of the Department of Argiculture has issued a bulletin, No. 170, entitled Traction Plowing.

It gives the result of investigations of 500 outfits using traction engines and gang plows. The subject is thoroughly gone into. Steam traction engines hauling plows in gangs is not a new industry, but the first gasoline traction engine was put on the market about 1903.

Naturally, these large plowing outfits are used profitably on extensive prairie properties by the owners thereof, and many outfits managed by experts, owning no land, are engaged in plowing for others—a custom trade. Many farmers are glad to pay a fair price for breaking new land who could not make such an investment or to organize a force of men for the purpose. The article generally approves the machinery in use as being fully up to date, with openings for continued improvements. The advantages of traction plowing are set forth as follows: (1) That the work can be rushed when conditions are favorable; (2) that the work can be done with a smaller force of hands, and fewer horess have to be kept; (3) in hot, dry weather engines can be used when horses could not stand the work; (4) with an engine it is possible to plow very difficult soils, and also to plow deepeer than with horses; and (5) under favorable conditions the cost of traction plowing has been brought lower than that of plowing with horses.

The steam engines weigh from seven to twenty tons, range from twenty to fifty horse power, cost from $1,500 to $6,000, and will plow from fifteen to fifty acres a day. The gasoline engines range from twelve to forty horse power and cost from $1,300 to $2,500.

A traction plowing outfit consists of (1) an engine; (2) the plows or disks arranged in gangs; and (3) miscellaneous conveniences for carrying supplies, making repairs, etc. The size and cost of the outfit and the amount of work it will do depend largely on the number of plows operated.

The average acreage plowed each year varies from 3,500 acres in California, where the largest engines are used; 1,075 acres in the Southwest, including the Panhandle of Texas; 797 acres in Canada and the Dakotas. The engines are also used for threshing grain, thus dividing expenses with two farm operations.

The comparative cost of plowing by steam and by gasoline depends to some extent upon the life of the engines, not yet ascertained; but in current expense the result is largely in favor of the gasoline engine. The bulletin is ably written and facts compiled by L. W. Ellis, of the office of Farm Management.

Saving the Peach Crop.

For years the peach brown rot has been recognized as a most destructive disease of stone fruits. This is a fungous disease, and it is widespread and very destructive to the peach crop. The loss which it inflicts on peach growers will easily average $5,000,000 yearly. The loss to the peach crop of Georgia alone is estimated at $1,000,000 a year.

Much work has been done with a view to discovering a satisfactory remedy for this trouble. Spraying with diluted Bordeaux mixture has been most commonly recommended, but its injury to the foliage has made it unsatisfactory, since the remedy must be applied during the growing season.

The peach scab (often called "black spot") is another disease which seriously affects the peach crop in all sections east of the Rocky Mountains, although not causing such serious losses as brown rot.

As the result of experimental work by the United States Department of Agriculture, a cheap and simple remedy for this disease has been found in the self-boiled lime-sulphur wash. This can be applied during the growing season with very little danger of injuring the fruit or foliage, and it is very effective. Furthermore, by mixing arsenate of lead with the fungicide, the curculio can be destroyed at the same time.

The Department has just issued a bulletin describing the preparation and use of the remedy. This publication will be of great interest to peach growers in all sections, and can be obtained by writing to Hon. Secretary of Agriculture, Washington, D. C.

The Government Income.

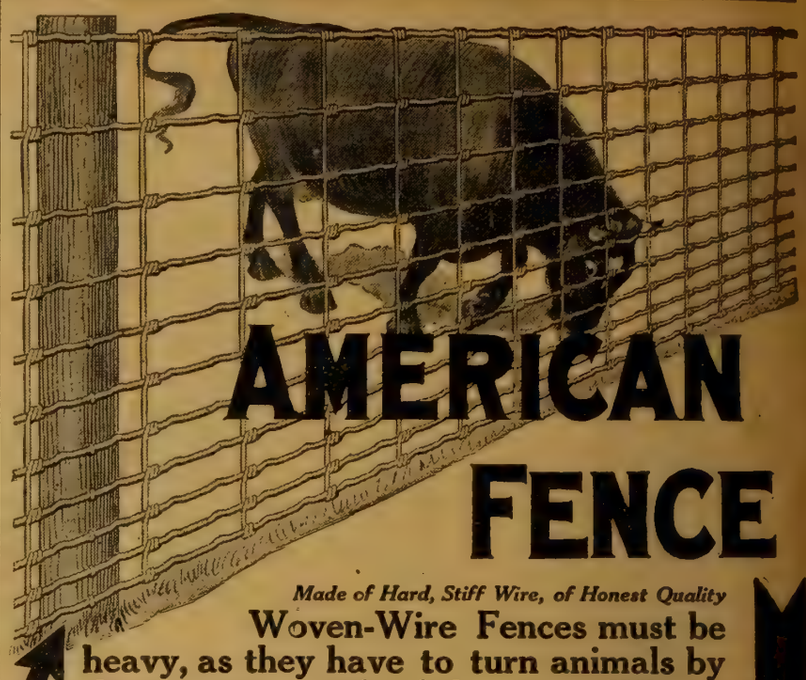
The federal government receipts in the year 1909 were, from customs duties, $329,343,474.99; from internal revenue, $254,977,391.26; from all other sources, $53,452,-299.11, a total of $639,773,165.36. It will be noticed from this that over 50 per cent. of government revenues were from customs duties and about 40 per cent. from the internal revenue. It is well to remember these figures. The tariff is subject to many misrepresentations, and it is well to remember that foreign imports are very large, so large indeed that the duties pay about one-half of the expense of the national government. The customs duties collected in the year 1909 were the largest in the history of the nation. Ten years ago the collections from internal revenue were larger.

Kernels of Corn Eighty Years Old.

It was reported from Georgetown, Delaware, in January, that kernels of corn over 80 years old were found by Doctor John Messick while searching through an old desk. The corn belonged to Jehu Bennett, once a widely known farmer of Lewes Hundred, and had been placed in the envelope as a sample of his seed corn. A note inside gave the name of the grower and the date of the growth. They are large kernels and of a much better quality than is now grown on Delaware farms.

Our Cattle Exports.

In the year 1907 the United States exported 401,583 head of cattle; in the year 1908, 277,036 cattle; and in the year 1909 the United States exported 185,137 cattle. The exports of 1909 included 167,596 cattle to England, 1,087 to Belgium, none to France or Germany, 8,976 to British North America, 5,804 to Mexico, 319 to Cuba, 846 to the West Indies, 101 to South America, 58 to Asia and Oceanica, and 350 to all other countries.



Made of Hard, Stiff Wire, of Honest Quality

Woven-Wire Fences must be heavy, as they have to turn animals by the sheer strength of the wire. Why?

A fence with barbs is protected from excessive pressure because the animal fears the barbs. Remove the barbs and the greatest strength of the animal is thrown upon the fence. Hence its wires must be larger and stronger. Therefore, to have a longlife woven-wire fence you must have a heavy fence.

Among the valuable features that distinguish American Fence is the Hinged-Joint (patented). We back this feature with all our experience as the largest makers of fence in the world.

Under side stress and strain the resilient Hinged Joint yields to pressure and quickly returns to its old form without bending or breaking the stay wires, the strain being taken up by the heavy horizontal bars.

The real test of a fence is the service you get out of it. Test, judge and compare American Fence under any and all conditions, and you will find that the steel, the structure and galvanizing are equal in durability, strength and efficiency to the hardest usage.

BETTER CISTERNS --- WHY?

To protect the health of every member of your family. Medical experts have pronounced the brick and wood cistern to be the cause of many cases of sickness.

A Cistern to be perfectly sanitary must be made so tight that no impurities can possibly get through. This can only be accomplished by using the Steel Cistern.

The Favorite Corn Husker.

This Corn Husker is more largely sold than any other on the market. We have therefore selected it as a seasonable subscription premium. It is made for the right hand. The hook sets at any angle to prevent glancing. Opening or closing the small end of the plate adjusts a fit to any size hand and prevents chafing.

The improved shape of the plate and leather makes this hook the favorite. We will send The National Farmer and Stock Grower for one year and the Favorite Corn Husker for fifty-five cents. It takes five cents for mailing and the Corn Husker is a free premium. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Concerning Land Ownership.

Prof. F. B. Mumford, of the Missouri Agricultural College, is credited with opening a lecture at Kansas City with the statement that it is cheaper to rent land in Missouri than to own it. This is equal to saying that land in Missouri can no longer be bought for what it is worth. It is also an encouragement for people to rent land and become tenant farmers under rich landlords rather than be ambitious to become free and independent land-owning farmers.

According to the United States census of 1900, Missouri had 284,886 distinct farm properties. Of the total number of farms the number operated by the owners thereof was 196,158; operated by managers, 1,831; by tenants, 86,897; and by owners and tenants together, 5,118. The percentage of farmers owning their lands in Missouri is 68.9; in Ohio, 71.3; in Indiana, 70.4; in Illinois, 60.0; in Michigan, 83.0; in Wisconsin, 85.7; in Minnesota, 82.0; in Iowa, 64.4; in Nebraska, 62.2; and in Kansas, 63.8.

In the United States 3,149,344 farms, or 54.9 per cent. of the total number, are operated by their owners. In the state of Maine, 93.8 per cent. of the owners operate their own farms; and in the state of Georgia only 38.3 per cent. of the land owners operate their own farms.

We have been taught to believe that landlordism is the curse of Europe. It is a system to be avoided. It produces worn-out soil, an idle and incapable landlord and a careless and irresponsible tenant. With land owners operating their own farms this will be a prosperous, peaceful country; and if ever it becomes a nation of tenant farmers it will be a wrangle and fight, class against class, world without end.

Although the Almighty may have created men free and equal, He did not endow each man with a farm. The road to the possession of a farm in this country, however, has been so easy that it has been considered undesirable to own them. The very abundance of land has caused it to be undervalued. But even in Missouri it has become more difficult, and it will continue to become more difficult to purchase farms, and as the cost increases the desire to possess them will increase also. We hope that in their future lectures the Agricultural College professors will advocate that it is far better to own and build up the poorer farms than to become tenants on the richest farms.

New Grape Barrel.

Consular Agent A. E. Carleton, of Almeria, Spain, reports to the Department of Commerce and Labor the invention at that place of a barrel for grapes, for which many advantages are claimed. The barrel is cylindrical, and has four compartments, so constructed that the grapes will receive all needed ventilation. Each compartment will hold twelve pounds of fruit, which will keep better, it is claimed, than in the present barrel where the whole quantity, say fifty pounds, is packed together. The entire barrel can be made by machinery and there is practically no waste of wood. Any kind of wood may be used.

Look Out For Argentina.

A report by the United States Consul General at Buenos Ayres is to the effect that the Argentine Republic will soon be exporting 5,000,000 tons of wheat a year, which is a total of 166,666,666 bushels. The significance of this statement is explained by the fact that the United States exported 91,000,000 bushels of wheat in 1907; 93,000,000 bushels of wheat in 1908, and 49,000,000 bushels of wheat in 1909.

High Price of Broom Corn.

During the month of March it was reported that a Kansas City dealer in broom corn had sold and shipped out enough broom corn to make 60,000 brooms, each car-load being equal to about 11,000 brooms. The shipment amounts to fifty-five tons, and the price, $225.50 a ton, is said to be the highest paid for any quantity of broom corn since the Civil War.

The HARVEST

How the Farmer Controls the Cost of Living

THE cost of living depends on the volume and cost of production. The farmer can determine only partially the amount nature will permit her soil to produce, but he can regulate the cost of his crop by the machines he uses in tilling and harvesting.

The markets of the world are now watching for the results of the grain harvest of the farmers of America. Prepare properly against delays and waste and you will reap rich reward.

The responsibility for wasted grain and profits rests with you.

Choose your harvesting equipment—make your selection before the rush comes—take no chances—avoid experiments either in machines or binder twine.

From experience hundreds of thousands of farmers endorse the adaptability of the I H C line of harvesting machines.

Champion McCormick Osborne Deering Milwaukee Plano

Hundreds of thousands of farmers, hard-headed business men, with the same problems that confront you, have had their problems solved by some one of these machines. They didn't buy because they were prejudiced in their favor—they bought because they were convinced that these machines represented the highest standard of excellence in harvesting-machine construction, because these machines met their requirements, because they thought they were getting the greatest return on their investment.

The experimental period has passed, and efficiency, durability, simplicity, dependability and absolutely interchangeable parts are now at your order. Improvements in time and labor-saving features, finer materials, more skilled and painstaking workmanship are now strictly carried out in the manufacture of these six lines of machines, so that all element of risk on your part is eliminated. With any machine in the I H C line you are safe—for smooth, rapid, uninterrupted, perfect work at harvest time.

Materials, workmanship and quickly available interchangeable I H C parts are backed by the most responsible and trustworthy guarantee in the farm-machine world today. Such perfection would not be possible if the manufacturer did not have available ore mines, steel mills, timber lands and saw mills so as to make sure of the raw materials, and if the buying power and large output did not insure the first choice of raw materials from all other sources—and the ability to employ the right men to work up these materials, and to furnish these men with the most perfect facilities in the world—all this is of equal importance to you. It is these resources, insuring the highest degree of efficiency in every machine turned out, that means the lessening of your responsibility at harvest time, the elimination of most all the risk, the freedom from anxiety and worry and discouragement. Profit by the experience of hundreds of thousands of others who reap all their harvests and all the profit with one of the six leading machines. See the International dealer at once. Take your choice. The quality is the same in all—the best possible. The lines include grain and corn harvesting machines, haying machines and tools.

From the I H C dealer you can get repairs that fit when repairs are needed. Repairs having the I H C standard of excellence can be secured at almost every cross roads or village. This availability is not only a great convenience, but also saves valuable time, which means money to the busy farmer in case of accident in the harvest field.

Don't experiment with binder twine, either. Get one of the seven perfectly dependable brands of twine and be sure. Choose Champion, McCormick, Osborne, Deering, Milwaukee, Plano or International in Sisal, Standard, Manila and Pure Manila brands.

If it is not convenient to see an International dealer, write for full information and the catalogue you want.

Use of Pea Vines From Pea Canneries.

In the early history of pea canning, the pea vines were treated as a waste product, the disposal of which involved considerable difficulty and expense. Most commonly they were thrown out in piles to rot, the resulting manure being used for fertilizer.

During recent years, the pea vines have risen to the dignity of a by-product, from which the factories derive considerable profit. They are now utilized for silage, or fed to stock in a fresh state, or cured for hay. They make a silage superior in value to corn silage. They may be preserved in silos the same as green corn, or they may be put up in large stacks in the open air. If these stacks are well put up and the vines are well tramped, decay will only affect the surface to the depth of a few inches.

The United States Department of Agriculture has recently made an extensive investigation of this subject and published the results in a circular.

The pea vine can easily be cured by spreading them on sod land. Pea-vine hay is considered better than clover hay.

Both the hay and the silage are excellent feeds for dairy cows. They are also satisfactory feeds for beef cattle, horses and sheep. The hay sells at $3.00 to $5.00 a ton.

In some cases the pea vines are hauled away from the factory by the farmers who supply the peas; in other cases they are sold in a fresh state; and in still other cases the factories either silo the vine or cure them for hay.

The Market For Corn.

There is plenty of corn, but the quality is bad. Large contracts for No. 2 corn if made could not be filled. No. 3 corn is plentiful. On March 31st, cash corn at St. Louis, No. 2 basis, sold at 62 to 62½ cents a bushel, which is about the previous four-months' average price. The Chicago market for futures closed March 31st: May, 62¼ cents; July, 64½ cents; and September, 65½ cents; thus recording a decline of about three cents a bushel in a month.

The Oats Market.

During the month ending March 31st, oats declined in the speculative market. Oats is the banner crop in quantity and quality. At St. Louis, March 31st, cash oats were quoted at 46½ cents a bushel, the same as thirty days ago. The Chicago future market quoted the May option as closing at 43⅜ cents; July, 41¾ cents; and September, 39½ cents; the quoted decline for the month being 1½ to 4 cents a bushel. Before this decline set in oats advanced in price for several months.

National Association of Farmers.

It appears that there ought to be an association of land-owning, tax-paying and employing farmers organized upon the lines of the business associations of the great cities.

There are many farmers' associations organized for good purposes, also stock breeders' associations, but there is no association that represents the land owner as distinct from a tenant farmer or a farm employe. They are all classed as farmers in a general way, but their interests are not identical. The laborer and the tenant are transients; they may be and ought to be land owners later on, but the distinctions are clear as they stand. The land-owning farmers with their families, operating their own farms, are the reliance of the nation in the maintenance of all beneficial public institutions. They are the largest class, the most dependable class, and the class that says the least.

There is a pressing need of a classification for land-owning farmers, an association that will voice the opinions and sentiments of all such. At present anybody can represent the farmer, because the farmers who are land owners have not yet classified or asserted themselves.

The Frisco Scholarships.

The Frisco Railroad has offered a scholarship of $100 in each of the forty-five counties through which their lines extend in this state to the short winter course in agriculture at the University of Missouri next winter. These scholarships consist of $100 each, which will be sufficient to pay the entire necessary expense of the recipient for the full term of fourteen weeks, beginning November 1st, 1910. They will be awarded to the man or boy sixteen years of age or over who grows and exhibits the best ten ears of corn in his county this year. A County Corn Show will be arranged in each of the Frisco counties some time during the month of October by S. M. Jordan, State Director of Farmers' Institutes, Columbia, Mo., where the corn entered in this contest must be shown. To obtain further information, address C. B. Hutchinson, University of Missouri, Columbia, Mo.

Sheep and Lamb Notes.

The first lambs to ever reach $10.00 per 100 pounds west of the Buffalo market were handled by Clay, Robinson & Co. at Chicago on March 14th. There were 488 head of 78-pound Mexicans in the shipment, and the price was 10 cents per 100 pounds higher than any other lambs brought. They were marketed by G. C. Belmont, of Brush, Colo. The next highest price was $9.85, Clay, Robinson & Co. also obtaining this figure for 504 head of 84-pound Western lambs sent in by Drake & Bartels, of Fort Collins, Colo.

For two years The National Farmer and Stock Grower has encouarged farmers to raise sheep, and especially those tributary to the St. Louis market. The results have been exactly as stated—the sheep sold well, the wool has brought good prices, and the lambs have done better than we stated.

On March 15th, Clay, Robnson & Co., sold on the South St. Joseph market 518 Mexican lambs, averaging 77 pounds, at $9.75 per 100 pounds, the top of the market that day by 10 cents per 100 pounds, and up to then the highest ever known on that market by 5 cents per 100 pounds. The lambs were fed and marketed by F. R. Sylvester, of Scotts Bluff, Neb.

A. D. Mathias represented Monte Vista, Colo., on the East St. Louis market, March 14th, with 257 shorn lambs, averaging 80 pounds. Clay, Robinson & Co. obtained $8.85 per 100 pounds for them, which price up to then was the highest ever paid on that market for shorn lambs.

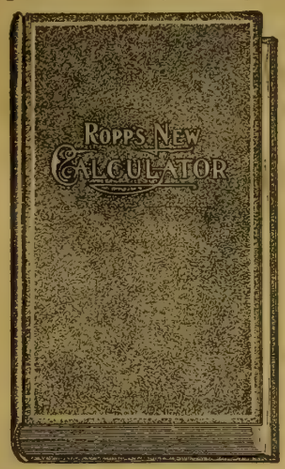
Great Sale of Shot Guns.

The Norvell-Shapleigh Company of St. Louis, Mo., have purchased the entire supply of the excellent single and double-barrel shot guns manufactured by the Remington Arms Company of Ilion, N. Y. The transaction amounted to a round half million of dollars and it means that all the double-barrel hammerless and single-barrel semi-hammerless shot guns distributed by the Remington Company throughout the country have passed into the hands of the Norvell-Shapleigh Company. The St. Louis firm does a wholesale business and will furnish the sportsmen the gun that they want through all dealers. Anyone desirous of knowing where to obtain these splendid guns can address the Norvell-Shapleigh Hardware Company of St. Louis, Mo. The Remington Arms Company will devote their entire attention to other styles of gun manufacture.

Mr. Robert H. Essex, well and favorably known in poultry circles, has been elected President of the Model Incubator Company of Buffalo, N. Y. He is a practical man in every branch of the trade, having gained eminence as a breeder, journalist, author and manufacturer. Mr. Essex is author of several good poultry books, including "The Turkey Book" and "Ducks and Geese," which we sometimes advertise in these columns.

Ropp's Commercial Calculator.

This is a standard book and a revised, enlarged and improved edition. There are millions in use. Ropp's Commercial Calculator is especially valuable to farmers. By its regular use many hard problems



become easy. It will prevent mistakes, relieve the mind, save labor, time and money, and do your figuring in the twinkling of an eye. As handy as a watch, always ready and reliable. Anyone who will send fifty cents for one-year's subscription to this paper, The National Farmer and Stock Grower, can select one copy of Ropp's Commercial Calculator as a free premium. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Mr. Albert S. Ennis, owner of Sunset Jersey Cattle Herd, has four bull calves of his own breeding that he will sell. He sells them at very reasonable prices. His herd is highly bred and includes the best butter-making families. He recently sold one bull calf to H. J. Grubb, of Vergennes, Ill., and another to I. M. Bundy, of Centralia, Ill. Mr. Ennis can be addressed at 712 Missouri Trust Building, St. Louis, Mo.

Mr. D. F. Beauchamp, of Meredosia, Ill., reports that he has the best bunch of spring pigs he ever saw. They are pedigreed Poland-Chinas, and he can ship them at weaning time. They will give satisfaction on any farm.

The Wheat Market.

At St. Louis, March 31st, cash wheat was selling at $1.20 to $1.20½ per bushel, which was 5 to 6½ cents lower than the market was thirty days previous. At Chicago on the same day the May option closed at $1.18⅛ per bushel; the July option at $1.08½; and September, $1.05⅝. The market for May wheat is usually the excitement maker, but speculators are afraid of it. They do not expect a scarcity; in fact, the world's supply of wheat is about as large as the world can consume and pay a fair price for it.

Big range in onions, from 30 to 90 cents a bushel, according to quality and condition.

Try Kerosene Engine 30 Days Free

Gasoline Prices Rising.

You can't run a farm engine profitably on gasoline much longer. Price of gasoline going sky high. Oil Companies have sounded the warning. Kerosene is the future fuel and is now 6c to 10c a gallon cheaper than gasoline. The Amazing "Detroit" is the only engine that uses common lamp Kerosene (coal oil) perfectly. Runs on gasoline, too, better than any other. Basic patent. Only 3 moving parts. Comes complete ready to run. We will send a "Detroit" on free trial to prove all claims. Runs all kinds of farm machinery, pumps, saw rigs, separators, churns, feed grinders, washing machines, Silo fillers and electric lights. Money back and freight paid both ways if it does not meet every claim that we have made for it. Don't buy till you get our free catalog. 2 to 24 h.p. in stock. Prices "stripped," $29.50 up. Special demonstrator agency price on first outfit sold in each community. 2,000 satisfied users. We have a stack of testimonials. Write quick. (52)

Soil Elements Affect Color of Plants and Flowers.

It seems now to be quite definitely proven that the elements of the soil have a very important bearing on the color of plants and flowers. It has been assumed for a long time that this was not the case and that variations in colors were due to other things entirely. It is probably safe to assume even now that soil elements are not the only factors in determining colors.

If foliage and flowers are affected, it is also safe to infer that the color of fruit is also controlled to some extent by the same causes. This fact may prove to make the knowledge of considerable commercial advantage to fruit growers, as well as to florists.

Among the more recent demonstrations of the above was the applying of several substances to the soil in which was growing the white rose Kaiserin. This rose has been grown so long and is so well known that no one will suspect it of varying in color under ordinary conditions.

The elements applied were potassium hydrate, potassium carbonate, calcimum hydrate and lead acetate. As a result, red was developed in the lower portions of the petals of the white rose.

A red hydrangea was supplied with potassium and aluminum sulphate and with calcium hydrate. The red flowers changed to blue. The lead acetate seemed to intensify the color of the flowers, whether the colors were changed or not.

It should be noted, however, that the change in color was dependent on the soil in which the plants were grown, light, sandy soil being favorable to the change, and heavier soil not.

In actual practice this truth has long been discounted. The men that have developed new colors in plants have often done so by the free supply of food elements from which the plants were able to select the elements from which to elaborate color. The combinations of soils are so numerous that it will be a long time before we have any very definite idea as to what color effects each soil element has.

The production of color by soil elements is complicated with temperatures. Careful experiments have been made as to the color effects produced by temperatures on certain kinds of white roses. The same variety grown in a hothouse gave white petals throughout, while grown in out-of-door locations in a cold fall gave a deep carmine.

The knowledge of this is valuable for several reasons. It shows why some of the flowers advertised as of a certain color do not hold that color when purchased by those that take them hundreds of miles away into new temperatures and new soils. This change of color is likely to be most common in the highly-developed newer varieties, in which color qualities are not too firmly fixed.

This field is an interesting one for experimentation, and anyone that cares to can learn from it. Color has a great value in the markets of the world, and the man that learns how to color his fruits and flowers will have found a new source of profit.

GASOLINE PUMPING ENGINE

It costs about ONE CENT AN HOUR to pump water with this engine. If your time is worth more than a cent an hour you cannot afford to pump by hand: It will raise 32 barrels of water per hour to an elevation of 25 feet, 10 barrels to an elevation of 100 feet, or proportionate quantities to other heights.

This engine can be connected to "any old pump" in 30 minutes. After you have watched it pump water for five minutes you will wonder how you ever got along without it. The longer you have it, the better you will like it. It is right on the job all the time. A turn of the fly-wheel and it is off. A child can operate it. The ladies often start it to pump a pail of water. They rest while it works.

It is shipped complete with walking beam, supporting frame and everything ready to set it up in complete working order, except three stakes for driving in ground.

Next to a windmill, this is the most economical outfit for pumping. We are selling **many thousands of them every year,** but our sale of Aermotors is still increasing.

A PULLEY for running cream separator, churn, washing machine, ice cream freezer, grindstone or other light machinery is furnished with this engine for $1.50 extra.

If you need an engine for pumping large quantities of water for irrigating, watering large herds of stock, or for other purposes, our Heavy Back-Geared Pumping Engine for $100.00 is just the thing you have been looking for. It will raise 125 barrels of water an hour to an elevation of 50 feet, or proportionate quantities to any height.

Our $75.00 2 H. P. General Purpose Power Engine with Fluted Cooler is the best thing going.

Larger sizes at proportionately low prices.

AERMOTOR CO., 2510-12TH ST., CHICAGO.

[Please mention National Farmer and Stock Grower.]

The Smuts of Sorghum.

Smuts are very serious enemies to cultivated crops, hence they have received a great deal of attention from the National Department of Agriculture. Recently the Department issued a circular on sorghum smuts. The objects of this circular are (1) to call attention to these dangerous pests; (2) to warn farmers of the dangers of introducing them into new localities; and (3) to suggest simple methods of getting rid of these smuts.

The term "sorghum" as here used includes not only the sweet sorghums, but Kaffir corn, milo and dura (known in some sections as Egyptian corn). As the growth of different varieties of sorghum, as grain and forage crops, is rapidly extending, it is very important that farmers should prevent the spread of smuts by using seed that is free from the disease or by treating the seed.

The kind of smut most commonly found on sorghums in this country is that which affects the individual grains in the seed head. If seed is taken from a field affected by this smut, it can freed from contamination by soaking for an hour in a solution of one pound of formalin in thirty gallons of water. Water heated to about 135 degrees Fahrenheit is also effective in destroying the spores. Full directions for treatment are given in this circular, which is for free distribution. Write to Hon. James Wilson, Secretary of Agriculture, Washington, D. C., for a copy.

I. A. Estes, of Quincy, Mo., a veteran with studs and jacks, says that his jack served seventy-one mares in 1908 and the result was fifty-three living foals.

Premiums with Stock Supplies

ALL FREE

We are giving away with every order amounting to $5 and upward valuable premiums of standard, first-class quality. We aim to offer value in this way equal to 20% of the price of our goods—the average profit the dealer has been securing.

WE WANT TO SELL DIRECT TO YOU

and add your name to the large list of well satisfied customers among farmers and stockmen who are now dealing directly with us and **saving the middleman's profit.** The honorable position we have held in the business world for over 30 years should be a sufficient guarantee to you as to the reliability of our special premium offer—but if not satisfied, ask any bank or commercial agency—you'll find **our guarantee is good.**

WE ARE THE MANUFACTURERS

of everything required in the line of Stockmen's Supplies, such as **Ear Tags—Sheep Dips—Tanks—Stock Foods—Punches—Worm Remedies—Bone Cutters—Poultry Supplies—Shears—Shearing Machines—Tools, etc.**

If you don't need enough of our goods to make a sufficiently large order to secure the premium which strikes your fancy, sell a small order to one of your neighbors and put it with yours, as we permit joint orders of that kind to secure premiums.

SEND FOR OUR FREE PREMIUM LIST

It tells how you can get, free of charge and without any special effort, one or more valuable premiums, which include

Pocket Knife—6-blade combination, of best quality steel; has large and small cutting blades, screw driver, leather punch, can opener and corkscrew. **Worth $1.75.**

Keen Edge Razor—"Comfort" brand—made in Germany. A great favorite among the barbers. **Worth $1.75.**

Practical Barn Plans.

This is the name of the best book out. Every farmer needs it. It contains drawings, pictures, plans, specifications and everything necessary and up-to-date for a barn, stock shed, wagon shed, corn barn, smoke house, ice house, silo, dairy barn or any other conceivable outbuilding on the farm. Not only one plan of each, but many of each are shown with all the latest inventions and contrivances for saving time, money and labor.

Each and every plan in the book is accompanied by a lengthy written description, explaining and giving the details of the drawings, and so worded and arranged, numbered and indexed, that it must be readily understood by anyone who reads it.

The price of this book is One Dollar, and we include one-year's subscription to The National Farmer and Stock Grower. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Wheat, Corn and Oats in Farmers' Hands.

The Crop Reporting Board of the Bureau of Statistics of the United States Department of Agriculture esimates, from the reports of correspondents and agents of the Bureau, that the quantity of wheat in farmers' hands on March 1, 1910, was about 23.5 per cent., equivalent to 173,344,000 bushels, of last year's crop, as compared with 21.6 per cent. (143,692,000 bushels) of the 1908 crop on hand March 1, 1909, and 23.8 per cent. (152,571,000 bushels), the average for the past ten years of the quantity on hand on March 1. It is estimated that about 59.3 per cent. of the crop will be shipped out of the counties where grown, as compared with 59.2 per cent. of the 1908 crop, and 56.6 per cent., the average for the past ten years, so shipped out.

The quantity of corn in farmers' hands on March 1, 1910, is estimated as 37.9 per cent., equivalent to 1,050,865,000 bushels, of last year's crop, as compared with 39.3 per cent. (1,047,763,000 bushels), of the 1908 crop on hand March 1, 1909, and 38.2 per cent. (925,386,000 bushels), the average for the past ten years of the quantity of the crop on hand March 1. It is estimated that about 23.1 per cent. of the crop will be shipped out of the counties where grown, as compared with 21.3 per cent. of the 1908 crop, and 20.0 per cent., the average for the past ten years, so shipped out. The proportion of the total crop which is merchantable is estimated as 82.6 per cent. of the 1909 crop, as compared with 88.2 per cent. of the 1908 crop, and 83.6 per cent., the average of the past ten years.

The quantity of oats in farmers' hands on March 1, 1910, is estimated as 36.1 per cent., equivalent to 363,159,000 bushels, of last year's crop, as compared with 34.6 per cent. (278,847,000 bushels) of the 1908 crop on hand March 1, 1909, and 36.4 per cent. (310,763,000 bushels), the average of the past ten years of the quantity of the crop on hand March 1. It is estimated that 32.7 per cent. of the crop will be shipped out of the counties where grown, as compared with 30.3 per cent. of the 1908 crop, and 28.7 per cent., the average for the past ten years, so shipped out.

Commercial Soil Cultures.

The New Jersey Experimental Station Bulletin No. 227 gives results of tests of commercial cultures for soil inoculation. The first chapter is a tribute to the value of earth taken from old fields where legumes have grown, but warns farmers that such earth also brings with it weed seeds, dodder and spores of fungous diseass, and is, therefore, discouraging in regard to that method. Mentioning Farmogerm and Nitragin as two distinct bacteria cultures, the bulletin gives the result of two-years' work. The summary says that Farmogerm and Nitragin contain large numbers of vigorous bacteria, but are not useful on land that is deficient in lime. On properly-limed soils Farmogerm for alfalfa, cowpeas and red clover gave satisfactory returns. Farmogerm failed for soy bean inoculation. Farmogerm was superior for cowpeas and Nitragin for Lima beans. The final conclusion was as follows: "The experiments show that in soils properly drained and supplied with moisture, lime, phosphates and potash, the commercial cultures, Farmogerm and Nitragin are capable of increasing the yields of such leguminous crops as have not been previously grown on the land."

The Corn of L. B. Clore.

In co-operative tests by farmers in Southern Indiana, under auspices of the Purdue Experiment Station, Johnson County White Seed Corn furnished by L. B. Clore & Son was tested in five districts in comparison with other standard varieties. In each and every case the Clore corn exceeded the yield of all other varieties. We are offering some of Mr. Clore's corn as a subscription premium for the benefit of our patrons. We have just received some more offrom competition. The value of his this corn, sufficient for all purposes.seed corn cannot be estimated. It is Mr. Clore has won so many champion-the most valuable corn production in ship premiums that he is now barredthe United Sates. See page 18.

Amatite ROOFING

Will End Your Roofing Troubles

IF you will write to-day for a free sample of "Amatite" the end of your roofing troublesisinsight. After you have submitted it to every test that you can think of, you will be prepared to order it not only for your *new* buildings, but for your *old* roofs as well. You will find that it is cheaper to cover them with Amatite than to continue painting and repairing them.

We make a strong point of our "Free Sample" offer because the smallest sample of Amatite speaks for itself. It is more convincing than yards of talk.

There are all kinds of ready roofings on the market—so-called "rubber roofings," so-called "guarantee roofings," so-called "sand surface roofings."

The "rubber" roofings are no more made of rubber than a cow is made of saw-dust. The "guarantees" that are promiscuously handed out with many brands are hedged around with so many provisos that it will take three lawyers to dissect them and find out what they are all about. The "sand surface" has little or no protective value.

The point to remember is that all of these roofings have to be *painted* every year or two to keep them tight. In other words, it is the *paint* that protects, and not the roofing. If a man will sit down and figure out exactly what this paint costs, he will find that it is more than the roofing itself. Amatite, on the other hand, has a surface of *real mineral matter* and we sell the goods on the broad statement that you need never coat or paint this roofing.

You can lay Amatite on a roof and then forget all about your roofing troubles. *No painting, no coating, no worry.* The man who puts Amatite on his buildings is insured against leaks and trouble for many years.

Free Sample

If you have any doubts about the matter and want to investigate our claims, send for sample and booklet to-day. The sample tells its own story; the booklet is written for practical men. It hits straight from the shoulder.

Address our nearest office.

BARRETT MANUFACTURING COMPANY

BOSTROM-BRADY MANUFACTURING COMPANY, 1107 Pine Street, ST. LOUIS, MO.

The National Farmer and Stock Grower.

(Title Registered in U. S. Patent Office.)

Published monthly by The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Subscription Price, 50 cents a year, or $1.00 for three years.

Entered at Postoffice at St. Louis, Mo., as second-class matter in January, 1901.

People are charging the high cost of living in this country to the tariff, and they charge the high cost of living in England to free trade. The contradiction in tariff argument shows that people do not understand it.

The cost of the necessaries of life may have advanced in price, but the advance in necessities has not compared with the advance in the cost of luxuries.

According to the Department of Commerce and Labor, the Argentine Republic shipped 573,946 head of beef cattle to the English market in 1908 and 3,297,667 head of frozen sheep in 1909. The United States shipped out only 184,957 cattle in 1909, and only 54,613 sheep.

In Ireland the farmers have found it necessary to establish what are called Mutual Banking Associations. They have now seventy-six in operation. These associations loan money to farmers, and that is what the postal savings banks fail to do.

The next meeting of the Missouri State Poultry Show will be held at the Convention Hall, Kansas City, Mo., on December 3, 1910. It will be a great show, still greater than the one recently held in St. Louis, if it is possible to make it so.

The paint manufacturers wish farmers to produce more flax seed, and the oil mills wish farmers to produce more cotton seed. The farmers are hereby notified of the wishes of these gentlemen.

Read our advertisements. This is the season for them. It is to the publisher the harvest month. There is yet good farming matter in the paper, if one will examine every page.

A Cincinnati packer who died about fifty years ago was described as "a man of great benevolence and enterprise and a good judge of pork." We wonder what they said about him before he died.

We commend the book "Horse Secrets Disclosed" to our readers. It was edited by Dr. A. S. Alexander, a famous veterinarian, and it is furnished as a subscription premium with the Farm Journal of Philadelphia, the premier monthly farm paper of the United States. See page 24.

We are offering some very liberal premiums, for prizes won at State, Interstate and National Shows by corn grown from the seed that we furnish as subscription premiums. We are very glad to pay these premiums, and hope we will pay more in 1910 than we did in 1909.

Education pays. Yes, wonderfully well, providing getting it does not occupy the best working years of a man's life.

And now the story is out that packers make their living by purchasing meat at high prices in the United States and selling it cheap in England. This is equal to saying that the packers have lost their senses and are losing their money.

GOOD BOOKS AND PAPERS.

THE ELKHART BOOKLET, issued by the Elkhart Carriage and Harness Manufacturing Company of Elkhart, Ind. This is the small catalogue for quick buyers, and it answers every purpose. It also answers every question that buyers of buggies or any kind of light vehicle are likely to ask. Write to the factory and obtain a copy.

AMERICAN NEWSPAPER ANNUAL AND DIRECTORY, 1,362 pages royal octavo, cloth, $5.00 net, carriage extra. Postage 60 cents, published by N. W. Ayer & Son, Advertising Agents, Philadelphia. This is a consolidation of the Newspaper Directory long published by Geo. P. Rowell and the Newspaper Annual published for seventeen years by Ayer & Son. This great work stands alone as the standard directory of newspaper publications of every kind or character. The Annual and Directory likewise presents a vast amount of up-to-date gazetteer information showing the transportation, banking and other facilities of every town in which a newspaper is published, together with references to its leading industries and characteristics. Business men need this work before they consider entering into any campaign of advertising.

THE THIRTY-SECOND VOLUME OF THE BERKSHIRE RECORD is just out and contains the pedigrees of recorded boars and sows numbered from 120,001 to 125,000. The work contains index to boars and sows; index to breeders and owners; a list of members of the American Berkshire Association, including officers and directors; rules of entry, pedigrees and transfers, etc.; also list of state champion herds. The volume is edited by Frank S. Springer, Secretary, of Springfield, Ill., and is thorough and complete in all departments. Herd books are free to members and $1.00 to non-members.

VOLUME 33 OF THE AMERICAN HEREFORD RECORD indicates prosperity. It contains pedigrees from 305,001 to 325,000, inclusive. It is customary for this association to publish full-page pictures of a few prominent representatives of the breed. This volume contains Beau Columbus, 283,061, owned by Giltner Bros., of Eminence, Ky.; Prime Lad, 9th, owned by W. S. Van Natta & Son, of Fowler, Ind.; Margaret, 234,336, by the same owners; Lady Fairfax, 4th, owned by A. C. Huxley, of Bunker Hill, Ind.; and Lady Fairfax, 9th, owned by Warren T. McCray, of Kentland, Ind. The volume also contains a full list of shareholders arranged by states, and index to breeders and owners and to all animals recorded. The Record is a masterpiece as a compilation for reference. C. R. Thomas, of Kansas City, Mo., Secretary of the American Hereford Cattle Breeders' Association, has our thanks for furnishing this office with a copy.

HARPER'S MAGAZINE for April maintains the high reputation of that excellent publication. Experiences of Palestine, entitled "Across the Ghor to the Land of Og," by Prof. Ellsworth Huntingdon, of Yale University, is particularly interesting; "The Journal of John Wesley," by Nehemiah Curnock; "A Woman in the Pennsylvania Silk Mills," and "Oases in Gotham," by Philip Verrill Mighels, stand out as valuable articles; and there are twenty more articles and stories, all up to the Harper standard.

SPRING AND SUMMER GOODS CATALOGUE by the Lincoln-Pope Mercantile Co. is issued for free distribution to farmers. It contains 180 pages of bargains, three columns to the page. This firm is well established on the basis of fair dealing always and money back if not satisfied. About 600 leading lines of goods are illustrated and enumerated. Write for a copy. Address, Lincoln-Pope Mercantile Co., 1856 Pine street, St. Louis. Mo.

PORTFOLIO BOOK IN COLORS, showing 125 styles of vehicles manufactured by the Ohio Carriage Mfg. Co. This is the book advertised on page 15 relating to the Split Hickory Vehicles, which are made for every purpose. They are sold upon thirty-days' road test and full two-years' guarantee. Address, Mr. H. C. Phelps, President. Station 204, Columbus, Ohio, and ask for a copy of his free book.

STEEL ROOFING SHINGLE BOOK for free distribution is just off the press. It contains full particulars concerning the Edwards Reo Steel Shingles, sold with a guarantee bond for $10,000 against lightning. Freight paid on orders for five squares and over. Ask for Catalogue No. 338, and address Edwards Mfg. Co., 338 Lock street, Cincinnati, Ohio.

The **"UTILITY OF ALL KINDS OF HIGHER SCHOOLING"** is the misleading title of a book by R. T. Crane, who has sought to prove that in a majority of instances a college education is a waste of money and a waste of time. Young men entering the business of life after obtaining a college education expect to fill the higher places, and by their training and want of practical experience they are unfit, on account of their age and high expectations, to begin even at the beginning. Mr. Crane wishes the boy to go from the grammar school into the office or shops of whatever line of business he intends to follow, and there obtain his business education and earn money, instead of being an expense to his parents. Mr. Crane is particularly hard upon the agricultural college, saying that it is the "fifth wheel to the farmer's wagon," and has cost far more than it is worth. He says the home farm is the best place to finish the education of the farm boy. He says four years in high school and four years in the agricultural college are not needed to make farmers. The book is a work of 331 pages, issued at $1.00 per copy by A. C. McClurg & Co., 215 Wabash avenue, Chcago, Ill.

ANIMAL HUSBANDRY by Louis F. Swift, being a reprint in elegant pamphlet form of an article that appeared in the Christmas number of the Breeders' Gazette. Mr. Swift, who is the practical head of the great firm of Swift & Company, is also a ranch owner, and as such his interests are the same as other stock raisers. He reviews in a practical way the live stock trade, showing decreased numbers and increased cost of live stock, and he strongly advocates increased production throughout the country as necessary and beneficial to all concerned. The beauty and elegance of the illustrations in this little volume appeal to the reader as much as the concentrated facts appeal to his judgment. We have no doubt that a copy can be obtained by any of our readers by addressing Mr. L. F. Swift, Union Stock Yards, Chicago, Ill.

DON'T MAKE THE MISTAKE

Of thinking all eye remedies for horses are alike, or that you can't find a remedy to cure your horse. Visio is the remedy that has cured where others have failed. The wonderful results of Visio have astounded the veterinarians throughout the entire world. Moon blindness, ophthalmia, conjunctivitis and cataract, readily yield to its wonderful curative powers. It's sold under a positive guarantee. It must either cure your horse or we refund the money. Send $2.00 for a bottle to-day and let the remedy prove its own goodness. Visio Remedy Association, Dept. C, 1933 Wabash avenue, Chicago, Ill.

On January 29th, in Callaway county, Missouri, Jack Harrison, of Auxvasse, purchased the 1,000-acre farm of L. B. Scroggins, lying east of that town, for $50,000. The farm was originally owned by Mr. Harrison's father, the late Thomas Harrison, and was purchased by Scroggins about fifteen years ago at $25,000. The sale as now recorded is remarkable as indicating the value of large tracts of improved lands in Missouri.

Missouri Live Stock Short.

According to the Missouri crop report, there is a decided shortage of live stock in every section of the state. Correspondents estimate that there are but 48 per cent. of the usual number of cattle now on feed, while the percentage of hogs now on feed, as compared with an average year, is only 37.9. The number of brood sows, as compared with the average number, is placed at 64.5 per cent. The number of breeding ewes on farms is given as 90.5 per cent., as compared with the number usually found on Missouri farms.

The Live Stock Situation.

In the past ten years cattle in the country have increased 11 per cent.; hogs have decreased 16 per cent.; and sheep have decreased 4½ per cent. These figures show that the decrease of hogs and sheep has offset the gain in cattle. Furthermore, live stock is marketed younger and lighter than formerly. Although food animals have decreased in number, the population has increased 12 per cent. The situation is therefore in favor of the stock raiser, who should buckle down to business and raise all he can while prospects are good.

Missouri Live Stock Assessment.

The Missouri tax assesment of live stock for the year 1909 is upon 868,289 horses, 291,171 mules, 10,695 jacks and jennets, 2,060,757 cattle, 2,259,785 hogs, and 1,031,359 sheep. The total value of live stock is placed at $79,514,831, and the sales of Missouri live stock during the year is placed at $119,251,000. The last United States census gave Missouri 2,978,589 cattle, 4,524,664 hogs, 1,087,213 sheep, 24,478 goats, 967,037 horses, 283,519 mules, and 8,777 jacks and jennets.

FARM AND RANCH LANDS.

GOOD FARM BARGAINS FOR SALE BY FRANK P. CLEVELAND.

IOWA.—239-acre improved farm in Monona county. Price, $70.00 per acre.

WISCONSIN.—200-acre improved farm in Jackson county. Price, $4,000.

WISCONSIN.—80-acre improved farm in Bayfield county. Price, $1,800.

WISCONSIN.—153-acre improved farm and milk business, which pays $11.00 per day, in Monroe county. Price, $16,000; terms, half cash.

WISCONSIN.—240-acre improved farm in Adams county. Price, $4,000.

TEXAS.—2,560-acre ranch in Dallam county; will divide. Price, $12.00 to $16.00 per acre.

SOUTH DAKOTA.—940-acre improved farm in Mead county. Price, $20.00 per acre.

MONTANA.—640-acre tract of rich farm land in Custer county. Price, $17.50 per acre.

MISSOURI.—140-acre fruit and garden farm in Ripley county. About 7,000 trees in full bearing; large amount of small fruit; good buildings. Price, $10,000; terms, one-third cash.

MINNESOTA.—240-acre improved farm in Marshall county. Price, $3,600.

MINNESOTA.—4-acre fruit and chicken farm in Red Lake county. Price, $1,500.

MICHIGAN.—100-acre improved farm in Mecosta county. Price, $3,500.

ILLINOIS.—346-acre improved farm in Woodford county. Price, $125.00 per acre.

CALIFORNIA.—1,000 acres fruit and farm land in Modoc county; will divide. Price, $50.00 per acre.

MINNESOTA.—200-acre improved farm in Pine county. Price, $3,000.

ILLINOIS.—209-acre improved farm in Henderson county. Price, $12,000.

MISSOURI.—120-acre improved farm in Vernon county. Price, $65.00 per acre.

INDIANA.—238½-acre improved farm in Jasper county. Price, $48.00 per acre.

WISCONSIN.—240 acres of farm and timber land in Florence county. Price, $2,400.

ARKANSAS.—160 acres of farm and timber land in Stone county. Price, $1,600.

If you want to buy, sell or exchange any kind of business or real estate anywhere at any price, address **FRANK P. CLEVELAND, Real Estate Expert, 7910 Adams Express Building, Chicago, Ill.**

MEXICO.

For Sale: Timber, Agricultural and Grazing Lands in Western Mexico, States of Michoacan, Sinaloa and Tepic. Fine timber. Soil of the best. Grows abundant crops. Plenty water. Climate excellent. Lands now cheap, $1.50 up, but upon completion of Southern Pacific R. R., now building, will advance steadily.

For particulars address
J. H. Cavanaugh & Co.,
Acaponeta, Tepic, Mexico,
or **J. H. Cavanaugh & Co.,**
P. O. Box 76,
Guanajuato, Mexico.

MICHIGAN.—I sell Farms in Oceana, the best county in the United States; fruit, grain and stock. Write for list. **J. D. S. Hanson,** Hart, Mich.

TENNESSEE.—Send for booklet on farming and full description and prices of lands for sale in the valley of East Tennessee, the healthiest climate and best lands in the country. Address, **East Tennessee Real Estate** Company, Morristown, Tenn.

TEXAS.—2,600 acres, 11 miles from Sabinal, Uvalde county; about half agricultural, balance excellent grazing. Price, $7.00 per acre; half cash; deferred payments to suit the purchaser. Address, **Albert D. Evans,** North Fort Worth, Texas.

VIRGINIA.—Farms for sale from the mountains to the sea. Stock, Grain, Fruit, Poultry, Fish and Oyters. Illustrated catalogue free. **Geo. E. Crawford & Co.,** Richmond, Va.

FARM WANTED.—We want to hear from OWNER having good FARM for sale in good locality. State lowest price, as you will have no COMMISSION to pay. If you want to buy property of any kind it will be to your interest to write us. **American Investment Association,** 815 Palace Bldg., Minneapolis, Minn.

WESTERN CANADA

What Governor Deneen, of Illinois, Says About It

Governor Deneen, of Illinois, owns a section of land in Saskatchewan, Canada. He has said in an interview:

"As an American I am delighted to see the remarkable progress of Western Canada. Our people are flocking across the boundary in thousands, and I have not yet met one who admitted he had made a mistake. They are all doing well. There is scarcely a community in the Middle or Western States that has not a representative in Manitoba, Saskatchewan or Alberta."

125 Million Bushels of Wheat in 1909

Western Canada field crops for 1909 will easily bring **$170,000,000.00** in cash.

Free Homesteads of 160 acres, and pre-emption of 160 acres at $3.00 an acre. Railway and Land Companies have land for sale at reasonable prices. Many farmers have paid for their land out of the proceeds of one crop. Splendid climate, good schools, excellent railway accommodation, low freight rates, wood, water and lumber easily obtainable.

For pamphlet "Last Best West," particulars as to suitable location and low settlers' rate, apply to Sup't of Immigration, Ottawa, Can., or to the Canadian Government Agent. (5)

J. S. Crawford, 125 W. 9th St., Kansas City, Mo.; C. J. Broughton, 412 Merchants Loan & Trust Bldg., Chicago, Ill.

A Most Useful Premium.

A farm on which there is not a sewing awl is in difficulties when work is most pressing. It is surprising how useful this little implement is. It is the Myers Famous Lock Stitch Sewing Awl. It is the only sewing awl made with a groove running the full length of the needle and has what is known as a diamond point. In order to sew leather or any heavy, thick material without breaking or cutting the thread it requires a needle with the groove running the full length of the needle. You might just as well have no groove in the needle as to have it only part of the way. With the Myers Awl you can sew old or new harness, saddles, carpets, canvas, tents, rugs, quilts, shoes, grain bags, and many other things. You can use any kind of thread in the Myers Awl, and it makes a lock stitch same as a sewing machine. It is very simple; a woman can use it as well as a man. It is one of the most practical devices ever invented. They are put up with two needles; one is straight and one curved, with a small screwdriver and wrench combined. Also a reel of waxed thread with each awl ready for use. Every teamster and farmer should own a Myers Lock Stitch Sewing Awl, as there is use for one in almost every household. The Myers Awl is nicely finished, the metal parts are nickel-plated, the needles and wrench are kept in the hollow handle, which has a screw top.

Anyone who will send One Dollar cash to pay in advance for two-years' subscription to The National Farmer and Stock Grower can select one of Myers' Lock Stitch Sewing Awls, which we will send by mail, postage paid, as a free premium. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Milk Producers' Association.

The Milk Producers' Association of Missouri and Illinois held a quiet meeting March 28th, and only officers and Directors were present.

Mr. D. I. Furbeck, acting as Milk Committee, and Mr. Jeff. Hogan, of Edwardsville, Ill., made a round of the city dairies, and the report goes direct to the members in good standing.

Mr. Hogan brought in and paid over to the Secretary annual dues paid by the following new members: Theodar Eilers, R. R. 5, Edwardsville, Ill.; Otto Stillie, R. R. 5, Edwardsvile, Ill.; Wm. Lengendof, R. R. 3, Worden, Ill.; Theodar Carrens, R. R. 4, Alhambra, Ill.; Wm. Kipp, R. R. 4, Alhambra, Ill.; Charley Weire, R. R. 4, Alhambra, Ill.; Henry Sanders, R. R. 4, Alhambra, Ill.; Ernest Sanders, R. R. 4, Alhambra, Ill.

The April meeting will be held Monday, April 25th. Only Directors will attend.

A number of members have failed to pay their dues, although bills have been sent out. Directors on different railroad systems are requested to rustle hard amongst the members and bring results to next meeting.

Between meetings address Wm. A. Fischer, Secretary, 409 Franklin avenue, St. Louis, Mo.

The New Campaign.

Having successfully influenced Congress to take the customs duty off hides, there is now a campaign for the purpose of taking the duty off beef and admitting the productions of Canada and South America into this country duty free. The first gun of this campaign is an alleged interview with American beef packers' representatives at the Smithfield Market of London, England, in which it is stated that they sell American beef in England cheaper than they do in the United States.

The fact of the matter is that the man who sells beef on the Smithfield Market, in London, does not sell in New York also; therefore he is not posted. He probably knows how to sell beef in England, and that is his limit. Probably he has been told that he was selling it for less than cost. The American cattle that are shipped alive to England and slaughtered on arrival there are not top-grade cattle, and there are many other American food productions exported the same way. Top-grade butter and the best American cheese are kept here and second grades are exported to suit the market. The English people are great consumers, but the masses there cannot afford to pay for beef that is commonly put on the tables of the average families in Boston, New York, Philadelphia, Chicago and St. Louis, and if they could, they would buy English beef in preference to imported meats.

What the packers' representatives ought to have said is: "The best cattle imported into this country are plain, good steers, and do not sell as high here as better cattle do in America." The daily press is always able to work up a political sensation, but when it comes to interviews on business matters they never get onto the facts, and they are easily imposed upon.

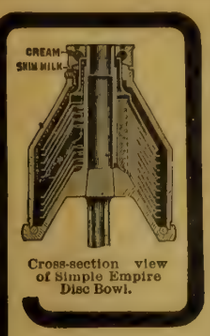
Dairy and Creamery Notes.

The New York Farmer says that many milk producers are dropping out of the business. The reason is that the farmer gets half the retail price for production and the distributor gets the other half. An unfair division of the money is the cause.

The Helvetia Milk Condensing Company of Hudson, Mich., has announced its schedule of prices for the next six months, beginning April 1, as follows: April, $1.40; May, $1.15; June, $1.15; July, $1.15; August, $1.25; September, $1.40—an average of $1.25 per 100 pounds. These prices are for milk testing from 3.5 to 4.4 per cent. fat, inclusive. There is a descending scale for milk testing less, while milk testing 5 per cent. or over 4.4 per cent. will draw a premium of 15 cents per 100 pounds.

Going to Bring in Canada.

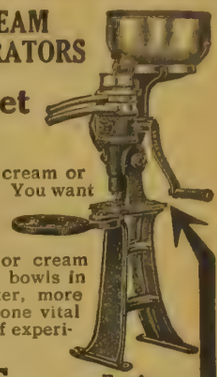
The Americans who go to Canada will make good citizens and pretty good farmers. Some day they will annex the United States to Canada and Saskatchewan, Manitoba and Alberta will send Senators and Members of Congress to the Capital of the united countries, which will most likely be St. Louis. Canadians would like to have the credit of improving the crop averages of the continent.



Cross-section view of Simple Empire Disc Bowl.

EMPIRE CREAM SEPARATORS

Kept Clean and Sweet Without Effort



Empire Disc

TAKE no chances on having your cream or butter graded "second" or "third." You want everything in your dairy easy to get unmistakably clean. The bowl devices in ordinary separators have slots, corners and crevices in which specks of milk or cream lodge to spoil the next skimming. The bowls in Empire Separators are different, better, more simple and perfectly sanitary. That's one vital reason why more and more thousands of experienced dairymen every year are choosing from—

THE EMPIRE LINE

DIFFERENT STYLES—ALL SIZES IN EACH STYLE

Here we show the Empire Center Feed Disc and its simple bowl. This Empire bowl is lighter than any other with an interior skimming device, except the Frictionless Empire; the few smooth parts are cleaned in a jiffy because of no corners, slots or crevices to dig into; no place for impurities to lodge and spoil the next batch; cream has free passage to outlet so butter-fat globules are unbroken, adding to quality; spindle fits up into bowl, aiding perfect balance and ease of turning; the closest skimmer in the world, day in and day out, barring none, **and we have the proofs.** You may prefer the Famous Frictionless Empire, with its equally simple, sanitary bowl with cone device. Either of these in the exact size you want is the separator that will save you most work and time; give you "First Grade" butter-fat always; make you the most money every year and for the longest term of years.

The Facts Are Free, Write

Send postal for the facts proving the Empires to be the easiest to clean, easiest to turn, longest lasting and best paying separators. Our 1910 Dairy Book is full of information you should have—a guide to more dairy dollars.

EMPIRE CREAM SEPARATOR COMPANY, Dept. LL, 1225 Wabash Ave., Chicago, Ill.

Factory—Bloomfield, N. J.

ABSOLUTELY FREE

If **FRAZIER'S DISTEMPER CURE** fails as a cure or preventive of Distemper, Epizootic, Influenza, Catarrhal Fever, Coughs, Colds and affection of the Throat, ask your druggist for the return of your money. $1.00 bottle holds three times the quantity of the 50c. size. Write for our free 32-page booklet.

Some Points on Commercial Milk.

The problems of handling commercial milk stand by themselves, because the milk handled by the city dealers is an unknown quantity, so far as its previous care is concerned. It comes to the city dealer in all kinds of conditions, and some of it has been medicated or treated with preservatives before reaching his hands. As only large concerns can keep a chemical laboratory in operation, the average milk dealer must take the milk largely on faith.

Pasteurization has come largely into use in the large cities for the purpose of insuring the citizens protection from diseased milk. It has been believed that milk that had been heated to the point of killing live germs is healthful. Some cities have laws requiring milk to be pasteurized before sale.

But during the last two or three years there has grown up a rather strong sentiment against the pasteurization of milk. The doctors think they have found elements of danger in it. Chemical analysis and observation seem to show that if pure, sweet milk is pasteurized it is a healthful product, and the pasteurization kills any disease germ in it and also helps it to keep longer than it would without pasteurization. But they think they discover certain tendencies in the pasteurization of milk that may make it a more harmful product than if not pasteurized.

One of the harmful tendencies is to neglect the proper care of pasteurized milk, thinking it will resist all harmful conditions. If disease germs get into pasteurized milk they have a better medium in which to develop than they would have in unpasteurized milk, for the lactic acid ferments have been killed, and these lactic acid ferments make war on disease germs in milk. While the lactic acid ferments are developing in milk the disease germs are decreasing, according to some investigators. But when they are absent, the disease germs have the whole field to themselves. It can be readily seen that it is even more necessary to carefully handle pasteurized milk than milk not so treated.

The same doctors say also that some of the milk pasteurized for sale would not be sold at all if not pasteurized. Milk so dirty that it would be rejected is disguised by the pasteurizing to a point where it can be disposed of to the public. Dirt is pasteurized with the milk and sold also. The most that can be said of it is that it is clean dirt.

The above is not an argument against pasteurization. It is simply an argument in favor of not trying to pasteurize milk that ought not to be pasteurized, and it is also an argument in favor of the proper care of milk before and after pasteurization.

There is the greater necessity for the use of proper methods in pasteurizing milk, because the public is trusting in such milk and do not take precautions with it that they would with other milk. Thus, during an epidemic of scarlet fever they will heat unpasteurized milk to a point where germ life is destroyed, but will take no such precautions with the pasteurized milk.

Milking Early and Often.

Mr. Malcolm H. Gardner is Superintendent of the Holstein-Friesian Advanced Register, and he has some ideas of his own which he includes in his reports, and the following is a sample:

"An Iowa man, wishing to improve his herd by the purchase of a pure-bred dairy bull, so as to gain a larger profit from the grades he will raise than he is able to get from his common cows, writes that he understands that Holstein breeders, in making official tests, always milk three times, and many of them four times a day, and asks if I regard tests made in such a way as a fair measure of capacity.

Well, what are our dairy cows for? Do we keep them as lawn ornaments, or as a source of milk supply? Shall the dairyman drive his cows from door to door, as dairy cows and goats are driven in some countries, milking as much and as often as his patronage demands as long as the supply holds out, or shall he use more improved methods? Shall he milk once a day, as was the practice some hundreds of years ago, and is yet the custom in some places, or shall he milk three times, as is the custom among the more advanced dairymen in Denmark? Shall the cow be given the opportunity to show her capacity by the removal of her milk product as often as seems necessary, or shall we dry her down to suit our convenience in milking?

As our population and the cost of food products increase, milk, as one of the most valuable of food products, will also increase in price; and in the near future it will be as customary for dairymen to milk cows three times a day during the earlier portion of the lactation period, as it is now to milk but twice. Indeed, owing to the wonderful milk-producing qualities of Holstein-Friesian cows, in order to avoid congestion of the udder, it is the common practice among those having the better cows to milk three times daily for many weeks after freshening."

In the twenty-fifth annual report of the Bureau of Animal Industry appears a valuable article on "Improved Methods For the Production of Market Milk by Ordinary Dairies." It is by Messrs. C. B. Lane and Karl E. Parks, and describes simple and inexpensive methods within the reach of the average dairyman by which clean and wholesome milk may be produced. We believe that copies of this market milk article can be obtained by writing to the Secretary of Agriculture, Washington, D. C.

Hammond's Handy Atlas of the World.

This great Atlas contains 107 pages, 6x8 inches, is printed in colors and is bound in a durable red-cloth cover. It contains seventy full-page maps of every state and territory, with new railroads and towns. Every country in the world is shown by maps of the latest plates. We use this Atlas as a subscription premium. For One Dollar paid in advance we will send one copy of **Hammond's Handy Atlas** post free by mail and credit three-years' subscription to The National Farmer and Stock Grower. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

We have received from the Secretary of Agriculture a list of convictions of farmers for adulterating milk; some of it was filthy and decomposed; some had butter-fat taken from it, and in a majority of cases the milk had been watered. These cases extend over wide territory, being interstate shipments. In every instance the defendants had opportunity to clear themselves, but pleaded guilty.

What Every Farmer Wants

You Can Get It Free

Ask for Book No. 7.

JUST drop us a post card and we will send you, **free**, the latest edition of our **Corn Book**, containing the best information from the highest authority on selection and care of seed corn. You can get more and better corn without increased cost by following this book

Forty Pages in Colors

Every page illustrated and printed in colors.

The fact that this book also contains a description of the

Deere No. 9 Corn Planter

the most highly perfected machine on the market, adds to its value.

Increased accuracy secured by the famous **Deere edge-selection drop**, means anywhere from ten to fifteen bushels per acre over the old style of machine.

Repeated tests have shown the above increase in favor of really accurate planting.

We have plates for all kinds of corn and other seeds. Instantly changed from hill to drill drop without changing plates.

Fertilizer attachment that distributes either in hill or drill. The illustration shows the regular runner, but stub runner or disc openers may be had on special order. In fact, the **Deere No. 9** is strictly up to date in all the real improvements.

Painting Implements

FULL information regarding the best paint for use on farm buildings, implements and wagons is contained in this 116 page *free book* which every farmer should have. It explains the economy of using good paints and varnishes frequently and gives information regarding the painting of everything about the farm and the special paint for the purpose.

SHERWIN-WILLIAMS
PAINTS AND VARNISHES FOR FARM USE

There is a Sherwin-Williams' Paint for every purpose about the farm, and you are always sure of the right paint, no matter what your requirement. If you want to paint your barn, you have Sherwin-Williams' Commonwealth Barn Red; for your floors, Sherwin-Williams' Floorlac or Inside Floor Paint; for your wagons, implements and machinery, Sherwin-Williams' Wagon and Implement Paint, and every other conceivable kind of paint for every possible purpose.

This book gives a lot of painting information that every farmer should have, and shows how frequent use of good paint saves good money on the farm. Every farmer should have it—and we'll send it free to everyone who'll ask for it.

The Sherwin-Williams dealer in your town can furnish you with the Sherwin-Williams' Paint for any purpose.

SHERWIN-WILLIAMS PAINTS & VARNISHES

Address all inquiries to The Sherwin-Williams Co., 689 Canal Road, Cleveland, Ohio. In Canada, to 639 Center Street, Montreal.

The Thermometer in Dairying.

The Australian Farmer and Grazier is responsible for the following dairy story:

"In England there are a large number of ladies employed by County Councils to lecture on dairying. In England, she is the product of the agricultural schools, and no doubt the reason of her employment arises from the fact that at home and on the Continent women take a more active part in dairy work than is the case here, where the 'dairymaid' is little heard of. Anyway, not to the extent to constrain poets to rush into verse about her. But to come to our subject of the 'Thermometer, a Butter Charmer,' it is related that a lady employed to lecture for the first time to some Cumberland farmers and their wives, met an audience bristling with prejudice, hostility and derision. They did not assemble to seek knowledge, but to laugh at what they regarded as 'new-fangled' ideas.

" 'What does the likes of her know, with her fancy machinery and ladyfied talking; what does she think the likes of her can tell us that we didn't ken years agone?' " asked one woman of another.

" 'My word! What, indeed. Why, I made butter in my grandmither's-mither's churn before her was thought on.' "

" 'She'll rue coming here, trying to teach her grandmither to suck eggs, like as not, before her goes,' " chimed in another.

"The lecture was accompanied by a butter-making demonstration, a hundred quarts of cream being churned, washed, brined, worked and made up into 100 pounds of butter, more or less.

"As the lecture progressed, the lady was observed inserting a thermometer in the churn. A harsh, derisive laugh assailed her ears, and, looking round, she saw an old farmer, who bawled out: " 'Eh, missis, is't a love charm you're puttin' in that cream?' " " 'No, sir,' " replied the lecturer, " 'not a love charm, but a butter charmer.' " "Then she proceeded to lecture the old farmer on the use of the thermometer. She spoke to that poor man for forty minutes, pointing out the all-powerful effects of temperature on the art of butter making, and that the thermometer was the golden key that opened the way to dominate certain effects, and that without its aid all was guess work, the results unreliable, the work being done in the dark, etc.

" 'By degrees,' to use the words of the lady herself, 'my audience became quite eager to see the result of the practical part of my demonstration fulfilled; they strained forward to see the golden grains of butter-fat sparkling with clearest brine, and free from buttermilk, placed on the butter worker, and had become quite enthusiastic and warmly congratulatory at the completion of the demonstration.

"But the proudest feather in her cap was the voice of the old farmer, now no longer derisive, saying in quiet accents: " 'Here, missis, give us hold of a couple of the 'butter charmers.' I'll never be widout 'em in t' dairy ony mair.' "

"We must all agree with the lecturer on the value of this little instrument in dairy work. A ship might just as well be at sea without a compass as a dairy without a thermometer."

Holstein-Friesian Records.

A list of Holstein cows undergoing tests for admission to the Advanced Register includes 125 animals, of which about one-third were full-aged cows. In seven days these 125 cows produced 51,543.2 pounds of milk, containing 1,805,885 pounds of butter-fat, thus showing an average of 3.51 per cent. fat. The average production for one week by each cow was 412.3 pounds of milk, equal to 28 quarts of milk per day per cow, and the butter that could be made from it was 16.57 pounds per week. One cow in the test produced 576.7 pounds of milk in one week, including 26⅛ pounds of buter-fat.

Dairy and Creamery Notes.

Milk sells in London, England, very much as it is retailed in St. Louis, the principal retail price being eight cents a quart.

Mr. Ralph Hershfelt, of Carlyle, Ill., has a fine herd of sixteen cows and eight heifers, mostly Holsteins, headed by a pure-bred bull, a son of the world's champion, Sarcastic Lad, and a well-bred, recorded heifer raised by Jesse W. Osbourn, of Butler, Ill. The grade herd consists of sixteen cows and eight heifers, which Mr. Hershfelt will sell at reasonable prices. He is going exclusively into raising pure-bred stock. Anyone wishing to obtain some first-class cows will do well to write Mr. Hershfelt at Carlyle, Ill.

In Albany, N. Y., recently, a dealer in oleomargarine was fined $100 and costs for giving away coloring matter in connection with the sale of uncolored oleo. This is an offense against the New York state law.

In Massachusetts it has recently been upheld by law that all milk must contain not less than 12.15 per cent. of milk solids, and not less than 3.35 per cent. of fat. The decision came as the result of an appeal brought by three Concord farmers, who were found guilty of having for sale milk which contained but 11.65 per cent. of milk solids. The appeal was made as a test case, the farmers maintaining that the milk in their possession was nutritious and not injurious.

In March, at Albany, N. Y., the Public Service Commission decided that the advance of one-half cent per gallon in the rates on milk and one cent in rates on cream to Buffalo for distances up to seventy-five miles, made by the steam railroads entering that city, is unreasonable and unjust, and that the rate should not exceed one and one-half cents per gallon in eight and ten-gallon cans on milk, and two and one-half cents per gallon on cream in five to ten-gallon cans.

A New York firm was convicted for misbranding a product sold as pure vacuum-dried milk flour represented as containing 5 per cent. butter-fat. Analysis by the Department of Agriculture found that it contained only 1 to 2 per cent. butter-fat. The property was therefore condemned by the United States Court.

The Fatted Calf.

The minister had just been giving the class a lesson on the Prodigal Son. At the finish, to test what attention had been paid to his preaching, he asked:

"Who was sorry that the Prodigal had returned?"

The most forward youngster in the class breathlessly answered: "The fated calf!"

The Simplest, Strongest And Most Convincing Of CREAM SEPARATOR ARGUMENTS

We cannot believe that there is a sensible man living who would put his own money into the purchase of any other than a DE LAVAL cream separator, for his own use, if he would but first avail of the opportunity open to everyone to SEE and TRY an improved DE LAVAL machine before buying any other.

It is hardly possible to say more than this. It is hardly possible to put the simple truth in plainer words. It would hardly seem possible to say it more convincingly.

The TRIAL of a DE LAVAL machine is free to every responsible man thinking of buying a cream separator. We have agents in every locality for this purpose. If you don't know the agent in your neighborhood, send to us for his name and address and it will be a pleasure to give your inquiry prompt and courteous attention.

CUT FARM EXPENSES.

This can be done by preserving, lengthening the life of every wooden structure on the farm with "Avenarius Carbolineum," the only wood preservative, which has stood the test of time, being in use now for over thirty years.

With one gallon of Avenarius Carbolineum you can paint one square of shingle roof and prevent decay and warping and at the same time impart a nice, durable brown color to your roof.

From forty to fifty fence posts can be painted or dipped three feet butt treatment with one gallon of "Avenarius Carbolineum" and the life of such a post doubled, no matter whether the post stands in alkali soil or is a chestnut, pine, oak or of inferior grade of lumber.

It is not expensive and is applied as easily as ordinary paint. From the common sense standpoint of pure economy, money saving, Avenarius Carbolineum appeals to every thrifty farmer, and the plea for its use is made on this ground alone.

For further information, circulars and testimonials please write to Carbolineum Wood Preserving Company, Dept. 47, Milwaukee, Wisconsin.

In Oklahoma, in the month of February, the State School Land Department disposed of the entire list of lands for sale amounting to 3,840 acres at $20.00 an acre. This was in tracts of 160 acres each. It is seldom if ever, that public lands sell for so much money.

LIVE STOCK BREEDERS.

POLAND-CHINAS.

"Kirby's got the best." Not what we say, but what our customers in nine different states say. Write for prices.
KIRBY STOCK FARM, Marmaduke, Ark.

Write MRS. P. E. KIRBY for prices on BUFF ORPINGTONS, Cockerels and Hens. P. O. Address, MARMADUKE, ARKANSAS.

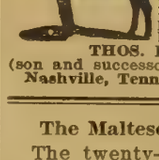
Write for catalogue. Also Jersey Cattle.



THOS. H. EZELL, Prop.,
(son and successor to the late H. C. Ezell),
Nashville, Tenn., Sta. B, R. F. D. No. 7.

The Maltese Goat Importation.

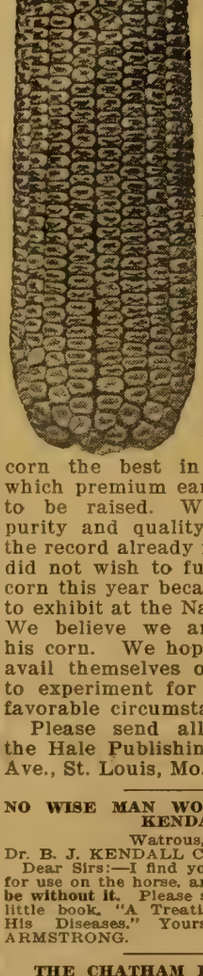
The twenty-fifth annual report of the Bureau of Animal Industry, issued recently by the Department of Agriculture contains the history of an importation of Maltese goats by the Department of Agriculture a few years ago and a description of Malta fever is presented in an article by Drs. John R. Mohler and George H. Hart. The goats, which were imported with a view to building up a milch goat industry in this country, were found to be affected by Malta fever, a disease which prevails to a considerable extent among people as well as goats on the Island of Malta and other places on the Mediterranean. After keeping the goats under strict quarantine for some time it was finally considered necessary to destroy them all.

What a School Boy Did in Georgia.

He received a pound of Clore's Grand Sweepstakes White Corn as a subscription premium to The National Farmer and Stock Grower, and from this very seed he raised a good crop from which he selected ten ears that, being exhibited at the Georgia State Fair, won the first prize of $50 in the Agricultural Department in class for the best ten ears of corn in the exhibit open for school children. In addition to the State Fair prize he also won $25.00 awarded by The National Farmer and Stock Grower to the winner of a first prize at any State Fair, providing the corn was grown from premium seed furnished from this office. Attention is invited to page 18 of this edition.

GRAND CHAMPION YELLOW CORN

Our readers are reminded that besides the premium offer of Grand Sweepstakes White Corn we are also offering the same prizes for Yellow Corn. Anyone sending us 60 cents for one-year's subscription to The National Farmer and Stock Grower can select one pound of Pascal's Grand Champion Yellow Corn as a premium, or if he will send one dollar to pay for two-years' subscription he can select two pounds of Pascal's Grand Champion Yellow Corn as a premium. The same prizes are offered by us for Yellow Corn that we do for White Corn. See page 18. The reason we use the Pascal Corn is because Mr. Pascal has been breeding Reid's Yellow Dent Corn pure since he obtained it from the originator. Mr. Pascal has won many premiums, and his famous "Pascal Ear" stood for several years without a rival. We regard his corn the best in the world from which premium ears can be expected to be raised. We rely upon the purity and quality of the seed and the record already made. Mr. Pascal did not wish to furnish us any seed corn this year because he was unable to exhibit at the National Corn Show. We believe we are right in using his corn. We hope our readers will avail themselves of the opportunity to experiment for themselves under favorable circumstances.



Please send all subscriptions to the Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

NO WISE MAN WOULD BE WITHOUT KENDALL'S.

Watrous, Sask., Sept. 1, '09.

Dr. B. J. KENDALL CO.:

Dear Sirs:—I find your medicines the best for use on the horse, and no **wise man would be without it.** Please send me your valuable little book, "A Treatise on the Horse and His Diseases." Yours truly, SHANNON ARMSTRONG.

THE CHATHAM FANNING MILLS.

The Manson Campbell Company, Detroit, Michigan, have been making Chatham Fanning Mills for many years. And with every year the demand has grown, because farmers have realized more and more the necessity of properly cleaning their seed, of keeping out the weeds and of grading up their crops. The factory is now running day and night to prevent delay in filling orders. Chatham Fanning Mills are sold on time and on thirty-days' free trial, freight prepaid, guaranteed five years. If you do not own a fanning mill that is giving you absolute satisfaction you should certainly write to the Manson Campbell Company, 118 Wesson Avenue, Detroit, Michigan, **for their latest book and full information.**

BARGAINS!!!

In High Grade Used

Boys' and Girls' Agricultural Clubs.

Within recent years a new method of agricultural education has been devised in the form of boys' and girls' clubs. Such clubs have various objects, but usually they provide for prize contests among the members. Corn-growing contests are probably the most common among the boys, although many other crops have been tried, while the girls compete in bread making or sewing, or even test their skill against that of the boys in gardening.

The United States Department of Agriculture has information of 395 counties in twenty-eight states in which such clubs are organized, with a total membership of about 144,000. New York has about 75,000 members; Nebraska, 25,000, and other states smaller numbers. One county in Pennsylvania has 2,000 members. In most cases these clubs are organized under the auspices of some state authority, such as the Commissioner of Agriculture, the Superintendent of Public Instruction, the Agricultural College, or a society, like the State Corn Growers' Association of Delaware. But in many cases the County Superintendent takes the initiative, while in many other cases the rural teachers arrange contests among ther own pupils.

The United States Department of Agriculture also gives assistance, through the office of Experiment Stations, by furnishing advice and suggestions. Through the Department's Farmers' Bulleins the most practical instruction in the growing of corn and other crops may be had by the boys, while the girls may obtain bulletins on bread making or gardening.

A new Farmers' Bulletin on Boys' and Girls' Agricultural Clubs tells how to organize the clubs, how to conduct the contests and what publications will be useful to the boys and girls. This bulletin may be obtained free upon application to a member of Congress, or to the Secretary of Agriculture, Washington,D.C.

The Acetylene Light.

The railroad managers have installed acetylene light in the passenger coaches because of its cleanliness and brilliancy, and now we understand that the Wabash Railway is equipping the headlights of their engines with acetylene, and they guarantee these lights to outline the figure of a man 800 feet distant. A few years ago acetylene light was unknown, whereas now it it is used in 176,000 houses for lighting and light cooking, and barns are lighted up from the acetylene plant that is in the house. This time-saving, money-saving light can easily be installed in any farm house; indeed, it is far safer, brighter and cleaner than oil lamps, and whiter and cleaner than electric light. On page 27 an article appears entitled "Home-Made Gas From Crushed Stone and Water." It refers to the Acetylene Light. Write to Union Carbide Sales Co., Dept. A—156 Michigan Ave., Chicago, Ill., and ask for further information concerning this light for farm houses.

Missouri Peach Report.

April 1st: The prospect for peaches is the best that Missouri has had in many years, the percentage for the state being 66.9. The crop is generally good on the ridges, while the greatest damage is on the low lands, where the crop is, in many instances, a total failure. Some correspondents also report the trees killed by extreme cold weather. The outlook for a general fruit crop is 79.6 per cent.

Pleasing People

No one ever succeeded in pleasing everybody, but we have come nearer that mark than anyone else in our line of work.

"Pleasing People" has made us the largest sellers of live stock in the world.

Send us your next shipment and you will understand the reason.

Write for CATALOGUE which illustrates and describes Impregnators, Dewees, Breeding Hobbles, Stallion Service Sandals, Supports, Service Books, Etc.

CRITTENDEN & CO., Dept. 29, Cleveland, Ohio.

Increase Your Profits

The Percheron Horse.

Horsemen are complimenting the Percheron horse on account of the large number imported into this country and the larger number of breeding farms devoted to raising them than all other draft breeds combined, the comparison being entirely in their favor, yet this popularity is not because of any superiority on the part of the Percheron as a draft horse, but rather because of the reputation of the lighter-weight horses, weighing 1,250 to 1,400 pounds, that were sired by Percherons. When it comes to a contest of draft horses, the Clyde and the Shire bring just as good or better prices than the Percheron, and in a hauling contest of draft horses to show power, it is very likely that the Percheron would have to take a third place. Although a single, mature, working draft horse should weigh 1,500 to 1,600 pounds in the Chicago market, for every pair of Percheron grades weighing 3,000 pounds there are dozens weighing 2,500 to 2,800 pounds to the pair, and these carry more style and finish than the corresponding productions of the Clydes, Belgians or Shires. The people of the United States do not care for light work horses with hair on their feet, and if they buy the light-weight draft horse or chunk, as it is called, they desire it to have the foot of a trotter. On the St. Louis market, the other day, a dealer who has had vast experience in buying horses for Eastern trade said: "I think that a pair of grays will outsell any other color on the market, and every dapple gray horse is considered as having Percheron blood." "But," said I, "nearly all the imported Percherons are black and many of the Shires are gray." "Yes," said he, "but the popularity of the Percheron began with stylish gray teams, and it will be some years before any gray teams on the market will be credited to any breed but the Percheron, even if the auctioneer makes an affidavit that they are Shires."

After the Team Record.

Mr. M. W. Savage, of the International Stock Food Farm, Minneapolis, Minn., is determined that there will be a new world's team record before the end of the 1910 racing season, and one that will stand for many years to come. One of the Minneapolis horseman's principal objects in recently purchasing George Gano, 2:03¾, was to bring this world's record to Minnesota and the International Stock Food Farm.

Mr. Savage has been in the habit of getting what he goes after, and this fact will lend added interest to that part of the campaign to be made this year with Minor Heir and George Gano in an attempt to lower the world's team record of 2:02½, now held by Lady Maud C. and Hedgewood Boy, and to reduce this record to two minutes

"I believe George Gano will be the next two-minute pacer, and I also believe that before the end of the coming season he, with Minor Heir, will be able to reduce the team record materially. I hope to place it at the two-minute mark," declared Mr. Savage a few days ago.

So fixed is Mr. Savage's purpose to get this record that he has given definite orders to his farm superintendent, Harry Hersey, to make every preparation to carry out his plans. Mr. Hersey has already made arrangements for the manufacture of special harness and wagon for these pacers, and during all of the training season he will overlook nothing that may help to bring about the desired event. Some Fair will probably have the honor of holding the world's team record for many years.

Minor Heir and George Gano are wonderfully mated in size, weight, gait and disposition. It seems almost certain that the two speed merchants will make a perfect going team, and their phenomenal speed will make their efforts to lower world's records, both singly and in double harness, sensational features for race meets and State Fairs. Both horses are in remarkably good condition, and horsemen are predicting a sensational season for the Savage pair.

Dan Patch, champion of champions, has wintered unusually well, and with him to introduce this great pair of young pacers Mr. Savage surely has attractions that are very hard to beat.

Sale of Shire Stallion Carlton Greystone.

During the month of February, Truman's Pioneer Stud Farm of Bushnell, Ill., sold to Messrs. W. A. Wiegand & Son, of Biggsville, Ill., the imported Shire stallion, Carlton Greystone. It is important from the fact that Messrs. Wiegand are the owners of the grand champion, champion and reserve champion Shire mares at the last International Exposition. It will be remembered that they purchased them at the sale in December last. Carlton Greystone is one of the greatest draft colts ever imported. He has a fine head and neck, very strong back and loins, oblique shoulders, with good depth of rib, is wide at both ends, standing on the best of feet, with 13½ inches of bone below hock. His sire, Dapple Tom, is owned by the Iowa Agricultural College, and was purchased by Professor Kennedy at a very long price. His grandsire, Stroxton Tom, was twice champion horse in England. Carlton Greystone was considered by J. H. Truman one of the best colts he had ever shipped, and was purchased at a long price by him on purpose for exhibition at the International Show, where he was shown with great success only a few days after landing on this side.

A Brtish Draft Champon.

At the show of the English Shire Horse Society held at the Agricultural Hall, London, England, Gaer Conqueror, bred by Mr. P. Stubbs, of Blaisdon, in the county of Gloucester, won the championship. He is a five-year-old bay, seventeen hands high, and weighing about 2,200 pounds. The extent of the competition may be understood from the statement that in the class for aged stallions he had forty-three contestants. He also had to compete with Lord Rothschild's Birdsall Menestral, a noted prize winner. Other horses were equally heavy and tall and strong, but Gaer Conqueror outclassed them all in style and finish.

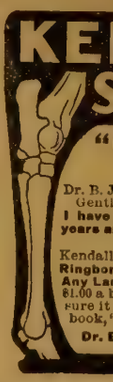
Exports of Horses.

During the year 1909 the United States exported 23,428 horses. To England, 638; to Belgium, 22; to France, none; to Germany, 31; to British North America, 18,616; to Mexico, 1,803; to the West Indies, 2,088; to Asia, 3; to Africa, none; to other countries, 227.

Imports of Horses.

During the year 1909 the United States imported 1,687 horses from Great Britain; 2,379 from France; 3,250 from British North America; and 2,264 from other countries, a total of 9,580 horses. Of these, 6,723 came in duty free for breeding purposes, and 2,857 paid duty.

KENDALL'S SPAVIN CURE



"Cannot Be Beaten"

Hempstead, L. I., Apr. 29, 1909. R. F. D. 1, Box 98,

Dr. B. J. Kendall Co.

Gentlemen: Kindly send me your book. I have used your medicine for about 20 years and find it cannot be beaten.

Yours truly, Daniel T. Stenson.

Kendall's "cannot be beaten" for Spavin, Ringbone, Curb, Splint, Swellings, Sprains, Any Lameness. The standby for 40 years. $1.00 a bottle, 6 for $5.00, at drug stores. Be sure it is Kendall's you get and ask for free book, "A Treatise on the Horse," or write to

Dr. B. J. Kendall Co., Enosburg Falls, Vt.

Death in the Milk-pan.

Startling as is the statement, the old plan of setting milk in pans or crocks is one of the most urgent invitations to typhoid and other infectious diseases in the vicinity to take up their abode with us.

Milk calls flies. Every housewife knows this. And even though the milk room is rigidly screened—which in too many instances it is not—they seem to scent the feast from afar and flock about the doorway to steal admittance. While the tidy housewife strives to keep them at bay it is a constant struggle through the entire season, the battle becoming more useless as the host increases.

It is decidedly unpleasant to see a fly swimming about in the milk or skating over the cream; discouraging to realize that the more milk we have cared for in the old way the more the flies will annoy, but appalling to learn the magnitude of their depredations. Microscopic investigations by the health authorities of New York City show that the average fly caries on its body nearly a million and a quarter of bacteria. Some of the flies examined came from cow stables, swill barrels. One which was heading for the nearest milk pitcher was found carrying on its legs and in its mouth 100,000 fecal microbes. Many came from the midst of typhoid, cholera, diphtheria, and were scattering the germs of these diseases broadcast.

Yet the filth conveyed on the body is small compared with that which passes through it. Dr. N. A. Cobb, of the Department of Agriculture, has ascertained by actual count that the number of germs passed through the intestinal canal of the fly and then deposited on our food and furniture is at least one thousand times as great as that carried on its legs. Dr. Kober, another recognized authority, states that allowing for time lost by sickness, expense for medical treatment, etc., the typhoid alone for which the common house fly is responsible costs the people of the United States annually $350,000,000, almost half the entire value of her dairy products. Add to this the tuberculosis, cholera and other maladies, the dissemination of which can be traced directly to this source—surely for filth the proverbial hog is totally eclipsed. The four-footed beast at least wants to be clean, but the six-footed one revels in garbage.

Dr. L. O. Howard, Chief Government Entomologist, says: "It is the duty of every individual to guard against flies on his premises. It is the duty of every community, through its Board of Health, to spend money in warfare against this enemy of mankind. The duty is as clear as if the community were attacked by a band of ravenous wolves. That the typhoid fly—a creature born in filth and literally swarming with disease germs—should practically be invited to multiply unchecked, even in the great centers of population, is nothing less than criminal."

In the face of these facts, can we consistently adhere to the old method of deep-pan setting? If covered, air is shut out and the cream does not rise well. Even with screens, the fly is called to the premises, and if barred from the milk room it dodges into the kitchen. Unless the milk is sent to the factory, the separator is the only absolute safeguard. It disposes of the milk at once and gives no temptation for retaining unsightly, unsanitary swill barrels. Feeding sweet milk to stock renders their troughs more easily kept in order. Baits for flies are reduced to a minimum. And while the separator has proved a key to the wealth of the dairyman, it is likewise a key to the health, not only of his family, but of his patrons and friends.—Bessie L. Putnam.

Horse and Mule Notes.

At a public auction sale of jacks and jennets held by Petty Bros. at Sedalia, Mo., March 3d, the two-year-old jack Tunsdale, 2,394, sold to Miller Rodgers, of Bunceton, Mo., brought the record price of $1,610. Out of a total of twenty-three jacks, the best ten averaged $1,012.50. The twenty-three jacks averaged $648 around, and twelve jennets averaged $170.80.

The Breeders' Special of Kansas City remarks that one of the most remarkable auction sales of the year was held late in February by John A. Gex, of Graham, Mo. An average of $172 was made on an offering that included sixteen yearlings. The total of the sale was well up above $10,000. One span of mules, four-year-olds, and said to weigh 3,100 pounds, sold for $685.

On March 9th and 10th, Mr. O. P. Hendershot, of Lincoln, Neb., sold at auction seventeen Percheron stallions at an average of $1,083, and forty-nine mares at an average of $540 per head. Two mares each sold for $1,100 to O. A. Strahan, of Malvern, Iowa, and eleven stallions sold at $1,000 each or better. The top price paid for a stallion was by J. H. Christ, of Skidmore, Mo., for the six-year-old Carlo, an American-bred Percheron.

A recent circular by Holland, Nugents & Maxwell Bros., horse and mule commission salesmen at the St. Louis National Stock Yards, mentioned the prices that certain classes of horses were then selling as follows: Good chunks, weighing from 1,300 to 1,500 pounds, that are low to the ground, short-backed, good middled, five years old, and sound, brought from $200 to $250. We had a few horses that would weigh 1,500 to 1,600 pounds that brought $275. Chunks weighing from 1,150 to 1,300 pounds, with quality, sold from $150 to $190, in some instances at $200, where they had a little extra quality.

Stock farming is the most reliable of all agricultural pursuits.

UNIQUE MOTIVE POWER.—To the eyes of American farmers it is a strange spectacle to see a team of dromedaries hitched to an American-made mowing machine. But this is a reproduction of an actual scene in the far-away province of Orenberg, Russia. The machine is a Johnston Mower, made by the Johnston Harvester Company, Batavia, N. Y. The machines of this well-known firm are known all over the world. If you wish to know further concerning these standard machines, address Johnston Harvester Company, Box 117 C, Batavia, N. Y.

THE BRADLEY MANUFACTURING WORKS, near Kankakee, Ill., owned and operated by Sears, Roebuck & Co., of Chicago. This is one of the best-constructed manufacturing plants in the world. These works were established at a time when Chicago had but 2,500 inhabitants by the late David Bradley, who worked at plow making as far back as 1832. The works remain under the management of Messrs. B. H. Bradley, G. C. and David Morgan, who have long been identified with the company, and the working force will be increased to 800 men. The implement line at present manufactured consists of Bradley disk plows, made under the Hancock patents; Tu-Ro, Red Rider and Little Jap cultivators; Bradley No. 6 beam hitch gang plows; edge drop drills and harrow cart. All the implements manufactured will appear in the Sears-Roebuck catalogues and will be sold direct to farmers at a small manufacturer's profit.

THE NEWTON REMEDY CO. Toledo, Ohio.

What the Horse Should Be.

"To be good and well-formed, a correspondent says, must have three parts, like a woman—the breast to be broad, the hips round, the mane long; three like a lion—countenance, intrepidity, fire; three like a bullock—the eye, the nostril and the loin; three like the sheep—nose, gentleness, patience; three like the mule—strength, constancy, feet; three like the deer—head, ear, short coat; three like the wolf—throat, neck, hearing; three like the fox—ear, tail, trot; three like the serpent—memory, sight, turning; and three like the hare or cat—running, walking, suppleness."—Farmers' Home Journal, Louisville, Ky.

Mr. J. A. McLain, of the Mississippi Experiment Station, is reported as having paid Ripley Steele, of Maury county, Tennessee, $1,570 for a two-year-old jack of the Taxpayer stock.

The End of a Bull.

On March 1st, at St. Louis, an old bull, strictly fat, weighed 1,860 pounds, and sold for 5½ cents a pound, which amounts to $102.30. He had probably sired 500 calves in his lifetime, and it is even betting that he sold for more than he cost.

Holland, Nugents & Maxwell Bros.' Horse Special Sale.

At the St. Louis National Stock Yards a special sale of harness, saddle and speed horses will be held, commencing Monday, April 18 and ending Friday, April 22d. This is a joint special sale, in which all the commission firms at the yards are interested. There will be a splendid lot of horses suitable for all purposes. At latest reports the supply is expected to surpass in number and quality the offerings at any former sale. For catalogue and particulars address Holland, Nugents & Maxwell Bros., National Stock Yards, Ill.

St. Louis Wool Market.

Those who have wool clips for sale should write to A. J. Child & Sons, St. Louis, Mo., and obtain their 1909 wool circular. St. Louis is a first-class wool market for the shipper, and it has often been the means of preventing disastrous declines in values when other markets were demoralized. Many mills buy in St. Louis that do not buy anywhere else, and the Eastern markets can be lifeless when St. Louis is active. Messrs. Child & Sons handle wools strictly on commission, and the firm is absolutely reliable. See page 9.

WESTERN
Range Horse Sales
will be conducted by
Campbell & Reid and Western Sale Stables Co.,
NATIONAL STOCK YARDS, ILL.,
As usual, during the season of 1910. The First Sale will probably take place on
TUESDAY, JUNE 14th,
And every two weeks thereafter until the close of the season. We will be glad to hear from Ranchmen having Horses for sale. The demand is sure to be good, especially for well-bred Mares and Geldings.

Please address
J. J. SEARCY, Sale Manager,
NATIONAL STOCK YARDS, ILL.

Preventing Colt Diseases By Proper Precautions.

Most of the serious losses of newborn colts which occur annually in Wisconsin may be prevented by proper care, states Dr. A. S. Alexander, Professor of Veterinary Science, who is in charge of horse breeding at the College of Agriculture of the University of Wisconsin, in a forthcoming circular of information on the care of the new-born foal. Large numbers of foals die annually from navel and joint diseases, or derangement of the bowels.

The disinfection is due to filth germs in dirty stalls and stables. On infecting the navel stump the germs cause pus, then secondary abscesses form elsewhere in the body, often in the joints of the extremities. Infection will not take place if the foals are born in a clean, sunny, well-ventilated, disinfected and whitewashed box stall, bedded with clean, dry planing-mill shavings.

Care should be given to the navel, as follows: If it is necessary to tie the navel cord, a clean string that has been soaked in a 1 to 500 solution of corrosive sublimate should be used. At once the stump of the navel should be saturated with a solution of two drams of powdered corrosive sublimate in one pint of boiling water, to be used cold, and the application should be repeated twice a day until the navel is perfectly healed.

Carbolized lard or vaseline should be smeared around the navel to prevent the corrosive solution from blistering the skin. The foal's bowels should move freely soon after birth. To stimulate movement, rectal injections of lukewarm slippery elm bark tea, flaxseed tea, sweet oil or warm water may be given. If results do not promptly follow, two to four ounces of a mixture of equal parts of castor oil and sweet oil, shaken up in milk, may be administered from a bottle.

A Pair of Good Mares.

In one of the recent auctions held by Holland, Nugent & Maxwell Bros. at the St. Louis National Stock Yards a pair of gray mares shipped in by Charles Hall, of Keokuk, Iowa, sold at $645 for the pair. They were each sixteen hands high, superbly finished, and weighed 1,600 pounds each. There are not many in the country like them.

Western Range Horses.

The season is approaching for the great sales of Western range horses and mules conducted at the St. Louis National Stock Yards by Campbell & Reid and Western Sale Stables Company. The sales take place every two weeks, and always on Tuesday. The present conditions indicate an unusual buying demand. On account of the usual good quality and condition of the offerings presented by this firm there are always plenty of buyers at these sales, and the horses net range horsemen more money than do the sales at any other market. Ranchmen having horses to market will find it to their interest to communicate with J. J. Searcy, Sale Manager, National Stock Yards, Ill.

Sale of Cattle at Top Price.

At the St. Louis National Stock Yards, on Monday, March 29th, Messrs. Wilcox & Littrell, of Randolph county, Missouri, marketed eighteen head native steers, 1,440 pounds average, at $8.25 per 100 pounds. These cattle were sold on the market by Messrs. Clay, Robinson & Co., and were the top-price cattle for the day and week when sold.

The New York Herald reports that Mr. M. W. Savage, of International Stock Food Farm, Minneapolis, Minn., has bought of J. C. Crabtree, of Taylorville, Ill., the champion pacing team Hedgewood Boy and Lady Maud C., holders of the world's record to pole, 2:02¾. Mr. Crabtree bred both pacers from the same sire and dam. Their new owner now has in his stable five pacers whose average record is not far from 2:01.

Evans-Montague Commission Company
THE MEASURE OF SUCCESS attained by a SHIPPER OF LIVE STOCK depends largely upon THE COMMISSION HOUSE to which he consigns his CATTLE, HOGS AND SHEEP.

If you wish to receive TRUSTWORTHY AND RELIABLE SERVICE and have your consignments SOLD BY CAPABLE AND CONSCIENTIOUS SALESMEN, you cannot do better THAN PATRONIZE OUR HOUSE.

The Shippers' Interests ARE OUR INTERESTS, and our rapidly-increasing business IS THE STRONGEST TESTIMONIAL of our ability TO PLEASE OUR CUSTOMERS

HOLLAND, NUGENT & MAXWELL BROTHERS.
P. O., National Stock Yards, Ill.

The New York Herald says: Analysis of the principal sales of olo ponies in England last year disloses the fact that 165 of the best nes brought $95,900, an average of 581. Fifty-eight of the tops were old at from $500 to $2,500, making n average of $1,000.

CURE YOUR HORSE OF HEAVES.

Many a horse has been sold at half its real orth, because it had the heaves, and was herefore regarded as incurable. The fact at the lungs were affected seemed to prove at heaves was a lung trouble, and in most the older veterinary text books this erroous teaching will still be found. As a atter of fact, affection of the lungs was a sult and not a cause, and this discovery as made it possible not only to cure heaves it so certainly to do so that in almost every se a cure can be guaranteed.

A standard veterinary remedy that will re the trouble (a remedy backed by nineen years general sale and, consequently, it ust be of merit) is Newton's Heave, Cough, istemper and Indigestion Cure. It is most fective for troubles applying to the Wind, hroat, Stomach and Blood, and the best all-ound remedy offered for Horses. Send to he Newton Remedy Company, Toledo, O., r their free booklet, "Horse Troubles and table Hints," which tells fully in regard to e troubles mentioned. You run no risk in sing Newton's for the colt, adult, or mare foal. Newton's is not simply a proposion relying on mail orders or after the imediate dollar for its business, but is a andard article in which the druggist and aler is relied upon for its sale. It is a edicine scientifically prepared and was rmerly used in veterinary practice only. he money is refunded on Newton's if reults are unsatisfactory, when used as per mple directions.

The Mule Trade.

Mules are selling as high as they ver did since the world began to aise them. A pair of stylish, gentle raft mules, sixteen to seventeen ands high and 1,500 pounds in eight, can sell close up to the housand-dollar mark. Dealers have aid as high is $300 to $320 per head n the country in car-load lots for top raft mules, and it is reported that pair of dark bay mules, closely natched in every way, weighed 3,460 ounds. One mule that was on the narket, weighing 1,400 pounds as a wo-year-old a year ago, is returned s a three-year-old weighing 1,940 ounds, and was the best single nule at the Illinois State Fair. It is oubtful if as many fine large mules ave ever been seen together as are ow (April 1st) in the National Stock Yards. In a general way, 14-hand mules sell from $75 to $150; 14½-hand mules, $95 to $160; 15-hand mules, $120 to $195; 15½-hand mules, $140 to $225; 16-hand mules, $150 to $300. These prices depend largely upon quality, condition, conformation, weight, etc., and there can be a clean hundred dollars difference between two mules of the same height and weight. In the sale of mules, Messrs. Holland, Nugents & Maxwell Bros. can advise a shipper safely. The postoffice address of the firm is National Stock Yards, Ill.

Ticks Being Driven Out.

Good progress is being made in clearing the country of the tick fever in cattle. The total territory freed of ticks and released from quarantine since the beginning of tick eradication amounts to 130,000 square miles, or an area nearly half the size of the state of Texas. The whole country can be cleared in due time if the stock raisers will keep moving in that direction. The quarantine officials are doing their full duty.

Top Heavy Hog Market.

When hogs sell high it is difficult to tell what will happen. April 1st, on the St. Louis market, top hogs, 288 pounds average, sold up to $11 per 100 pounds. Hogs weighing 218 pounds, suitable for the butcher trade, sold up to $10.95 per 100 pounds; and light hogs, 188 pounds, sold up to $10.80 per 100 pounds. Pigs and lights, weighing 155 pounds, sold up to $10.60 per 100 pounds. The lowest price for pigs and culls was $8.25 per 100 pounds.

THE GUIDE POST TO PROFIT

CONSIGN YOUR LIVE STOCK TO CLAY, ROBINSON & CO.

NATIONAL STOCK YARDS, ILL.

We desire to invite stock raisers and shippers to make their headquarters with us at the St. Louis National Stock Yards. Our service is superior to any and in a class by itself. In this particular card we mention a few of our record sheep sales:

On Monday, March 7th, we sold 288 lambs, averaging 72 pounds, at $9.35 per 100 pounds. These lambs were shipped by Wallace & White, of Rio Grande county, Colorado, and was the highest price ever obtained for lambs on this market outside of early springers, and 10 cents higher than any other sale that day.

On Tuesday, March 8th, we sold 246 yearling wethers, averaging 74 pounds, and on Wednesday, March 9th, we sold 251 yearling wethers, averaging 74 pounds, at $8.75 per 100 pounds. These yearlings were marketed by Payne & Roembach, of Sedgewick county, Kansas, and was the extreme top of the market for the day and the highest price secured for yearling wethers on this market.

On Monday, March 14th, we sold 257 shorn Colorado lambs, averaging 80 pounds, at $8.55 per 100 pounds. These lambs were marketed by Mr. A. D. Mathias, of Rio Grande county, Colorado, and established a new record price on this market by being the highest price for shorn Colorado lambs ever sold here.

On Tuesday, March 15th, we sold 302 head of pea-fed Colorado lambs, which averaged 60 pounds, at $9.70 per 100 pounds, which was 10 cents higher than any other sale of lambs that day. These lambs were marketed by Mr. J. A. Kelley, of Rio Grande county, Colorado.

On Wednesday, March 16th, we sold 274 head of pea-fed Colorado lambs, which averaged 65 pounds, at $9.75 per 100 pounds, which was the highest price ever obtained on this market for pea-fed Colorado lambs. These lambs were marketed by Mr. J. L. Smalley, of Rio Grande county, Colorado.

On Monday, March 21st, we sold shorn lambs at $9.60 per 100 pounds, which was the highest price ever obtained for shorn Colorado lambs on this market. This drove of lambs was marketed by Mr. A. D. Mathias, of Rio Grande county, Colorado, 270 head in the drove, which averaged 76 pounds.

On Tuesday, March 22d, we sold 549 Colorado fed lambs, which averaged 59 pounds, at $9.90 per 100 pounds, which was the extreme top of the market that day. These lambs were marketed by Mr. O. T. Mann, of Bent county, Colorado.

On Wednesday, March 23d, we sold 539 Colorado fed lambs, which averaged 60 pounds, at $10 per 100 pounds. These lambs were marketed by Mr. O. T. Mann, of Bent county, Colorado, and brought the extreme top of the market, and were the first Colorado lambs that ever brought the above price on this market.

On Thursday, March 24th, we sold for Creamer & Sutherland, of Rio Grande county, Colorado, 242 lambs, which averaged 66 pounds, at $10.25 per 100 pounds, which is the highest price ever secured on this market for lambs, with the exception of early spring lambs.

It will pay you to ship your sheep to CLAY, ROBINSON & CO. Why? Because topping the market is a daily occurrence for our salesmen. We are the most exclusive sheep handlers in the business, and when we satisfy our customers we are satisfying ourselves. We are fully equipped in all departments to give each branch of the business the very best service that can be secured. You make no mistake by letting that next billing read CLAY, ROBINSON & COMPANY.

REMEMBER:

THE GUIDE POST TO PROFIT

CONSIGN YOUR LIVE STOCK TO CLAY, ROBINSON & CO.

NATIONAL STOCK YARDS, ILL.

Head and Front of the Mule Trade.

The pioneer firm of mule dealers of the St. Louis market is the Jos. A. Maxwell Mule Company, and their specialty is of the beter class. Contracts are entered into for any number or grade of commercial mules and satisfaction is guaranteed. Members of the firm also contract for cavalry, artillery, Cuban or Eastern horses. It is a safe firm to do business with, always upholding the highest traditions of the great market of which they have been so largely instrumental in building up. For mule quotations, address The Jos. A. Maxwell Mule Company, National Stock Yards, Ill.

Sheep and Lambs.

On March 31st, on the St. Louis market, clipped lambs, 77 to 87 pounds average, sold at $7.75 to $9.00 per 100 pounds. A consignment of Colorado wool lambs, 243 head, 63 pounds average, sold at $9.10; and 330 head clipped Western lambs, 87 pounds average, sold at $9.10 per 100 pounds also. Clipped mutton sheep, 117 to 134 pounds, sold at $7.60 to $7.65 per 100 pounds, and a few bucks sold at $6.00 to $6.25 per 100 pounds.

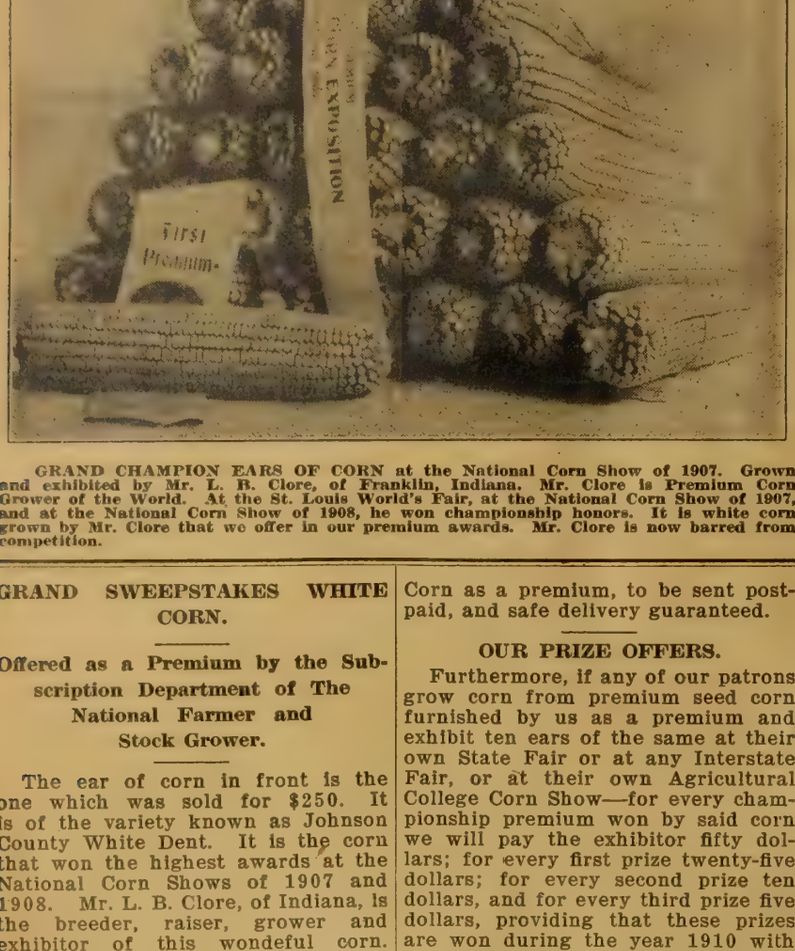
WINNER MFG. CO.
Dept. 766 A,
East St. Louis - Illinois



GRAND CHAMPION EARS OF CORN at the National Corn Show of 1907. Grown and exhibited by Mr. L. B. Clore, of Franklin, Indiana. Mr. Clore is Premium Corn Grower of the World. At the St. Louis World's Fair, at the National Corn Show of 1907, and at the National Corn Show of 1908, he won championship honors. It is white corn grown by Mr. Clore that we offer in our premium awards. Mr. Clore is now barred from competition.

GRAND SWEEPSTAKES WHITE CORN.

Offered as a Premium by the Subscription Department of The National Farmer and Stock Grower.

The ear of corn in front is the one which was sold for $250. It is of the variety known as Johnson County White Dent. It is the corn that won the highest awards at the National Corn Shows of 1907 and 1908. Mr. L. B. Clore, of Indiana, is the breeder, raiser, grower and exhibitor of this wondeful corn. Mr. Clore has won so many sweepstakes prizes for corn exhibits that he has the high honor of being the recognized champion, and is barred from competition. He can select corn of his own raising and be sure to win the championship. At one Corn Show his winnings amounted to $7,536.50. Mr. Clore has very kindly furnished us with a small quantity of his Grand Sweepstakes Seed Corn for premium purposes. We offer it to our readers for experimental purposes. We have offered this same corn for two years with gratifying success. A fourteen-year-old boy in Georgia received a pound of this corn from us as a subscription premium and from it he raised a good stand and selected ten ears which won a $50 first prize at the Georgia State Fair. This office also awarded him $25.00, and the same corn was in competition at the National Corn Show of 1909.

Mr. Clore habitually raises 90 to 100 bushels per acre. A pound of his seed is worth considerable money.

PREMIUM OFFER NO. 1.

For premium purposes we make this offer: Anyone sending us a post-office money order for 60 cents will be credited with one-year's subscription to The National Farmer and Stock Grower, and he can select one pound of Clore's Grand Sweepstakes White Corn as a premium, to be sent postpaid by mail, and safe delivery guaranteed.

PREMIUM OFFER NO. 2.

Anyone sending us one dollar by money order or registered mail will be credited with two-years' subscription to The National Farmer and Stock Grower, and will have the privilege of selecting two pounds of Clore's Grand Sweepstakes White Corn as a premium, to be sent postpaid, and safe delivery guaranteed.

OUR PRIZE OFFERS.

Furthermore, if any of our patrons grow corn from premium seed corn furnished by us as a premium and exhibit ten ears of the same at their own State Fair or at any Interstate Fair, or at their own Agricultural College Corn Show—for every championship premium won by said corn we will pay the exhibitor fifty dollars; for every first prize twenty-five dollars; for every second prize ten dollars, and for every third prize five dollars, providing that these prizes are won during the year 1910 with corn grown by our subscriber from the seed corn furnished by us to him as a premium.

The National Corn Show Offers.

If any premiums are won at the National Corn Show of 1910 by corn grown by our subscriber from premium seed furnished by us, we will double the amounts. Thus, ten ears of corn at a State Show winning a first prize will receive from us $25.00, and, if winning a sweepstake prize, will receive $50.00 from us. Then, if winning a first prize at the National Corn Show, the exhibitor would receive $50.00 additional from us, and, if winning a sweepstake prize, would receive $100.00 from us, or a total of $225.00 in all. All this is possible with ten ears of corn grown from the corn which we will send as a subscription premium.

SUBSCRIPTION BLANK.

Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Is Your Roof Guaranteed?

IF the roofing of your building wears out within ten years, have you any way of renewing it *without cost to yourself?*

This is a question of importance in selecting your roofing.

Congo 2 or 3 ply is absolutely *guaranteed for ten years.*

No worry with Congo. You are protected by our guarantee which is backed up by a Bond of the National Surety Company of New York, a Two Million Dollar concern of the highest financial standing.

The Bond means that if we should go out of business, the National Surety Company would have to make good our guarantees. However, the National Surety Company does not make such agreements blindly. They well knew our responsibility and good standing beforehand. And we pay them a big premium.

We do not make guarantees blindly either. It is because we know Congo will last longer than ten years that we are willing to guarantee it for that time.

Congo Roofing is made to withstand all kinds of weather—storms, heat and cold. It is waterproof, acid-proof, alkali-proof, rot-proof and wear-proof.

With Congo on your roofs you can rest easy.

It is elastic and pliable and can be easily laid by anyone. You can lay it right on over your old roofs and be sure of *ten years* of perfect roof protection.

Send for free sample and booklet to-day. You will find it worth while.

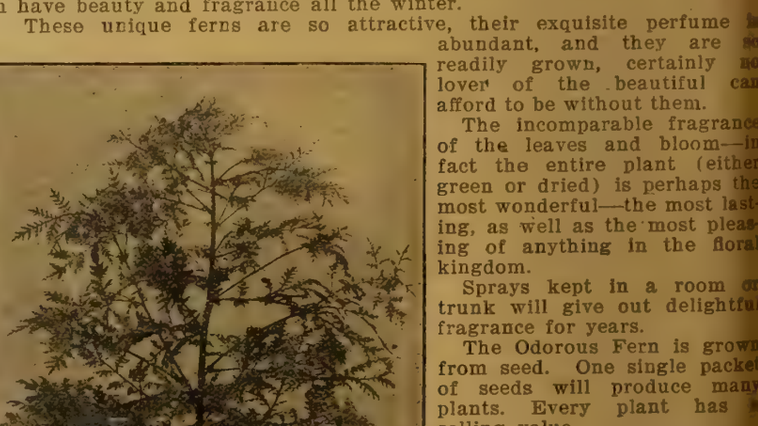
CONGO "NEVER-LEAK" ROOFING

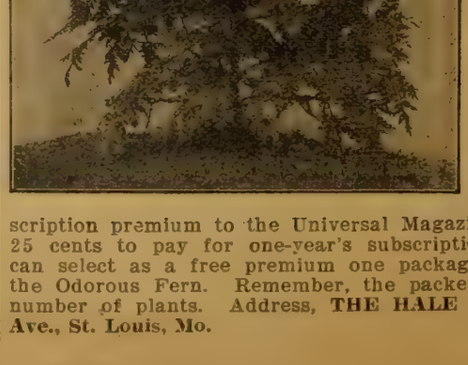


Congo covers all these buildings.—Commercial Mining & Milling Co., Knoxville, Tenn.

A WONDERFUL NOVELTY. THE ODOROUS FERN TREE.

A novelty beyond compare. One of the most charming and fragrant of all out-door plants, and one of the most delightful for pot culture. You can have beauty and fragrance all the winter.

These unique ferns are so attractive, their exquisite perfume is abundant, and they are so readily grown, certainly no lover of the beautiful can afford to be without them.



The incomparable fragrance of the leaves and bloom—in fact the entire plant (either green or dried) is perhaps the most wonderful—the most lasting, as well as the most pleasing of anything in the floral kingdom.

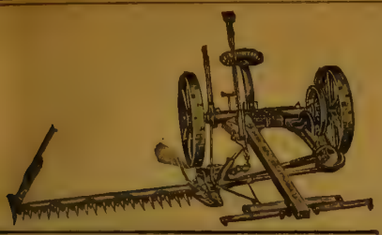
Sprays kept in a room or trunk will give out delightful fragrance for years.

The Odorous Fern is grown from seed. One single packet of seeds will produce many plants. Every plant has a selling value.

Plants are very hardy, succeeding everywhere—either in sunshine or dense shade. Blooms profusely first season. Height, four to six feet or more.

Plant for out-door culture any time up to July, and any time later for pot plants for winter.

We have adopted the seed of the Odorous Fern as a subscription premium to the Universal Magazine. Anyone who will send us 25 cents to pay for one-year's subscription to the Universal Magazine can select as a free premium one package of true, guaranteed seed of the Odorous Fern. Remember, the packet of seed will produce a large number of plants. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**



A Strong, Simple Mower That Cuts Clean and Easy

The longer the lever, the heavier load you can lift. You can liken each spoke in a mower wheel to a lever this is the principle to which the Dain, with its high, road-gauged, wide rim wheels, long pitman and compensating gears, owes its remarkable light draft and its tremendous cutting power.

Season in, season out it cuts over all kinds of ground and goes through heaviest grass without choke-downs, breakage or trouble of any kind. The gears are compensating—neither work out of mesh nor wear apart. As the strongest braced cutter-bar, too, with a protected pitman that gives a long, unerring stroke, applying power direct to cutter-bar without lost motion.

Is strong where others are weak. The Dain is the only mower in which the cutter-bar can be re-aligned at a moment's notice. A monkey wrench does the business in a jiffy.

DAIN Vertical Lift MOWER

A boy can lift cutter-bar right from the seat by hand, lot or both at once. Trees, stumps, stones, etc., can easily be passed—and you never have to back up with the Dain. This mower is built of few parts, is so simple in construction that any one can operate it and it's durable, too.

Dain Hay Tools Make Biggest Hay Profits

After hay is cut with a Dain mower, it can best be cured and handled by Dain rakes, loaders or stackers, because like the mower, these machines are built by specialists who for 35 years have been making successful hay tools that get *the biggest value out of hay*.

If your dealer hasn't this remarkable Dain mower, send your name, tell what tools you are interested in and complete information, and a valuable book **"All About Hay"** will be sent to you by return mail.

TRADE MARK

The Farmer's Responsibility.

Farmers have been taught a lesson recently which, if they are wise, they will never forget. The lesson they must learn, if it is not already learned, is, that they are accountable to the nation at large for the conduct of their farms. It is the bounden duty of the farmer to produce all that he is able with the means at his command, and this specially refers to meat and bread, upon which the people must subsist.

This does not mean that an individual farmer must necessarily plant crops that do not suit his particular locality or pleasure to plant, but it does mean that the people of the United States will consider any systematic limiting of production as a crime against economic laws; in other words, land ownership has the responsibility of feeding the people, and the people will not tolerate a famine that may be brought about by agreements of farmers amongst themselves to leave the land idle and limit production.

We do not know of any farmers' organizations that have heretofore limited the production of grain crops or of cattle, hogs and sheep, but in cotton and tobacco it has been openly advocated and practiced. So far as tobacco is concerned, its limitations will hurt no consuming interest, and probably the worst of that has passed; but if cotton mills are ever idle and operatives out of work because a bad season is made worse by concerted restriction of planting, there is likely to be an agitation that will be unpleasant to contemplate and one that will have far-reaching, disastrous results.

The farmer's responsibility did not become apparent until the population became so large that the feeding of the people became an important subject. There are to-day 88,500,000 people in the United States. It is up to the farmers to feed them. If the farmers do not feed the people on beef, the people will vote subsidies for ships to run to South America, where there is no population and plenty of beef, and they will admit the beef tax (duty) free, while American farmers will be paying taxes on their own productions. It will be the same with grain. If farmers do not raise sufficient corn, oats or wheat to feed the nation, every effort will be made to bring it in from abroad, regardless of the fact that the importation will be to the disadvantage of American farmers.

Are we not right? Last fall, when butter and eggs began to get scarce, not one minute did they hesitate. They appealed to Congress to take off all duties and let butter come in, and eggs from China, or any other country, all free of duty. The appeal was an unreasonable one, but he who talks reason to hungry people will waste his breath, and it is easier for farmers to accept their responsibilities and act upon them in good faith, doing they best they can to increase the production of their farms, just the same as if they were employed to raise crops and did it in the performance of their duty.

We have little sympathy with the present cry of high prices. Wheat is not high; neither is oats or corn; no higher than they ought to be. For a time poultry was high, and eggs also, but not now. Hogs are high, but there was no intention to limit the production of hogs; all farmers have done and are doing all they can to raise them now. This, however, is a willfully extravagant nation. Flour is reasonable in price, but people refuse to bake bread and economize on flour. The appropriation for food is too small and for luxuries it is too great. Luxuries are bought first and food with what is left. But these things will be corrected. The country can support the cities and the people in the cities will have to correct their own bad habits; but the farmer must accept his responsibility and do his duty. He will not be able to defend his action unless he has done all in his power to raise the crops and live stock, which is more necessary than gold for the prosperity of the nation.

Possibilities in the Hog.

Just now the price of hogs and hog products is very high, and this, if continued, means money in the pockets of the men that produce them. About fifteen years ago men were discussing the problems of how to make money out of fifty-cent corn fed to three-cent hogs. But now it is a question of ten-cent hogs and not three-cent hogs. We may consider what are the chances that hog products will be higher than the products of all other farm animals. Just now we find the hogs highest in price, with cattle next, and sheep at the lowest point.

In the markets of the world the hog has a certain advantage over cattle, sheep or poultry. The flesh of the hog can be preserved in a way that makes it keep indefinitely, or at least for a very long time. Also it is a fact that the method of preservation makes it even more palatable than in a fresh and unpreserved state.

By smoking or by treating with certain liquids we create ham and bacon. We use not only the hind quarters for hams, but we also make hams out of the fore quarters. These hams are in demand in all parts of the world. The sides of the hog are made into bacon of the first quality and the bellies into bacon of a poorer quality, but both kinds have a large place in the markets of the world.

The taste of the race for ham and bacon is increasing, and the price only limits the demand for them. It therefore comes about that not a very large part of the hog need be sold in a fresh state. The fact that ham and bacon can be kept for a very long time makes them particularly useful for ocean-going ships, and more and more the navies of the world are drawing on this kind of provision. The lessened danger from spoiling makes ham and bacon an economical food, even at an advanced price.

So we may take it for granted that the foreign demand of the present day for ham and bacon, great as it is, will be constantly exceeded by the demand of the future. At home the demand for good bacon and hams is growing at a speed that makes it possible for the local dealer to put a good round price on his product without seriously curtailing the sale. In the light of the retail demand for these two products, to-day there seems to be no reason why hogs should not remain permanently at a high price, though not necessarily so high as to-day.

Another product of the hog is lard, and that, too, has a world-wide field for its sale. It is put up in hermetically-sealed tins and is not exposed to outside germs. It is used wherever man is found, and the demand for lard is on the increase. At home it has a constantly-increasing sale.

The total number of hogs in the country cannot rapidly be greatly increased; but the number of hogs can be slowly increased as the hog raisers learn better how to deal with the problems that are connected with the raising and fattening of hogs.

On March 29th, at St. Louis, the first lot of new clip of wool sold at 23 cents a pound. It was a burry lot.

DON'T JUDGE A MANURE SPREADER BY *LOOKS*

BECAUSE different makes of spreaders look alike—don't think they are alike. There's just as much, or more, difference between two spreaders of different makes that look alike as there is between automobiles of different makes that also look alike.

It's the way the spreader is built that counts. The way the power is generated, the materials, the design and moving of the apron—the way the power is applied—such things are what you must be careful about in buying a spreader. The best thing is to be sure of the makers—that they are absolutely experienced and reliable.

The market has become flooded with spreaders of slip-shod quality—slapped together in a hurry—since the demand has grown so large, owing to the general recognition of the big money-making and time and labor-saving qualities of good manure spreaders.

The actual value in actual use of

I H C Spreaders

Cloverleaf Corn King Kemp 20th Century

has been proved by hundreds of satisfied farmers. Years of experience and study and practical testing go to make our 1910 patterns the very best to be had anywhere. You'll find strength where it ought to be. The construction simple, yet sturdy, with the right power in the right place. The draft is light—there's little friction—the axles and roller bearings are sand, dust, mud and water-proof.

I H C spreaders are made in all sizes, from 30 to 70 bushel capacity, and there is a style for every section and condition. Choose to suit your special requirements from the only complete line. Large, heavy, rapid working spreaders for big operations—spreaders for orchards, vineyards—in fact for every purpose.

See our local agent now for details; or, if you prefer, write us for catalogue and further particulars.

Clover Leaf Manure Spreader in Actual Use. Covers all the Ground—All Plant Food Washed into Soil by First Shower.

Better Farming

A John Deere Book

—*Just Out*

A Farmer Can Get It Free

IF interested in farming, get our FREE book called "BETTER FARMING." It tells all about—

Alfalfa	*Making Hay*
Dairying	*Fighting Frost*
Seed Wheat	*Silos*
Corn Crops	*Cultivation*
Stock Feeding	*Cotton Crops*
Art of Plowing	*Soil Fertility*
Boll Weevil	*Gasolene Engines*
Controlling Weeds	*Adjusting Plows*

Hired Help Costs Big Money

Your land is high priced and hired help expensive. There is only one way to make big money—use implements that cut down the cost of your crops. Isn't it true that when you break something on a plow it is nearly always a cast part? Wherever strain comes on a John Deere Plow there you will find steel—tool steel. Take any plow that has had hard work for five years, put it along side of a John Deere which has been in service that long—and see the difference. Then there is no paint to cover up poor material. You can see the wear and the defects. The John Deere will be solid, staunch and ready for the hardest job. Then you begin to know that quality counts.

You can take pride in owning a John Deere—the standard plow of the world for two generations.

We will send you the 80-page, illustrated book free if you write and ask for

Package No. **7.**

Mention the package number *sure*, then you will get exactly the right stuff.

DEERE & COMPANY, MOLINE, ILL.

The Date Book History of Live Stock and Agriculture.

The editor of The National Farmer and Stock Grower has collected historical items relating to agriculture and live stock raising and arranged them in the order in which the incidents happened. It is a record which is intensely interesting to all earnest farmers and progressive stockmen. The events recorded include much that is ancient and is brought down through the ages of progress to about the year 1906. This material is all arranged in a handy booklet of 100 pages; it is nicely illustrated and is a handy, useful publication. We will be glad to send a copy, postage paid, to any of our readers on receipt of 25 cents, or we will credit one-year's subscription to The National Farmer and Stock Grower for 50 cents and we will send a copy of the Date Book History of Live Stock and Agriculture as a free premium. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Cost of Picking Apples.

The National Nurseryman mentions the experience of Mr. J. W Stewart, proprietor of the Protumna Orchards of West Virginia, who last year set systematically to work to secure apple pickers and packers by advertising in the country stores in the surrounding counties and by announcing the fact through public sources that the country in which he was located would have a large fruit crop. This method secured a goodly force from which to select his picking contingent. He arranged sleeping and boarding quarters for his gang and organized them into four groups of fifteen men each, with a sub-foreman at the head of each group. The cost of boarding these men varied from fifty to sixty cents per day. The cost of picking the apples added to the cost of the package was practically fifty-five cents per barrel.

The general plan of managing the apple harvest seemed to work very well, and the owners of orchards who co-operated with him this year have the promise of abundant labor next season. It is another argument in favor of the co-operative method.

Cement Workers' Handbook.

This book is designed to teach anybody how to work with cement; how to mix mortars of all kinds for all concrete purposes; how to make building blocks; how to build walls, floors, ceilings, walks, posts, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers.

For Sixty Cents we will credit one-year's subscription to The National Farmer and Stock Grower and send a copy of the **Cement Workers' Handbook.** Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

The Editor Needs Bread.

A North Dakota editor says: "It is reported that one of the fastidious ladies in a neighborhood town kneads bread with her gloves on. This incident may be somewhat peculiar, but there are others. The editor of this paper needs bread with his shoes on; he needs bread with his shirt on; he also needs bread with his pants on; and, unless some of his delinquent subscribers pay up before long, he will need bread without a blame thing on, and North Dakota is no Garden of Eden in the winter time."

DUCKS AND GEESE.

How to Succeed With Water Fowl.

This is an enlarged edition, revised and up-to-date. There are eighty pages, 9x12 inches. This is a fine book. A practical manual, giving full and authentic information and advice on the subject of breeding and raising ducks and geese for market, for breeders and for exhibitors. How to dress, pack and ship ducks to obtain the highest prices. A complete Guide to profitable duck and geese rearing.

The contents of the new edition include: Origin of the Duck; Development of the Duck Industry; Father of the Pekin Duck Industry in America; Comparison of Shapes of Ducks; How Best to Start; Profitable Pekin Ducks; Hints for the Amateur or Small Breeder; the Long Island Duck Industry; Results of Crossing; Pennsylvania Duck Industry; Shipping to Commission Men; Indian Runner and Rouen Ducks; Articles on Feeding, Housing, etc.; Duck Rearing Abroad; Domesticated Geese; Housing, Feeding and Rearing Geese; Goose Growing for the Farmer; Toulouse Geese; Crossing, etc.; Artificial Food for Water Fowl; Sebastopol Geese, etc.

The publisher's price for this book is 75 cents, and it cannot be sold for less, but for the price we can include one-year's subscription to The National Farmer and Stock Grower. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

More Corned Beef to be Eaten.

In all the discussions relating to the retail cost of beef, very little or nothing has been said about corned beef. In England all the round of beef and all the brisket are sold as corned beef. It is cooked and sold at retail in what are called "cook shops," and hundreds of thousands of people buy it because it is good to eat and sold at a fair price. Cooked corned beef can be bought in as small quantity as two ounces.

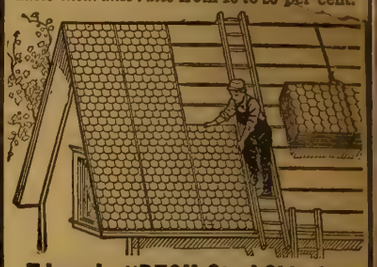
In this country, twenty years ago, corned beef was a rare luxury. The butchers used to corn the beef that was becoming tainted and would no longer be sold as fresh meat; but in late years more good corned beef is sold by butchers. If a good article of cooked corned beef was sold at the butcher shops, it would soon come into general use. In order to sell the cheaper cuts more corned beef must be sold. Take a rest on educating the farmers and educate the city people to eat corned beef.

Dried Fruit at St. Louis.

Apples—Evaporated Rings— Fair at 6½ to 7 cents; choice at 7½ cents; quarters—fair at 6⅛ cents; choice at 7 cents; fancy at 7½ cents; cores and peelings at 1 to 1½ cents; choice at 1½ to 2 cents—latter choice bleached; sun-dried—prime at 5½ to 6 cents; poor to fair at 4½ cents. Peaches—Sun-dried at 3½ to 4 cents per pound; inferior less.

Steel Shingles Last a Lifetime—Cost Less

An Edwards "Reo" Steel Shingle Roof always saves from four to five times its cost. It outwears four wood shingle roofs and costs less than one. Outwears six composition or tar roofs. It's fireproof and *reduces insurance rates* from 10 to 20 per cent.



Edwards "REO" Steel Shingles

Lay them yourself. No tarring—no soldering. Need only hammer and nails. Comes in stamped sheets of finest Bessemer Steel, 5 to 10 feet long, covering width of 24 inches. Either painted or galvanized. *Factory Prices—Freight Prepaid*—We are largest makers of iron and steel roofing and pay the freight on all Steel Shingles: Plain, Corrugated, V-Crimp Roofing; Imitation Brick Siding, etc. Write for free catalog 338 and ask about our **$10,000 Guarantee Bond Against Lightning.**

THE EDWARDS MANUFACTURING CO.

308-338 Lock Street, CINCINNATI, OHIO

A New York firm has just sold 100 selected draft horses to a contractor at the average price of $500 per head.

NOW IS THE TIME TO TRY AN ALL-STEEL STUMP PULLER.

Get rid of the stumps at once. Don't wait till "next fall." Every crop you plant in a stumpy field represents a big loss in actual cash—to say nothing of the many annoyances. And right now a special proposition is being made to our readers by the Hercules Manufacturing Company of Centerville, Iowa, offering to send one of their genuine All-steel, Triple-power Stump Pullers on thirty-days' free trial, with a full three-years' guarantee against breakage from any cause.

Write to the above company for their proposition. We feel sure it will be a pleasant surprise to read their books and other printed matter. A special price-reduction is being made to first buyers in each locality so send your name in at once to be sure to get in on this low-price proposition. Another thing: Steel has advanced tremendously in the last six months, but the above company bought up immense quantities of raw materials at rock-bottom prices before the advances. They are now making up 5,000 Hercules Steel Stump Pullers and they will be sold at remarkably low prices. Send a postal to-day to the Hercules Manufacturing Company, 640 17th street, Centerville, Iowa, for their interesting literature.

Barb Wire Cheap.

Barb wire cheap and good at $1.42 to $1.59 for a full quarter of a mile reel. Sample can be had before buying. Write for catalogue to Lincoln-Pope Mercantile Co., 1854 Pine street, St. Louis, Mo.

$15.95 AND UPWARD

THE LOW DOWN AMERICAN SEPARATOR

EXCELS ANY SEPARATOR IN THE WORLD

THIS OFFER IS NO CATCH. It is a solid, fair and square proposition to furnish a brand new, well made and well finished cream separator complete, subject to a **long trial** and **fully guaranteed**, for $15.95. It is different from anything that has ever before been offered. Skims **1 quart of milk a minute**, hot or cold, makes thick or thin cream and does it just as well as any higher priced machine. Any boy or girl can run it sitting down. The crank is only 5 inches long. Just think of that! The bowl is a sanitary marvel; **easily cleaned** and embodies all our latest improvements. Gears run in anti-friction bearings and thoroughly protected. Before you decide on a cream separator of any capacity whatever, obtain our $15.95 proposition.

OUR LIBERAL TRIAL ENABLES YOU TO DEMONSTRATE THIS. While our prices for all capacities are astonishingly low, the quality is high. Our machines are up to date, well built and handsomely finished. Run easier, skim closer, have a simpler bowl with fewer parts than any other cream separator. Thousands of machines in use giving splendid satisfaction. **Write for our 1910 catalog.** We will send it free, postpaid. It is richly illustrated, shows the machine in detail and tells all about the **American Separator.** Our surprisingly **liberal long time trial** proposition, **generous terms of purchase** and the low prices quoted will astonish you. We are the oldest exclusive manufacturers of hand separators in America and the first to sell direct to the user. We cannot afford to sell an article that is not absolutely first class. You save agent's, dealer's and even catalog house's profits by dealing with us and at the same time obtain the finest and highest quality machine on the market. Our own (manufacturer's) guarantee protects you on every **American Separator.** We ship immediately. **Western orders filled from Western points.** Write us and get our great offer and handsome free catalog. ADDRESS,

AMERICAN SEPARATOR CO., Box 1102, BAINBRIDGE, N.Y.

National Corn Show.

The Fourth National Corn Exposition will be held at Columbus, Ohio, January 30th to February 11th, 1911. It will be held at the Ohio State Fair Grounds. There will be a Great Agricultural Congress and Round Up and exhibits of all kinds of grains. The National Corn Exposition is now to the grain grower what the International Live Stock Exposition is to the stock grower. It is the clearing house of merit and the exhibit of the best in the land. Mr. E. D. Funk, of Shirley, Ill., is President of the National Corn Association, and E. G. Montgomery, of Lincoln, Neb., First Vice-President. The Directors include C. P. Bull, Anthony Park, Minn.; R. A. Moore, Madison, Wis.; William Stull, Omaha, Neb.; V. H. Young, Athens, Ill.; V. M. Shoesmith, Lansing, Mich.; C. W. Pugsley, Lincoln, Neb.; G. L. Christie Lafayette, Ind.; L. B. Clore, Franklin, Ind.

During the year 1910 all communications relating to the National Corn Show of 1911 should be addressed to Mr. George H. Stevenson, Secretary, Dispatch Annex, Columbus, Ohio.

Three Big Papers, 70 Cents.

The National Farmer and Stock Grower; Twice-a-Week Republic of St. Louis, the oldest, biggest and best semi-weekly in the Southwest; and Farm Progress, the biggest semi-monthly farm paper printed, sent to any address a full year for only 70 cents. The subscription price of all these papers, if taken separately, would be $1.25. Send orders to the St. Louis Republic, St. Louis, Mo.

Educating the Masses Through Association.

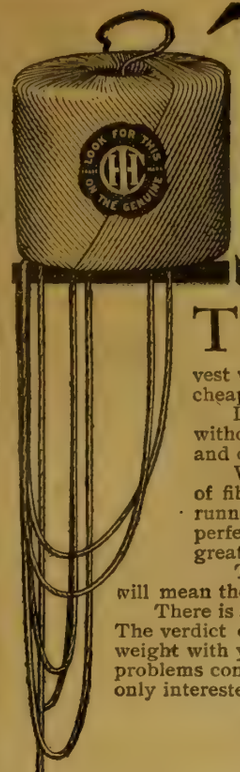
The attendance in our colleges, all over the land, has enormously increased in ten years and is still increasing. It is said that all cannot go to college, but the masses are really going to college by proxy. Every student that goes to college and returns to mingle with the people becomes a college instructor of the people.

Every day he is educating people by his contact with them. Without knowing it, the masses of his neighbors are being influenced by the learning he has received in college. Many a community has had its agricultural processes changed by the example of the young man that has come home from college and turned again to the plow.

As a result, in a generation we shall have a new kind of people. Every phase of rural life is being affected by the process, and the upward movement is far more pronounced than is being recognized.

The professors of some of our agricultural colleges are complaining that the farmers do not send for their bulletins and therefore are not profiting by their work. But the agricultural students and graduates are reading the bulletins and putting them into practice, and the farmers that have not been to college are looking over the fence at the results. Scoff, as some of them do, at the instructions received in the colleges, most dullers of farms have more confidence in them than they pretend to have.

Within a generation this uplifting process has changed the popular notion regarding a good many things. It used to be thought that clover was less valuable for feeding cattle than timothy hay, but this opinion is no longer held, and that it is not held is largely due to the education by association that has been going on.



LET THE EXPERIENCE OF THE MAJORITY OF FARMERS BE YOUR GUIDE IN BUYING TWINE

THE time has come to order your binder twine for the 1910 harvest. Twine dealers are placing orders for their season's stock. The mills are running. Now is the time for you to decide the twine question. It is something that requires careful consideration. The success of your harvest will depend on the uninterrupted work of your binder, for no binder can work well if you use a cheap grade of binder twine.

It is our aim to have every farmer who uses I H C twine go through the 1910 harvest season without a break in the field. We have much more at stake than merely selling twine. Your interests and ours are the same.

We know that the raw materials from which I H C twines are spun have the quantity and quality of fibre that insure greater strength than is found in any other twine. They are evenly spun—smooth running—do not tangle in the twine box—work well in the knotter, insuring perfect binding and perfect tying. They insure your being able to work your binder through the entire harvest season with greatest speed and economy and are therefore practical profit insurance.

Those who buy cheap twine will certainly have trouble—delays due to tangles, knots and breaks will mean the loss of valuable time—and every delay at harvest time will cut down your profits.

There is a sure way to avoid this. Let the experience of the past be your guide in purchasing your twine. The verdict of the majority of the farmers of this country is a safe guide. Their decision should have more weight with you than the statement of any twine manufacturer. These farmers know. They have the same problems confronting them that you have. They have no axe to grind. They do not sell twine. They are only interested in results.

I H C Brand of Sisal—Standard Sisal Manila or Pure Manila

Are the twines used by the majority of the farmers of this country. They have been proved to give the best results. Eighty-five to 90 per cent of the farmers use Sisal. It is smooth running and works at steady tension without kinking or tangling in the twine box—insuring perfect binding and perfect tying. Its only equal is the really high grade Manila twines such as bear the I H C trade-mark.

Your interests and ours are identical on this twine proposition. We have more at stake than selling twine. We are vitally interested in the successful operation of hundreds of thousands of binders. On their successful operation depends our success—and we know they cannot operate successfully with poor twine. No binder made can. For this reason we have given the twine problem careful study. When we say "Stick to Sisal or high grade Manila bearing the I H C trade-mark"—we do so because we know them to be the highest standard of excellence in binder twine.

But we don't ask you to do as we say. We want you to be the judge. But your judgment to be right should be based on facts—not on the statement of any twine man. And the fact is—that the majority of the farmers of this country use I H C twine. Sisal or Standard (which is made from pure Sisal) comes 500 feet to the pound; high grade Manila, 600 feet to the pound; Pure Manila, 650 feet. See your local I H C dealer at once and let him know how much you will need. If you want more facts on binder twine, write direct to

International Harvester Company of America Chicago U S A
(Incorporated)

Before agricultural graduates became so numerous, in the country, the breeder of pure-bred seed corn had a small demand for his product, but now the demand for good seed corn, of name and breeding, is large and increasing. The use of such corn by some has led to its more extensive use by others.

This educating by association was illustrated to the writer when he visited a farm on which the owner was conducting his operations according to the most approved scientific plans. The crops on the farm were partly of a nature that the farmers declared could not be grown in that locality, yet they were doing wonderfully well under the intelligent treatment given them. On the day in which the farm was visited by the writer scores of other farmers from the neighborhood were inspecting the crops and discussing them.

But, ethically, the masses are being elevated by association with those that have been under the ethical influences of the colleges and universities. A higher standard of morals is resulting, and duties are now being recognized as duties which previously were not considered to exist. No one is wise enough to forecast the future as it will be affected by this factor of education.

THREE FREE HORSE BOOKS.

One of our advertisers is offering to send three valuable books on the diseases of horses, sheep and dogs free to our readers on request. These three books represent years of effort and experience in the treatment of live stock diseases and naturally contain a great deal of valuable information and advice. Special attention is given to diseases most common and difficult to cure, such as distemper, pink-eye, coughs, colds, fevers, influenza, etc., making them particularly valuable. One of them is "Dr. Craft's Advice," a book by one of the best veterinarians. Another is "The Horse -His Diseases and Treatment;" the other "Veterinary Pointers," comprising a complete, handy reference set of booklets that ought to be in every horse owner's hands. Drop a post card to the Wells Medicine Co., 179 Third street, Lafayette, Indiana, for these three free books. Mention this paper in writing.

HERE'S A GREAT CHANCE

To secure absolutely free a number of very useful and attractive articles.

F. S. Burch & Co., Chicago, wholesale manufacturers of stockmen's supplies, are giving free with orders for their goods amounting to $5.00 and upwards valuable premiums equal to about 20 per cent. of regular price. Farmers and their wives are thus enabled to secure without effort or cost a number of useful and attractive things which they certainly will appreciate.

F. S. Burch & Co. sell stockmen's supplies as low as they can be bought elsewhere, are a high-class and responsible concern to deal with, and we recommend to our readers that they write at once for free catalogue and list of premiums to be secured. Address, F. S. Burch & Co., 64 West Illinois street, Chicago., Ill., and ask for Premium List B.

DEAF PEOPLE NOW HEAR WHISPERS. Wilson's Ear Drums are sound magnifiers and rest the ear nerves. Write to-day for our descriptive booklet. It's free. Wilson Ear Drum Co., 891 Todd Bldg., Louisville, Ky.

Wanted To the women of Ohio, Indiana, Illinois, Michigan, Wisconsin, Minnesota, Illinois, Iowa, Missouri, Nebraska and Kansas, who will send me the names and addresses of ten or more substantial farmers who own their land, together with three 2-cent stamps, to pay for packing and mailing, I will send you the finest lithographed calendar, 2½ feet long, ever produced, and a nice little surprise present. This calendar is one that anyone will be proud to own. Little effort is necessary in order to send ten names. If you can send 25 or more, I will send you, in addition to this pretty calendar, a more substantial present, worth any woman's appreciation.

Chicago Flexible Shaft Co. 1820 Ontario St. Chicago

Scarcity of Sheep.

The opening for the sheep raiser is very wide. Sheep are very scarce. They are good property on a farm and pay well year in and year out. Clay, Robinson & Co., a great live stock commission firm, having houses at nine principal markets, keep close in touch with sheep supplies and markets. A recent issue of the Live Stock Report, issued by said firm, includes the following:

"Arrivals of sheep and lambs are dwindling fast. Receipts at the six leading Western markets thus far this year display a decrease of more than 100,000 from the corresponding period of 1909. The shortage will be felt most after April. The great bulk of the offerings back in the feed lots are in Northern Colorado, and these will have been well sent out by that time. Reports from Kentucky and Tennessee tell of heavy losses of lambs owing to a hard winter and of very dry weather in Arizona, cutting down the supply in that quarter. After April it looks like famine supplies until grassers come from the Western ranges."

A Pioneer Movement.

The Fort Smith (Ark.) Commercial League, a business organization, has employed an agricultural expert who centers his efforts upon giving the farmers of that section the benefit of his knowledge and experience. It is claimed that this is the first time a commercial organization has done such a thing, and the reason given is that the business people of Fort Smith wish the farmers to raise larger and better crops, that there may be more profit obtained commercially by dealing with them.

It is also reported that the farmers in general have taken kindly to this proposition and are availing themselves of the advantages of the new movement, and that in a very short time plats have been laid off on many farms for special demonstrations. Farmers are realizing what we have always believed and asserted—that every farm is an experimental farm—and farmers are accepting in good faith and in the proper spirit the assistance that is tendered them, and we venture the assertion that every farmer who accepts a share of this instruction will reciprocate the service in the heartiest manner until the town of Fort Smith will consider the agricultural expert the best investment they ever made an appropriation for.

In the general work of the farm there are many questions that remain unanswered because there is no one to answer them. There is not even time to ask them. The Fort Smith agricultural expert is on the ground. He can go from farm to farm; he can do the one thing needful and set the farmer right who may be going a little wrong, for it is in the decisive moment of action that the farmer can best accept advice and assistance. The ninety per cent. that the farmer knows by experience is increased to the hundred per cent. when he can turn to the expert and clear up a doubtful question, and there are thousands of ways by which the government expert can have an influence upon the improvement of agriculture in his district. We congratulate the Fort Smith Commercial League upon their enterprise, generosity and good business sense and hope and confidently expect that the good results will exceed their expectations a thousand-fold.

Sheep and Their Teeth.

Prof. Gaumnitz, of the Division of Animal Husbandry at University Farm, St. Paul, says that fine-wool sheep live longer than medium or coarse-wool sheep. The former have been used successfully as breeders from one to eight years, and the latter from one to six, and more rarely seven years. This indicates the extreme period of usefulness in the flock. The prime of life probably extends from one to five or six years.

The lamb has a short and small head as opposed to the head of the mature sheep. Its teeth are smaller in every way. They are usually smooth and white as opposed to a more corrugated, darkened surface in the old sheep. The age of sheep is told by the four pairs of incisors which are found only on the lower front jaw. These are all present by the time the lamb is six weeks old.

In the yearling the central pair of small incisor teeth are replaced with a large pair when the lamb is ten to fourteen months old. They are almost twice as wide and much longer than those at either side.

At the age of two years the animal gets a second pair of large teeth.

At three years it gets a third pair of large teeth. It would then have three pairs of large teeth and one pair of small or lamb teeth.

The four-year-old has a full mouth of four pairs of large teeth. The outer ones are never as large as those in the center.

After the sheep is four years old it is difficult to tell the exact age. With age the teeth usually grow longer and narrower. They begin at six years to resemble shoe pegs. Sheep that are living on short pasturage and get sand with their grass wear their teeth short, even in old age. This is unusual in Minnesota. When sheep get long, peg-like or broken teeth, it is time to dispose of them.

Different Kinds of Exchanges.

True business exchanges do not fix prices of commodities. A true business exchange establishes rules for the conduct of business in certain lines, and members thereof buy and sell on the Exchange, thereby establishing the prices that are based upon actual sales. An exchange to limit the prices a seller will accept or a buyer will pay is not an exchange, but a combination in violation of business laws.

THE UNIVERSAL MAGAZINE SUBSCRIPTION PROPOSITION.

We publish the Universal Magazine. It is issued monthly. Every issue is thirty-two pages, three columns to the page, containing home reading, fashions, patterns, poetry, all elegant, interesting and instructive literature. A first-class publication for the money; nothing cheap except the price. In order to introduce the Universal Magazine we have secured a most beautiful picture which can be selected as a subscription premium. The picture is entitled "Mother and Child."

This is a glorious picture. It is 6x8 inches and is mounted on a nice green mat which is 8x11 inches. It is just the right size for a panel picture. It is rich in colors and is ready to tack or hang on the wall. It is not necessary to frame this picture, but no picture in the world is better worth framing. The dark, warm colors of the room, enlightened by the glow of the candles; the chubby face; the restful, healthy, natural position of the child; his delicate, little hands, and the fond look of the mother, all go towards perfecting a picture that will be enjoyed and give happiness to any house it may enter.

Anyone who will send us 25 cents in silver or in new one-cent postage stamps will receive the Universal Magazine for one year, and can select the "Mother and Child" picture as a free premium, which will be sent postpaid. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

For 38 Springtimes thousands f the most successful stock and oultry men have tided their nimals over the critical period etween Winter and Spring by eans of

Pratts Animal Regulator

for their live stock—and

Pratts Poultry Regulator

for their poultry.

For 38 Springs these unquestionbly reliable preparations have given he Stock and Poultry of the country he elements they vitally needed—nd couldn't get from ordinary food —the elements that made them ealthy and strong and good proucers.

There's a record unparalleled in he annals of stock and poultry egulators in the Continent of North merica.

The above preparations are those ou should use this Spring.

Remember they are absolutely uaranteed—and back of the guarntee is an honorable record of early half a century.

Pratts Powdered Lice Killer

Just the thing your hens need right ow—prevents and kills lice.

are ready! Have you sent for ours? If not, write to-day for he one that interests you most. Here they are.

Poultry Wrinkles. By Michael K. Boyer, Poultry Editor of the Farm Journal; author of "Poultry Secrets," etc., etc.

Things you ought to know by eminent veterinarians—both of them specialists on the care and health of live stock.

Write for whichever book interests you most. We want to send you a copy free.

Pratt Food Company

Department F Philadelphia.

Co-operative Egg Selling.

The Egg Reporter says that recently several associations have been organized for selling the produce of the farm. Among these is one for disposing of eggs. One association is at Dassel and another at Barnum, Minn. The general idea is to produce larger and better eggs and market them in a systematic way. They gather the eggs twice a day, keep them clean, sort them, and throw out all under or oversized eggs and pack them for market in cartons holding one dozen each. The white eggs and brown ones are packed in separate cartons. All unattractive and dirty eggs are discarded so far as the market is concerned. The eggs are shipped direct from the producer to the city grocer or consumer. A guarantee of the facts is set forth on the carton concerning their quality, with a statement that any egg found defective in any way will be replaced free of charge. Such eggs bring several cents a dozen more than those marketed in the ordinary hit or miss manner.

Handling Storage Eggs.

Mr. Chas. H. Parsons, President of the Eastern States Cold Storage Company of Springfield, Mass., gives to the Republican of that city an average statement, covering the purchase, packing, transportation, storage, interest, insurance, handling, selling and retailing of storage eggs. The eggs are bought when eggs are plentiful and cheap and stored until they can be sold at wholesale for a better price and a profit, if possible.

	Per dozen.
Farmer's price	$0.16
Cost of packing, etc.	.02
Shipper's profit	.00½
Transportation	.01½
Storage charge	.01½
Interest, insurance, etc.	.01
Wholesalers, rehandling	.01½
Wholesaler's profit	.02
Retailer's profit	.14
	$0.40

It will be seen that eggs sold at 16 cents a dozen when eggs are plentiful and cheap, cost about 26 cents when they come out of storage, and after paying a fair wholesale price. The retailer gets what he can on his market, which Mr. Parsons figures to be 14 cents per dozen on 26-cent eggs. Mr. Parsons also stated that no one willingly carries cold-storage goods any longer than they can help, because it means increased charges and deterioration in quality. Cold storage has its own benefits and limitations.

Egg-selling Results.

L. W. Clark, of the Petaluma (Cal.) Hatchery, submits the following record to show what was done by a poultryman from whom he buys eggs. The record is from October 4, 1909, to December 18, 1909, a period of seventy-six days, when he quit selling and began saving eggs for his own hatching. The record from that time on would no doubt also furnish interesting reading. The market eggs were sold to the Golden Eagle Company, and the figures were taken from their tags. The hatching eggs were sold to Mr. Clark. The poultry raiser in question had 390 hens which were two years old in January, 1910, and 510 were one year old in January, 1910. These and 330 pullets hatched in March, 1909, a total of 1,230, were all mated. He sold for market from October 4 to December 18, 2,038 dozen eggs for $991.94, and for hatching from November 15 to December 18, 957 dozen for $600.70, making a total of 2,995 dozen for $1,592.74. He sold 473 eggs a day from 1,230 hens.

Write and get our proposition—our literature is free. Free Trial plan—best ever offered. Don't delay—Write for full information today.

Asbestos and Metal Covered

RACINE HATCHER COMPANY, Box 82, Racine, Wis.

Remarkable Development of Chicks.

Dear Editor:—In the interest of those who are trying to make poultry raising profitable, I wish to say through your paper that I have had my troubles with roup and bowel troubles. I heard of Walker's Roup and Cholera Cure and sent 50c. to the Walker Remedy Company, Dept. B C, Lamoni, Iowa, for the treatment, and out of seventy hens that had the roup bad, I saved all but six. It excels any medicine I ever used for roup and bowel trouble among the little chicks, used as a tonic and preventive. I raised over 200 chicks last year and they grew very fast, being ready for market in from seven to nine weeks. I would not be without it, for it is a very valuable remedy for the poultry raiser.

MRS. C. L. CLARK, Le Claire, Iowa.

Poultry and Pet Stock.

During the week ending February 19th the last of the eggs in cold storage in Chicago were sold on the market.

At Toledo, Ohio, the grocers are selling eggs by weight and figuring that a dozen ought to weigh a pound and a half. That is easy figuring; twenty cents a pound is thirty cents a dozen; but the retailer will figure this way: Cost price, 30 cents a dozen; charge the consumer 45 cents a pound.

An international egg production contest is to be instituted at Mexico, Mo., under government supervision. A National Poultry Experiment Station in charge of Mr. J. H. Schwindler is being established, so that hereafter our friends in Australia will have competition in this line.

The Petaluma Poultry Journal of California mentions 6,000 chicks that were hatched at one farm and loaded on a farm wagon and driven over eight miles to another farm without the loss of a single chick. The Petaluma Poultry Journal is published in a district where poultry is raised on small tracts; where egg production runs way up into the millions.

Jack Lee, a poultry writer in the Petaluma Poultry Journal, says: "In 1906 twenty-nine White Wyandottes and twenty-nine Faverolles, side by side, with the same feed, gave the following results: Food consumed for each pound gained, Wyandottes, 4.16 pounds; Faverolles, 3.9 pounds. Greatest gain at thirteen weeks, Wyandottes, 2 pounds 5½ ounces; Faverolles, 2 pounds 8¾ ounces." These figures are interesting because records of results from chicken feeding are not easy to obtain.

With a mixed lot of one, two and three-year-old hens many chicken raisers are selling a surplus of eight to ten dozen eggs per hen per year. Several Vermont ladies interested in keeping records made such averages last year and averaging 25 to 26½ cents a dozen at the fence gate.

February prices for eggs in London, England, at wholesale: Danish, 23.7 cents a dozen; Italian, 22½ cents; Russian cold-storage eggs, 15.8 cents; English eggs, 29.2 to 31.6 cents per dozen.

Recently in New York City, liquid eggs, doctored and rotten, were condemned by officials of the National Department of Agriculture. Sold originally for tanners' use they were finally found consigned to a dealer in bakers' supplies.

In the city of London, English rabbits are retailed at 24 to 42 cents, dressed; Ostend rabbits from Belgium sold, fresh and dressed, at 15 to 17 cents a pound; and Australian rabbits, frozen, at 18 to 24 cents each.

Six pens of White Leghorns are leading all others in a nine-months-out-of-twelve-months' egg-laying test in Australia, and in a two-year test two pens of Black Orpingtons and four pens of White Leghorns are leading. The best single-year, nine-months' records range from 1,016 to 1,059 eggs for pens of six hens, and the two-year pens range from 1,972 to 2,082 eggs per pen. It will require three months more to finish the record.

POULTRY PROFITS DOUBLED

If you want $2 profit where you now get $1, either from eggs or poultry for market, simply send us your name and address and let us tell you the real poultry secret that has doubled the profits of poultry raisers. Its the only real way to poultry success. Make every fowl a profit earner. Write at once for this information whether you have 3 fowls or 300. It's free to you.

THE BEST POULTRY PAPER.

We are often asked which is the best poultry paper published in the United States, and the answer is, The Reliable Poultry Journal. There are other good papers, but this is the best. The subscription price of The Reliable Poultry Journal is 50 cents a year, and the subscription price of the **Universal Magazine** is 25 cents a year. We have made arrangements whereby we can send the **Universal Magazine** and The Reliable Poultry Journal, both papers, one year, for 50 cents. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

WHY HAVE A BLEMISHED HORSE?

Why have a blemished horse in your stable when you can clean off any soft swelling with Absorbine? Of course it takes a little time and patience with persistent treatment, but the ultimate results will more than compensate, and you have an animal free from the unsightly bunches which are so common. Ask your druggist for Absorbine, $2.00 per bottle, or sent direct upon receipt of price. W. F. Young, P. D. F., 106 Temple street, Springfield, Mass.

USEFUL FARM INSTRUMENTS.

The Decker Manufacturing Company, Keokuk, Iowa, offer live stock owners by advertising in our columns an excellent stock marker. They also supply swine owners with the well-known "Never Root Tamer," forceps, hog catcher, and a number of other useful implements. Their catalogue is mailed free to applicants.

DEAFNESS CURED
By New Discovery

"I have demonstrated that deafness can be cured."--Dr. Guy Clifford Powell.

The secret of how to use the mysterious and invisible nature forces for the cure of Deafness and Head Noises has at last been discovered by the famous Physician-Scientist, Dr. Guy Clifford Powell. Deafness and Head Noises disappear as if by magic under the use of this new and wonderful discovery. He will send all who suffer from Deafness and Head Noises full information how they can be cured, absolutely free, no matter how long they have been deaf, or what caused their deafness. This marvelous Treatment is so simple, natural and certain that you will wonder why it was not discovered before. Investigators are astonished and cured patients themselves marvel at the quick results. Any deaf person can have full information how to be cured quickly and cured to stay cured at home without investing a cent. Write today to Dr. Guy Clifford Powell, 6182 Bank Building, Peoria, Ill., and get full information of this new and wonderful discovery, absolutely free.

RHEUMATISM
A CURE GIVEN BY ONE WHO HAD IT

In the Spring of 1893 I was attacked by muscular and inflammatory rheumatism. I suffered as those who have it know, for over three years, and tried almost everything. Finally I found a remedy that cured me completely and it has not returned. I have given it to a number who were terribly afflicted, and it effected a cure in every case. Anyone desiring to give this precious remedy a trial, I will send it free. Address,

Mark H. Jackson, No. 491 James Street, Syracuse, N. Y.
Mr. Jackson is responsible. Above statement true.--Pub.

GALL STONES or any LIVER DISEASE. Write me ALL about it. Will tell of a cure FREE.
Address ED.C.COVEY, R.F.D., Lansing, Mich.

On March 28th, Simon Gruhn, of Macoupin county, Illinois, made a new record with forty-five hogs, 264 pounds average, that sold at $11.15 per 100 pounds.

What is a visible typewriter?

The Majestic Range.

The "Majestic" is called the range with a reputation. Some have been in continual use for twenty-five years and still giving excellent results. It is not the cheapest, but it is claimed in every way to be the very best.

A range isn't bought every day in the year, nor every year in one's life, and if she is a wise woman, she will insist that the range for which she invests her husband's hard-earned money will be a range with a reputation—a reputation for durability—a reputation as a perfect baker, year in and year out. Before deciding upon the purchase of a range, the wise woman will examine closely into the merits of the Great Majestic. It is, indeed, a range with a reputation. It is a perfect baker at all times.

The Great Majestic has a fifteen-gallon all-copper reservoir which touches the fire, giving boiling hot water in a very few minutes. The body of the Great Majestic is made of charcoal iron, which gives it wearing quality that will outlast three ordinary ranges. All top doors and frames are made of malleable iron—they won't break, crack or rust. Malleable iron is absolutely necessary for perfectly air-tight joints, and on the Majestic Range all joints are riveted perfectly air-tight—no heat escapes or no cold air can enter—it is also completely lined with pure asbestos—thus the oven can be heated quickly with about half the fuel used in the ordinary range.

Anyone who is interested can obtain full particulars concerning this excellent range by writing to Majestic Mfg. Co., Dept. 39, St. Louis, Mo., and asking for the free booklet "The Story of Majestic Glory."

A Ten-dollar Bill.

The old-time Aberdeen-Angus cattle breeder, Vissering, writes: "If this were written on a ten-dollar bill it would scarcely be more valuable to you than the message it now contains. You know our Western ranches are broken up and that our future beef must come from farms. Beef prices are and will be high. To obtain top prices you need top cattle, and you know there is nothing superior to Angus blood. Now listen: I offer you more Angus quality for the money than you can find elsewhere; bulls that sire market toppers. I sell 90 per cent. of my cattle on mail orders with privilege of returning if not as represented. But I would sooner you would come and see them. Send for my free booklet. It contains my story. It is free." Address, J. P. Vissering, Box 1, Godfrey, Ill.

St. Louis Root Quotations.

April 1st—per pound: Golden Seal at $1.70; Ginseng—Wild at $6.00 to $6.25 and cultivated at $5.50 to $6.00; Lady Slipper, 18 cents; Seneca, 32 cents; Pink, 22 cents; Black (dry), 7 cents; May Apple, 5½ cents; Snake, 30 cents; Angelica, 5 cents; Wahoo—Bark of root, 14 to 16 cents; bark of tree, 4 cents; Blood, 5½ cents; Blueflag, 5 cents; Sassafras—Bark of root, 5 cents; bark of tree, valueless; Wild Ginger, 10 cents; Spikenard, 3 cents; Skullcap, 7 cents.

The Thomas J. McMahon farm, containing 500 acres, near Peruque Station, twelve miles northwest of St. Louis, on the Chicago, Burlington and Quincy Railway, was purchased Saturday by Francis D. Nunes for $30,000.

The Cost of Bread.

Flour exported from the United States in February of the present year averaged $5.13 a barrel. This is only $2.61 per 100 pounds, and bread can be made from it at a cost of two cents a pound. Five cents will buy enough flour to make two and a half pounds of bread.

Unbreakable Fruit Jars.

The grocers and dealers in household furniture have on sale the American "Star" Wax Top Can for putting up preserves. They are made from special-quality, extra-coated tin plate and are worthy of examination. Be sure to get the can with the "Star" on top and bottom. See advt. on page 30.

Sales of Goats.

From the American Stockman of Kansas City we publish a list of goat sales in order to answer questions concerning their market value, as follows:

382 goats, fall shorn, shipped direct from New Mexico, weighing 59 pounds, at $4.75 per 100 pounds, sold to go to the country; ten culls out, 66 pounds, at $3.50 per 100 pounds.

265 goats, fall shorn, shipped direct from Texas, 71 pounds, at $5.40 per 100 pounds, sold to the packers; five culls out, 60 pounds, at $4.40 per 100 pounds.

259 goats, shorn, shipped direct from Texas, 66 pounds, at $5.00 per 100 pounds, sold to a packer; forty culls out, 60 pounds, at $3.50 per 100 pounds.

534 goats, fall shorn, shipped direct from Texas, 69 pounds, at $5.40 per 100 pounds, sold to a packer; ten culls out, 58 pounds, at $3.25 per 100 pounds.

718 goats, fall shorn, shipped direct from New Mexico, 58 pounds, at $4.50 per 100 pounds, sold to go to the country.

561 goats, fall shorn, shipped direct from New Mexico, 49½ pounds, at $5.25 per 100 pounds, sold to go to the packers; 144 culls out, 34 pounds, at $5.00 per 100 pounds.

FREE DEAFNESS TREATMENT.

A successful institution makes this remarkable offer to send free medicines to prove their ability to cure Deafness, Head Noises and Catarrh by a new method. Address Dr. Branaman Remedy Co., 1121 Walnut St., Kansas City, Mo.

SPRING-TIME MALADIES.

In the spring months horses are especially liable to all of the affections of the throat and membranous tissues, coughs, influenzas, pink-eye and distemper. In these troubles the one certain cure and preventive is Frazier's Distemper Cure and the relief from the first dose of this remedy is perceptible. There are many of these diseases and many names for them, but there is only one remedy, and that is "Frazier's." Every bottle sold on a strict guarantee to give satisfaction, or your money refunded. $1.00 size bottle contains three times as much medicine as the 50ct. size. Write for our thirty-two-page booklet; it is sent free. Binkley Medical Company, Dept. H, Nappanee, Ind.

WATERPROOF ROOFING.

Most people think that a material which is called a roofing is of course waterproof. As a matter of fact, ordinary ready roofings are only waterproof for a little while, and do not really become roofs at all until they are painted. Most ready roofings when new have a coat of paint which has been applied at the factory, and when the paint wears out it must be promptly renewed or the manufacturers' guarantee will not hold.

An up-to-date roofing, like Amatite, has a surface of pitch and mineral matter which is absolutely proof against water. The pitch in Amatite Roofing is in two good thick layers. On account of the oily nature of pitch, water has no effect upon it, and accordingly Amatite Roofing needs no paint whatever and can be left out in rain and snow and sun year after year without any attention or care.

Despite this peculiar surface, Amatite is just as easy to lay as any other roofing and does not cost any more.

A sample of Amatite can be obtained free on request to nearest office of the Barrett Mfg. Co., New York, Chicago, Philadelphia, Boston, St. Louis, Cleveland, Pittsburg, Cincinnati, Kansas City, Minneapolis, New Orleans.

Horse Secrets Disclosed.

This is a valuable book. It tells how to feed and fatten your stock in the cheapest, quickest way; how to rear an orphan foal by hand; the secret of silage feeding; how to break a horse of bad habits, and scores of other money-making, money-saving secrets.

This book is published by the **FARM JOURNAL** of Philadelphia, the foremost monthly agricultural paper of this country.

THE FARM JOURNAL

does not sell this book, but offers it to its new subscribers. This paper has for thirty-three years been working for the prosperity of farmers and the happiness of farm homes. It is taken by 700,000 people whom we call "Our Folks," and we believe you will be as fond of it as they now are. Everything in it is boiled down so that its twenty-four to sixty pages every month give you the most matter in the least space. It is ably edited by authorities and is a cheery and welcome friend in every home it enters.

"Horse Secrets" and The Farm Journal for two years, both for 50 cents. Address, **FARM JOURNAL, 1068 Cherry Street, Philadelphia, Pa.**

J. N. KRAMER & SON, Cedar Rapids, Iowa

Beautiful Flower Pictures.

The most famous painter of flower objects in the world is Paul De Longpre. He received $2,500 for the original of his picture "American Beauties," and a large sum for "A Study in Violets;" and "Pansy in Perfection" is another of his glorious masterpieces. With 180 of his

pictures in their amazing excellence before us we have selected three as the very best to place within reach of our readers as a subscription premium. We delight in offering pictures as supplements and premiums. The pictures we have are panels from the original paintings on heavy water-color paper, size 10½x 14 inches. We cannot describe these beautiful paintings. The depth and harness of color; the remarkable image details; the refined taste in grouping and the wonderful naturalness—truly they are unsurpassed in artistic excellence.

The illustrations herewith are feeble representations of the pictures, which must be seen to be appreciated.

Our Splendid Offer No. 1.

To anyone sending us fifty cents by postoffice money order, or in currency, or in new one-cent stamps, we will send The National Farmer and Stock Grower for one year, and we will send in a tube, postpaid, safe delivery guaranteed, the three 10½x 14-inch pictures, "American Beauties," "A Study in Violets," and "Pansy in Perfection," as a free premium.

Our Special Offer No. 2.

We publish the Universal Magazine. It is issued monthly at 25 cents a year. It is a nice, clean, illustrated, interesting, thirty-two-page publication, three columns to the page, devoted to literature, stories, fashions and patterns—well worth the money. Anyone who prefers to subscribe for the Universal

Magazine and who will send fifty cents direct to this office will receive the magazine for two years and can select the three pictures as a premium, and we will send them postpaid, safe delivery guaranteed. Address, The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Wheat, corn and oats, and, in fact, all grains, should be sold at a price per 100 pounds, the same as cattle, hogs and sheep. The bushel units of 32, 56 and 60 pounds are as antiquated as the English pounds, shillings and pence. We need an International Conference and agreement on weights, measures and coins.

At Iuka Springs, Mississippi.

A Splendid Hotel Property at a Great Bargain.

On account of the death of the former owner, this property was foreclosed under mortgage by a bank that will sell it on easy terms. It is located in an ideal resort town. Besides what is shown in cut here are three cottages, large barns and grounds go with hotel, all adjoining. Iuka is noted for mineral springs, and a fine park three hundred yards from the hotel. Summer rates on railroads to town, including week end rates from local stations and Memphis. Refurnished new throughout, hot and cold bath, telephone system with each room, pool and billiard room, all equipped. Can be bought at a big bargain. An opportunity for a first-class hotel man to make a fortune. Iuka is the summer resort of the South and renowned for its healing springs. The property cost $60,000. It is now better than new and can be bought for $25,000 on easy terms. Address, **JAS. H. FAIRCLOTH, Iuka, Mississippi.**

CAUSES and CURE of EYE AND EAR TROUBLES

Write For This Book—Use the Coupon

One of the Greatest Books Ever Published

Full From Cover to Cover Concerning the Treatment and Care of the Eye and Ear—SEND FOR IT AT ONCE—USE THE COUPON.

My book is handsomely bound in cloth and contains 160 pages of most valuable information.

The book tells how to test and care for the eye and ear. An illustrated chart of the eye is shown, and methods for testing the eye are given; also the proper information for the care and cure of eye diseases is suggested.

Each part of the ear is illustrated with good pictures. Causes and forms of deafness are explained and remedies suggested. Instructions are given how to test the hearing, how to know whether you are suffering from any trouble with the ear, or may be threatened with such trouble. Thus you will find instructions in the use of a series of tests which will enable you, if you have ear troubles, to decide the amount and location of the defect in your hearing, and can therefore take proper measures for relief.

Help a Friend—If You Are Well and Strong

If You Know of a Friend Afflicted With Eye or Ear Troubles, Send for My Book So He or She May Be Benefited by the Information It Contains.

The facts I present are the result of personal contact with thousands of the most complex derangements of the eye, ear, nose and throat. If you know of a friend who is afflicted, recommend my book.

I want my book to spread the glad news that there is help for those threatened with blindness and deafness, and the knowledge contained in my book, if imparted to those so afflicted, may be the means of restoring them to healthful sight and hearing. I impose no obligations, I ask no favors. I simply want interested people to get my book. It is free. Write for it TODAY.

You get this book without expense to yourself. Fill out the coupon with your name and address. Cut out the coupon, send it without delay.

Hints in House Cleaning.

Freshen and clean wall paper by rubbing from the ceiling downward with pieces of old soft cloth, and these should be changed often for a clean, fresh piece.

When brasses have become dull or tarnished they can be made to look like new by brushing them over with a little brass lacquer or shellac that may be procured at any paint shop or at the drug store.

Fly specks can be removed from gilt frames by moistening with the white of an egg, allowing it to remain about fifteen minutes and then wiping off with a soft cloth.

To clean willow furniture, first brush away all dust and then scrub with strong salt water, and when it cannot be cleaned any longer in this way it can easily be stained or painted any desired color.

An old and faded Brussells or velvet carpet can be given a fresh, new appearance by cleaning thoroughly and wiping off with vinegar water; then when this is dry, go over the carpet, one width at a time, with a good dye, selecting the predominant color in the carpet and apply with a paint brush.

Lace and muslin curtains can be cleaned with very little rubbing by shaking them well to remove the dust and then rinsing through clear water and putting them to soak over night in a light suds. In the morning wash them through hot borax suds, and this is prepared by stirring in a tablespoonful of the powder for every gallon of water used and rinse them through two or three waters. The borax suds are excellent for cleaning carpets and old mattings and for cleaning the floors before putting down the floor covering, and a little of the borax should be used in all the rinsing waters, as it brightens the colors.

Before tacking down new oilcloth or linoleum, let it lie in place and be walked over for several days if you would have it smooth, and they last longer and look better if they are gone over with a mixture of two parts of linseed oil and one part of turpentine, which should be well mixed and applied evenly with a soft paint brush.—M. H.

Make Him Toe the Mark.

"Mother thinks you'll make me a good wife," said the girl's intended.

"Indeed?" replied the girl with the determined jaw. "You tell your mother I'll make you a good husband."—Gateway.

MAY MANTON EMBROIDERY.

A Line of Nice, Useful, Up-to-Date Paper Patterns.

These paper patterns require only a hot iron to insure a perfect transfer on cloth. The way to do it is to lay the material to be stamped on a padded ironing board or table. Place the pattern over it with the printed side down and press over the entire surface of the paper with a hot iron, when a perfect outline will result.

Bodice, Collar and Cuffs.

No. 494.—Design for embroidering a blouse, shirt waist or Princesse gown. Patterns for front, collar and cuffs, or sleeves, are given. The price of the embroidery pattern is 10 cents.

Sprays of Daisies.

No. 496.—Design for embroidering sprays of daisies. Fourteen separate sprays are given. Price of the pattern is 10 cents.

For a Blouse.

No. 492.—Design for embroidering the yoke, front and sleeves of a blouse. Especially adapted to May Manton Pattern No. 6579. Price of embroidery pattern is 10 cents.

Corset Cover Embroidery.

No. 493.—Design suitable for embroidering a corset cover, with or without front closing. For corset cover closing at the front omit center spray. Price of the pattern is 10 cents.

Please send all orders for these embroidery patterns to the **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

Editor and the Office Devil.

Enraged over something the local newspaper had printed about him, a subscriber burst into the editor's office in search of the responsible reporter.

"Who are you?" he demanded, glaring at the editor, who was also the main stockholder.

"I'm the newspaper," was the calm reply.

"And who are you?" he next inquired, turning his resentful gaze on the chocolate-colored office-devil clearing out the waste basket.

"Me?" rejoined the darky, grinning from ear to ear. "Ah guess ah's de cul-ud supplement."—Lippincott's.

The Eternal Feminine.

Queen Elizabeth, in a characteristic rage, had proclaimed the doom of the courtier. "Off with his head!"

The culprit courtier was heard to mutter something to himself.

"What said the caitiff?" demanded Elizabeth.

"May it please your Majesty," faltered one of the guards, "his words were: 'Pretty rough. It is becoming—' "

The Virgin Queen plumed herself; her eyes sought the mirror.

"Ha! Pretty ruff! Truly, the fellow hath good taste, and it were a pity—Let sentence be suspended. We have need of men of good judgment and sound discretion about us. I will hear further what he may have to say."—Harper's Monthly.

Never Touched Her.

"Bridget," began Mrs. Youngbride, timidly, "I don't suppose you would—er—object to my getting an alarm clock—"

"Not at all, ma'am," replied the lazy cook. "Them things never disturbs me at all."—The Catholic Standard and Times.

Don't think of buying before reading it. It is the handsomest piano and organ catalog ever issued. It explains things you ought to know whether you buy from us or not and it is yours for the asking. Write for it now and please mention which you are interested in—piano or organ.

CORNISH CO. WASHINGTON, N. J. Established Over Half A Century.

Please mention Nat. Farmer and Stock Grower.

Spring Relishes.

After the long stiff winter it is a pleasure to get something fresh from the ground. Among the vegetables which may be best wintered in the ground is the salsify or vegetable oyster, pronounced by oyster lovers as a good substitute and relished by some who do not care for the real sea product.

Scrape the brown skin from the roots, putting them at once into water to prevent discoloring. Cut across in thin slices and cook at least two hours in salted water, a small piece of pork being added to give a rich flavor. If the pork is not at hand, add butter to the soup just before serving. Cook in granite or new tin. Iron will turn it dark.

Parsnips are excellent if cut in slices half an inch thick, boiled until tender, rolled in flour and fried a rich brown in meat fryings or lard.

If the cabbage has a slighly wilted appearance soak it in cold water for a few hours before slicing for slaw or salad. It will freshen it wonderfully.

Baked rhubarb is a pleasing dish easily prepared. Cut the stalks in inch pieces. Early in the season it is not necessary to remove the skin, which serves to give a pinkish hue and an additional flavor. Cover with sugar, add water, and, if preferred, thicken with a little flour. Bake until tender.

Grind horse-radish root in the food chopper and mix with vinegar. This is a much more easy way of preparing than grating, and less trying to the eyes. It forms a pleasant relish with meat and may be canned for summer use. Select only the young roots, which are less acrid than the old ones.—Bessie L. Putnam.

The Farm Reformatory.

A writer in a recent magazine article forcibly presents the dangers in the present high prices which prevail in cities. While once it was difficult for the working people to provide more than the necessaries of life, now it is just these necessaries, meat, milk, butter and eggs, from which they are cut off. She states that a few years ago there were three hearty dishes popular with working girls in a city restaurant with which she was familiar—two eggs on toast, a wholesome meat pie and chicken with rice—each costing fifteen cents. Now the price has doubled, or nearly so, and these girls are forced to a cheaper and much less nourishing substitute.

The results are no less alarming to the moral than to the physical condition of the race. Observers state that this condition induces the women to "take to slops, the men to take to drink," all because the farms cannot supply a sufficiency of the necessities of life which will bring the essentials down from the plane of luxuries.

There should certainly in the realization of the condition be a greater incentive to making the acres bring forth the most of which they are capable—milk, butter, eggs and meat. It is a little cycle which has no end, in itself, or in the demand for its components. Milk, judiciously used, produces meat, and from the stock we have milk. Poultry thrive on the waste products of the dairy and fill the egg basket. A more harmonious arrangement can scarcely be found, yet few of us work it to the limits.

Yet aside from the profit we have the assurance that we are aiding in the cause of morality, of temperance. The farm has long been recognized as the store house of the world; it now shows its power in the upbuilding of the nation.—Bessie L. Putnam.

Not In It.

An old darky named Mose White, in one of the Southern States, walked down the main street one morning in his best blackcloth suit, with a white rose in his buttonhole and cotton gloves on his large hands.

"Why, Mose," said the proprietor of a large store that he was passing, "are you taking a holiday?"

"Dish yere," said the old man, in a stately voice, "am mah golden weddin', sah. Ah'm sallybratin' hit."

"But your wife," said the storekeeper, "is working as usual; I saw her at the tub as I passed this morning. Why isn't she celebrating, too?"

"Her?" said Mose, angrily. "She hain't got nuffin' to do with hit. She am mah fo'th."—Harper's Monthly.

Wrong View of Marriage.

"There would be less divorce," said ex-Governor Pennypacker at a dinner in Philadelphia, "if there were fewer men like William Windle.

"William Windle embarked on an excursion steamer for Point Breeze, and a few miles out, as he paced the upper deck and drank in the bracing ozone, he spied his friend Jackson.

"'Why, Jackson, how are ye?' he exclaimed. 'Are ye out for pleasure, or is yer wife along?'"

Is It Coming to This?

Beggar (returning a penny to the giver)—"Excuse me, lady, I can't take less than three cents."

Lady—"Why not?"

Beggar—"Them's the union's rules and if I take less I lose my card."—Meggendorfer Blaetter.

An Ungallant Outlook.

"Again, the ungallant outlook of some husbands causes divorce," said ex-Governor Pennypacker, in a witty, after-dinner speech at Philadelphia.

"It is amazing what an ungallant outlok some men have. I said one day to a Bucks county farmer:

"'Have you got a wife, Hans?'

"'Why, yes, to tell the truth, I have,' Hans answered. 'For the little bit the critters eat, it ain't worth a man's while to be without one.'"

So Soon?

He was telling the young woman about his fine cows and called her attention to a calf grazing not far away.

"That calf is only six weeks old," he said; "isn't he a beauty?"

"Only six weeks old?" questioned the young lady in amazement, "and walking so soon!"—Life.

Home-Made Gas From Crushed Stone and Water

TWENTY years age thé oil lamp had already been driven out of the city into the country home where gas could not follow—so we thought.

In those days we would have laughed at the possibility of gas being used for lighting and cooking in a country home.

CRUSHED STONE

But like the telephone and free mail delivery gas has finally left the city to become a common rural convenience.

In the year 1910, the up-to-date villager or farmer not only lives in a gas-lighted house same as his city cousin, but when he drives home on a cold, wet night he actually lights up his barn, his barnyard or porches on his house with this same gas light by simply pulling a little chain to the fixture.

* * *

And this change seems quite like magic when you consider that this rural gas is home-made—made by the family right on the premises.

Takes fifteen minutes once a month to make all that can be used in a large house.

The magic is all in the strangely weird, manufactured stone known commercially as "Union Carbide."

COOKING

This wonderful gas producing substance "Union Carbide." looks and feels just like crushed granite. For country home use it is packed and shipped from warehouses located all over the United States in sheet steel cans containing 100 pounds.

* * *

Union Carbide won't burn, can't explode, and will keep in the original package for years in any climate. For this reason it is safer to handle and store about the premises than coal.

All that is necessary to make "Union Carbide" give up its gas is to mix it with plain water—the gas, which is then instantly generated, is genuine Acetylene.

Acetylene makes a white light like sunlight and the gas is so pure that you might blow out the light and sleep all night in a room with the burner open without any injurious effects whatever.

On account of its being burned in permanent brass fixtures attached to walls and ceilings, Acetylene is much safer than smoky, smelly oil lamps, which can easily be tipped over.

For this reason the Engineers of the National Board of Insurance Underwriters called Acetylene safer than any illuminant it commonly displaces.

In addition to all these advantages, Acetylene is inexpensive.

An Acetylene light of 24-candle power costs less than the wicks, chimneys, kerosene, etc., consumed by an oil lamp of equal volume.

As a summer fuel for light cooking Acetylene is very economical, considering the fact that it is delivered right in the cooking appliance, is controlled by a thumb screw and burns without soot, ashes or dirt.

* * *

Consider this carefuly and you will hardly wonder at the fact that there are today more than 176,000 town and country homes using home-made Acetylene for lighting and cooking.

Once a month some member of the family must dump a few pounds of Union Carbide in a small tank-like machine which usually sets in one corner of the basement.

This little tank-like machine is automatic — it does all the work—it makes no gas until the burners are lighted and stops making gas when the burners are shut off.

LIGHTING

No city home can be as brilliantly or as beautifully illuminated as any one of these 176,000 homes now using Acetylene.

Won't you let us tell you how little it will cost to make this time-saving, money-saving, beautifying light and ideal summer fuel at your own home?

Write us today how many rooms you have, and receive our estimates and free books giving full information. Just address UNION CARBIDE SALES CO., Dept. A — 156 Michigan Ave., CHICAGO, ILLINOIS.

Prevent and Relieve Headache

"It gives me great pleasure to be able to refer to Dr. Miles' Anti-Pain Pills as the best remedy we have yet had in our house for the prevention and cure of headache. My wife who has been a constant sufferer for a number of years with above complaint joins me in the hope that they may fall into the hands of all sufferers."

JOHN BUSH,
Watervleit, Me.

Used Them Four Years.

"Dr. Miles' Anti-Pain Pills are the best I ever tried for the relief of headache. I have used them for nearly four years and they never fail to give me relief. I have tried many other remedies, but have never found any better."

JOSEPH FRANKOWICK,
854 Trombly Av., Detroit, Mich.

There is no remedy that will more quickly relieve any form of headache than

Dr. Miles' Anti-Pain Pills.

The best feature of this remarkable remedy is the fact that it does not derange the stomach or leave any disagreeable after-effects.

Druggists everywhere sell them. If first package fails to benefit, your druggist will return your money.
MILES MEDICAL CO., Elkhart, Ind.

Nat Spencer, 439 Hall Bldg., Kansas City.

Speculators are afraid to boost the grain markets; the supply is not short enough to permit it.

A Lincoln Story.

"Among Lincoln's circus stories," said a Cincinnati veteran, "was one about a Delaware tough.

"A circus, Lincoln's story ran, visited Newcastle, and the town tough turned out, the afternoon of its arrival, to see what sort of a circus it was.

"A canvasman was making his usual round, shouting: 'Off the guyropes, there! Off the guyropes!' when he came suddenly on the town tough, who was leaning against the canvas tent wall in the sun, smoking a corncob.

"'Ye wuzn't talkin' to me, wuz ye, stranger?' said the tough, hunching up his shoulders very wickedly.

"'Oh, no, sir,' said the canvasman, frightened by the tough's size. 'I only just wanted to warn you, sir, that it's a little dangerous to lean against the tent that way, as the elephant might kick you, sir."

"The tough snorted with contempt.

"'Drat yer elephant,' he growled. 'I'll clean out the hull show, elephant an' all, if ye give me any of yer lip.'

"The canvasman slunk off humbly, and a few minutes later went inside and told the boss. The boss, who weighed over 200 and stood six feet six in his socks, chuckled and took up one of the enormous mallets that were used to drive in tent pegs.

"'Show me where he's leaning,' was all he said.

"The canvasman led the boss to the place where the tough's form made a long, oval dent in the tent wall. The boss, chuckling again, fixed his eye on that spot, just below the tough's coattails, where the dent was deepest, and, swinging the mallet twice round his head, he struck with all his might.

"There was a dull thud, a cry of pain and fear, and the tough leaped ten feet, and than made off down the road as fast as he could run.

"'What's the matter, Peleg?' the inhabitants shouted, as he tore through the town.

"'Been kicked by an elephant,' he replied."

FREE BOOK ABOUT CANCER.

THE LEACH SANATORIUM, of Indianapolis, Ind., has published a book on cancer, which gives interesting facts about the cause of cancer; tells what to do in case of pain, bleeding, odor, etc.; instructs in the care of the patient, and is in fact a valuable guide in the management of any case. The book is sent free to those interested who write for it, mentioning this paper.

Charity, Not Business.

H. C. Frick, crossing on the Campania, said one day of a certain trust:

"Of course they have their excuses and palliations. Who hasn't, even when caught red-handed?

"I remember a Pittsburg divine who remonstrated with a tobacconist for doing business on the Sabbath.

"'Doing business?' shouted the tobacconist indignantly. 'You call selling cigars like these for five cents apiece business? Why, man, it's charity.'"—Chicago Evening Post.

South Texas has already supplied the Middle States with car-load lots of cabbages.

TO WOMEN WHO DREAD MOTHERHOOD!

Information How They May Give Birth to Happy, Healthy Children Absolutely Without Pain—Sent Free.

No women need any longer dread the pains of childbirth, or remain childless. Dr. J. H. Dye has devoted his life to relieving the sorrows of women. He has proved that all pain at childbirth may be entirely banished, and he will gladly tell you how it may be done absolutely free of charge. Send your name and address to Dr. J. H. Dye, 248 Lewis Block, Buffalo, N. Y., and he will send you, postpaid, his wonderful book which tells how to give birth to happy, healthy children, absolutely without pain; also how to cure sterility. Do not delay but write today.

Snails in the Cellar.

A Lancaster county professional man wrote to State Zoologist Surface, Harrisburg, stating that his cellar, built four years ago of limestone, was infested last year with "some animal" that looked to him like a snail. It came out during the night, and left slimy tracks. He asked what to do to get rid of the pest.

Professor Surface replied as follows: "As to what to do for snails in your cellar, I can say that the best thing is to dust freshly-slaked lime abundantly into the cracks or crevices that might be inhabited by these lowly animals. Their bodies are moist, and the freshly-slaked lime is more than they can stand. They can also be killed by poisoning them, dipping fresh slices of potatoes into a mixture of one part of Paris green and thirty or forty parts flour, and placing the slices where the snails will feed upon them. As a rule, however, the lime is sufficient, and this is also good for sanitary purposes."

No Charm For Him.

"Get up Bliffers!" called the friend, pounding upon Bliffers' bedroom door. "Get up and see this beautiful sunrise."

"That's all right," answered Bliffers, sleepily. "I saw it ten minutes ago as I came in."—Chicago Post.

Messrs. Christian & Lang Company of York, Neb., breeders of Aberdeen-Angus cattle, claim October 18th as date of sale at auction to be held at South Omaha, Neb.

Flour is Not High.

Low-grade flour made from hard wheat, classed as second baker's, is selling at $3.00 to $3.25 per barrel at wholesale; clears and first baker's at $3.75 to $4.00. This means that flour that bakers use freely is selling at two cents a pound; straights, a superior flour, is selling at $4.70 to $4.80, and patents, the highest grade of flour, at $4.90 to $5.00 per barrel of 196 pounds.

Made from soft red wheat, low-grade flour sells at $3.30 to $3.50 per barrel; fancy (used by bakers), $3.85 to $4.00; extra fancy (also used by bakers), $4.70 to $4.90; straights at $5.25 to $5.40; and patents at $5.50 to $5.80. The highest grade of flour that bakers use will make fine bread at a cost of five cents for a two-pound loaf.

MAY MANTON PATTERNS.

ery Elegant Fashion Service, With Full Instructions For Ordering and Making.

This is the very best pattern service, and re are very much pleased to obtain it for ur friends and patrons Each pattern is ew and original.

Girl's Dress.

No. 6594.—Simple little frocks as this one re always attractive, always desirable. One f the new chambrays is the material illustrated, and it is trimmed with white linen, but this dress will be found available for all childish materials. It can be utilized for the light-weight wools of the present as well as the washable materials of the future. It can be made as illustrated, or plainer, with the trimming portions omitted, as liked. One of the inexpensive printed wash fabrics made without trimming would make an exceedingly serviceable frock for every-day wear. This one is daintily charming, and the same model made from cashmere or serge with trimming portions of plaid silk would be exceedingly smart for the present and for between-seasons wear.

The dress is made with blouse and skirt. The blouse consists of front and center-front ith the back portions. There are tucks id over the shoulders, and the trimming ortions when used are arranged over the nter-front and stitched to position. The irt is straight and laid in backward-rning plaits. The sleeves are made with pper and under portions. The trimming, hen used, is arranged on indicated lines. The quantity of material required for the edium size (twelve years) is 6½ yards 24 27, 4¼ yards 32, or 3¼ yards 44 inches ide, with ¾ yard 27 inches wide for trimming.

The Pattern 6594 is cut in sizes for girls eight, ten, twelve and fourteen years of e, and will be mailed to any address by the shion Department of this paper on receipt 10 cents.

Sailor Blouse or Shirt Waist.

No. 6577.—The sailor blouse is such a satfactory garment that it is always in mand. This one includes the plaits at the oulders that are among the features of the season. It can be worn with or without the shield, and the shield can be made high or low neck, so that it suits all needs. It is adapted both to the odd blouse and to the gown also, and it will be found available for every material suited to so simple a design. Flannel, light-weight serge and materials of the sort are much liked at all seasons, but sailor blouses also are extensively worn made from linen, poplin, lawn, and, indeed, all simple washable materials. In this case white linen is finished with bands of embroidery.

The waist is made with fronts and back. The plaits are stitched for their entire length t the back; for yoke depth at the front. he front edges are finished with hems, and he sailor collar is joined to the neck. The ll sleeves can be made either to the wrists r cut off to three-quarter length. When made long they are finished in shirt-waist style, and the separate shield is adjusted under the waist and closed at the back.

The Pattern 6577 is cut in sizes for a 32, 34, 36, 38 and 40-inch bust measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Belted Coat With Peplum.

No. 6589.—Belted coats make a novel feature of incoming styles. This one is chic and smart and altogether desirable yet quite simple. It includes a little vest that allows effective use of contrasting materials, it is finished with the long revers that is such a feature of the season, and the peplum extends just below the hip line. All suiting materials are appropriate, and the trimming can be silk or moire velours, or any preferred material, and the vest allows an opportunity for the use of the oriental embroideries, rich silks and the like, while at the same time it can be utilized for plain broadcloth, linen, and materials of the sort. In fact, the coat is a very generally useful and very generally satisfactory one, that will be found available for a variety of materials, silk, wool, linen and cotton.

The coat is made with the body portion and peplum. The body portion consists of fronts, side-fronts, back and side-backs. The collar and blouse are faced and rolled over and the vest is attached under the revers. The sleeves are in two pieces each, whatever their length.

The Pattern 6589 is cut in sizes for a 34, 36, 38, 40 and 42-inch bust measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Girl's Coat.

No. 6586.—Long coats with deep openings are the latest shown for the younger girls. This one can be made in two such different styles that it practically is two in one. With the plaited side portions it is distinctly novel and graceful; without it, becomes a simple plain coat. Both styles are in the height of style. All seasonable cloaking materials are appropriate, but in this case the coat with plaited sides is made of broadcloth; the plain one of cheviot, the former being trimmed with silk. Later pongees and linen will be needed and can be utilized for either style. For the revers-collar either the same or contrasting material is appropriate.

The coat is made with fronts, side-fronts, back and side-backs. When the plaited portions are desired, the sides are cut off and joined thereto. The sleeves are made with upper and under portions in coat style. The collar is joined to the neck and is faced with the fronts, then rolled over on an indicated line.

The Pattern 6586 is cut in sizes for girls of six, eight, ten and twelve years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Russian Blouse Coat With Peplum.

No. 6591.—Every possible variation of the blouse coat is to be extensively worn this coming season, and this one is chic and smart, yet quite simple withal. It includes the slightly full sleeves with deep cuffs that are always pretty and becoming, and it is made with a smooth-fitting peplum that is attached to the blouse beneath the belt. Broadcloth is the material illustrated and it is trimmed with satin, but all suiting materials and those that are used for coats of the sort are appropriate for this one. It will be found charming for linen and similar suitings as well as for those of wool and silk. Pongee would be most attractive so made, and the model is altogether an eminently useful and suggestive one. The big pointed revers are exceedingly smart and also allow excellent opportunity for the use of the fashionable embroidery or braiding. The lines are exceptionally becoming, yet the coat is so simple that very little labor is required for the making.

The coat consists of blouse and peplum. The blouse is made with front and back portions, and the peplum is circular and attached to its lower edge. The collar is joined to the neck and it and the fronts are faced, then rolled over to form the revers. The sleeves are cut in one piece each and are laid in inverted plaits at their lower edges, where they are joined to the pointed cuffs.

The quantity of material required for the medium size is 4⅝ yards 27, 3 yards 44, or 2½ yards 52 inches wide, with 1⅛ yards of silk for bands and trimming.

The Pattern 6591 is cut in sizes for a 34, 36, 38 and 40-inch bust measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Please be sure to give size of pattern ordered and write your own name and address plainly that no mistake can be made to cause delay.

Kindly address all pattern orders to **Hale Publishing Co., 3550 Vista Ave., St.Louis, Mo.**

A CHANCE IN ANY CASE.

Muriel (letting him down easy)—"I should advise you not take it to heart. I might prove a most undesirable wife. Marriage is a lottery, you know."

Malcolm (bitterly)—"It strikes me as more like a raffle. One man gets the prize and the others get the shake."—Smart Set.

FREE TO YOU—MY SISTER

Free to You and Every Sister Suffering from Woman's Ailments.

I am a woman.
I know woman's sufferings.
I have found the cure.

I will mail, free of any charge, my home treatment with full instructions to any sufferer from woman's ailments. I want to tell all women about this cure—you, my reader, for yourself, your daughter, your mother, or your sister. I want to tell you how to cure yourselves at home without the help of a doctor. Men cannot understand women's sufferings. What we women know from experience, we know better than any doctor. I know that my home treatment is safe and sure cure for Leucorrhoea or Whitish discharges, Ulceration, Displacement or Falling of the Womb, Profuse, Scanty or Painful Periods, Uterine or Ovarian Tumors, or Growths; also pains in head, back and bowels, bearing down feelings, nervousness, creeping feeling up the spine, melancholy, desire to cry, hot flashes, weariness, kidney, and bladder troubles where caused by weaknesses peculiar to our sex.

I want to send you a complete ten day's treatment entirely free to prove to you that you can cure yourself at home, easily, quickly and surely. Remember, that, it will cost you nothing to give the treatment a complete trial: and if you wish to continue, it will cost you only about 12 cents a week or less than two cents a day. It will not interfere with your work or occupation. Just send me your name and address, tell me how you suffer if you wish, and I will send you the treatment for your case, entirely free, in plain wrapper, by return mail. I will also send you free of cost, my book—"WOMAN'S OWN MEDICAL ADVISER" with explanatory illustrations showing why women suffer, and how they can easily cure themselves at home. Every woman should have it, and learn to think for herself. Then when the doctor says—"You must have an operation," you can decide for yourself. Thousands of women have cured themselves with my home remedy. It cures all old or young. To Mothers of Daughters, I will explain a simple home treatment which speedily and effectually cures Leucorrhoea, Green Sickness and Painful or Irregular Menstruation in young Ladies, Plumpness and health always results from its use.

Wherever you live, I can refer you to ladies of your own locality who know and will gladly tell any sufferer that this Home Treatment really cures all women's diseases, and makes women well, strong, plump and robust. Just send me your address, and the free ten day's treatment is yours, also the book. Write to-day, as you may not see this offer again. Address

Consumption Book FREE

This valuable medical book tells in plain, simple language how Consumption can be cured in your own home. If you know of any one suffering from Consumption, Catarrh, Bronchitis, Asthma or any throat or lung trouble, or are yourself afflicted, this book will help you to a cure. Even if you are in the advanced stage of the disease and feel there is no hope, this book will show you how others have cured themselves after all remedies they had tried failed, and they believed their case hopeless.

Write at once to the Yonkerman Consumption Remedy Co., 3923 Water Street, Kalamazoo, Mich., and they will gladly send you the book by return mail free and also a generous supply of the New Treatment, absolutely free, for they want every sufferer to have this wonderful remedy before it is too late Don't wait—write today. It may mean the saving of your life.

The Individuality of the Farmer.

Success in farming depends very largely on the individuality of the farmer. By individuality is meant the combination of qualities that go to make up a person. Some farmers will succeed with great odds against them. Others will fail, even if all the conditions are favorable.

In a little Illinois village the writer was talking with a hotel keeper respecting a young farmer loitering on the street corner. The hotel keeper said: "That young fool has blown in three farms. He inherited one farm from his father and two others from relatives, and has spent his time in dissipating in the village till his property is about all gone."

Here was a young man that was so constituted that with all things in his favor he had made a failure of farming. The fault was not with farming, but with the man himself. There was absolutely no chance of such a man succeeding, no matter how much he might have to assist him. The moral fiber was lacking.

At the base, the battle of life depends on the constitution of the person. The farmer in preparing his own sons to go out into the world must take cognizance of this. The individuality can be influenced by influencing the qualities that go to make up the boy.

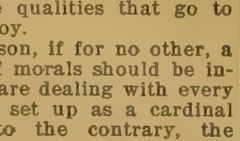
For this reason, if for no other, a high quality of morals should be inculcated. Square dealing with every one should be set up as a cardinal virtue. But to the contrary, the writer has known of men that taught their sons to lie in the buying and selling of the farm products and supplies. To teach a boy to lie is to inculcate a quality that will surely work against him in the future. In the long run truth is triumphant, and the advantage gained by lying is but temporary.

In these days there is another quality that is becoming more and more important, and that is the quality of being alive to the investigations of the principles that underlie successful farming operations. It is probable that this stands next to moral stamina in securing success in farming. It is certain that with the growing poverty of some of our lands this quality will have to exist in the men making success with such lands.

We have known some farmers that were so set in their ways that they would not be able to acquire such a quality, no matter how desirable. Such farmers can succeed only under fairly favorable conditions. The knowledge that is being acquired relative to the constitution of the soil and the crops taken out of the soil must be assimilated to be useful, and happy is the farmer that still has this power of assimilation. If one has it not naturally he should acquire it by every means possible.

Just how old a man has to be to have lost the power of acquiring new qualities we do not know. Up to that time every man can control to a large extent the making of his own individuality, because he can acquire new qualities and choke out old ones. Many of us can remember in our own lives having done this, much to our own advantage and the advantage of society generally.

$1000.00 IN PRIZES



To be Given Away. Contest FREE and open to everybody. Help the "100,000 Club" and earn big reward. Write today for particulars. Contest conducted by The Fruit-Grower, St. Joseph, Mo. Box 107

First Prize $500 Auto
Brush Runabout shown above
Second Prize $100 in Cash
Ten Other Prizes Ranging from $75.00 to $25.00 Each

WHICH PRIZE WILL YOU GET

The Fruit-Grower is the world's leading fruit and farm magazine. January—Special Spraying Number; February—Gardening Number; either issue worth a dollar—sample free. The "100,000 Club" is a National Organization to benefit fruit growers in a practical way. Everyone will want to join. Send coupon today, get busy and earn a prize.

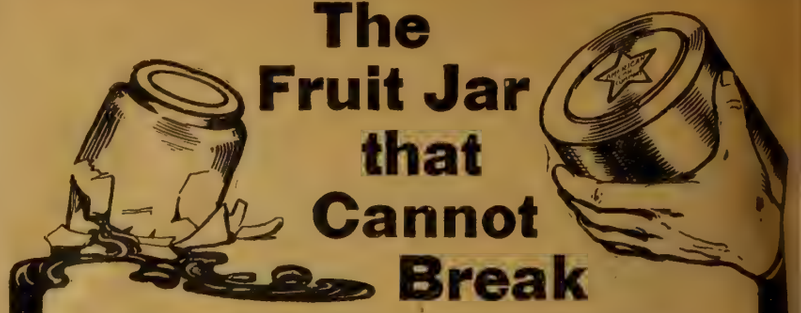
The Number of Meat Packers.

Mr. Geo. L. McCarthy, of New York, who is Secretary of the American Meat Packers' Association, gave evidence before the United States Senate Committee that was inquiring into the cause of high-priced food products. He startled the committee by declaring that while there were over 900 slaughtering establishments in the United States doing an interstate business at the time the meat inspection law went into effect, only about 300 now have government inspection. Over 600 packers, he declared, stopped doing an interstate business rather than subject themselves to federal inspection and meet the expenses necessitated by the reconstruction of their plants according to governmental regulations and the losses incurred through the condemnation of live stock which they had purchased that might be adjudged unfit by the inspectors.

The evidence of Mr. McCarthy will open the eyes of the people who believe that the packing trade is in but few hands. Interstate business requires compliance with federal inspection methods, and it is only the large houses that can satisfactorily comply with them; the consequence is that the more stringent the regulations are the greater is the tendency towards concentration or monopoly in the meat trade. This is one of the difficulties of the situation. Federal inspection is necessary for interstate and export business, and cannot be done away with; but the state laws should be the same as the federal laws, and every animal slaughtered should be inspected and enter into inter-state trade, if desired. In slaughtering meats there is great competition between local houses of the better class that never did and never intended to do an interstate business, and some of the houses do not wish to kill a class of live stock that would stand any kind of inspection.

The Fruit Jar that Cannot Break



Save money on your preserves this year. Put up your fruit in

American "Star" Wax Top Can

Keeps your preserves perfectly and saves you money. Costs one-half less than glass jars. Sanitary and economical. Unbreakable and light-proof. Made from special quality extra coated tin plate.

Seals air-tight with wax or paraffine.

Don't pay the "Star" price for cans not *half* so good. Be sure to get the can with the "Star" on the top and bottom. Plain or indexed top.

Sold by all grocers and dealers in crockery, glassware and household furniture.

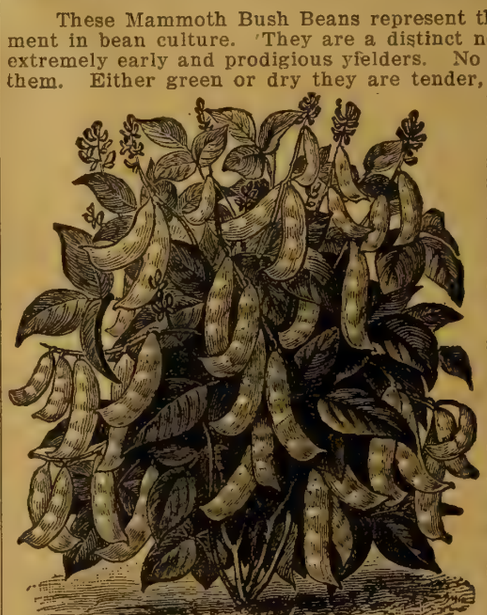
AMERICAN CAN COMPANY
NEW YORK CHICAGO SAN FRANCISCO

The fact remains, however, that every regulation that has been adopted for the purpose of injuring the great packers has in some way or other finally resulted in their benefit for the reason given by Mr. McCarthy, which is, that those who cannot comply with the laws have to stand aside and leave the interstate field to the greater corporations.

The American people do not first buy their food and afterwards spend their surplus money for luxuries. The American people buy their luxuries first and after they have wasted a large portion of their earnings they have not enough money for food. The American people spend about 60 per cent. of their money for luxuries and 40 per cent. for necessities.

MAMMOTH BUSH LIMAS THE KING OF ALL LIMA BEANS.

These Mammoth Bush Beans represent the latest and highest achievement in bean culture. They are a distinct new creation of enormous size, extremely early and prodigious yielders. No other Lima can compare with them. Either green or dry they are tender, rich and buttery—possessing the exquisite "Lima" quality in the highest perfection.



Great Clusters of Mammoth Pods — Extra Early—Delicious Quality—Continuous Bearers—Immensely Productive.

Of true bush form, with strong, stiff stalks, healthy, sturdy growth—requiring no poles or stakes. Plants are two feet high, densely loaded with great clusters of well-filled pods. They bear early and continuously from July till frost.

Every family should grow an abundance of these luscious beans to supply their own table the year round.

Mammoth Bush Limas are marvels of earliness and productiveness. Not to plant them would be a distinct loss. I want every reader to grow them—and also get up clubs among their friends.

Big money can be made growing these beans for sale. Let your children have a good-sized patch — and all the money they can get from it. It will pay—(and help make them love the farm—and you).

True headquarters stock. Large two-ounce packet, 10 cents—three for 25 cents—twelve for $1.00. Thirty-six packets and a beautiful, jeweled watch (ladies or gents), all prepaid for only $3.00.

Now is your time to grow these "money-making" beans and make a lot of profit—besides getting a valuable guaranteed watch free.

Order at once. My new Seed Catalog (full of big bargains in seeds and premiums) also Premium Coupon will accompany the seeds. Club agents wanted at every postoffice. My terms beat the world.

Order at once and name this paper—and I will add free a nice present for your wife, sister or sweetheart—one they will value highly. Do not miss it. Address, **A. T. COOK, Seedsman, Hyde Park, New York.**

SELECTED POETRY.

THE PROPHET.

Old Ellery Gregg, when the weather was fine,
When the sunlight was bubbling and sparkling like wine,
When the skies were as bright as the dreamings of boys,
And the day seemed to be running over with joys,
Would squint at the sky and drink in the fresh air
With a look of distrust and be moved to declare:
"Ye may think it's spring, but th' winter ain't quit!
I bet ye we pay for this fine weather yit!"

Old Ellery Gregg, when the autumn was long
And the birds tarried late and the open brook's song
In November was heard and the big yellow moon
Made the fields near as light as the sun did at noon,
When the earth was aflame with its yellow and red,
Would look with distrust and a shake of his head
"It ain't human natur'—this here kind of thing!
I bet ye we ketch it nex' winter, by jing!"

Old Ellery Gregg, when the winds whistled keen,
When the snow lay knee deep all the fences between,
When the boards creaked and snapped in the walk down the street,
When the wires sang with frost and the limbs hung with sleet,
Would tramp down the street with a challenge so grim
In his eyes as though this had been ordered for him:
"I tel' ye, by gum, that th' winter ain't quit;
I tel' ye we'd pay fer that fine weather yit!"
—J. W. Foley, in Globe-Democrat.

A SCALEY STORY.

A Major loved a maiden so, Do.
His warlike heart was soft as
He would often kneel to her and say:
"Thou art my life and only Ray.
Oh, if but kinder thou wouldst be,
And sometimes sweetly smile on Me.
Thou art my earth, my guiding star;
I love thee near, I love thee Fa.
My passion I cannot control—
Thou art the idol of my Sol."
The maid suggests his asking pa,
The Major cries: "What, I? Oh, La!"
The Major rose from bended knee,
And went her father for to Si.
The father thought no match was finer—
The Major once had been a Minor.
They married soon and after that
Dwelt in the rooms all in one Flat.
So happy ends this little tale,
For they lived on the grandest Scale.
—Young's Magazine.

WEATHER SIGNS.

The sun is bright, the sky is clear,
But granma says a storm is near;
And when I asked how she could know,
She said the peacock told her so,
When, perching on the old fence rail,
He screamed so loud and dropped his tail;
And the shy cuckoo on the wing
Repeated over the same thing;
And "More wet!" all the bob-whites cried
That in the grassy meadows hide;
The soot that from the chimney fell
Came down, it seems, this news to tell;
The kettle sang the self-same tune
When it boiled dry so very soon;
The grass this morning said so, too,
That hung without a drop of dew;
And the blue swallows, flying low
Across the river, to and fro.
So all these told her very plain
That ere the evening it would rain;
But who told them, and when, and how?
That's what I want to find out now.
—St. Nicholas.

IT'S DIFFERENT NOW.

In days of old,
Ere storage-cold
In Marketdom held sway,
No eggs were packed
In crates and stacked
To wait some future day.

But every hen
Was fruitful then,
Because it was the style;
They daily laid
The egg that made
Their happy owner smile.

At break of day
Her cheerful lay
Around the farm would buzz,
And fifteen cents
Was recompense
Sufficient by the doz.

But now we pay
For each fresh lay
Three times the price of old.
The hens all know
This fact is so—
They're worth their weight in gold.

Ah, yes, they're wise,
And don't disguise
The fact they know their worth.
Cold-storage men
Have made the hen
The proudest bird of earth!
—E. A. Brininstool, in Los Angeles Express.

THE WISE ONE.

There was a man in our town,
And he was wondrous wise;
He didn't do the strenuous life
Nor go the pace that flies.

He didn't hit an auto up
Until he caused a wreck
From which they later picked him out
With broken bones or neck.

He didn't seek the upper air
In ships that fly around
Until they drop a cog and drop
Their contents to the ground.

He didn't drive a rapid horse
That loved to burn the road
Until he ran away like mad
And smashed the wagon-load.

He didn't buck the Wall street bunch
As either bull or bear
Until he finished up with it
And left his wad down there.

He didn't blow his millions on
The great white way by night,
Nor mix up in the social whirl
That sweeps the cash all right.

He didn't even try to skip
With Brown's or Jones' wife;
But bravely sought in every way
To live a simple life.

And so he lived—until one day,
Just how did not appear,
A street car caught him on the track
And ended his career.

Beneath the sod the wise one rests;
We wipe our weeping eyes
And wonder in a town like ours,
Why should a man be wise?
—Exchange.

LEGEND OF THE SWEET BRIAR.

The chill wind wailed o'er Bethlehem,
And flowers were seen no more;
A leafless briar rose shivered
Beside the stable door.
The stars shone clear above her,
And by their glimmer light
The shepherds on the hillside
Kept watch that winter night.

But when the choir of angels
Burst forth in joyful strain
That echoed through the stillness,
O'er town, and hill, and plain,
The briar rose by the doorway
Peeped in and tried to see
The blessed Chirst-Child resting
Upon his Mother's knee.

When, lo! her withered branches
Were clothed in living green,
And scented ruddy rosebuds
In beauty fresh were seen;
And since that hour the briar rose
Retains that fragrance sweet,
Which long ago she lavished
Before the Savior's feet.
—Pall Mall Gazette.

IN THE NEW COUNTRY.

I want Lucille. I've grubbed on this old Section now for months and lashed the stubborn acres with my steel,
And now my heart, all human-like, cries out —I want Lucille.
The cabin is quite finished—every crevice mortared, and the roof
Is fit for any rain. The stove is set
And all the dishes patient on their shelves;
The bed with its checked coverlet is there
In its own corner, and the chair
I made for her is rocking empty in the breeze;
The nails on which to hang her things are driven
And the mirror placed at her own height, a little less than mine.
Out in the shed the Alderney is tied, and Bess, her mare,
Is coated for the fall. The saddle on its form
Is waiting, as am I, just for Lucille.
It's strange, isn't it, how strong a man can be
And yet how lonesome he can feel?
But I don't care—I want Lucille!
—Richard Wightman.

Haste and Waste

Stop and think for a moment the next time you are about to buy soda crackers.

Instead of hastily buying soda crackers that go to waste because broken, soiled or soggy, buy

Uneeda Biscuit

in separate five-cent packages. Soda crackers in large packages soon become broken, stale and unpalatable. On the other hand, Uneeda Biscuit in handy, moisture proof packages are *always* fresh, clean, crisp and whole—*not one wasted.*

NATIONAL BISCUIT COMPANY

OBSERVATIONS OF REV. GABE TUCKER.

You may notch it on de paling's as a mighty resky plan
To make your judgment by de clo'es dat kivers up a man;
For I hardly needs to tell you how you often come across
A fifty-dollar saddle on a twenty-dollar hoss.
An' wukin' in de low-groun's, you diskiver, as you go,
Dat de fines' shuck may hide de meanes' nubbin' in a row!

I think a man has got a mighty slender chance for Heben
Dat holds onto his piety but one day out o' seben;
Dat talks about de sinners wid a heap o' solemn chat
An' nebber draps a nickel in de missionary hat;
Dat's foremost in de meetin' house for raisin' all de chunes,
But lays aside his 'ligion wid his Sunday pantaloons!

I nebber judge o' people dat I meets along de way
By de places whar dey come fum an' de houses whar dey stay;
For de bantam chicken's awful fond o' roostin' purty high
An' de turkey-buzzard sails above de eagle in de sky;
Dey ketches little minners in de middle ob de sea;
An' you finds de smalles' 'possum up de bigges' kind o' tree!
—J. A. Macon, in Epitomist.

20 Year Guarantee

Solid Gold Filled 5.95

It seems impossible but we mean just what we say. A genuine solid gold filled watch for $5.95. Both case and works fully guaranteed. Double hunting case, fancy engraved. Genuine full seven ruby jeweled Movement of Standard American make, quick train lever escapement, stem wind and set and fully guaranteed for 20 years. SEEING IS BELIEVING. Cut this out and send it to us with your name and address (and your nearest express office) and watch will be sent at once by express. If satisfactory after examination pay express agent our bargain price $5.95 on express, charges and it is yours. We furnish this watch in Gents Size or Ladies Size. State kind wanted. Gents size or Ladies size.
Order today. Address R. E. CHALMERS & CO., 356 Dearborn St., CHICAGO.

KIDNEY AND LIVER TROUBLES

Stomach and Lung Troubles

Or a Weak Circulation of the Blood Can Be Cured Without a Drop of Medicine

Magnetic Shields Make the Blood Circulate

We Prove it to You

We Prove Every Statement We Make. We Do Not Ask You To Take Our Word For It.

We simply want you to give us a chance to prove the truth of the claims we make for the curative value of MAGNETIC SHIELDS.

We guarantee our shields to be perfect in every respect, and to retain their power. We show you they have cured hundreds of cases where medicine had failed to do any good. They have cured these cases after they had been given up to die. Give us a full statement of your case today, and we will advise you FREE OF CHARGE just what can be done, and will show you cases like yours that have been cured by MAGNETIC SHIELDS after medicine had failed to do any good.

It is your duty to investigate. If we prove our claims, YOU WILL WANT MAGNETIC SHIELDS. We give the proof. **YOU ARE TO BE THE JUDGE.**

Hardening of the Liver—Complicated with Severe Stomach Trouble—Completely Cured and Forty-three Pounds of Flesh put on in Six Months.

THACHER MAGNETIC SHIELD CO., Chicago, Ill.

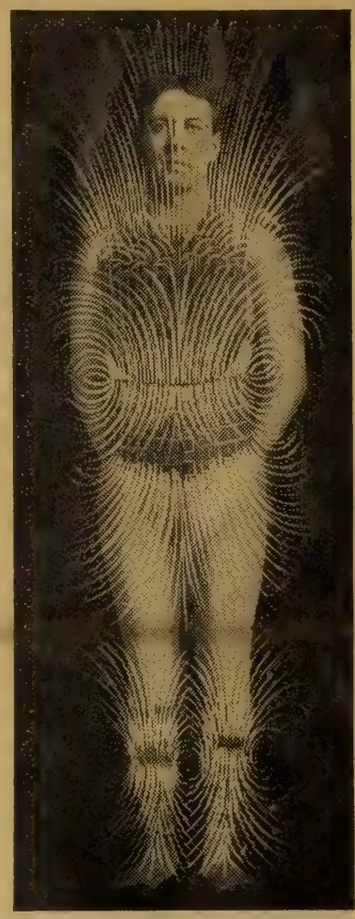
Gentlemen: I feel that I have a duty to discharge in giving my experience with the use of your Magnetic Shields for the cure of a most serious complication of Stomach and Liver trouble, that very nearly proved fatal to me, feeling that the cure in my case should be classed as simply **wonderful.**

While traveling on the road as wholesale dry goods salesman, I was taken seriously ill with a terrible distress in the pit of my stomach. I employed the most skillful medical talent for about two years, and under the best treatment in this line, continued to grow worse, until the physicians considered my trouble an incurable case, and did not anticipate I would live more than three months. My former weight had been 190 to 195 pounds, and I was reduced to a living skeleton, my color being a dirty yellow, and having a general mummified appearance. Fortunately at this time, about the 1st of December, I met a gentleman who had been cured by using your Magnetic Shields, and on his recommendation purchased the Shields and wore them faithfully. In thirty days I had gained ten pounds in weight, and by the first of July I had gained forty-three pounds and weighed 170 pounds.

I took no medicine whatever after applying the shields, and have not had a sick day since, nor even an ache or a pain, and eat and digest any and all food my appetite may crave. I am now past seventy years of age and enjoy as good general health as when a boy of ten. My case has attracted great attention here in Danville, where I am well known.

My confidence in Magnetic Shields is so great that I recomend them to every person who is not enjoying perfect health, and you have my permission to refer any one to me who wishes to know more fully the details of my case. I am

Very truly yours,
JOS. R. PATTON,
Danville, Pa.



If you are so skeptical you must have proof on your own body before you can believe, try a pair of our foot batteries. They will convince you.

OUR NEW BOOK FREE

"A Plain Road to Health"

It tells the cause and cure for every form of disease and gives the most valuable information on the subject of Magnetism. Simply send a statement of your case. We will send the book free with our letter of advice.

We Make Shields for Every Part of the Body for the Treatment of Every Form of Disease.

The accompanying cut shows how Magnetism is radiated from the Lung Shield, Belt and Lower Leggins into all the vital organs, as well as lower extremities, giving new life and activity to the circulation from head to foot, thus strengthening all the vital organs and large nerve centers and assisting nature in the work of eliminating diseased conditions by reason of the better circulation of blood that is established as soon as the Shields are applied. This set of shields contains over eight hundred powerful Magnetic Storage Batteries, that are guaranteed to hold their power and will never have to be recharged.

Serious Complication of Lung, Stomach and Kidney Trouble. A Marvelous Chicago Recovery.

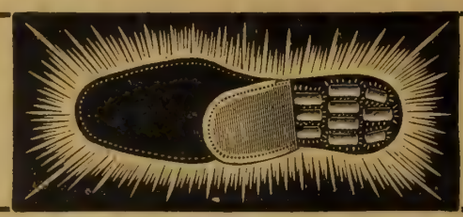
DR. THACHER.

Dear Sir: It gives me great pleasure to testify to the perfect cure I have gained by using your wonderful Shields. After suffering fifteen years with stomach troubles, although doctoring the greater part of the time, I kept getting worse, until I was the victim of a severe complication of stomach and kidney trouble, which a year and a half ago all seemed to go to my lungs. Had dreadful pains, lost my appetite, could not sleep, became so very weak I could hardly walk across the floor, and not able to do my work. At times when my pains were not so severe I would try to read, but could not for more than five minutes at a time, as I was very nervous. My family and friends thought I could not live another month. I was getting tired of taking medicine. Nothing helped me. I happened to see your advertisement in the paper, which read, "Magnetism Cures Without Medicine." I thought "While there is life there is hope." So just one year ago today I put on your wonderful Magnetic Vest, Leggins and Insoles. The result was a miracle, for in two days I felt relieved; in a week, very much better; in three weeks entirely cured.

Words can not express how thankful I am to you for your kind advice; also for the treatment, to which I owe my life. May you live long for suffering humanity's sake. May your great and sure cure be known a great deal better than it is today.

Yours respectfully,
MRS. O. RAY,
654 Hirsch St., Chicago, Ill.

WARM



FEET

The greatest comfort and luxury of modern days; magnetic fire under your feet. The greatest life protector known; your feet keep warm all the time, even in the coldest weather. A sensation of life, warmth and comfort that you have never experienced before. A pair of our **Magnetic Foot Batteries,** the smallest shields we make, worn in the shoes, will convince the most doubting skeptic of the curative value of Magnetism. If you want evidence that speaks louder than words—if you want positive proof, get a pair of the Foot Batteries today and insulate your body against the cold, damp earth. They are worth ten times their price for this insulation alone. The Single Power Foot Batteries are $1.00 a pair or three pairs for $2.00. The Double Power, or the Compound Foot Batteries, are $2.00 a pair, or three pairs for $4.00 postpaid. Send size of Shoe when ordering Foot Batteries.

WHITE PLYMOUTH ROCKS—Considered to be equal to Barred Plymouth Rocks as general-purpose fowls, and particularly distinguished as dressing to suit the market for high-class roasters.

AGRICULTURAL BLUE BOOK.

Announcement of the Second Edition Soon to be Issued.

We publish the Agricultural Blue Book and Live Stock Breeders' Directory. It contains three departments. One department consists of a list of firms who by the nature of their business should have their names and addresses appear in such a work. This is called

THE BUSINESS SECTION.

It includes a great variety of agricultural implement manufacturers, seed merchants, dealers in and manufacturers of dairy, poultry, veterinary supplies, nurserymen, and all classes of reliable people in towns and cities whose names are legitimately useful for farmers to have in their houses for reference. It is arranged alphabetically by states, giving in each case the name of the firm, the street and number, the town and the business engaged in. In the last edition the Business Section contained 4,500 entries.

THE COUNTRY SECTION.

The Country Section is made up of a select alphabetical list by states, consisting of names and addresses of experimental farmers, live stock and plant breeders, seed, fruit, grain and dairy farmers and ranch owners. This is a select list of the largest land-owning farmers and stock breeders and raisers in America. The list gives the name, address and the special line of agriculture the farm may be devoted to. In the first edition this list occupied sixty-five pages, containing 11,050 names. By careful selection this list will be increased in the next edition to 20,000 names and addresses.

A MARKET SECTION.

In order to furnish farmers, dairymen and live stock and poultry raisers with a book that will be useful to them in every way, we have decided to include a section to be devoted to the market interests. It will be arranged by states and in alphabetical order and include live stock commission agents at all markets, East and West, horse and mule commission, grain salesmen and commission firms selling butter, cheese and eggs, etc.

CONCERNING ADVERTISING.

Each page is eight inches long, two columns wide. Advertisements will not be admitted except from those who are entitled to entry in the book. Page rate, $25.00; half page, $15.00; quarter page, $8.00; single inches, $3.00. Each advertiser receives a free book. Every advertisement is placed where the name is entitled to appear, unless special position is paid for. We invite single inch advertisements of live stock breeders.

BOOK SUBSCRIPTIONS.

The Farm Edition in stiff paper covers will cost $1.50; this in order to secure a large farm subscription. The Business Edition for office use will cost $2.50 per copy. Subscribers can pay in advance or after delivery. All pay-in-advance subscribers will be entitled to have their names appear in capital letters. For order blanks address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

5 Cents a Copy. Published Monthly by The Hale Publishing Co. 50 Cents a Year.

and Stock GROWER

Practical Farming and Gardening.

This is a book of 500 pages, 6x7¼ inches to the page. It is a complete farmers' instruction book. The feeding chart is worth a ten-dollar bill to any stock farmer. Soil fertility, drainage, grain crops, gardening, truck growing, fruits, forestry, pruning, grafting, budding, injurious insects, plant diseases, spraying, cattle, sheep, horse raising and feeding, treatment for diseases, silos and silage, poultry, handy rules and farm cookery, are a few of the subjects. There are eighteen three-column pages of index. If you look for something you find it. We have adopted this book as a subscription premium. Send One Dollar and we will send you **Practical Farming and Gardening,** postage paid, and The National Farmer and Stock Grower for two years. This is a grand offer. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

The Favorite Corn Husker.

This Corn Husker is more largely sold than any other on the market. We have therefore selected it as a seasonable subscription premium. It is made for the right hand. The hook sets at any angle to prevent glancing. Opening or closing the small end of the plate adjusts a fit to any size hand and prevents chafing.

The improved shape of the plate and leather makes this hook the favorite. We will send The National Farmer and Stock Grower for one year and the Favorite Corn Husker for fifty-five cents. It takes five cents for mailing and the Corn Husker is a free premium. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Local Losses of Land Fertilization.

One that has lived in different parts of the country has forced upon him the diversity that exists in local ideas as to the fertilization of land. Let us compare, for instance, the idea of the New England farmer with that of the farmer in the Mississippi Valley.

The man brought up on a New England farm has the idea firmly implanted in him that nothing can be done without the application of fertilizer in some form, except on the lands devoted to pasturage and the production of hay.

Usually the New England farmer does not put into a cultivated crop more land than he has fertilizer for. So firmly is this idea fixed that even the land that has been manured for a hundred years must every year receive its portion of fertilizer.

This accounts largely for the large relative productiveness of these lands. A reference to the statistical tables published by the government will show that the per acre yield of land devoted to wheat is much larger in Maine than in any Western state, say Illinois. This is due solely to the practice of fertilization on the Maine land and its non-practice in the West. The Eastern man puts in an acre or two of wheat, while the Western man puts in one or two hundred acres.

On one Maine farm in the memory of the writer there was always grown a half acre of wheat. That land was heavily manured every year, the manure being applied broadcast. It was plowed, re-plowed, harrowed, cross-harrowed and given every treatment that would make it possible for the rootlets of the wheat to get hold of the fertility scattered in the soil. The farmer always counted on getting twenty-five bushels of wheat from that half acre. This wheat was spring wheat, and in the fall after harvesting it was taken to the local flour mill and ground into flour, which supplied his family with bread for the whole ensuing year. This is but to illustrate the fact that annual fertilization, even of the wheat crop, results in the production of a large yield under normal conditions of soil and temperature.

But the farmer that has grown up in the West has an inherent indifference to the problem of fertilization, though he is gradually getting rid of that indifference. In the beginning, Western soil was so rich that it needed little or no fertilizer outside of the fertility contained in itself. For many years no fertilization was given, and the habit of cultivating the raw soil became a fixed one. The large area annually plowed made the application of fertilizers a very difficult one.

Yet big as the problem is, it must be worked out, for the lands have deteriorated so largely in their producing power that the loss is great. That is, a certain unit of labor will produce more profit on productive land than on unproductive land, and we have passed the point where we can ignore the demands of the soil for additions of material out of which to make plant food.

Money invested in fertilizers is profitable, even in the West.

Australian Meats Arrive.

During the week ending April 16th a consignment of fresh meats arrived from Australia and was sold in New York City for what it was worth and what it would bring. In other words, it was sold for all the selling agents could get in about the highest and meanest market for meats. American meats were slow sale at strong prices, and the Australian meats had an active market at less prices—say three cents to four cents a pound less than other meats usually sold to the same class of trade.

The Australian meats come here for several reasons; all good ones. The Australians are short on population at home; their markets are overstocked; the English frozen-beef trade is not at all brisk; they wanted to try a new market. New York looked pretty high to them, and lastly, and the most important reason, is that when Congress took off the tariff on hides Congress also reduced the tariff on meats from 2 cents to 1½ cents a pound.

But the Australian meat did pay 1½ cents a pound duty, and we rejoice at that. There will be some questions raised as to whether the producer or consumer paid the tax, and to decide it we will answer that whether the meat was taxed or not, the price was the same—as before stated—the meat was sold for all they could get and no more than they could get on the market. What the meat originally cost in Australia cuts no figure on the market here.

The 1½ cents a pound was deducted from the money that went for this meat to Australia, and this same 1½ cents a pound that did not go back to Australia did go to the support of the United States government, which is a good thing, as the government needs the money, and, failing to get it one way, would get it in another. The other way would be from us. The government cannot get at the Australians, but we are here all the time.

Had this meat come in duty free it would have sold for neither more nor less. Had it come in free of duty, the Australian net result would have been 1½ cents per pound more, and the United States government net result would have been 1½ cents per pound less.

That is the way hides are coming in, free of duty; the foreigner takes home the 15 per cent. duty formerly paid; the government of the United States gets nothing, and the United States citizens make up the difference. The foreign shippers give us the laugh.

Next time Congress revises the tariff, unless American farmers assert themselves as Protectionists, they will have the duty taken off beef. And when the duty is off beef, the beef raisers will not be such good customers of American manufacturers and American retailers. The Australians and New Zealanders have sense enough to be Protectionists, if we are not. The money that goes to Australia will not support American industries.

Notwithstanding this article is written about Australian beef, we have in mind another and more dangerous country, and, when the trade begins—look out for Argentina!

Recent Fur Quotations at St. Louis.

Receipts light, but all meeting ready sale (top prices for Northern): Raccoon, 40 to 80c. each; mink from 15 to 50c. for Nos. 3 and 4 up to $3.00 and $4.00 for prime and Northern; skunk, 50c. to $1.25; opossum (trash out), 15 to 40c.; muskrat, 45 to 55c.; fox, 25c. to $4.00; otter, $1.00 to $12; beaver, 50c. to $8.00; bear, $1.00 to $10; wolf, 25c. to $4.00; wild cat, 25 to 75c.; house cat, 10 to 20c.; civet cat, 25 to 40c.

bigger, better wheat!

means bigger, better profits. 16 bushels of wheat per acre is a pretty fair yield in the West In Maine, by FEEDING THE SOIL, they raise from 30 to 40 bushels. All plant life needs nitrogen, phosphate and potash No matter how plentiful any TWO of these elements are in the soil, if the THIRD is lacking, the crop yield will be SMALL. The element that exists in the LEAST amount FIXES the size of your crop. Many times a small investment in

"EMPIRE" FERTILIZERS

has doubled the yield of a farm. "EMPIRE" fertilizers have been standard for 28 years—prepared by practical farmers and soil scientists WHO KNOW. There is an "EMPIRE" Brand for every need of every soil and every crop.

Write today for booklet giving complete facts about fertilizers, their uses, results, cost, etc.—suggests ways to make MORE money from LESS land. You'll say "The most valuable book I ever read."

EMPIRE CARBON WORKS, 419 Locust St., St. Louis.

AGENTS WANTED in unoccupied territory. Many farmers as well as dealers make money selling "EMPIRE" fertilizers. Write for particulars and terms.

Increasing the Yield of Oats.

The following is an extract from Farmers' Bulletin No. 338, issued by the United States Department of Agriculture, prepared in the office of Experiment Stations, A. C. True, Director:

"Perhaps the most practical seeding method of increasing the yield of oats is the use of the drill instead of the broadcast seeder. At Urbana, Ill., in 1905, the average difference in yield between oats planted with the drill and those planted with the broadcast seeder was twelve bushels, and on each of the eighteen plats it was in favor of the drilled portion. In 1907 the difference was in favor of the drilled oats in eleven cases, in favor of the broadcast oats in five instances, while on the remaining two the yields were exactly equal. In 1908 the drilled oats were planted at the rate of two bushels per acre and the broadcast sowing made at the rate of three bushels. Out of thirty sowings made, eighteen yields favored drilling, while nine favored broadcasting, and in three cases the yields from the two methods were exactly equal. The average yield from drilling was 1.6 bushels greater than that from broadcasting, which, together with the saving in seed, gives this method an advantage of 2.6 bushels. It is seen that the weather conditions during the growing season make a great difference as to the relative yields obtained by these methods. Similar tests at DeKalb showed a net average of 2.7 bushels in favor of drilling as compared with broadcasting. The most marked difference at this station was shown on timothy sod, where four bushels per acre represented the advantage of the drilled oats over those sown by broadcasting. For two years at another point, land previously in corn, seeded to clover at the last cultivation of the corn, and planted in oats in 1906, showed an average difference in yield of 3.6 bushels per acre in favor of the drilled fields.

"It has been found that plowing does not take the place of drilling, but that the advantage of drilling over broadcasting is even more marked upon plowed land than upon land disked before seeding. Plowing the land produced an increased yield of two bushels per acre, which was insufficient to pay for the difference between the labor of plowing and that of disking. In some instances the impossibility of harrowing in the oats immediately after they are broadcasted emphasizes the advantage of the drill, which both plants and covers at the same operation. The three Illinois fields quoted are representative of widely differing conditions, and show an average difference in yield of 3.9 bushels per acre, indicating the possibility of increasing the production of oats in this state alone by over 13,000,000 bushels annually, without any increase in acreage or improvement in other particulars. At the market price of 32.2 cents per bushel, this would mean an increased income of more than $4,000,000 to the oat producers. The increase in yield on thirty-five acres, it has been estimated, will pay for a drill in a single year. The difference in cost of sowing is almost nothing, as the experience of careful farmers indicates that the time and labor required to drill land is practically equal to that required for harvesting it once and going over it with a broadcast seeder.

"'This would certainly represent the minimum of work that could be done in each case. If, besides this, the broadcast land needs to be disked, while the disk-drilled land needs only to be harrowed, the drilled land would require less expense.' A drill properly cared for 'should not cost over $2.50 to $5.00 per year, depending upon size of drill and amount of land sown. * * * The question will likely arise as to what kind of drill to use. To this it is only necessary to reply that the only practical kind for corn-belt farmers is some good make of disk drill. The disk drill is the only kind we know that will not clog in going through an ordinary amount of cornstalks or other refuse on land. A good disk drill will do this without much trouble. Perhaps the disks should be eight inches apart rather than closer together for this mechanical reason.'"

Not Too Much Acreage.

Mr. J. H. Chamberlain, of Morgan county, Ill., who raised fifty-five bushels of wheat to the acre, is reported as saying that farmers in general seem irresistibly impelled to sow a large acreage rather than try to get a large yield per acre. He produced 1,045 bushels of wheat on nineteen acres.

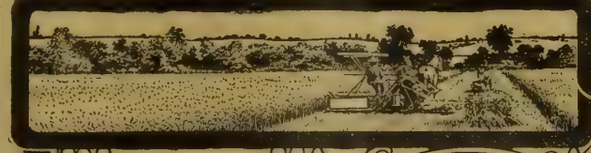
Speed of the Age.

This is a rapid age. A Richmond (Ind.) girl was a bride at 13 and a grandmother at 28; and an Oakland man meets a girl on Sunday, marries her on Monday, leaves her on Wednesday, attempts suicide five days later, becomes reconciled, then disappears. Going some. — Oakland (Cal.) Enquirer.

American Corn in Scotland.

According to the Consular and Trade Reports of the Department of Commerce and Labor American corn is being used in large quantities in the manufacture of Scotch whiskey. The general impression is that we sell corn as food, not as drink. The foreign buyers take great liberties with American farm products.

PREPARE NOW



MAKE THE HARVEST CERTAIN

YOUR time and careful judgment cannot be used to better advantage than in preparing well in advance for the proper harvesting of your grain crops.

Take no chances of delays, with experimental harvesting machines. Don't risk the choice of one or two neighbors, because you must buy for many years' service as well as this year's harvesting.

It is necessary that you be prepared with efficient harvesting machines if you are to reap all the profit that your harvest should yield.

Right now is the time to ascertain whether or not you need a new harvesting machine—binder, mower, reaper, hay rake, tedder—it does not matter so much which machine you need, the principle is the same.

You should start today to look over your equipment—ascertain what you will need.

There are many points to be considered in selecting a harvesting machine. If it is a binder you need, you should have a machine that is efficient, dependable and durable, and then the machine should meet your particular requirements—and to do all this it is necessary that you take sufficient time to properly consider the selection of the new machines.

Buy wisely—safely—on the verdict of thousands of farmers of America and all over the world who have cut out the failures and choose from standard makes of the famous I H C Line of Machines.

Champion McCormick Osborne
Deering Milwaukee Plano

Why waste your valuable time—patience—labor, and sacrifice part of your crop this year and every year in experimenting with unsatisfactory machines? Others have taken all the experimental risk for you—if you act wisely now.

Don't wait until you must "buy in a hurry." That is not necessary, because an I H C Dealer is right near you and will, any day, show you just the I H C machine adapted to your particular needs.

He will also take your reservation order for reliable binder twine on which you should take no risk this year. The late market may be flooded with inferior grades of experimental twine. It's important that you investigate these facts and your I H C Dealer has the details to show you—and the proof of quality on all machines and I H C brands of binder twine.

Then, too, remember that with the strongest and most reliable guarantee given on any machines in the world, you also have the satisfaction of knowing that I H C interchangeable parts are quickly at hand—through your I H C Dealer. No waits. No delays. No annoyance. Perfect workmanship and materials of highest quality are guaranteed by the experience of over half a century in I H C machines. Make your harvest certain.

We urge upon you the importance of deciding this matter now; because, if you put it off until a more convenient time, the chances are that you will never give the subject proper attention. You, no doubt, think there is plenty of time—but the harvest season will be upon you the first thing you know. Therefore, consider this harvesting machine question, now, while you have the time to give it proper study. Write for any information you may need to help you make a wise decision.

Ask the I H C dealer for catalogue of the machine you want. If you do not know the dealer nearest you, ask us.

Take your choice of machines. The quality is the same in all—the best possible.

Don't experiment with binder twine, either. Get one of the seven perfectly dependable brands of twine and be sure. Choose Champion, McCormick, Osborne, Deering, Milwaukee, Plano or International—in Sisal, Standard, Manila and Pure Manila brands.

If it is not convenient to see an International dealer, write for full information and the catalogue you want.

Value of the Muskrat.

On account of the increasing scarcity of fur-bearing animals, considerable interest is being manifested in the muskrat. Both the fur and the meat are staple articles in some of the markets of the East and Middle West during the winter months. The furs are used largely by fur dressers and dyers and are made to closely imitate the more costly furs, thus creating a continuous demand for the pelts.

Owners of marsh lands have already made the trapping of muskrats profitable, converting otherwise useless lands into income-producing investments. Many lease the trapping privilege to those who make a business of trapping.

Farmers' Bulletin No. 396, "The Muskrat," gives a description of its general habits, methods of trapping and the value of its fur and flesh. It will be sent free by Senators, Members of Congress and the Secretary of Agriculture, Washington, D. C.

The American Stockman says: "Sheep are great soil renovators and weed eradicators, but the man who would make a profit on them should not get the idea that they are simply scavengers."

CREDIT Subscriptions.

◆ ◆ ◆

Three Years For One Dollar, Payable at the End of the First Year.

We desire to invite attention to our blank form at the end of this item, which can be filled out for subscriptions on credit. This is an invention of Uncle Piper, our subscription editor, who has guaranteed that every one of them will be paid when they are due. The subscription price of this paper is $1.00 for three years, and the bill for the subscription is sent to the subscriber at the end of the first year. When the bill goes out Uncle Piper generally slips in a list of handy premiums for the subscriber to select one, providing he pays the bill promptly, and the general result is that the bill is soon paid. When it comes to getting subscriptions from intelligent, high-class farmers, Uncle Piper is at the head of the class.

The Price of Corn.

It is a common saying that a farmer don't know anything about what he is going to get for his crop. That is one of the common errors. Any farmer raising 5,000 bushels of corn can contract his crop six months in advance. All he has to do is to put up the security that he will not fail to deliver the goods. The closing Chicago Board of Trade quotations on April 30th were for May delivery No. 2 corn, 58¼ cents a bushel; July delivery, 62¼ cents; September, 63½ cents; and December, 58¼ cents.

St. Louis Wool Market.

Those who have wool clips for sale should write to A. J. Child & Sons, St. Louis, Mo., and obtain their 1909 wool circular. St. Louis is a first-class wool market for the shipper, and it has often been the means of preventing disastrous declines in values when other markets were demoralized. Many mills buy in St. Louis that do not buy anywhere else, and the Eastern markets can be lifeless when St. Louis is active. Messrs. Child & Sons handle wools strictly on commission, and the firm is absolutely reliable. See page 17.

The Price of Wheat.

The best instantaneous crop report indicator is the Chicago Board of Trade. Every hour of every business day reports are received there, and every change in the market is noted. Foreign crops are also reported on. Wheat being a world's crop, is studied from that standpoint. On April 30th the closing quotation for wheat to be delivered in May was $1.08¼; for July delivery, $1.03¼; and for September, $1.01⅝ a bushel. These figures represent buying and selling quotations, money put up to guarantee receipts by the buyer, or delivery by the seller.

The Price of Oats.

If a farmer wishes to know what his oats are likely to be worth on the market at almost any time, he can do no better than consult the Board of Trade quotations. There is no other way. The President of the United States cannot help him, neither can the Secretary of Agriculture, but on the Board of Trade legitimate sales are being made every day. At Chicago, on April 30th, trading was on the following basis: For May delivery, 41⅛ cents; July, 40½ cents; September, 38¾ cents; and December, 39¼ cents.

Future Trading Necessary.

Every man who makes a contract with any city, state or national government has to speculate in futures. Contracts are all made for a year. The contractor is under bonds to deliver the goods, and if he loses money, that is his look-out. Some people simply say they are opposed to gambling; there is, however, just as much gambling in entering into a government contract as there is in contracting to deliver grain or any other produce in the future. Commerce cannot be conducted without speculation any better than a dairy without a cow. Many a time legitimate commerce is called gambling by people who don't know the difference; furthermore, the gamble is largely in the intent.

Ropp's Commercial Calculator which we offer as a subscription premium is a very valuable work. At first it seems a little complicated, but after a few times in use it becomes familiar and very useful. Read about it on another page.

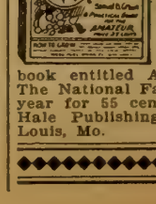
FOR THE FRUIT GROWER.

Someone in the family ought to be a fruit grower; and yet it is very hard to interest the stockman in fruits. We will do our best, however, by placing a good fruit book in the hands of our readers. The book entitled Amateur Fruit Growing was written by Samuel B. Green, a practical man and one of the best authorities on the subject. There are 134 pages written with special reference to the growing of fruits for the home and the market. We will send the book entitled Amateur Fruit Growing and The National Farmer and Stock Grower one year for 55 cents. Send a money order to Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.



AutomobileSense

You can save enough on the purchase price of your car to make the gas and oil free for several years and get from us

ANY STANDARD RELIABLE HIGH-GRADE MAKE

AUTOMOBILE

AT ⅓ OF ORIGINAL COST.

They are used cars, secured from owners getting 1910 models, also from overstocked manufacturers, who have traded them in. THE FACT THAT THEY HAVE BEEN USED, HOWEVER, DOES NOT MAKE THEM ONE BIT LESS VALUABLE FOR PRACTICAL SERVICE, because it is proven that CARS OF QUALITY ARE BETTER AFTER HAVING BEEN BROKEN IN THAN WHEN NEW, and every car we sell is thoroughly inspected, and, when necessary, repainted, so that even in appearance they are equal to new. So, excepting for the pride of getting a car that has never before been run and paying its fancy price, you can

GET JUST AS GOOD VALUE AND QUALITY AT ⅓ OF THE COST.

Among the excellent cars now ready for PROMPT DELIVERY are such well-known makes as Peerless, Pierce, Packard, Oldsmobile, Rambler, Lozier, Thomas, Stoddard-Dayton, White Steamers, Wintons, Maxwells, Buicks, Fords, Reos, and all other standard makes in

Runabouts.....from $100 to $1,250
Small Touring Cars.. " 550 to 1,150
Large Touring Cars.. " 650 to 2,500

We are sure to have the car you want, and every car we sell is guaranteed to be exactly as represented.
Send for our instructive and interesting Bulletin giving prices and description of hundreds of cars.

National Association of Farmers.

In our last edition we said that there ought to be an association of land-owning, tax-paying and employing farmers organized upon the lines of the associations of the great business world.

We say it again. There are numbers of good associations representing special interests, such as the Live Stock Breeders', the Fruit Growers' and Grain Growers' Associations, but not one of them is lined up as a protective-tariff association, advocating distinctly and positively the protection of all farm products and all manufacturers' products and all United States products by the levy of customs duties on foreign imports for the purpose of making the foreign products pay their share towards the support of the government of this country, and as distinctly opposing every so-called free-trade movement which advocates extending foreign products entry free of duty in order and for the express purpose of reducing the value of our home-grown, tax-paying productions.

If the land-owning, crop-growing, employing, tax-paying farmers do not organize such an association they will repent it in sackcloth and ashes. No man should be allowed to join it unless he be owner of a farm in operation, and no man be allowed to enter unless he subscribe his name as a supporter of the tariff laws for protecting American industries against the admission of any competitive foreign goods unless a duty is paid on them surely equal and more than our own products are taxed by city, county, state and federal governments.

We need to be doubly armed and organized, for there are two elements to contend against; one is the Free-Trader, who is working for foreign interests against our own, and the other element is the one who is in favor of protection for his own goods and who is in favor of taking away the protection from your goods. We expect farmers who agree with us to signify their willingness to join the National Association of Farmers, formed for the purpose of consistently watching over the interests of the farmer in upholding such duties as now exist and to advocate and insist upon the restoration of such duties as have been recently removed.

Addicted to Agriculture.

The Saturday Evening Post is unfortunately addicted to agriculture. It perpetrated the great Alaska wheat fake upon a million readers, and has now selected Hon. F. D. Coburn as a market expert and has misled the million once more. Mr. Coburn is a great man; his books on alfalfa and swine husbandry have given him a lasting place in the Hall of Fame; but his article, "Does the Farmer Get His Share?" in the Saturday Evening Post of April 9th, is so full of misinformation and false conclusions that we imagine Coburn was never guilty of writing it. The article leads people to believe that the commission charges, yardage and other expenses at the stock yards eat up a large proportion of the amount paid for the farmers' hogs, whereas all these stock yard expenses combined don't amount to much over 20 cents on a twenty-five-dollar hog. The Saturday Evening Post ought to get the accounts of sales of hogs, cattle and sheep at any or all of the markets and tabulate them and show the result. Then Mr. Coburn's article should be re-written in an intelligent manner in accordance with the facts and the "clap trap" cut out.

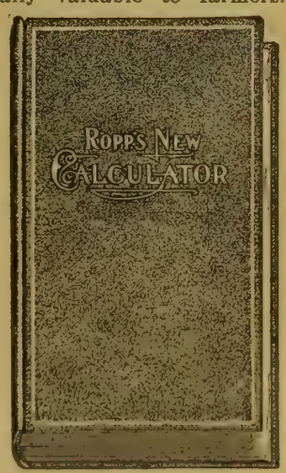
When the journalistic trained misinformers and jungle writers arrive at the preordained conclusion that black is white, people who know the facts simply smile and let it go at that; but Hon. F. D. Coburn, Secretary of the Board of Agriculture of the state of Kansas, ought to do better, for it is his business to know something of market methods, and his very article more than any other shows ignorance of the farmers' opportunities and of the competitive features of the market, and will mislead every man who puts faith in it. We have confined ourselves to the criticism of but one section of his article relating to the market for hogs. If Mr. Coburn was to act as a buyer of hogs for just one day, and on that day there were not too many hogs for sale on the market, he might not be able to buy any hogs, but he would very likely be a wiser man at night than he was in the morning.

The Earth and the Comet.

In the middle of April the earth passed over and beyond the future path of the comet. At the present time the earth and the comet are moving away from each other as fast as they can. The comet is between the earth and the sun, but is rapidly passing out of range, and when it passes out of sight will not reappear for seventy-five years. About the 20th of May the comet will begin to appear as an evening star. It will be seen in favorable position May 27th to June 5th. Whenever the comet is seen our readers will understand that His Majesty has left us and the tail is bidding us good-bye.

Ropp's Commercial Calculator.

This is a standard book and a revised, enlarged and improved edition. There are millions in use. Ropp's Commercial Calculator is specially valuable to farmers. By



its regular use many hard problems become easy. It will prevent mistakes, relieve the mind, save labor, time and money, and do your figuring in the twinkling of an eye. As handy as a watch, always ready and reliable. Anyone who will send fifty cents for one-year's subscription to this paper, The National Farmer and Stock Grower, can select one copy of Ropp's Commercial Calculator as a free premium. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

While we are trying to injure the cold-storage plants with injurious and unnecessary legislation, the paternal government of Canada is paying a third of the cost of erecting them.

The Date Book History of Live Stock and Agriculture.

The editor of The National Farmer and Stock Grower has collected historical items relating to agriculture and live stock raising and arranged them in the order in which the incidents happened. It is a record which is intensely interesting to all earnest farmers and progressive stockmen. The events recorded include much that is ancient and is brought down through the ages of progress to about the year 1906. This material is all arranged in a handy booklet of 100 pages; it is nicely illustrated and is a handy, useful publication. We will be glad to send a copy, postage paid, to any of our readers on receipt of 25 cents, or we will credit one-year's subscription to The National Farmer and Stock Grower for 50 cents and we will send a copy of the Date Book History of Live Stock and Agriculture as a premium. Address, HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

Get our FREE Books and Get More Profit from Your Farm

The Business Farmer doesn't sell out and buy new lands. He makes his old lands new by fertilizing.

Get our Free Books which go into the whole subject of Nitrate of Soda fertilizing and show how little it costs to get larger crops and more profits.

Nitrate of Soda

is an investment that's bound to pay. Thousands have proved it. So can you.

HAY Nitrate of Soda, used 100 lbs. to the acre has increased the yield of barn-cured Hay 1000 lbs.

CORN Nitrate of Soda, used 100 lbs to the acre, will increase the yield of corn 280 pounds of grain.

ALFALFA Nitrate of Soda is also highly successful in starting Alfalfa right.

Special directions and books on the crops *you* are interested in—free of charge and postpaid.

Strawberries in Missouri.

According to T. C. Wilson, Secretary of the State Board of Agriculture of Missouri, the cost of bringing an acre of strawberries up to harvest time has been figured by an extensive grower as follows: Rent for one acre, $5.00; plowing and preparing the ground, $2.50; 5,000 plants (standard varieties), $15; expense setting plants, $5.00; cultivating fifteen times, $7.50; hoeing three to four times, $10; mulch and spreading same, $5.00. Total, $50.

The Secretary of one of the Strawberry Growers' Associations writes: "On soil that will produce from thirty to forty bushels of corn per acre, without the use of any fertilizers, the average minimum yield of strawberries will be 100 twenty-four-quart crates, and the average maximum yield 200 twenty-four-quart crates." These estimates are probably for strong and vigorous plants grown in fields not "cultivated with a mowing machine."

Another Secretary writes: "The yield varies greatly, so does the price. For instance, this year (1909) all well-cultivated fields in this section returned to the grower from $80 to $150 per acre, net, while fields that were four or five years old and somewhat neglected returned from $10 to $75 per acre. Last year the general average was probably $40 per acre, the light yield being due to late frosts. One hundred crates to the acre is considered a good yield. We count 60 cents per crate as the cost of crates, picking and delivering to the cars. Our average this year is about $1.85 per crate, or $1.25 net." The Missouri strawberry season is a short one, harvest continuing only about thirty days—say, for an ordinary season, from May 15th to June 20th.

Storage of Seed Potatoes.

Seed potatoes, like table stock, should be stored as cold as possible without frost. Light injures the flavor of table potatoes, which should be kept in the absolute dark. Light is a benefit to seed potatoes, as it toughens the skin and retards sprouting. Hence potato cellars should be partitioned so that the seed may be in the light and the eating potatoes in the dark.

Potatoes in large piles or in unventilated cellars often heat so that they will not grow well, and if for seed, are most vigorous if stored in boxes, crates or open barrels, or if thinly spread upon the floor.

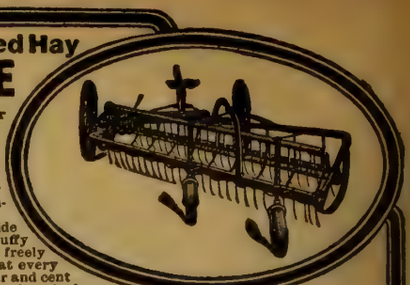
Dirt should be carefully screened out of seed potatoes, before they are stored, because much dirt among potatoes tends to heat them and stop the circulation of air. If potatoes have been frozen in the ground and put in storage, they should be sorted over, the third week, to remove the rots, as the rotten potatoes tend to heat and kill the seed.

Every potato man should have two cheap thermometers tested in slush for correctness at thirty-two degrees Fahrenheit, one for the outside of the house and one for the cellar, and by opening and closing doors and ventilators and letting in cold or keeping out warmth or cold, he should hold the potatoes from thirty-two to thirty-five degrees all winter, and fight back the spring rise in temperature as much and as long as possible.

After the temperature gets up to forty-five degrees, the potatoes should be thinly spread out and shoveled over once a week, or oftener, to discourage sprouting.

The first sprouts that come are the most vigorous and afford a sort of natural selection. If potatoes were set by hand, like cabbage plants, it would be well to have these first sprouts started before setting. Where planters are used, seed potatoes should not sprout at all, until their most active sprouts start after the tubers are in the ground.—C. L. Fitch, Colorado Agricultural College, Fort Collins.

Make Top-Priced Air-Cured Hay with the DAIN Side Delivery RAKE



There are two kinds of hay; the kind that is air cured and the kind that is not. Air cured hay is easily worth seventy-five cents to a dollar more per ton. If hay is left in the swath to bleach in the sun, its juicy richness is boiled out, and it is robbed of its greatest feeding value. If hay is packed into dense windrows with an ordinary rake, air cannot penetrate and furnish the circulation necessary to carry away the moisture.

The Dain way is to air cure hay with the Side Delivery Rake by turning it into continuous fluffy windrows through which drying wind and air will freely pass. The Dain Side Delivery Rake insures that every smitch of juice and goodness, nutrition and dollar and cent value will be dried right in. It's the rake that handles the hay gently without bruising or breaking off the tender leaves. It sends the hay dry to the barn with all its *natural green color* and *richness.*

This is the DAIN WAY to Air Cure Your HAY

More than making top-price hay, the Dain Side Delivery Rake is the most durable, simple, practical, easily operated rake on the market. It is built by specialists, who for 25 years have done nothing but build hay tools, rakes, mowers, stackers, loaders, presses. That's why more Dains are used. Ask your dealer to show you the Great Dain Line, or tell us what hay tool you are interested in, and we will send you complete information and valuable book—"*All About Hay*"—it's free

DAIN MFG. CO.
828 Vine Street OTTUMWA, IOWA

Exclusive Features
Teeth may be raised or lowered.
Teeth turn with gentle motion harmless to tender products.
Rakes clean, leaves trash and dirt.
All jars absorbed by cushion springs.
Easy regulation of bevel gears.
Easily adjusted to handle light or heavy hay.

Free Trade and Protection.

Free trade in general is based upon the idea that the more we buy of foreign countries and the less we buy at home of our own people the more prosperous we will be. On the other hand, protection is based upon the idea that the less we buy of foreign countries and the more we buy at home of our own people the more prosperous we will be.

That is the whole of it. There is no more. The man who expends more than he receives, goes broke; the family that takes in less than it pays out, comes to poverty; the country that buys of foreign nations more than it sells, is on the same road to the poor house.

This country has heretofore sold more products than it has purchased. That is the reason why this country has been prosperous, because we did not admit foreign goods without having them pay some tax towards the support of the government. Foreign productions ought to pay tax as well as and more than our own. That is our position, the position of The National Farmer and Stock Grower. Don't let anybody forget it.

Argentine Chilled Beef.

The Department of Commerce and Labor is authority for the following:

"From Buenos Aires Consul-General R. M. Bartleman reports that the Swift Beef Company and H. & W. Nelson, owners of the English Nelson Line, have signed a contract by which the latter agrees to convey 1,200 tons of chilled beef weekly from La Plata, Argentina, to Liverpool. Mr. Bartleman's letter, under date of February 24, continues:

"Ten boats are to be put on this service, of which a 6,000-ton vessel is to start immediately, and the three under construction, of 10,000 tons each, as soon as launched. Six new vessels are to be built or purchased. Each of these steamers is to carry 3,400 tons of chilled or frozen meat, and is to make the run in twenty-two days. Should all these arrangements be carried out, it is expected that the export of chilled beef from Argentina will increase by 100 per cent. All these new vessels will be fully equipped with excellent refrigerating machinery.

"It has been stated that negotiations are nearly completed for a fortnightly service from La Plata to London of steamers carrying chilled beef, and it is extremely probable that such a line will be started within a year. The export trade of Argentina in preserved meats of all kinds is assuming larger and larger proportions, and affords good openings for the investment of American capital on a large scale."

Try Kerosene Engine 30 Days Free

Gasoline Prices Rising.

You can't run a farm engine profitably on gasoline much longer. Price of gasoline going sky high. Oil Companies have sounded the warning. Kerosene is the future fuel and is now 6c to 10c a gallon cheaper than gasoline. The Amazing "Detroit" is the only engine that uses common Lamp Kerosene (coal oil) perfectly. Runs on gasoline, too, better than any other. Basic patent. Only 3 moving parts. Comes complete ready to run. We will send a "Detroit" on free trial to prove all claims. Runs all kinds of farm machinery, pumps, saw rigs, separators, churns, feed grinders, washing machines, Silo fillers and electric lights. Money back and freight paid both ways if it does not meet every claim that we have made for it. Don't buy till you get our free catalog. 2 to 24 h. p. in stock. Prices "stripped," $29.50 up. Special demonstrator agency price on first outfit sold in each community. 2,000 satisfied users. We have a stack of testimonials. Write quick. (52)

Practical Barn Plans.

This is the name of the best book out. Every farmer needs it. It contains drawings, pictures, plans, specifications and everything necessary and up-to-date for a barn, stock shed, wagon shed, corn barn, smoke house, ice house, silo, dairy barn or any other conceivable outbuilding on the farm. Not only one plan of each, but many of each are shown with all the latest inventions and contrivances for saving time, money and labor.

Each and every plan in the book is accompanied by a lengthy written description, explaining and giving the details of the drawings, and so worded and arranged, numbered and indexed, that it must be readily understood by anyone who reads it.

The price of this book is One Dollar, and we include one-year's subscription to The National Farmer and Stock Grower. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

How to Drain Farm Lands.

In addition to other necessary elements, soil must contain a certain percentage of water in order to yield the largest possible returns. A perfectly dry soil is dead and worthless for producing crops. On the other hand, a soil completely saturated with water will produce nothing but aquatic plants, and hence is worthless for cereals and other valuable products.

Surface drainage is accomplished by open ditches, which in addition to receiving and removing water from the surface of land contiguous to them, may, if sufficiently deep, act as receiving drains for water which percolates through a porous substratum through which the ditches are excavated, and under such conditions facilitate underdrainage as well as carry off water from the surface.

Underdrainage is that which directly affects the soil and puts it in condition for plant production. The use of drain tiles for this purpose introduced in England about the year 1810 has increased to such an extent, and the art of using them has been so perfected, that the tile drain is now regarded as the best type of underdrain. Well turned clay pipes of circular form, one to two feet long, are laid through the soil in a continuous line upon such a grade that any water which finds its way into them will be carried by gravity to some lower point, thus conveying the surplus away. The water enters the lines of tile through openings, left between the ends of the "joints," as they are commonly called.

The drain being surrounded by soil, the spaces of which are filled with water, the water in the soil flows by gravity through the crevices between the ends of the tiles, thus entering the drain, and passes off more or less rapidly, according to the grade upon which the line is laid. The process does not leave the soil without moisture, but only removes the surplus, leaving just enough moisture to keep the soil in a fertile condition.

In order to get the best results in a system of drainage, the work should be laid out with a leveling instrument. No one can be relied upon to guess a grade correctly, nor can anyone arrange a system of grades with economy and at the same time get the best possible work out of the system, without first knowing the facts as determined by a dependable leveling instrument. The slight grades upon which lines of tiles may be laid with satisfactory results are a surprise to many; indeed they were regarded as entirely impracticable until the experience of recent years proved the contrary. Lines of tiles laid on a grade as low as one-half an inch per 100 feet in firm soil will operate successfully, providing the lines are not too long, while drains laid on grades of one to two inches per 100 feet may be counted by the hundreds of miles and their successful operation is attested by thousands of acres of cultivated lands. It is not difficult to impress upon the mind of anyone who will give the matter attention the fact that such work must be laid out with accuracy, and this can not be done without the aid of a dependable farm level.

The success of thousands of farmers in draining their lands with modern methods emphasizes the fact that every farmer should by all means have a dependable farm level. This little instrument will pay for itself in the saving effected by eliminating several days' fee for the surveyor or civil engineer, and the owner will be equipped for life with an instrument which will enable him to do his own terracing, ditching, irrigation work, road building, leveling, house foundation work, running fences, laying out orchards, etc.

We are glad to be able to advise our readers that the market now affords an absolutely reliable telescope farm level at a price within the reach of all, thus filling a long-felt want among land owners.

Adding Value to Land.

By the judicious use of fertilizers and a proper system of crop rotation, the College of Agriculture of the University of Missouri was able to add 16½ bushels an acre to the corn yield on an experimental farm at Billings, Christian county, Missouri. The application of the same methods increased the yield of wheat from nine to eighteen bushels and added a ton of clover hay to the acre.

These results were obtained on a field typical of the rolling upland of that section of Southwest Missouri known as the Springfield group of soils. The top soil is reddish brown to gray and the subsoil is usually a bright red. The soil is deficient to a marked degree in nitrogen and phosphorus and only slightly deficient in potash and lime. In the experiment made by the college, cowpeas, phosphorus, potassium and lime were used. The tabulated results of the experiment are given in a bulletin just issued by the Agricultural Experiment Station. The bulletin is by Prof. M. F. Miller and C. B. Hutchison.

PROTECTION from LIGHTNING is what this TRADE MARK represents

In the last sixty years, more property–live stock, grain and buildings—and more **human lives** have been **saved** by COLE BROS. FRANKLIN LIGHTNING ROD than by any other Rod ever made. That is because it is a perfect and scientific Lightning Rod, and the *only Rod* whose efficiency has never been sacrificed or cheapened.

COLE BROS. FRANKLIN LIGHTNING ROD

is the **world standard** of protection; not the **cheapest** but the **best.** Its patent couplings, bronze and platinum points and ground connections form a *continuous* channel, by which electricity passes off to the earth as harmlessly as water from your roof. Every foot *guaranteed.*

BEWARE of cheap *imitations* and flimsy *wire* substitutes offered by the unscrupulous. Look for the initials CBFR on *every section* and for the full trade mark as above on *all packages.* Don't take anyone's word for **CBFR** it, see that they are there for yourself. These letters are YOUR Protection as well as OURS. When it comes to **CBFR** protecting life and property remember that Cole Bros. Franklin Lightning Rod has *never failed* in sixty years.

COLE BROS. LIGHTNING ROD COMPANY

310 to 320 South Seventh St., St. Louis, Mo.

OLDEST LARGEST BEST

In addition, the bulletin contains valuable advice on the handling of this soil. In this respect it is similar to two other bulletins recently issued by the Experiment Station on the series of experiments being made in various parts of Missouri to determine the best methods of handling the different soil types.

The Springfield group of soils to which this bulletin refers is found in the following sixteen counties of the state: McDonald, Newton, Jasper, Barry, Lawrence, Dade, St. Clair, Henry, Benton, Hickory, Polk, Greene, Webster, Christian, Stone and Taney.

The bulletin, No. 86, may be obtained free by writing to F. B. Mumford, Director of the Agricultural Experiment Station, Columbia, Mo.

Protection a Good Policy.

There are numerous magazine and newspaper writers engaged in a campaign to denounce the American protective tariff, and they do not stick at any statement, whether it be true or false. The protective tariff, however, has so much to recommend it that not one single article produced in a foreign country should be admitted here without paying an import tax, unless it be articles or commodities which this country needs and does not produce. The proposition that our American products shall be taxed by our city, our county, our state and our federal governments, and that foreign goods and manufactures shall come in free in competition with our double-taxed products, is a stupid proposition; and it was a great national, foolish, ignorant blunder when the duty was taken off hides. The duties that used to be collected for the support of the government now go into the pockets of the importers.

The Great Invention.

The men in the Pullman smoker were arguing as to who was the greatest inventor. One said Stephenson, who invented the locomotive and made fast travel possible. Another declared it was the man who invented the compass, which enabled men to navigate the sea. Another contended for Edison. Still another for the Wrights.

Finally one of them turned to a little man who had remained silent.

"Whom do you think?"

"Vell," he said, with a hopeful smile, "the man who invented interest was no slouch."—Lippincott's.

Heraldry.

She (on the liner)—"So you've crossed the ocean quite often?"

He—"Hundreds of times. Why, do you know, I actually recognize about half the waves we meet."

She—"Indeed! By their crests, I suppose."—Boston Transcript.

O. D. **subject to examination.** Outfit includes Level, Tripod, Graduated Rod and Target, full instructions and a copy of Bostrom's Book **"Soil Salvation"** of 25 years experience in **draining** and **irrigating.** Send your order TODAY to—

BOSTROM-BRADY MANUFACTURING CO., 1107 Pine St., St. Louis, Mo.

The National Farmer and Stock Grower.

(Title Registered in U. S. Patent Office.)

Published monthly by The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Subscription Price, 50 cents a year, or $1.00 for three years.

Entered at Postoffice at St. Louis, Mo., as second-class matter in January, 1901.

"Land can be improved and its productiveness increased just as easily as it can be worn out, or its productiveness decreased, and whether it takes one course or the other depends on the farmer and what he does." This paragraph is from a bulletin entitled "Soil Management" by Prof. W. L. Hutchinson, of the Mississippi Agricultural Experiment Station.

The best farmers are not all on the best farms. Many a man has performed wonders on a poor farm. There are men who have good farms now who started in debt, without buildings, money, little credit and the simplest kind of implements.

The best-posted people consider wheat worth a dollar a bushel after the harvest, and they may only be guessing.

Uncle Piper, our subscription editor, is never better satisfied than when there are more jokes than common sense in the paper.

It seems strange that in April, when all the fruit was reported killed, we were eating strawberries in St. Louis from four different states.

April was a troublesome month, and no end of damage was done to vegetables, fruit and grain, but we will have to make the best of it, and find, as we will, that a cold snap and many cold snaps in April will not close out the agricultural interests of the United States of America. If we buckle down to business, it may yet be a very good year.

The performance should always be judged by the opportunity. A twenty-bushel crop on fifteen-bushel land is a better mark than a fifty-bushel crop on sixty-bushel land.

Practical Farming and Gardening as advertised on page 2 as a subscription premium would be cheap at ten times the price.

Husking time is over and yet the husking is not all done. It is handy to have a first-class corn husker hanging in the barn. See page 2.

Australian meats arrive in New York, pay the duty for the support of our government and sell for what such meat will bring. Read about it on page 2, also on page 19.

When a dairy expert compares the product of a cow with the value of a steer he usually forgets that the steer does not have to be milked every day. Furthermore, the steer is calved, raised, fattened and marketed before the cow gives a drop of milk. The cow needs a man attendant to every fifteen and the steer needs a man to every fifty. See page 15.

An expert from Austria says the horse that is bred and fed and trained for speed is not much of a horse for any other purpose. We are not taking any exception to what the gentleman said.

The Universal Book of Original and Selected Poetry is a most readable and interesting publication. See page 19.

Read about the market for peanuts on page 18. The monopolist who sells them at a high price says that the weather has very much to do with his trade.

The Odorous Fern Tree as advertised on page 30 is a very interesting plant. It can be sown any time of year. Even the seed is odorous. We are offering it as a free preimum in connection with our publication, the Universal Magazine.

The Sewing Awl which we are offering as a subscription premium is a great success. Our subscription department has sent out thousands, and everybody satisfied—not one complaint. See page 9.

Do not overlook the Cement Workers' Handbook offered as a subscription premium. The publisher's price is fifty cents and the price of The National Farmer and Stock Grower is fifty cents a year. We eliminate all profits and send them both for sixty cents. Are you in it?

In all the reports of damage by frost, not one has said anything about killing the grass. After the rain, the sleet, the hail and the snow the grass was the greatest consoler, the ever-lasting perennial that comes back better and stronger than ever.

We commend the book "Horse Secrets Disclosed" to our readers. It was edited by Dr. A. S. Alexander, a famous veterinarian, and it is furnished as a subscription premium with the Farm Journal of Philadelphia, the premier monthly farm paper of the United States. See page 24.

The National Farmer Hat offered by our subscription department was originally started as a joke; but it is no joke. We have advertised it continually for two years, and now our first customers are renewing subscriptions, getting their second hats.

Radford's Practical Barn Plans advertised as a subscription premium on page 7 is a great labor-saving work. It is a splendid addition to the farm library. This office has sent out hundreds of them during the past two years.

The Date Book History of Live Stock and Agriculture was compiled and published by the editor of The National Farmer and Stock Grower. Anyone of our readers can obtain a copy as a free premium by sending a subscription to The National Farmer and Stock Grower. See page 5.

Attention is invited to an article elsewhere entitled "Argentine Chilled Beef." This indicates something of the proportions which Argentine meat exports are assuming. There are two reasons why this meat did not come to the United States. First, because there is no steamship line in regular trade fitted up to bring it here; secondly, because it would have to pay 1½ cents a pound towards the support of the United States government.

Turning a few meat packers out of the state of Missouri will not help the Missouri farmers. We can mention several cities and states that will be glad to take them in and pay a bonus for their coming. If the packers violate the law, we would like to see them in jail. But keep the packing houses in the state. Many stock raisers in the state of Missouri are perfectly satisfied with their market conditions; in fact, if all farm products had as good, competitive markets as live stock, there would be no kickers.

Cannot Be and Do Everything.

In conversation with a market gardener whose field of operations is within the limits of the corporation of the city of St. Louis, we asked him how he disposed of his crops, and he said: "I am a wholesaler and I sell on Third street, where the wholesale market is. My produce is sold all over town, but we never retail anything. Wholesale truck growing and vegetable retailing are two different lines of business. If we started retailing we would have to neglect the garden, and in the end very likely we would do no good with either. Live and let live and let the other man make a living."

"But," said we, "that is all very well for a gardener over in Illinois. He cannot distribute his produce in St. Louis, but you are right here in the market and you can cut out the middleman."

"Look at that middleman," he says. "There is a vegetable and fruit wagon; there is a double team to keep up; there is a stylish harness; there is a wagon that cost two hundred and fifty dollars; there is a man who went to work at five o'clock this morning and is still delivering. I could fill up his wagon with vegetables, but I could not fill up his assortment. There are tomatoes from New Orleans; grape fruit from Florida; apples from New York state; strawberries from Louisiana; green onions and new potatoes from the South—none of which I can furnish to-day. Some months in the year I could give him an assortment, but it is another line of business, and he has built up a trade depending on him that he can keep by attending to his business. We are wholesalers and intend to remain so, and we are not dissatisfied with present conditions. A farmer who does his duty to his farm cannot devote his time to anything else." And he went into the Farmers' and Merchants' Trust Company building, on the corner of Grand and Gravois avenues, and deposited the money for two loads of vegetables which he had sold to the middlemen on Third street.

Australian meats of all kinds and South American meats of all kinds can come to this country and be sold at a profit, providing the New York meat salesman can induce Congress and the state authorities to keep on taxing American meats and admit the foreign article free of tax and free of duty. See article "Imports of Lamb and Sheep," which we have reproduced by courtesy of the Butchers' Advocate of New York City.

FARM AND RANCH LANDS.

ARKANSAS.—Farms that grow big crops of corn, oats, alfalfa, rice, etc., at low prices. Hundreds of bargains. Homeseekers' Guide mailed free. State Map, 10c. **Moore & Ross,** Searcy, Ark.

TENNESSEE.—Send for booklet on farming and full description and prices of lands for sale in the valley of East Tennessee, the healthiest climate and best lands in the country. Address, **East Tennessee Real Estate Company,** Morristown, Tenn.

TEXAS.—2,600 acres, 11 miles from Sabinal, Uvalde county; about half agricultural, balance excellent grazing. Price, $7.00 per acre; half cash; deferred payments to suit the purchaser. Address, **Albert D. Evans,** North Fort Worth, Texas.

TEXAS.—A Great Bargain.—1,650 acres, 95 per cent. agricultural, in northeast corner of Red River county; 400 acres in cultivation and under hog-proof fence; 200 acres in Bermuda grass; eight houses and plenty of good water. Situated 11 miles north of Avery, on the T. & P. Railroad. Price, $25,000; one-third cash; deferred payments to suit purchaser. Address and mention this paper, **A. J. Martin,** Harris Ferry, Texas.

VIRGINIA.—Farms for sale from the mountains to the sea. Stock, Grain, Fruit, Poultry, Fish and Oysters. Illustrated catalogue free. **Geo. E. Crawford & Co.,** Richmond, Va.

3280-Acre Missouri STOCK FARM

I want every man interested in a stock farm and able to conduct one of this size, or interested in investments, to write me for full particulars. It is impossible to give details here, but in all my experience I have never seen a stock farm so complete and so ideally situated—close to three great markets; 2,000 acres are newly fenced with Page woven wire fence, posts a rod apart; there is plenty of water; houses are new and everything is ready for an able man to go right in and make a big success.

The price for a short time will be $25 an acre; easy terms. I have no doubt but that inside of 10 years the tillable land (of which one-half the farm consists) will be worth $100 an acre and the pasture land $50 an acre. The Rock Island R. R. runs through this farm, and has a switch in the center of it, to and from which freight of all kinds is shipped.

Write me now for full description and terms.

J. H. LIPSCOMB,
310 FIDELITY TRUST BLDG.,
Kansas City, Mo.

We can sell your property; send description. Northwestern Business Agency, Minneapolis.

GOVERNMENT FARMS FREE: — Official 112-page book "Vacant Government Lands" describes every acre in every county in U. S. How secured free. 1910 diagrams and tables. All about irrigated farms. Price 25c. postpaid. **Webb Pub. Co., Dept. 75, St. Paul, Minn.**

GOOD FARM BARGAINS FOR SALE BY FRANK P. CLEVELAND.

IOWA.—239-acre improved farm in Monona county. Price, $70.00 per acre.
WISCONSIN.—200-acre improved farm in Jackson county. Price, $4,000.
WISCONSIN.—80-acre improved farm in Bayfield county. Price, $1,800.
WISCONSIN.—153-acre improved farm and milk business, which pays $11.00 per day, in Monroe county. Price, $16,000; terms, half cash.
WISCONSIN.—240-acre improved farm in Adams county. Price, $4,000.
TEXAS.—2,560-acre ranch in Dallam county; will divide. Price, $12.00 to $16.00 per acre.
SOUTH DAKOTA.—940-acre improved farm in Mead county. Price, $20.00 per acre.
MONTANA.—640-acre tract of rich farm land in Custer county. Price, $17.50 per acre.
MISSOURI.—140-acre fruit and garden farm in Ripley county. About 7,000 trees in full bearing; large amount of small fruit; good buildings. Price, $10,000; terms, one-third cash.
MINNESOTA.—240-acre improved farm in Marshall county. Price, $3,600.
MINNESOTA.—4-acre fruit and chicken farm in Red Lake county. Price, $1,500.
MICHIGAN.—100-acre improved farm in Mecosta county. Price, $3,500.
ILLINOIS.—346-acre improved farm in Woodford county. Price, $125.00 per acre.
CALIFORNIA.—1,000 acres fruit and farm land in Modoc county; will divide. Price, $50.00 per acre.
MINNESOTA.—200-acre improved farm in Pine county. Price, $3,000.
ILLINOIS.—209-acre improved farm in Henderson county. Price, $12,000.
MISSOURI.—120-acre improved farm in Vernon county. Price, $65.00 per acre.
INDIANA.—238½-acre improved farm in Jasper county. Price, $48.00 per acre.
WISCONSIN.—240 acres of farm and timber land in Florence county. Price, $2,400.
ARKANSAS.—160 acres of farm and timber land in Stone county. Price, $1,600.

If you want to buy, sell or exchange any kind of business or real estate anywhere at any price, address **FRANK P. CLEVELAND, Real Estate Expert, 7910 Adams Express Building, Chicago, Ill.**

WESTERN CANADA

Prof. Shaw, Well-Known Agriculturist, Says:

"I would sooner raise cattle in Western Canada than in the corn belt of the United States. Feed is cheaper and climate better for the purpose. Your market will improve faster than your farmers will produce the supplies. Wheat can be grown up to the 60th parallel [800 miles north of the International boundary]. Your vacant land will be taken at a rate beyond present conception. We have enough people in the United States alone who want homes to take up this land." Nearly

70,000 Americans

will enter and make their homes in Western Canada this year. 1909 produced another large crop of wheat, oats and barley, in addition to which the cattle exports was an immense item.

Cattle raising, dairying, mixed farming and grain growing in the Provinces of Manitoba, Saskatchewan and Alberta.

Adaptable soil, healthful climate, splendid schools and churches, and good railways. For settlers' rates, descriptive literature "Last Best West," how to reach the country and other particulars, write to Sup't of Immigration, Ottawa, Can., or to the Canadian Government Agent.

J. S. Crawford, 125 W. 9th St., Kansas City, Mo.; C. J. Broughton, 412 Merchants Loa & Trust Bldg., Chicago, Ill.

THE SEWING AWL.

A Most Useful Premium For Subscribers to The National Farmer and Stock Grower.

A farm on which there is not a sewing awl is in difficulties when work is most pressing. It is surprising how useful this little implement is. It is the Myers Famous Lock Stitch Sewing Awl. It is the only sewing awl made with a groove running the full length of the needle and has what is known as a diamond point. In order to sew leather or any heavy, thick material without breaking or cutting the thread it requires a needle with the groove running the full length of the needle. You might just as well have no groove in the needle as to have it only part of the way. With the Myers Awl you can sew old or new harness, saddles, carpets, canvas, tents, rugs, quilts, shoes, grain bags, and many other things. You can use any kind of thread in the Myers Awl, and it makes a lock stitch same as a sewing machine. It is very simple; a woman can use it as well as a man. It is one of the most practical devices ever invented. They are put up with two needles; one is straight and one curved, with a small screwdriver and wrench combined. Also a reel of waxed thread with each awl ready for use. Every teamster and farmer should own a Myers Lock Stitch Sewing Awl, as there is use for one in almost every household. The Myers Awl is nicely finished, the metal parts are nickel-plated, the needles and wrench are kept in the hollow handle, which has a screw top.

Anyone who will send One Dollar cash to pay in advance for two-years' subscription to The National Farmer and Stock Grower can select one of Myers' Lock Stitch Sewing Awls, which we will send by mail, postage paid, as a free premium. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

COW BEATS WORLD'S RECORD.

Gave 80 Pounds of Milk Daily and Produced 29.27 Pounds of Butter.

About twenty-two miles south of Utica, N. Y., near Solsville, a cow has just distinguished herself by smashing the world's record in the amount of milk and butter production in a seven-day test. Farmer Eugene Lamunion had a cow which was producing milk and butter in such quantities that he had to milk the animal four times a day, so he took advantage of a privilege granted by the State Department of Agriculture and called upon the Department for a test of the cow, the state to pay one-half of the cost of the test and the owner the other half.

A representative of the State Department and another dairy sharp from the Cornell Agricultural College came to the farm, and for thirty days they fed the animal, weighing every ounce of food given her, as well as every ounce of milk and butter she produced. The result was that the two years, eleven months and twenty-three days old cow has smashed the world's record not only for production of cows at that age, but of the best that a cow of any age has produced.

Lockhart de Kol, No. 101,544, is the highly poetic name of this extremely practical cow, and for seven days she gave over eighty pounds of milk each day and produced 29.27 pounds of butter. The highest record for this age of cow was 27.06 pounds of butter in seven days. Farmer Lamunion was offered $2,500 to-day for the cow, but he promptly refused it.

New Boston Milk Law.

The new milk law of the Boston Board of Health will go into effect May 1. This law provides that all milk dealers must deliver milk in "original packages," or paraffine boxes, which must not be opened by storekeepers nor poured in cans for sale. Milk must be sold just as it is received from the producers. When the law becomes operative, milk can be purchased in the "original packages" of one or more pints at four cents per pint. No one will be able to secure milk in bulk.—Observer.

Cows' Milk and Sows' Milk.

For the first weeks of a pig's life the mother's milk is its drink as well as food, and therefore in caring for suckling sows it should be the aim to so feed them that milk of only medium richness will be furnished instead of a limited supply of that which is extremely rich, the latter being less healthful and more liable to cause thumps, scours and unsatisfactory growth. It is only a law of nature that pigs should make more economical gains through the milk of the dams than in any other way, and it is also true that the sow will furnish nourishment for her young at less cost for the raw material than any other animal on the farm. A sow's milk is rich in solid matter, which amounts to 17 to 20 per cent. On a comparative basis of 1,000 pounds live weight, a cow giving three gallons of milk a day will give in the milk one pound of fat and .77 pound of protein daily, while a sow's milk will yield 1.26 pounds of fat and 1.1 pounds of protein a day on an average. In composition sow's milk, in comparison with cow's milk, is very high in total fats as well as solids.—From Coburn's "Swine in America."

Milk Producers' Association.

Although a few members were in during the month of April, there was no actual meeting, neither will there be a meeting in May. The President made a round of the dairy distributing companies and the milk report was sent out to all members in good standing. This association manages to get milk shippers to the St. Louis market a better average in price than is obtained either in Chicago or New York.

Mules For Canada.

Eighty head of mules at $315 per head is the record of a mule sale at the St. Louis National Stock Yards during the month of April. They were sixteen to seventeen hands high, averaged about 1,400 pounds, and included some prize winners. These mules were picked up in about two months. Such mules are scarce. They went to Canada to work on the railroad.

$15.95 AND UPWARD

THE LOW DOWN AMERICAN SEPARATOR

EXCELS ANY SEPARATOR IN THE WORLD

THIS OFFER IS NO CATCH. It is a solid, fair and square proposition to furnish a brand new, well made and well finished cream separator complete, subject to a long trial and fully guaranteed, for $15.95. It is different from anything that has ever before been offered. Skims 1 quart of milk a minute, hot or cold, makes thick or thin cream and does it just as well as any higher priced machine. Any boy or girl can run it sitting down. The crank is only 5 inches long. Just think of that! The bowl is a sanitary marvel; easily cleaned and embodies all our latest improvements. Gears run in anti-friction bearings and thoroughly protected. Before you decide on a cream separator of any capacity whatever, obtain our $15.95 proposition.

OUR LIBERAL TRIAL ENABLES YOU TO DEMONSTRATE THIS. While our prices for all capacities are astonishingly low, the quality is high. Our machines are up to date, well built and handsomely finished. Run easier, skim closer, have a simpler bowl with fewer parts than any other cream separator. Thousands of machines in use giving splendid satisfaction. Write for our 1910 catalog. We will send it free, postpaid. It is richly illustrated, shows the machine in detail and tells all about the American Separator. Our surprisingly liberal long time trial proposition, generous terms of purchase and the low prices quoted will astonish you. We are the oldest exclusive manufacturers of hand separators in America and the first to sell direct to the user. We cannot afford to sell an article that is not absolutely first class. You save agent's, dealer's and even catalog house's profits by dealing with us and at the same time obtain the finest and highest quality machine on the market. Our own (manufacturer's) guarantee protects you on every American Separator. We ship immediately. Western orders filled from Western points. Write us and get our great offer and handsome free catalog. ADDRESS,

AMERICAN SEPARATOR CO., Box 1102, BAINBRIDGE, N.Y.

Three Big Papers, 70 Cents.

The National Farmer and Stock Grower; Twice-a-Week Republic of St. Louis, the oldest, biggest and best semi-weekly in the Southwest; and Farm Progress, the biggest semi-monthly farm paper printed, sent to any address a full year for only 70 cents. The subscription price of all these papers, if taken separately, would be $1.25. Send orders to the St. Louis Republic, St. Louis, Mo.

Cotton Seed For Seeding.

At New Orleans, La., on April 25, cotton seed rose to the highest price on record, long staple seed selling for $150 a ton. Ordinary seed for seeding brought $50 to $75 per ton.

A herd of 158 selected and tested Holstein cows produced twenty-eight quarts of milk per day with an average butter-fat content of 3½ per cent.

Malcolm H. Gardner, Superintendent of Advanced Registry of Holstein cattle, says the percentage of profit is not much of a basis; what Holsteins are after is the net profit; and on that basis the Holstein is always in the front.

In a New York hotel a millionaire paid $1.75 for two fried eggs and a cup of tea and then kicked about the high cost of living. We don't blame him. Five cents for a cup of tea, ten cents for two eggs, and sixty cents for being a millionaire, that would have been enough. He was charged a dollar too much.

The Southwestern Farmer and Breeder says: "Capt. A. M. Bush, of Denton, Texas, sold a 682-pound hog in that town for $61.63. It was a Duroc-Jersey. This price made one hog the equal of a 500-pound bale of cotton at 12½ cents a pound.

A Sure Proof.

"Tell me all about it," said the woman who was ill and couldn't attend the wedding.

"'Twasn't much," said her husband. "There was no best man, and the bridegroom forgot the ring and had to go back home for it."

"Lucky girl!" she exclaimed, with woman's intuition. "She is marrying a plumber."—Buffalo Express.

Inside and Out.

Speaker Cannon, at a dinner in Washington, said soothingly to a young suffragette:

"After all, you know, there is room for both man and woman in this world. Men have their work to do, and women have theirs.

"It is the woman's work to provide for the inner man, and it is the man's to provide for the outer woman."

"Regularity is perhaps more important in feeding sheep than any other animals, for they are naturally regular in their habits."—American Stockman.

DAISY FLY KILLER

placed anywhere, attracts and kills all flies. Neat, clean, ornamental, convenient, cheap. Lasts all season. Made of metal, cannot spill or tip over; will not soil or injure anything. Guaranteed effective. Of all dealers, or sent prepaid for 20 cents.
HAROLD SOMERS,
150 DeKalb Ave., - Brooklyn, N. Y.

Shoo-Fly THE ANIMALS' FRIEND KILLS EVERY FLY

It strikes when our gravity sprayer is used. Keeps insect pests off animals in pasture longer than any imitation. Used since 1885. Thousands of dairymen duplicate 10 to 50 gallons annually after testing imitations. Absolutely harmless; cures all sores.

30 cents worth saves $10

worth of milk and flesh on each cow during fly season. No Lice in Poultry House or any place it is sprayed. If dealer offers substitute, send us his name and $1 for 3-tube gravity Sprayer and enough SHOO-FLY to protect 200 cows. Name express office. $1 returned if animals not protected. Free booklet. Special terms to agents.
Shoo-Fly Mfg. Co., 1305 N. 10th St., Phila., Pa.
Editor knows from experience that Shoo-Fly is O. K.

SUBSCRIPTION PREMIUM — A POCKET COMPASS.

This is a true 1¾-inch Pocket Compass purchased from a reliable house. It is a fancy, nickel-plated, open-face, watch-shape Compass, with a silvered dial, and it weighs less than one ounce. Every farmer or ranchman should have one in his pocket. Send us One Dollar and we will send you The National Farmer and Stock Grower for one year, and we will also send you this Pocket Compass by mail postpaid. Address, THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

AMATITE means more to the man who needs a roofing than just merely something to put on the top of a building. It means a thoroughly satisfactory and reliable roof covering, without future *expense for painting*—because the *real mineral surface* makes painting unnecessary.

Frequently the cost of painting a roofing amounts to almost enough to buy a new Amatite Roof.

Amatite can be laid right over shingles, tin or other ready roofings. The directions hold good for laying Amatite anywhere and over anything, and are as simple as A B C.

If your dealer doesn't handle Amatite, write us for a sample. The sample tells the whole simple story of Amatite—why it is waterproof, why *it needs no painting*.

Write to-day to nearest office.

BARRETT MANUFACTURING CO.

New York, Philadelphia, Cleveland, Cincinnati, Chicago, Boston, St. Louis, Pittsburg, Kansas City, Minneapolis, New Orleans, London, Eng.

The Elgin Quotation.

There is a discussion between the members of the Elgin Board of Trade which will probably result in doing away with the Elgin butter quotation altogether. The same influence is also at work that eliminated the New York quotation. The Elgin butter quotation does not represent actual sales but the joint agreement of a basis arrived at by the representatives of dealers and producers for sales in the immediate future. It would be far better to have quotations based upon actual sales, just the same as live stock sales are made and published, because the trade agreements are not easy to arrive at, and, when arrived at after a contest, there still remain differences. The Elgin quotation for many years has been an instance of the "tail wagging the dog once a week," but quite recently the dog has attempted to wag the tail. No matter how well the tail may wag the dog (and we all take off our hats to Elgin), there comes a time when the dog insists on dominating the proceeding. At present the Chicago dealers representing the dog are trying to wag the Elgin quotation, and the producers will not stand for it because the Chicago influence is in favor of reducing the quotation so that Chicago dealers can outsell it in their own interest. Butter should be consigned for sale and every sale of a tub or more be a public record. That is the way to establish a quotation.

Farms in Holland.

So luxuriant does the grass grow in Holland that an average farm, growing no grain and not exceeding sixty acres, will support twenty-two cows, nine heifers, forty sheep, fifteen pigs and one or two horses. Of this land, about twenty-four acres are usually meadow and thirty-six in pasture. Sometimes in the event of a drouth some oil cake is fed, but as a general proposition Dutch dairy farming is on grass and hay. The grass is cut with a scythe and raked by hand. In Holland they have red and white Holsteins as well as the black and white. One of the best herds averaged 11,275 pounds of milk and 394 pounds butter-fat in an average lactation period of 306 days, no cow being milked over one year.

No Decrease in Butter Quality.

The Department of Agriculture reports that the quality of butter has decreased in the wholesale markets. Notwithstanding the Department says it, we doubt it. If all the creamery butter of former years is compared with the output of the same existing creameries we will have a fair test of quality and probably no deterioration; but there are hundreds of thousands of pounds of butter manufactured now and put on the market where in former years there was nothing but vacancy and emptiness. If we compare the small, stale, mixed-up lots of farm-made butter collected by country stores with the poorest output of the creameries receiving the worst quality of cream-separator cream, we have still an immense enlargement in quantity, a great improvement in quality and double the former price to the farmer. The fact may remain of a different percentage of high-class butter as compared with the former supply, but the comparison is not of the same product.

Feed of English Dairy Cows.

In a bulletin issued by the Agricultural Experiment Station of the University of Illinois, the feed of an English dairy cow is given as follows:

"It is estimated that on good land it requires from 2½ to 3 acres to keep a cow a year. The cows are turned to pasture about the middle of May, and the time at which they are taken off in the fall varies from October 1 to November 1, depending upon the season. Cows are not soiled, and pasture grass is generally depended upon to furnish the entire feed for the summer. When this is done it requires about two acres of pasture per cow. This will support the cows until the 1st of August, when they are turned on the aftermath in the meadow, and from this time on changed back and forth from the pasture to the meadow. Grain is seldom fed to cows on pasture, until after the 1st of August, when a small amount of cotton-seed cake is fed to many of the best milkers. Ordinarily, the winter ration for dairy cows consists of 40 to 70 pounds of roots; 15 pounds of straw; 7 pounds of hay; and 8 pounds mixed meal and cake. The roughage is fed three times a day and the grain twice, the grain being fed according to the milk flow, and is cut off when the cow is dry."

Government Methods Corrected.

Chief B. H. Rawl, of the Dairy Division, United States Department of Agriculture, has recently sent out a circular letter to inspectors and field men, instructing them to discontinue a bad practice. The reasons for this are set forth in the letter, the full text of which is as follows:

"To the employes of the Dairy Division:

"As you know, the general practice in scoring butter is to take a plug from the package of butter with a butter trier. From this plug the judge bites a piece, after which the remaining portion of it is returned to the package. This practice has become so common that nothing is thought of it. However, it is a filthy and unsafe practice for which there is no excuse.

"The bacilli of tuberculosis will live in butter, hence any butter judge who has tuberculosis may communicate it in this way to hundreds of other persons. Other contagious diseases may be communicated in the same way. This unsanitary practice should be discontinued.

In judging butter, you are instructed not to bite from any part of the butter that will be returned to the package. A piece for tasting can be broken from the end of the plug, or any other method may be used that will not bring the mouth in contact with any portion of the butter that will be returned to the package. When you have an opportunity, warn other judges and buttermen of the danger of the spread of disease by the present custom."

Dairy and Creamery Notes.

English farmers receive about $1.40 per 100 pounds for milk in summer and $1.60 in winter, making an average of $1.50 per 100 pounds for the year. This is net to the farmer after paying the freight.

Canadian cream shippers are sending cream into New York state and paying a duty of six cents a gallon. If they shipped in butter or cheese they would pay six cents a pound, but they know better than that. In this connection it is well to observe that the duty paid on the cream goes to the support of the United States government.

Mr. John H. Curran, our worthy and energetic Missouri Immigration Agent, has taken out a patent for an apparatus for purifying milk and cream. As he is a creamery expert, it is safe betting that he has the real thing.

Franz M. Berberich, of St. Louis, Mo., has taken out a patent for an apparatus for milking cows. We hope it can be used with one hand. The milkers that require a factory attachment also require experts who are capable of running factories, and dairy farms don't make money fast enough to pay them. We need a milker that any boy can handle, and one that can be cleansed, purified and rendered sanitary in two minutes.

Why a farmer should deliver whole milk to a creamery when he can separate and deliver the cream alone has never been satisfactorily explained. And until it is explained farmers who are not now doing so had better forget that they ever hauled milk to a creamery. This does not excuse farmers delivering inferior cream, which is the excuse for saying they ought to deliver the whole milk.

President J. P. Mason, of the Milk Shippers' Union, with headquarters at Chicago, keeps 100 cows, ships milk to the value of $12,000 in one year, from a farm of less than 300 acres, of which 100 acres are in corn. He has two silos with a capacity of 300 tons each that are never empty. He buys a little bran, and that is about all. Our authority for this statement is H. B. Farmer, Secretary of the Union, in the Milk News.

Various bottling plants and condensers in the Chicago district are paying $1.45 per 100 pounds for April milk and will pay $1.20 for May milk.

In butter made in Wisconsin and scored at the Agricultural College, a wide variation in salt content was noted, ranging from 2 to 3.5 per cent. in three samples of butter made by the same man. The average salt content was 2.4 per cent.; the highest 5.8 and the lowest 1.2.

The Elgin Butter Board let the price of creamery extra butter go down three cents a pound from 32 to 29 cents on Monday, April 25. This is not so bad, because the quotation a year ago was 26 cents, or three cents less. There is usually a decline in butter about this time of year.

The Chicago price for April milk is $1.30 per eight-gallon can, and May price is $1.00 per eight-gallon can.

Painting About the House

THIS big 116 page book is *free*. It tells not only all about painting everything around the house, giving full information on the particular paint for every special purpose, such as enameling your kitchen cupboard, painting or varnishing your floors, finishing wood-work, screens and porches, but it also covers the entire subject of painting about the farm, giving exact information as to *just what paint to use on what and why*.

SHERWIN-WILLIAMS

PAINTS AND VARNISHES FOR FARM USE

The one way you can be sure you are getting the best paints for whatever purposes you require is to buy Sherwin-Williams' Paints. Only in the Sherwin-Williams' line do you find a paint especially made for every special requirement. If you want to paint your barn, use Sherwin-Williams' Commonwealth Barn Red; for your implements, Sherwin-Williams' Wagon and Implement Paint; for your buggies and carriages, Sherwin-Williams' Buggy Paint. And so it is, all through the line—a special paint for every purpose about the farm. The Sherwin-Williams' dealer in your town can furnish you with a special Sherwin-Williams' Paint for any requirement.

SHERWIN-WILLIAMS PAINTS & VARNISHES

Address all inquiries to The Sherwin-Williams Co., 689 Canal Road, Cleveland, Ohio. In Canada, to 639 Center Street, Montreal.

Dairy and Creamery Combined.

Having asked of creamery managers the question: "What do you think about having a dairy in connection with the creamery?" the New York Produce Review and American Creamery received a number of replies, of which the following from Warren E. Cline, of Iowa, was considered the best:

"Would a dairy in connection with the creamery pay? Although it would be necessary to go to considerable expense to establish a dairy, it most undoubtedly would pay, and pay well, in most instances.

"I would hire a man competent to have charge of the dairy farm, one who could explain to the patrons the necessity of having a dairy breed of cows if they wanted the best returns from the dairy. Also the advantage of feeding a balanced ration to milch cows and being able to compound balanced rations from the feeds that the farmer has at his command. If the creamery owned the land on which the dairy was located it would pay to have a silo, and in this way prove to the patrons the advantage of having a silo and the cheapness of the excellent feed for winter dairying that silage affords.

"The dairy sire could be used to good advantage to assist the patrons in building up their dairy herds, and any surplus from the dairy herd could be sold to the patrons and in this way get better dairy blood in their herds.

"Last, but not least, the creamery would be assured of a supply of good milk to be used for making starters or for any other purpose for which it might be wanted."

Why You Need a Silo.

The silo will enable you to increase the amount of stock you are carrying on the farm. This should be the aim of every farmer, for it seems the maintaining of soil fertility.

It enables you to increase the production of milk and butter-fat and very materially decreases the cost of producing it.

With silage you can prevent shrinkage in the flow of milk, which takes place in the late summer and early fall. It is the most economical feed for stock at this time of year when your pastures are short and dry. You can also keep up the flow of milk during the winter, when butter-fat prices are most favorable. Winter dairying can be carried on in a satisfactory and profitable way with the silo.

About 40 per cent. of the feeding value of the corn plant is in the leaves and stalks. With the silo you save all of this 40 per cent., which is often wasted. It makes a palatable feed of stuff, which would not be eaten.

It enables the farmer to get more fall plowing done than he otherwise would.

There are no aggravating corn stalks in the manure when silage is fed.

It saves the drudgery of feeding and makes the hired man more satisfied with his posiion.

The young stock is kept in a healthy, growing condition. Old stock wintered on silage comes through into the spring in a much better condition than stock wintered on dry feed.—Blue Valley Bulletin.

Reduce Duty on Butter.

Before the Congressional Committee investigating the alleged high cost of living it was proposed to reduce the import duties on butter from six to two cents a pound, thereby, as the proposer stated, to admit foreign butter to keep down the price. This is only one of the items going to show that there is a campaign on foot for the purpose of getting Congress to reduce the duties upon all farm productions or to bring in all foreign farm productions absolutely tax and duty free, like hides, for instance, and at the same time to retain the duties upon all kinds of manufactures. The editor of The National Farmer and Stock Grower is not in favor of building a high-tariff wall around this country, but is in favor of a moderate degree of protection, and that all foreign farm productions shall be made to pay a duty or tax more than equivalent to the taxes American citizens pay to city, county, state and the federal government. The idea of running this government to the detriment of our own citizens and to favor the grain growers and live stock producers of Australia and South America is a ridiculous propotion; but that is exactly what was done when Congress removed the duty from hides.

Stopping Crows From Pulling Corn.

A farmer of one of the central counties wrote to State Zoologist H. A. Surface, Harrisburg, about shaking corn in either coal tar or dilute carbolic acid to keep crows from pulling up newly-planted corn. He said that he had suffered much damage in past years through the depredations of crows, and wants to get ahead of them this year.

Professor Surface's answer to this letter contained the following:

"It is commonly reported that corn should be soaked a few minutes in water containing a solution of coal tar or gas tar, and then spread and allowed to dry. This will make the corn so bitter that the crows will be suspicious of it and will not eat it for fear of being poisoned. I presume dilute carbolic acid would serve the same purpose, but I am not certain about this.

"Different devices have been recommended to keep the crows from pulling corn, one of which is strings stretched around and across the corn field. It is also recommended to sow corn on top of the ground about the time it commences to shoot through the soil, in order to feed the crows at this time, so they will not pull the grain that is planted. It is best for a person to try one or more methods and make a practice of that which he finds best."

They Were All Setting.

A farmer was sawing wood, when it occurred to him that he ought to have the help of one or more of his five boys. Lifting up his voice, he called, but not a boy appeared.

At dinner, of course, they all appeared, and it was not necessary to call them.

"Where were you all about two hours ago, when I wanted you and shouted for you?"

"I was in the shop, settin' the saw," said one.

"And I was in the barn, settin' a hen," said the second.

"I was in gran'ma's room, settin' the clock," said the third.

"I was in the garret, settin' the trap," said the fourth.

THE

BEST INVESTMENT ANY COW OWNER EVER MADE

Thats what MORE THAN A MILLION COW OWNERS the world over have found the DE LAVAL CREAM SEPARATOR to be, after thirty years of separator use.

A DE LAVAL FARM SEPARATOR costs from $40.- to $175.- according to capacity. It saves butter fat and produces a cream of superior quality over any setting system or any other separator every time it is used,—twice a day every day in the year.

It involves far less labor than any setting system, and runs easier, has greater capacity and lasts from two to ten times longer than any other separator.

That's how a DE LAVAL separator saves its cost at least the first year, and frequently in a few months, and then goes on doing so right along for an average of twenty years.

Any desired separator information can be had of the nearest DE LAVAL local agent or of the Company directly.

The De Laval Separator Co.

165-167 BROADWAY, NEW YORK
42 E. MADISON ST., CHICAGO

Please mention Nat. Farmer and Stock Grower.

"You are a remarkable set!" remarked the farmer. "And where were you?" he continued, turning to the youngest.

"I was on the doorstep, settin' still."—Judge.

JUST WHAT YOU NEED.

If you are the owner of horses, you will understand how important it is to have something on hand to use in case of emergency. Read what E. G. Bean, of Williamsburg, Ia., had to say about Absorbine: "I can highly recommend your Absorbine. I did not use quite two bottles of your medicine to cure my horse. It had a lump on one side of the neck and behind the jaw. The lump was as large as the crown of a hat. After I had used about half the bottle, the lump broke open and run for a while, then a core came out of it like a chicken's heart. Then the lump went down and is now all right." Wind Puffs, Strains, Sprains, Bursitis, Bog Spavin, Capped Hock, Swollen Tendons, are promptly reduced by the use of this valuable remedy, which should be in every stable. If your druggist cannot supply you, send $2.00 for a bottle, charges prepaid. W. F. Young, P. D. F., 106 Temple street, Springfield, Mass.

Remember to subscribe for The National Farmer and Stock Grower.

St. Louis, Mo.

IMPORTS LAMBS AND SHEEP.

Sayles, Zahn & Co., of New York City, Bring Cargo From Australia —Meat in Fine Condition—Is Sold Cheaper Than Native Product.

Butchers and packers throughout the city have been much interested in the announcement that Sayles, Zahn & Co., the enterprising butchers on Sixth avenue, had imported a quantity of lamb and sheep from New South Wales, Australia. About 700 carcasses were received by the firm early last week and they were eagerly examined by experts from the Armour, Swift, Cudahy and other packing houses of the city. After a critical and thorough examination the meat was declared by all to be of first-class quality and to be in splendid condition. The members of Sayles, Zahn & Co. are jubilant over the successful outcome of their venture and believe that a big field will be opened up in New York for the Australian producer.

In addition to the 700 carcasses already received they have 2,000 more on the way, and from the large demand for the meat they believe they will have no difficulty in disposing of all the animals they can secure. One of the members of the firm, in discussing the matter with a representative of the Advocate, said there were many advantages to be gained by handling this stock in preference to native-grown lamb and sheep. "In the first place," he said, "there is the consideration of price, which is very important just at present. The prices of native stock have gone so high that the consumption of meat has fallen off. These carcasses were brought from New South Wales, and after paying the purchase price, the tariff duty, freight and all transportation charges, the cost to Sayles, Zahn & Co. was a great deal less than the same animals of native production could be bought. This enables the company to place the meat on the market at rates lower than those now prevailing for lamb and mutton. Naturally this appeals to the consumer and is a decided advantage in favor of the foreign meat. Another factor which is important and which contributes to the lower price of the imported meat is the fact that it is received in better condition than are the animals butchered in this country; that is, better in the sense that there is not so much waste, and hence there is a greater proportionate profit in handling. For instance, the supply received by us was trimmed so that nearly all the fat was taken off and the legs and shanks had been removed, thus making a very appreciable difference in the amount of waste matter."

Inspectors from the Board of Health examined the carcasses shortly after they had been received and pronounced everything to be in first-class condition, and also stated that the quality of the meat was very good. In fact, the quality of the meat has appealed so strongly to all that a member of the firm said that, prices and all else being equal, he would prefer to handle the animals from Australia to those grown here, as he felt the people would be better satisfied with the foreign meat. He further stated that in view of the fact that there seemed to be no relief in sight for the high prices of meat, the foreign meat would continue to be lower in price and would secure a monopoly of trade. He also stated that the firm had imported sheep and lambs from Canada and had been able to receive them in New York cheaper than they could buy American sheep and lambs. This, in his opinion, was an indication that meat of all kinds could be placed on the market much cheaper here if the present tariff duties were to be abolished.

Blooded Stock.

Trumans' Pioneer Stud Farm has imported four different consignments of Shire, Percheron, Belgian and Hackney stallions since January 25. They are offering these stallions at special prices. Trumans never did stick out for excessive profits, only desiring a fair margin to pay for risk in transporting and a commission for buying. Write for catalogue to Trumans' Pioneer Stud Farm, Bushnell, Ill.

Messrs. C. J. Smith & Sons, R.F.D. 4, Greenville, Ill., are again advertising their pure-bred and registered Shropshires. This is a good firm of reliable breeders.

The Dorset-Merino cross is coming into favor in Australia At a recent test of cross-breds at the Wago Experiment Farms, Dorset-Merino lambs closely shorn weighed 78 pounds 3 ounces at twelve days old.

The Twenty-fifth Annual Meeting of the Holstein-Friesian Association of America will be held at the New Court House, Syracuse, N. Y., on Wednesday, June 1st, for the election of officers and the transaction of such business as may come before it.

Mr. Chas. Ford, of Mortonsville, Ky., writes that he has a fine lot of pigs to offer, and has just ordered some more imported stock, the best that can be found. While he has many of these booked, he is still able to fill quite a number of orders. Write him your wants early before they are all gone. He can give you what you want in Tamworth swine.

A very fine lot of Poland-China pigs can be had of the Kirby Stock Farm at Marmaduke, Ark. This is one of the herds that is bringing Arkansas to the front as the home of first-class live stock breeders.

New St. Louis Produce Exchange.

F. W. Brockman had the honor of buying the first load of produce sold in the new "Chamber of Commerce" of the St. Louis Fruit and Produce Exchange, Monday, consisting of ten sacks of new crystal wax onions offered by the firm of Henschen & Goerner. John Gazzolo was the buyer in the first sale of potatoes, sixty sacks of Wisconsin Rurals offered by Haueisen Brothers. Mr. Brockman also bought the first apples sold, ten barrels of New York Russet apples, offered by J. W. Humphreys.

Protection Against Lightning.

Lightning rods should be obtained from the manufacturer either direct or through his authorized agent. The first lightning rod is fittingly named the Franklin, for the reason that it was he who first learned to control the electric spark. It is manufactured by Cole Bros. of St. Louis, Mo., and has stood the test of sixty years. For particulars kindly address Cole Bros. Lightning Rod Co., 310 South Seventh street, St. Louis, Mo.

Our Three Flower Premiums.

On page 25 we are offering three beautiful flower pictures as subscription premiums. We are disappointed that these are not going fast enough. We send out hundreds when we ought to send out thousands. They are magnificent. The Pansies are perfection; the roses are delightful; the violets stand out as though in a bouquet. Paul De Langpre is the greatest flower artist in the world.

REGISTERED SHROPSHIRE SHEEP.

Rams, Ewes and Ram Lambs of the best breeding. Ram at head of flock sired by an imported English Ram out of a Canadian Ewe. Have used Rams from the best flocks in the United States and Canada. These sheep are bred for wool and mutton. Prices reasonable.
C. J. SMITH & SONS, R.F.D. 4, Greenville, Ill.

Mill Creek Stock Farm,

The home of the noted Starlight family of Jacks and Jennets for the past thirty years, is located seven miles southeast of Nashville, Tenn., on the N. C. & St. L. R. R., at Asylum Station, and has on hand at all times a nice lot of Jacks, Jennets and Stallions, all of the best blood, from six months to six years old, for sale at reasonable prices. Write for catalogue. Also Jersey Cattle.

THOS. H. EZELL, Prop.,
(son and successor to the late H. C. Ezell),
Nashville, Tenn., Sta. B, R. F. D. No. 7.

Three of these pictures are of inestimable value, and the illustrations in this paper do not give the slightest conception of their beauty.

On April 29th, Mr. and Mrs. J. J. Serven, of Prairie City, Ill., celebrated the fiftieth anniversary of their marriage. Mr. Serven is one of the oldest and largest breeders of Shire horses in the United States, having been closely identified with that business since the early 80's. They are both very early settlers in Illinois, having been residents of the state since 1847, and have resided on the same farm, their present home, for the past fifty years. There were about 200 of the leading farmers and horse breeders present at the banquet.

NEW VEGETABLE PEACHES.

A genuine wonder. Who would not grow them? Who would not eat them? Perfectly delicious. Nothing like them under the sun. Grows from the seed in eighty days. Size of an orange. Of easiest culture—marvelous yielders. Succeeds everywhere. Only 10 cents per packet or three for 25 cents, with full directions. I give a nice present with every order. Illustrated catalogue and premium coupon accompanies the seeds. Don't delay. Address, A. T. Cook, Seedsman, Hyde Park, N. Y.

FARM BLACKSMITHING.

Here is a book for the farmer. The book was written by A. J. Drew. It is a complete treatise on blacksmithing from the farm standpoint. This book teaches how to profitably spend stormy days. Many thousands of farmers will find it to their interest to own a copy. There are 100 pages. It is nicely and clearly illustrated and bound in cloth. We credit one-year's subscription to The National Farmer and Stock Grower and send one copy of this book by mail for 65 cents. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

THE 500 QUESTIONS ANSWERED.

This is all about swine, and is a book by L. H. Cooch. There are 526 questions and 526 answers. They are natural questions and practical answers. The questions relate to breeding, mating, feeding, pasturing, fattening, management, diseases, etc., of swine. It is a complete veterinary authority on all swine diseases. The answers to questions on feeding alone, if properly attended to, will put enough pounds on one pig to pay for many books. We are sending The National Farmer and Stock Grower for one year and the 500 hog question book for 60 cents. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

St. Louis Cash Grain Prices.

On April 30th, cash wheat, No. 2 grade, sold on a basis of $1.10 to $1.12½ per bushel, there being a decline during the month from $1.20 quoted on March 31st, and in two months from $1.25 to $1.27 per bushel, the price quoted February 28th.

On April 30th, cash corn, No. 2 grade, was sold at 63½ cents a bushel, which is a cent higher than the quotation of the close of the month before.

On April 30th, at St. Louis, No. 2 oats sold at 42 cents, this being a 4½-cent drop from the close of March, and 7 cents lower than the close on January 31st.

Our previous views on the grain trade have been justified. Wheat the speculators are afraid of; corn is plentiful but quality is scarce; and there is a large crop of oats of good quality.

Justice to the Markets.

There never has been a time in the history of the world when the farmer who raises live stock has received in market any more money for his stock on the average than he has done in the past six months, and there never has been a time since the world began that the commission and yard charges on the selling markets have been less in proportion to the total amount received by the farmer. There never was at any time previous so much buying competition in the markets as there is now. This statement is made in a paper reaching 125,000 stockmen, and we don't expect anyone of them to dispute it. The reason this statement is made is because an article appeared in the Saturady Evening Post which is calculated to mislead a million people. It needs correction, and needs it badly.

Empire Fertilizers.

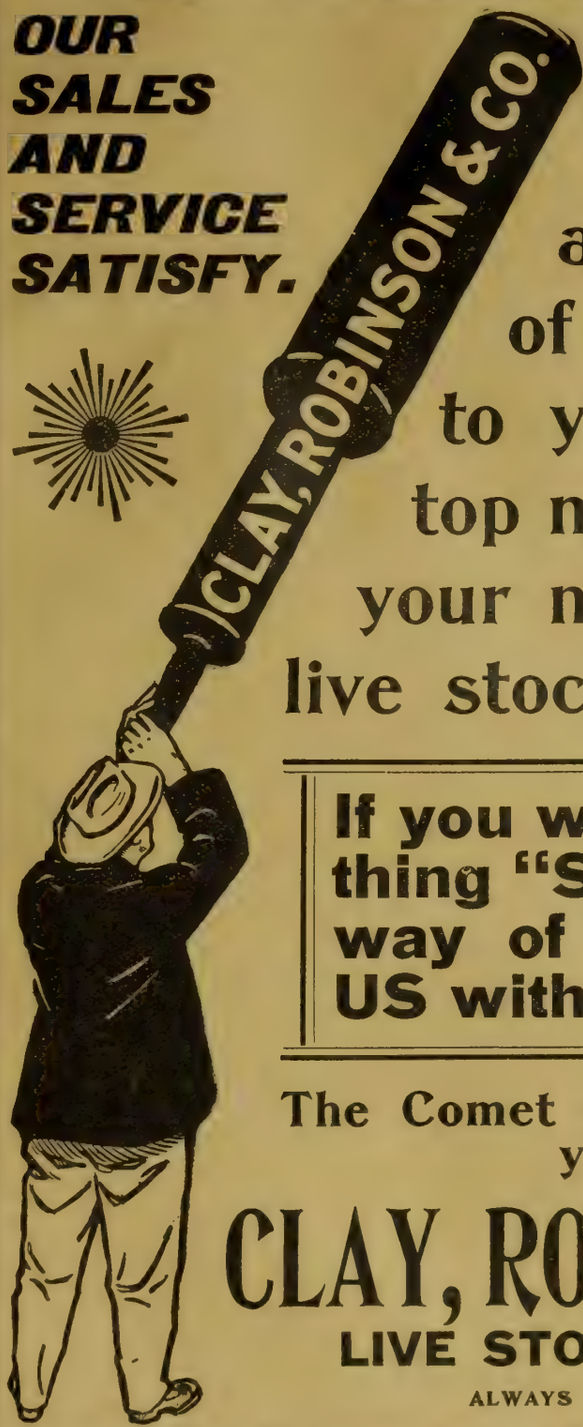
Attention is invited to the advertisement of the Empire Carbon Works, manufacturers of high-grade fertilizers. This is one of the oldest established and most reliable fertilizer plants in this country. By writing to this firm you obtain in return a statement of fertilizers required for every soil and every crop and the cost of same. It is one of the best agricultural booklets used. Furthermore, there is economy in freight bills by reason of St. Louis being the principal point of distribution. See page 2 and write to Empire Carbon Works, 419 Locust street, St. Louis, Mo.

Hay Prices at St. Louis.

At St. Louis the last sales of hay in April were as follows: Two parts of cars clover-mixed at $13.50; one car do. at $14.50; one do. at $15. Timothy—Part car grassy at $12.50; three No. 1 at $16; one do. at $17. Prairie hay—Two cars No. 2 at $11.50; one do. at $12; two No. 1 at $13; two do. at $13.50. Alfalfa—No. 2 quotable at $14 to $16.50; No. 1 at $17 to $18.50. On East Side: One car clover-mixed at $14. Timothy—Two cars No. 2 at $14.50, delivered to St. Louis; one do. at $15; two scant No. 1 at $16, delivered to St. Louis; three No. 1 at $17 do.; two good do. at $18 do. Clover—One car No. 1 at $16, delivered. Last sale of wheat straw, $6.50 per ton.

Germany is now receiving American pork without any restrictions, allowing it entrance upon the inspection certificates of the United States Department of Agriculture. This has little effect at present, but it is a valuable concession and will enlarge the demand for American meats.

The Coming of the Comet



OUR SALES AND SERVICE SATISFY.

although attracting world-wide attention, is really of less importance to you than getting top market prices for your next shipment of live stock.

If you want to see something "SKY HIGH" in the way of SALES, just try US with a consignment.

The Comet will come and go, but you will find

CLAY, ROBINSON & CO.

LIVE STOCK COMMISSION

ALWAYS READY TO SERVE YOU AT

Chicago East St. Louis Kansas City South St. Joseph Fort Worth
Denver East Buffalo South Omaha South St. Paul Sioux City

WE WANT TO SEND YOU OUR WELL-KNOWN STOCK PAPER, "THE LIVE STOCK REPORT"—a fine sixteen-page illustrated weekly journal, devoted to the interests of feeders, breeders, shippers, farmers and ranchmen; extremely interesting and valuable to anyone who has anything to do with live stock. Hon. Geo. M. Wilber, the well-known feeder at Marysville, Ohio, writes: "Of the several agricultural papers that come to my desk each week I find more condensed live stock news in the Live Stock Report than in any other. Enclosed find $1.00 and continue my subscription two years." Subscription price is 50c. per year, to cover postage and show good faith. It costs us twice that amount. **Money back if you don't like the paper.** A useful gift in the form of a handy, double-section key-ring will be sent free and postpaid to persons who fill out and send us the subscription coupon. The two sections enable you to keep keys most frequently used separate from others and saves bother in finding one you want.

LIVE STOCK REPORT DEPT.,

ABSORBINE

will reduce inflamed, swollen Joints, Bruises, Soft Bunches. Cure Boils, Fistula or any unhealthy sore quickly; pleasant to use; does not blister under bandage or remove the hair, and you can work the horse. $2 per bottle at dealers or delivered. Horse Book 7 D free.

ABSORBINE, JR., for mankind, $1.00 per bottle. Reduces Varicose Veins, Varicocele, Hydrocele, Goitre, Wens, Strains, Bruises, stops Pain and inflammation

W. F. YOUNG, P. D. F., 106 Temple St., Springfield, Mass.

BICKMORE'S GALL CURE

Be sure and work the horse

No salve in the world like Bickmore's Gall Cure for common horse ailments. Don't try unknown remedies. Bickmore's Gall Cure is standard everywhere. Cures galls, sores, cuts, wounds, grease heel, etc., without losing a single day's work. Sold everywhere by local dealers who are directed to refund your money if it fails. Send direct for trial package, enclosing 2c. postage.

BICKMORE GALL CURE CO., Box 399 Old Town, Maine.

Artificial MARE IMPREGNATORS

We GUARANTEE you can get from 2 to 6 mares in foal from one service of stallion or jack. Increase the profits from your breeding stables by using these Impregnators. No experience necessary to use them successfully. Prices, $3.00 to $5.00 each prepaid.

Popular SAFETY IMPREGNATING OUTFIT, especially recommended for impregnating so-called barren and irregular breeding mares, $7.50 prepaid.

Write for CATALOGUE which illustrates and describes our Impregnating Devices, Breeding Hobbles, Stallion Bridles, Shields, Supports, Service Books, Etc.

CRITTENDEN & CO., Dept 29, Cleveland, Ohio

Shoeing the Farm Horse.

The farm horse is generally an all-around-purpose animal, and, for this reason, should be shod. In addition to its being obliged to do the ordinary farm work, it is also used for hauling farm products to market, and for a pleasure animal for the family.

Traveling on the hard roads would soon cause the feet to become sore if left unshod, later lameness, and loss of the use of the horse.

The farm horse should be shod with a moderately heavy shoe, one that will be durable and protect the feet. The shoes should have low calks in order that the frog may touch the ground. In winter the calks should be sufficiently long to get a good foothold on the slippery roads. If the feet are obliged to have shoes with the long calks for three or four months, then a bar shoe is to be recommended. The never-slip calks have become popular of late years for the reason that the calks are quickly removed and new ones replaced, thus saving time and money.

Just as great care should be taken with the shoeing of the farm horse as is taken with a valuable race horse. The feet should be perfectly leveled and placed at an angle of from forty-five to fifty degrees for the front feet, and from fifty to fifty-five degrees for the hind ones. The shoes should not be fitted hot, as they are likely to start diseases of the feet, which might cause trouble later. The shoe should be attached to the foot with as small nails as will be necessary to hold it in place. Then, as in shoeing all horses, the nails should not be drawn too tightly and pinch the sensitive structures.

It is best to have the shoes reset every four to six weeks. If the horse can be kept off the road during the summer months, have the shoes pulled off and allow the feet to come down to the ground and get the natural frog pressure. The feet should be kept growing; then there will be very little trouble from the feet getting dry. Oil the coronary band of each foot twice a week. This band is located just underneath the hair line. It forms the horn of the wall, and if a new hoof is produced normally, the foot will not have time to become too dry.—C. L. Barnes, Colorado Agricultural College, Fort Collins.

A Foreign Expert Opinion.

Baron Beszeleny, an officer of the Austrian Army, has protested against a statement by the well-known horseman, Mr. M. H. Tichenor, who said that the American cavalry horses and horsemen were superior to the riders and mounts of the European Army. In coming back at Mr. Tichenor, the New York Herald quotes the Baron as follows:

"What does Mr. Tichenor call American horse? I mean a national horse, an equine type that is recognized as distinctively American, a type which conforms to certain standards of style and action.

"The trotter is the only equine type that can be called national today. But in this instance utility, beauty and everything that is good, everything that counts in judging a horse, have been sacrificed to speed, so that the trotting type—as a type—is a menace rather than a benefit.

"Then, does Mr. Tichenor mean to say that the drooped-hipped, cat-hammed, flat-ribbed, ewe-necked trotter, which is useless for anything but race-track purposes, outclasses those of Europe? All the good horses in America are imported, the offspring of horses imported from Europe.

"The cavalrymen of the United States, I gladly admit, are fair riders and good horsemen in every sense of the word, and I think a great deal of them, but as yet are far behind the English, Germans or Hungarians.

"But, as a fact, I have never seen more incompetent and more poorly mounted riders than these gentlemen on the bridle paths of Central Park.

"The American ladies are far better riders than the gentlemen. Almost every one I saw, and I have seen a great many, is a truly elegant, most graceful, well-mounted horsewoman."

Hundred-mile Race.

A reader of the New York Herald asks whether a pair of trotting horses ever covered one hundred miles in ten hours. The answer by the Herald is that no such performance can be found in Wallace's Year Book, Chester's Trotting Record or Hiram Woodruff's Trotting Horse of America, but in the American Turf Register for April, 1843, is a circumstantial account of a match against time in which Master Burke and Robin covered one hundred miles over the Centreville Course, on Long Island, in 9:48:48, actual trotting time.

This extraordinary performance took place on May 31, 1834, and it was not until nearly ten years afterward that the details were published, a circumstance which may explain the failure of Wallace, Chester and Woodruff to mention it. The horses were owned and backed by B. R. Theall, a well-known New York horseman of that day. George Spicer, who rode Dutchman to some of his great races, drove the team to a skeleton wagon weighing 185 pounds. The stakes were $1,000 a side, Mr. Theall undertaking to produce a pair of horses that could trot one hundred miles in ten hours and twenty minutes, the twenty minutes being allowed for rests or stops, but the horses not to be kept in motion longer than ten hours. They rested twenty-eight minutes and thirty-four seconds, and completed the one hundred miles in 10:17:22, elapsed time.

The horses showed no signs of distress in the first fifty miles, and the betting, which at first had been 2 to 1 in favor of time, shifted to odds on the horses. At the end of eighty miles Robin became distressed, and the betting changed again to odds on time. But Spicer, according to the Turf Register, saved the day by his generalship in taking the draught off Robin and throwing the weight on Master Burke. During the last fourteen miles the latter horse had not only pulled the load but dragged along his mate. Betting was against him until the last mile.

At the conclusion of the match the horses were instantly unharnessed, warmly clothed and kept walking until they cooled off. On the following day they walked from the course to Mr. Theall's stable in New York, and in a few days they were speeding on Third avenue again.

Brewers' Draft Teams.

The Standard Brewing Company of Scranton, Pa., created a sensation on the Chicago market on April 13th by the purchase of eight head of dapple gray and black draft horses, weighing 1,700 to 1,900 pounds each, at an average cost of $397.50 per head. They were considered as being the best draft horses that money could buy.

A Horse on Murphy.

"At one of the last races run at Monmouth Park," said Phil. Daly, Jr., the other day, "there was among other horses which started for the plate, a gelding called Botheram. Charlie Murphy, taking a fancy to the name, betted large odds in his favor. Toward the conclusion of the race his favorite happened to be in the rear of all, on which Murphy exclaimed:

"Ah, by Jabers! There he is! See how he drives them all before him! Botheram forever!"—Elizabeth Journal.

"Never interfere with a good pasture when once it is established." This is an English saying brought over by two Illinois Agricultural College professors who visited England.

Helping the Growth of Trees.

Some trees do not need help to grow, being in loose, friable soil. But we see many trees that are in soil that is largely clay and which seem to stand still from year to year. In such case the general need is a loosening up of the soil for a circle about the trees every year in the spring, or at least before the summer drouth comes on.

Some of our clay soils are of such texture that they have been able while in a virgin state to produce only trees stunted and irregular in form. They continue to do this after they are brought under the plow. The air cannot get into the soil, and this is necessary for the development of the bacteria that produce plant food. The air is also necessary for the growth of the root hairs on the rootlets, for by the root hairs all kinds of plant food are given to the roots and the trees.

The annual stirring up of the hard soil there is a great help to the trees, even those trees that like a clay soil.

A man across the way has a plum orchard on a hillside. The soil is one suitable to the growing of white oak. The land has never been plowed, but the soil was simply cleared of its original growth of white oak and hickory. The grass came in. Then the owner went in and dug some places in which to set his plum trees. That was eight years ago. Those trees have probably grown some in eight years, but one wouldn't notice it.

Off at one side is a place where the man had a pile of coal ashes, which he got rid of by spading into the soil. The ashes were around two of the trees, and so the two trees are surrounded by a circle of lightened soil. They have made good growth and are now double the size of the others.

Most of us do not realize how much good comes to such trees by the lightening of the soil about their roots. It may be that the tree is something like an individual—digests light food better than heavy. We put yeast in bread to make it light and believe that such bread digests better. This is because the digestive fluids can get at it better. In the light soil, the elements that help the preparation of plant food and its assimilation by the roots can get at the plant food better than when the soil is heavy and does not readily permit the passage of water.

This is a more serious matter than one supposes. The clay around the trees mentioned is very retentive of moisture, so much so that the slope drains out very slowly. The water in contact with any one root soon yields up its oxygen to the root, or the oxygen in the air around the root is exhausted, according to the species of tree, and there is no new supply. Plant food assimilation is therefore reduced to the minimum and growth of the tree is necessarily slow.

Manure is always a help, partly because it lightens up the soil and gives the roots room to breathe. But as soon as it decomposes the effect of the lightening is lost. Many orchard soils of this character can be improved by the use of coal ashes now carted away to some hole and dumped.

Value of Light in Growing of Plants.

The scientific orchardist takes into consideration the use of light in the maturing of his plants and fruit. It is so well known as not to need discussion that fruit highly colored by sunlight sells for the highest price on the markets of the world very largely irrespective of its quality. But, also, it may be said most fruit that has been colored by free sunlight has a good flavor.

For a long time in the great city markets apples from some parts of Colorado, where sunshine is eternal in the daytime and where the orchardists have learned to keep their tree tops thin, sell for the top price. The tops naturally thicken up fast when the roots of the trees have a full supply of water and about all the plant food they can use. But the man with the pruning knife keeps the branches from shading the fruit. The apples are bright in color and the buyer pays a big price for them.

Even in the growing of orchard trees, the matter of sunlight is no longer neglected, as it used to be. The writer remembers a time, about forty years ago, when a good many farmers practiced putting 160 apple trees on every acre. This meant the placing of the trees just a rod apart in every direction. The shade of the half-grown orchard was so great that the apples were deficient in color and even in flavor.

At that time some apple-tree sellers advocated the close planting of the trees, a rod apart. Doubtless they sold a good many more trees for it, and there was less danger of sunscald in winter. But the general result was to exclude light, and this made their efforts largely unavailing.

The writer remembers visiting the orchard of one fruit grower whose trees had been set a rod apart. The orchard was like a dense forest, and the shade made it impossible to get even the amount of fruit that should have been produced, to say nothing of the poor color of what was produced.

Since that time the tendency has been to plant farther and farther apart. At first twenty feet was considered a good distance; then it got to twenty-five feet, and later to thirty. Finally it stopped at about two rods, which gives forty trees to the acre instead of 160. This was largely a matter of sunshine. Now it is accepted as the proper theory to plant trees at a distance apart that will give sunlight from three sides.

The effect of the coloring power of sunlight was once illustrated to the writer by an incident that occurred in connection with an exhibit of apples at an Illinois County Fair. An apple grower went to a wealthy tree in his orchard and picked off three separate lots of apples. One lot was from the branches that received the most sunshine. The second lot was from the middle of the tree, where the fruit caught but occasional gleams from the sun; while the third was from the shade side of the tree, where it was never touched by the sun. The three lots were exhibited in three different varieties of apples and each lot got a prize. Then the joke on the judges was allowed to get out. But the lesson was a good one, as it showed what sunshine means to an apple grower.

A Wonderful Producer of Human Food.

A Holstein cow owned by the Department of the University of Missouri in one year produced more human food in her milk than is contained in the complete carcasses of four steers weighing 1,250 pounds each. This statement, impossible as it seems, is not only true, but does not even do full justice to the cow. The solids in the milk which are completely digested and used by the body are counted against the entire carcass of the steer which is only in part edible.

The cow that performed this feat of producing the equivalent of four steers is Princess Carlotta. In the year she produced 18,405 pounds of milk. Below is given the amount of proteids, fat, sugar and ash contained in this milk and the amount of the same substances found by Dr. P. F. Trowbridge in an analysis made of the carcass of a fat steer weighing 1,250 pounds:

	18,405 lbs. milk.	1,250-lb. steer.
Proteid..	552 lbs.	172 lbs.
Fat.	618 lbs.	333 lbs.
Sugar..	920 lbs.	... lbs.
Ash..	128 lbs.	43 lbs.
Total.....	2,218 lbs.	548 lbs.

The total amount of dry matter in the milk was 2,218 pounds, all of which is edible and digestible.

The steer, with a live weight of 1,250 pounds, contained 56 per cent. of water in the carcass, leaving a total of 548 pounds of dry matter. In this dry matter of the steer is included hair, and hide, bones and tendons, organs of digestion and respiration: in fact, the entire animal, a considerable portion of which is not edible. The analysis of the steer's carcass was made from samples taken after grinding up together one-half of the complete carcass, and is not in any sense an estimation of the composition of the carcass.

Princess Carlotta produced proteids sufficient for more than three steers; nearly fat enough for two; ash enough to build the skeleton for three, and, in addition, produced 920 pounds of milk sugar, worth as much per pound for food as ordinary sugar.

These figures show the remarkable efficiency of the cow as a producer of human food. It is because of this economical use of food that the dairy cow and not the steer is kept on high-priced lands. When land is cheap and feed abundant the meat-producing animals predominate; but when the land becomes high in value and feed expensive, the farmer turns to the dairy cow.—C. H. Eckles, Professor Dairy Husbandry, University of Missouri.

Ode to Missouri.

Here's to Missouri, the State of our birth, the greatest and grandest old State on earth; where the bright golden corn fills the thousands of bins, where the wealth of a world comes from faithful old hens; where mules big and round, long-eared, stubborn and fat, bring three hundred apiece, and go quickly at that; where sweet milk and honey, lead, copper and zinc, would fill a big river full up to the brink; where hogs root and grunt and bring ten and a half; where a cow sells for sixty, with ten for the calf; her people the best under God's shining sky; in Missouri I live, in Missouri I'll die."—Macon Times-Democrat.

Probably the most essential point in farming is to know your programme thoroughly in advance and stick to it through thick and thin.

You can lay it yourself

Congo is the ready roofing you will hear about from your ne ghbors.

It gives such good satisfaction, costs so little, is so easy to lay and is so waterproof that you cannot help talking about it.

There is absolutely nothing in Congo that will cause it to rust, rot or dry out, or be affected by acid.

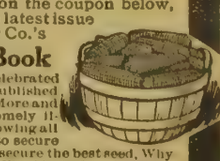
Deere News—

No. 1 Every little while, readers of this great paper will enjoy getting something new from the Deere People, at Moline, Ill.—probably the largest agricultural manufacturing center in the United States.

Right now if you say that you read this paper and send your name, either by postal or letter, or on the coupon below, you will receive the latest issue of Deere & Mansur Co.'s

More-Corn Book



The title of this now celebrated book, which has been published in seven editions, is "More and Better Corn," handsomely illustrated in colors, showing all facts on Corn—How to secure the best stand, How to secure the best seed, Why buy ear-corn for seed, Final test of seed corn, How to plant to best advantage, etc., etc.—every page profusely illustrated, makes the book most practical for your use because you can see from the photographs just what to do and how to do it. Also gives valuable tables and complete information about all of the latest kinds of improved Deere machines for handling corn, including the famous New Deere No. 9 Corn Planter, etc., etc. You are invited again this year to

"Get Your Name on Our Big Mailing List"

FREE

Deere & Mansur Co., Dept. 7, Moline, Ill.

As explained in Deere News No. 1, please put my name on your Free Mailing List and send me "More and Better Corn." I am a reader of (paper inserted).

Name .....

Address .....

Town ..... State .....

Note.—We will thank you particularly if you just indicate on the margin of paper here what kind of farm implements you are interested in this year. No obligation on your part to buy. Just give us the chance to send you books which will make you a better judge of values.

WESTERN

Range Horse Sales

will be conducted by

Campbell & Reid and Western Sale Stables Co.,

NATIONAL STOCK YARDS, ILL.,

As usual, during the season of 1910. The First Sale will take place on

THURSDAY, JUNE 16,

And every two weeks thereafter until the close of the season. We will be glad to hear from Ranchmen having Horses for sale. The demand is sure to be good, especially for well-bred Mares and Geldings in good condition.

Please address
J. J. SEARCY, Sale Manager,
NATIONAL STOCK YARDS, ILL.

Dakota Heifers Bring $7.90.

South Dakota yearling heifers were sold at a new high price on the Chicago market, April 26th, considering the number and weight of the offerings. On that day, Clay, Robinson & Co. sold nineteen head, including six steers, at $7.90 per 100 pounds, the lot averaging 739 pounds. The price was 15 cents per 100 pounds higher than any steers made on the same day and 50 cents per 100 pounds above any sale of a load of heifers. They were marketed by N. N. Poulsen, the progressive stockman of Vermillion, South Dakota. He also had in forty-five hogs of 266 pounds average which Clay, Robinson & Co. sold for him at $9.65 per 100 pounds, within five cents of the extreme top for prime offerings.

The Farmers' Home Journal of Louisville, Ky., says: "Judge F. P. Sebree, of Carroll county, Kentucky, sold this week 150 fat hogs at $9.50 per 100 pounds. He got $4,000 for them, and it is said to be the largest sale of hogs ever made in that county."

Sheep and Lamb Prices.

At St. Louis, on April 30th, the following were quotations for sheep and lambs: Good to choice spring lambs are quotable from $10 to $11 per 100 pounds; fair grades, $8.00 to $9.50, and little culls, $6.00 to $7.50; good, fat, clipped lambs, $8.50 to $9.25; fair to medium grades, $7.50 to $8.25; culls, $5.50 to $6.75; fat mutton sheep, $7.75 to $8.00; fair offerings, $7.00 to $7.65; stock sheep, $3.50 to $5.00; fat bucks, $5.75 to $6.00; and thin ones, $5.00 to $5.50—all quotations being at the price stated per 100 pounds. For the information of people who are not in the business we desire to say that the entire market charges for unloading, receiving, watering, weighing, feeding, yarding, selling, guaranteeing the sale, etc., do not amount to 25 cents per head.

Native Cattle Prices.

The following prices were paid to farmers at the St. Louis National Stock Yards, basis of trade May 1, 1910: Choice to prime steers, 1,300 to 1,500 pounds average, $8.25 to $8.50 per 100 pounds, which is $107.25 to $127.50 per steer. The commission for selling is 50 cents a head; the yardage is 25 cents a head; the bill for feed is not over 5 cents per head, which includes watering. Total yard and sale charges not over a dollar a head. Cattle are weighed up to the buyer when full of water and feed. The "fill," so-called, in a good steer averages forty to fifty pounds, which, being paid for by the buyer, nets the stock raiser $3.20 to $4.00 for his gain in market, out of which he pays but $1.00 for all the yard service. The farmer receives all the money except a dollar a head. This is on basis of best cattle. Other quotations: Good to choice steers, $7.75 to $8.25 per 100 pounds; medium to good steers, $7.00 to $7.75; common to fleshy steers, $6.25 to $7.00; choice to prime yearlings, $7.85 to $8.25; good to choice yearlings, $7.25 to $7.85; common to good yearlings, $6.00 to $7.25 per 100 pounds. Deductions for yardage and feed are the same, but commissions are less than fifty cents a head if more than twenty are in the car.

THE GUIDE POST TO PROFIT

CONSIGN YOUR LIVE STOCK TO CLAY, ROBINSON & CO.

NATIONAL STOCK YARDS, ILL.

Clay, Robinson & Co. keep the country so well informed on the markets the shipper is in position to take advantage of the best market. That's one of the reasons our clients are so generally successful. Our experts in ten of the leading live stock markets of the world watch the trend of trade every hour and post one another. Then in turn they give this information, condensed, to our patrons. Every day our cattle, hog and sheep departments at these ten markets mail to our friends the latest market news and information. More than that, the shipper in territory contiguous to two or more markets is advised by us from these several points. He thus is enabled to select the best point for his shipment. If you are located where you could ship to two or more markets, and are not being advised by us from each of these points, a card to us will secure you this valuable information. Keep it before you that we have the best talent to be secured in each of the following markets: Chicago, Kansas City, South St. Joseph, South Omaha, Sioux City, South St. Paul, East Buffalo, East St. Louis, Fort Worth and Denver. Having our own houses at all these points, our market information is not distorted or colored by local interest. Let us keep you posted, that you may select your best market. That's our reason for having branch houses. We want to sell your stock where the return of dollars to you will be greatest.

Money Going Abroad.

Vice-President Sherman stated at St. Louis that by the recent reduction of customs duties American productions had already been displaced by foreign goods to the total of two hundred and fifty millions of dollars. He also stated that in the future, instead of being downward, the revisions should be upward.

ROBBED BY FLIES.

Farmers Suffer Severe Losses From Attacks of Insect Pests.

It is a well-known fact that farmers and dairymen are actually robbed of their profits through the constant tormenting to which their live stock is subjected in summer by the bites of flies and other insects.

Horses and cows are so annoyed that they lose flesh and value. Horses are more tired out from being incessantly pestered by flies and other insects than they would be after a hard day's work in the fields, while the cows show the effects of being worried not only in the loss of flesh but by a big decrease in their yield of milk.

Farmers and dairymen all over the country are realizing these facts more and more every year, and are profiting through the discovery made by one farmer who sucessfully solved the problem of keeping the insect pests off his horses and cows.

It has been twenty-five years since this farmer first made his important discovery, and so effectually did it protect his live stock that instead of getting only eight quarts of milk a day from a cow he got twelve quarts a day when the cow was kept free from the insect pests. It wasn't long before the merits of his preparation were known all around him, and to take care of the great demand for it he formed a company to market "Shoo-Fly," the appropriate name he gave to his preparation. And the "Shoo-Fly" business has been growing in volume ever since and saving money for thousands of farmers and dairymen.

The Shoo-Fly Mfg. Co. has testimonials galore from those who have benefited by this great discovery, but the best testimonial of all is the fact that many dairymen who first tried it in 1885 have used it continuously ever since, and many others have come back to it after having been persuaded to try some of the numerous imitations which spring up every once in a while.

"Shoo-Fly" not only keeps flies and insects off animals in pasture longer than any imitation, but it cures all kinds of sores, barb-wire cuts, hoof ailments, etc. "Shoo-Fly" is easily applied—fifty cows can be sprayed in a few minutes—and 30 cents' worth will save about $10 worth of milk and flesh. It is also used to keep poultry and poultry houses free from lice and mites, and saves money here, too, for the hens will lay better and the profits from eggs will accordingly increase.

Every reader of The National Farmer and Stock Grower will doubtless be glad to know about this preparation to shoo flies off their live stock and keep them off. It is only necessary to say "Shoo-Fly" to the dealer to get this great fly repellant that has stood the test of twenty-five years. If unable to get it from a dealer, the makers, Shoo-Fly Mfg. Co., 1305 North Tenth street, Philadelphia, will send on receipt of $1.00 a three-tube gravity sprayer and enough Shoo-Fly to protect 200 cows to any express office named. They show their faith in their preparation by offering to return the dollar if "Shoo-Fly" doesn't protect the cows. Every farmer and dairyman who reads this article should at least write to the Shoo-Fly people for a copy of their booklet.

The Low Price of Oats.

Forty cents for thirty-two pounds of oats don't look high to a farmer after he has paid the freight to market.

Evans-Montague Commission Company

THE MEASURE OF SUCCESS attained by a SHIPPER OF LIVE STOCK depends largely upon THE COMMISSION HOUSE to which he consigns his CATTLE, HOGS AND SHEEP.

If you wish to receive TRUSTWORTHY AND RELIABLE SERVICE and have your consignments SOLD BY CAPABLE AND CONSCIENTIOUS SALESMEN, you cannot do better THAN PATRONIZE OUR HOUSE.

The Shippers' Interests ARE OUR INTERESTS, and our rapidly-increasing business IS THE STRONGEST TESTIMONIAL of our ability TO PLEASE OUR CUSTOMERS

Evans-Montague Commission Company

Box 68,
NATIONAL STOCK YARDS, ILL.

A First-class Commission House.

In consigning live stock for sale at the St. Louis National Stock Yards, remember the Evans-Montague Live Stock Commission Company. It is a successful firm, highly competent and persevering in the interest of their customers. The Evans-Montague Commission Company solicit consignments of cattle, hogs and sheep for sale on the market, and desire stockmen to take notice that the company has special buyers who select and buy stock and feeding cattle for their patrons. Address, Evans-Montague Commission Company, Box 68, National Stock Yards, Illinois.

MULE DEPT.—Ed Conway, Lan Morris.
AUCTIONEERS—Tim Holland, Ike Howard.

Write us for market information.
Address,

HOLLAND, NUGENT & MAXWELL BROTHERS.
P. O., National Stock Yards, Ill.

Feeding Work Horses.

The Iowa Experiment Station has been conducting a series of experiments in feeding work horses. It has been found that oats are too expensive to feed in large quantities, and that the ration may be greatly cheapened by substituting oil meal, or gluten feed. The health, spirit and endurance of the horse was the same when fed corn in connection with one of these feeds as when oats were fed. These experiments show that oil meal may be worth as much as $60 a ton for horse feeding, and cotton-seed meal a little more. The horses did a hard summer's work on these feeds without any considerable loss in flesh. These experiments are of great value to farmers everywhere, as the question of feeding the work horses cheaply and at the same time in such a way as to keep them in good flesh, is an important one. The results of the experiments have been published in bulletin form, and may be obtained free by writing to Director C. F. Curtiss, Iowa Experiment Station, Ames, Iowa, and asking for Bulletin No. 109.

Mule Prices For Buyers.

The pioneer firm of mule dealers of the St. Louis market is the Jos. A. Maxwell Mule Company, and their specialty is of the better class. Contracts are entered into for any number or grade of commercial mules and satisfaction is guaranteed. Members of the firm also contract for cavalry, artillery, Cuban or Eastern horses. It is a safe firm to do business with, always upholding the highest traditions of the great market of which they have been so largely instrumental in building up. For mule quotations, address The Jos. A. Maxwell Mule Company, National Stock Yards, Ill.

Sale of Range Cattle.

Captain S. B. Burnett, of Fort Worth, Texas, is reported as selling 2,000 head of dehorned two-year-old steers of his own raising at $35 per head, and 1,000 more, not quite so good, at $32.50 per head. This sale of Texas grass cattle, yet to be fattened and finished for market, represents pretty near the high market in the history of cattle trading.

The Mule Trade.

Generally speaking, mules are as high as ever. Good teams cost $600 a pair, and some of the extra large teams considerably more. The Live Live Stock Reporter of the National Stock Yards quotes car-loads as follows: 14 hands, $75 to $145; 14½ hands, $92.50 to $157.50; 15 hands, $117.50 to $192.50; 15½ hands, $135 to $225; 16 hands, $150 to $275.

The Horse Market.

Holland, Nugent & Maxwell Bros., horse and mule commission salesmen, continue to sell large numbers of horses and mules at the St. Louis National Stock Yards. They hold the horse auction every Monday and Tuesday in the year and sell mules every day in the week. This is strictly a commission firm, not buying or selling any horses or mules on their own account. Having but one interest to serve—that of their customers—they concentrate all energies and their ability to obtain the highest price for every animal sold. Horse and mule shippers will find it to their advantage to ship to this firm and to write for their market letter.

Southern Cattle Prices.

The following were quotations for Southern cattle: Choice to prime corn-fed steers, $7.25 to $8.00; good to choice meal steers, $6.40 to $7.10; medium to good steers, $5.50 to $6.40; common to good grassers, $5.00 to $6.25; good to choice heifers, $5.50 to $6.25; good to choice cows, $4.50 to $5.25; fair to good cows, $4.00 to $4.50; cutters, $3.40 to $3.85; canners, $3.00 to $3.25; bulls, $4.00 to $6.00; fair to choice heavy calves, $4.00 to $5.00; heretics, $3.75 to $4.50; yearlings, $3.00 to $3.50; veal calves, $4.50 to $7.50—all sales being at the prices stated per 100 pounds.

Prices For Cows and Heifers.

At the St. Louis National Stock Yards, May 1st, the following were native cow and heifer quotations: Canners (commonest cows coming to market), $2.50 to $3.40 per 100 pounds; a little better cows, called cutters, $3.50 to $4.15; medium to good cows, $5.50 to $6.50; fancy, fat cows, $6.50 to $7.00 per 100 pounds. Common to medium heifers sold to the butcher trade at $5.00 to $6.00 per 100 pounds; good heifers, $6.00 to $6.75; choice heifers, $6.75 to $7.75; and fancy heifers, $7.75 to $8.10. This range of quotations represents the prices paid to the farmers or whoever shipped them in, and on each animal yardage, feed bill, selling and all market charges do not amount to a dollar a head.

Kentucky Cattle Sale.

"Fox, O'Daniel & Co., of Lebanon, Ky., recently sold to B. Sterns Sons, of New York, 500 head of cattle, which a local firm had been slopping at the distillery of Mueller, Wathen & Kobert since last November. The cattle will be shipped to New York in two special trains, the first of which will leave here next week. The average weight of the cattle was 1,200 pounds, and the purchase price was $7.00 per 100 pounds. All the cattle were bought in Marion and Washington counties last fall at 4 to 4½ cents a pound as feeders. The same firm also sold to a Louisville buyer quite a number of head, and the two deals aggregated close to $50,000."—Farmers' Home Journal.

The Hog Market.

At the St. Louis market the April trade in hogs closed with car loads weighing 220 to 250 pounds at $9.30 to $9.65 per 100 pounds. The lighter weights, 165 to 195 pounds, sold from $9.25 to $9.60, and the pigs and lights, 110 to 150 pounds, at $8.25 to $9.50. Mixed hogs bought by packers sold at $9.25 to $9.45, and hogs at $9.50 to $9.65 were on the butcher order.

Western Range Horses.

The season is approaching for the great sales of Western range horses and mules conducted at the St. Louis National Stock Yards by Campbell & Reid and Western Sale Stables Company. The sales take place every two weeks, and always on Thursday. The present conditions indicate an unusual buying demand. On account of the usual good quality and condition of the offerings presented by this firm there are always plenty of buyers at these sales, and the horses net range horsemen more money than do the sales at any other market. The first sale will be held on Thursday, June 16th. Ranchmen having horses to market will find it to their interest to communicate with J. J. Searcy, Sale Manager, National Stock Yards, Ill.

Another Horse Importation.

Trumans' Pioneer Stud Farm of Bushnell, Ill., will receive another importation of Shire stallions and mares on the Steamer Minnewaska, sailing from London April 30th. This will make the fifth importation since January 25th. This is perhaps their banner importation for this year, as the horses are selected for the express purpose of showing at the State Fairs this fall, and are the choice of a few of the leading breeders in England. They will be due to arrive in Bushnell, all going well, on May 11th. The three importations received in March and April are in fine condition and are now ready for sale. They are making prices that will move them and solicit correspondence and a visit from anyone that is in the market for a first-class stallion at a reasonable price.

Clay, Robinson & Co. at St. Louis.

It is now a little over a year since Clay, Robinson & Co. opened their house at the St. Louis National Stock Yards, and ever since the first day the firm has made gains upon the market. It is a most thorough and successful organization, earnestly working to the end that the service to the shipper shall be the best that it is possible to render. Messrs. Clay, Robinson & Co. are strictly live stock commission agents, receiving consignments and selling them to the best advantage upon any of the markets on which the firm is established. See page 13.

Lettuce is a luxury, yet it is the first money-maker in many a market garden.

Sorghum is not high at 25 cents a gallon at wholesale.

WOOL MEN!

We can interest you. Do you know that St. Louis is a **Spot Cash** market? In 20 years we have handled **more separate lots** of wool, each season, than any other commission house here. Over **40 years' experience** in the business, and your shipments receive our personal attention. The Market For Peanuts.

We notice from a farmers' bulletin issued by the Agricultural College of Mississippi that in growing Spanish peanuts they produced an average of 1,640 pounds per acre. They also produced 2,452 pounds of peanut hay to the acre. The hay is good for rough feed on the farm, and the nuts are either fed to hogs or shipped to market.

We notice at this writing that peanuts are sold in car-load lots, sacked, on arrival at St. Louis at 3 to 3½ cents a pound, and probably net the shipper 2½ to 3 cents a pound at the home town. We have seen these sacks hauled on wagons and stacked on sidewalks, and there is quite a little difference between their condition on arrival and when they are sold from the fruit stands or from the push carts of the retailers.

They arrive in bulk raw, dirty and unsorted, and they are sold clean, selected and roasted, in small packages. and yet they are the same peanuts sold in the shells. Probably the shrinkage between arrival and sale is 10 per cent. This is only a guess, but it is a reasonable one.

The retail price of a bag of peanuts is five cents, and having bought and weighed numbers of them, we find the average to be 3¼ ounces in the bag, or an average of 25 cents a pound.

Here we are once more to the robbery of the farmer. The farmer receives 2½ to 3 cents a pound (or feeds them to hogs) and the ultimate consumer pays 25 cents a pound. This looks worse than the alleged beef trust. The farmer gets $41 to $49.20 per acre, and the ultimate consumer pays $369 per acre. The ultimate consumer does not buy an acre of peanuts at one time, but he pays that rate. The 1,640 pounds of peanuts less 10 per cent. is 1,476 pounds, and at 25 cents a pound the total is $369. What greater evidence do you want of the robbery of the farmer?

And we talk of the Italian man with the push cart, who collects his tribute from the consumer, and we ask him to explain how it is that the farmer gets so little and he gets so much. We cannot give the answer in his own language. He says: "We do not buy car lots of peanuts; we buy from the dealer; and there is plenty of money for us if the people always have money and weather is good. But in the cold and the rain we sell very few peanuts." Finally he said: "You tell your farmer to come here, pay a license and stand on the street corner all the rainy day, he then know something about selling peanuts. He then know that if he steal the peanuts he have no money, because there is no trade."

HORSES' SKINS ARE TENDER IN THE SPRING.

Every successful farmer knows how highly important it is to have all of his work horses in working condition every day during spring and summer, the time when he needs them most. A difficult thing to do, it is admitted. In the early spring horses' skins blister and gall easily and badly; during the winter months they have become tender. In the summer, when the weather is aggravatingly hot and insects are bad, their skins are apt to scald and chafe and become bitten. Owing to these conditions many an otherwise good horse is laid up when his services are most needed—most valuable. To provide against just such occurrences the foremost farmers of the country have discovered and provided themselves with the only sure, safe, quick remedy, Bickmore's Gall Cure. Invaluable and convenient; it cures while the horse works. Satisfactory—the hair grows in again of the original color. For quickly healing cows' sore, chafed or fly-bitten teats it certainly has no equal.

Ninety thousand horsemen and dairymen who use it and keep it in their stables the year round, admit that for surface sores of horses, cattle and all other stock no other cure is so sure, so safe, so quick and so satisfactory.

Try it for harness or saddle galls, chafe, rope burns, cuts, scratches, grease heel, etc.

Absolutely guaranteed to heal or money cheerfully refunded by your dealer.

Thousands of dealers sell Bickmore's Gall Cure. Ask yours for it or send 6c. postage for free sample box, and Bickmore's Horse Book—it's free, too. A practical, valuable horse book, every horse owner should have. Address Bickmore Gall Cure Co., Box 309, Old Town, Me.

HOW TO SELECT A HARVESTING MACHINE.

This is a subject which should be of great interest at this time of the year. The long winter months are past. The season of activity is upon us. From now on until harvest time you will be busier every day. Now is the time to look over your equipment, find out what you will need, and then select the machine that in your judgment will be best adapted for your work.

It is a subject that calls for careful consideration, for the construction of any harvesting machine, however simple, affords the manufacturer—if he be so inclined—abundant opportunity to skimp a little in a score of places that will not show at the time you make your purchase. If you do not choose wisely, you may find that instead of being prepared to make every moment count at harvest time with an efficient, economical machine you have purchased "continuous trouble." Every delay due to a breakdown, every moment lost by a bungling machine at harvest time seems a reduction of your profits.

It is the purpose of this article to call attention to a few points that you should consider carefully before buying any machine.

In the first place—it being, as we said, a simple matter to skimp a little in making a harvester in places where it will not show at the start, you should consider carefully the reputation of the manufacturers and the record of the machine in the field.

For example—harvesting machines in the I. H. C. line are known quantities. The I. H. C. trade-mark is a guarantee of quality — a seal of excellence. I. H. C. machines are known the world over for their efficiency.

Deering, McCormick, Champion, Osborne, Milwaukee and Plano harvesting machines have proved their labor-saving, profit-producing worth to millions of farmers in all parts of the world. They have a particularly good record for service on American farms. They seem to meet the American farmers' requirements as no other machines do. They get all the grain, no matter whether it is tangled, standing or down, in the quickest possible time. They have a strength and a wide range of adjustment that adapts them to all conditions of grain and ground.

The wide variety—six machines of known quality—gives you an opportunity of getting the machine that is best adapted to your individual use. The big demand for these machines permits their manufacture in such large quantities that the manufacturing cost is reduced to the lowest point, without sacrificing quality.

In buying a machine bearing the I. H. C. trade-mark, you are sure of getting a machine with the latest practical improvements. Every year finds the I. H. C. experts in the fields making notes and watching to see where any improvement could be made to increase the efficiency of the I. H. C. machines.

Another question that should engage your attention now is the selection of binder twine. In choosing twine bearing the I.H.C. trade-mark in Sisal Standard Manila brands, you are certain of satisfaction. The International Harvester Company of America has more at stake than selling twine. The company is vitally interested in the successful operation of thousands of binders and knows that no binder can work successfully with poor twine, and has therefore given the subject more careful consideration than any company that is not responsible for the success of the machine.

If you have not as yet made a selection—do not delay any longer.. See the local I. H. C. dealer, or write direct to the International Harvester Company of America, U. S. A., for the catalogs you are most interested in.

Pure Drinking Water For Man and Beast.

Disease germs carried in drinking water have always been destructive of life, both in the country and in the city. In both localities water has become contaminated through ignorance of the great forces of nature. There was formerly almost a superstition that the soil almost instantly destroyed disease germs, and that running water was a sure and rapid purifier.

The writer well remembers a school teacher who used to illustrate the cleansing power of running water by citing the Hudson river below Albany. He used to point to the fact that the sewers of Albany emptied into the Hudson, and asserted that six miles below the junction of the sewers and the river the water had entirely purified itself, as was proven by the fact that people drank the water. Many a pupil went out from under his instruction with the idea firmly fixed that no matter how much sewage was poured into running water, it would be fit to drink a few miles below the point of contamination.

Evidently someone in time woke up and asked if the fact that people on the Hudson below Albany drank of the sewage-polluted water was really good proof that it was fit to drink, for we know that since that time many things have been said and done in regard to it.

But this old heresy had the result of killing many people. It also killed millions of animals. In the case of hog cholera, some of the most destructive outbreaks have been produced by streams that ran through hog farms, carrying the disease to all the farms below, even for hundreds of miles.

In the country, the idea that the soil would destroy all germs had the effect of putting the people to sleep while their wells were dug near cesspools, outhouses and barn yards. To-day one can find many farm houses where the water is undrinkable to a person who is not used to it, and in such cases it will often be found, as the writer knows by experience, that the wells are receiving the leachings from the barn yards and privies. If any reader doubts this let him make an exploring expedition countryward. In any locality where the farms are small and numerous he will find the wells placed in astonishing places, when the neighboring yards and other things are considered.

This is bad enough, but what shall be thought of a well dug on the highway just outside of a cemetery, as was one well of which the writer knew. Three people stopped one day and drank from the well in mind Then each of the three returned to a different village and promptly came down with typhoid fever. There can be no possible doubt that the well was infested from the cemetery, and that it must have spread the dreadful disease among thousands of homes Every such well should be hunted up and filled up by the authorities.

An army surgeon tells the writer that he has known of typhoid germs living for six years in the soil. We have not his proof, but we can afford to be suspicious of the germ-destroying power of the soil. Perhaps some soils have in them substances that help keep certain disease germs alive. Don't trust too much in guessing.

More Care Needed.

J. Pierpont Morgan, seated in his favorite nook on the Cedric, conversed about alcohol with a group of bankers as the huge ship glided over a sea of blue glass, with Africa on her right and the Riviera on her left.

"That reminds me," said Mr. Morgan, "of the Dash Club. They are all hard drinkers at the Dash. And as Smith one day came forth to enter a taxicab, the hall footman ran ahead of him to open the cab door.

"The footman, in his zeal, slipped and fell full length. Smith shood his head at him and said:

" 'Really, my man, you must be more careful of your reputation. If you go flopping about like that people will take you for one of the members."

17 Lessons In Farming Given Free

WE received a copy of an 80-page book today, entitled "Better Farming," published by Deere & Company, with a letter asking that we look the book over and give our opinion of it. Also, that we tell our readers what we think of it and inform them that a copy will be sent free to any one of our subscribers upon request.

We have just gone through the book and hasten to present their offer in this issue, because this book will make some of the best winter-evening reading that will reach our farm homes this winter.

"Better Farming" contains eighteen special articles covering as many subjects of vital interest to everyone of our readers, each chapter going directly to the heart of its subject, each prepared by an authority who knew how to make every paragraph count.

It isn't too much to say that this book will afford anyone a mighty good groundwork of education on branches of farming suggested by the titles of the chapters as follows: Alfalfa Growing; Business-like Dairying; Silos and Silage; Improving the Corn Crop; Hints on Making Hay; Seed Wheat; Soil Cultivation; Maintaining Fertility; Improving the Cotton Crop; Improved Methods of Stock Feeding; Weeds and their Control; the Gasoline Engine; The Boll Weevil; The Science and Art of Plowing; Fighting Jack Frost, and Adjusting Wheel Plows.

In addition to these directly instructive articles, there is an inspiring introduction to the book under the general head of "Better Farming," an intensely interesting chapter on the invention and development of the steel plow; and, on other pages, the complete line of Deere Plows and Cultivators are well illustrated and described.

All in all, we don't remember to have seen another book published for free distribution that will be so much appreciated by the progressive farmer. During the past seventy years, Deere & Company have gotten mighty close to all farmers of America. They have done fine things in the way of issuing free books of value. But they have capped the climax with this latest book.

Certainly, some four or five or perhaps mostly all of the lessons in this book will be of particular value and interest in every farm home we reach. Hence, we trust that thousands will take advantage of this opportunity. Just mail a postal or letter to Deere & Co., Moline, Ill., and ask for a copy of "Better Farming," second edition, giving your name and complete address.

DEERE & CO., Box 7, Moline, Ill.

Gentlemen: Please send me, free, a copy of "Better Farming."

Australian Mutton in New York.

The National Provisioner of April 16th said:

"Local newspapers made a sensation this week out of reports of the importation and sale in New York this week of 'immense quantities' of Australian beef and mutton at prices said to be so much less than those prevailing for home-killed meats. As usual, the newspaper reports were exaggerated, and a great many of their statements were pure inventions.

"The actual facts are that a quantity of frozen Australian and New Zealand mutton had been imported, through London, and put on the local market at a time when home-killed mutton and lamb had been exceptionally scarce and high. It is only at such times that it would be profitable for anyone to handle the Australian stuff. During these limited periods the frozen carcasses from the antipodes may be marketed here at a fair profit in competition with home meats.

"The first Australian or New Zealand mutton was not marketed in New York this month, as the newspaper reports had it, but as long ago as August, 1909. At that time a consignment of 250 carcasses was brought in by an English agent through the Lang Packing Company of West Harlem Market. This was experimental, and the experiment proved a success. The local market at that time was very high, and permitted the payment of duty on the frozen stuff and its sale at a profit.

"Following this experiment, when the home market went up so high within recent weeks, Manager John P. Fetterly, of the Lang Packing Company, arranged for further and heavier importations. Consignments aggregating 2,160 carcasses have been received and about 2,500 more carcasses are on the way.

"In another month or so, when home supplies become more plentiful and the market reacts to a normal level, these foreign importations will no longer be profitable. In the meantime, however, the local dealers are paying 12 to 12½ cents for the foreign frozen sheep, as against about 14 cents for city-dressed sheep, and about 14½ cents for the frozen lambs, against 16 to 17 cents this week for fresh city-dressed stuff. The newspaper reports that Australian sheep were selling for 10 cents, against 16 cents for local stuff, and foreign frozen lambs at 12½ cents, against 18 cents for home stuff, shows the manner in which these sensational newspapers deliberately distort the facts.

"There has been no importation of Australian frozen beef so far as is known, though a continuance of the shortage of home beef supplies and high prices might tempt local concerns to try the experiment with the frozen beef also. Frozen mutton can be put on the market to much better advantage than beef, however. The Australian mutton and lamb is carefully selected and inspected by government inspectors before freezing and exportation, and stands both the freezing and the long journey and handling better than the beef. If properly thawed out it is said the Australian mutton will compare very favorably with fresh-killed stuff. But the expense of the long shipment from the other side of the world makes its marketing here practicable only at brief periods when local markets are exceptionally high."

To Pay Employes Benefits.

An elaborate system for paying benefits to its employes in case of accident and for the payment of fixed sums in case of death was announced in Chicago, Ill., April 13, by the International Harvester Company. The system is to go into effect on May 1 and is to apply to 25,000 employes in various parts of the country.

In its announcement the company says hereafter it will cast aside the defense of "contributory negligence," "assumed risk" and of the "fellow-servant" doctrine, and proposed to pay, without regard to any question of legal liability, a definite scale of compensation to all employes who are injured as a result of accidents occurring while they are at work.

About 17,000 of the company's employes are located in Chicago. The rest are employed in the plants at Milwaukee, Wis.; Akron, O.; Springfield; Auburn, N. Y.; Hamilton, Ontario; St. Paul, Minn.; Newark Valley, N. Y.; Sterling, Ill.; the mines in Masaba range, in Minnesota, and lumber mills at Deering, Mo.

Sheep and Goats.

The American Stockman says that the number of sheep in the world has decreased 93,000,000 head since 1873.

The sheep-raising industry is not likely to be overdone for many years. The consumption of mutton is far greater in this country than it ever was before.

Lambs will begin to eat in about ten days from birth, and they should then be introduced to the feed box. Lambs eat very little, but a good mother, a little grass and a little feed will produce a high-priced lamb at very little cost.

A Montana sheep rancher has started a sheep station in the Catskill Mountains of New York by purchasing 600 acres with buildings for less than $10 an acre. He will extend his holdings. A sheep ranch four or five hours' ride from New York City is a novelty and probably a good proposition.

The Best Ration For Hogs.

In a recent bulletin the College of Agriculture of the University of Missouri has published the results of a number of swine-feeding experiments by E. B. Forbes.

These experiments prove that corn —good corn—is a good feed for any animal and that there is no reason for withholding it from any animal needing food. At the same time, it is shown that corn alone is not nearly so good or so profitable a feed as corn supplemented by some proteid food, such as tankage, linseed oilmeal or soy beans.

In hogs fed exclusively on corn the animal becomes very fat and chubby and does not develop properly; the bones are brittle and easily broken.

Sixty-five hogs were used in this experiment and they were divided into lots of five each. Twelve different rations were used with corn alone in two of them and corn supplemented with some other feed in the others.

The hogs fed on corn and linseed oilmeal and those fed on corn and tankage gained the most; those receiving corn alone were most unsatisfactory.

A full account of this work, "The Effect of Rations on the Development of Swine," may be obtained free by writing for Bulletin No. 81 to F. B. Mumford, Director of Agricultural Experiment Station, Columbia, Mo.

Wool Quotations at St. Louis.

Recent wool quotations were as follows. The quotations are for average lots from the farm: Near-by growth—Choice 24 to 25c.; fair, 23c.; coarse and braid, 21 to 22c.; burry, 20 to 21c.; hard burry, 14c.; lamb, 14c. for burry to 20c. for choice; fine, 17c. ofr heavy to 23c. for bright. Southern and Southwestern—Fair to choice, 21 to 23½c.; sandy and burry, 13½c.; slightly burry, 18 to 19c. Northern and Western—Medium, 21c. for dark to 23c. for bright; burry, 13c. for hard to 20c. for slightly; fine, 11c. for heavy to 22c. for light. Tub-washed, 19 to 36c. Angora goat, 9 to 13c. for burry to 13 and 20c. for clear. Anyone having wool to ship will find St. Louis to be a first-class market. For quick up-to-date quotations write to A. J. Child & Sons, 511 North Main street, St. Louis, Mo.

Hints on Choosing Wallpaper.

If you wish to retain the same paper for more than one season, avoid extreme types of fashion. There are the quiet tones, the patterns of moderate size, the artistic designs which look well, even if not all the rage at the time; while the fad which is a little out of date shows the growth of the finale in the most objectionable manner.

Study the size, height and situation of your room as well as its purpose and your own personal taste. If it is low, a striped paper will in a measure counteract the defect. If it is high, the drop-ceiling may be used advantageously. Border comes in nine and eighteen-inch widths. The former should always be selected for a low room; the latter for a high one.

If the room is on the sunny side of the house, the cold colors, blue, gray, etc., should be selected; while the reds, yellows and their clan will wonderfully liven up the cheerless north room. Bright colors are, as a rule, apt to fade. The red roses with which you adorn your best room may prove a disappointment, though there is less danger of this if the higher grades of paper are chosen. Avoid pronounced figures for a sleeping room, especially if emergency should require its use as a sick room. The figures persist in annoying the invalid, who perhaps counts them over and over. Soft tints and inconspicuous outlines are greatly preferable for this reason.

The plain cartridge papers have a rich effect particularly their own; but the amateur will find them more difficult to hang, the paste being more inclined to spot, and a wrinkle on the plain surface is painfully apparent. If you wish to economize by doing your own paper hanging, get paper of fair quality. Cheap paper tears easily when wet with paste. A medium quality not only looks better, but is much more easily hung.— Bessie L. Putnam.

The Cooking of Meats.

Here are a few important points in the cooking of meats:

Never wash meat or soak it in cold water, as this extracts the juices and is only allowable in soup making.

Wipe the meat with a clean cloth wrung out of cold water.

Place the meat on a rack or perforated cover in a baking pan.

Do not add one drop of water or seasoning.

Place the pan in a very hot oven. If the oven is too hot, the outside of the meat will get hard and tough so quickly that the inside will not cook properly, but it must be hot enough to brown a five-pound roast in about half an hour.

The heat will sear the outside and keep the juices inside. When it is very brown, reduce the heat and cook more slowly. About half an hour before it is done, dredge the meat with salt, pepper and flour. When the flour is quite brown, add two cups of boiling water. This will make a fine brown gravy of delicious flavor.

When meat is well roasted it is crisp and brown on the outside and is browned inside to about a depth of three-quarters of an inch, both top and bottom. The whole inside should be a good pink, but not at all raw.

Raw meat is digested easily, but we cook it in order to make it more attractive in appearance and more appetizing in flavor.

Round steak is juicy, but not so tender as porterhouse or sirloin, on account of its coarser fiber, and it must be cooked very carefully.

A rump roast is a pretty good one for a boarding house or very large family, as it has so much solid meat and is therefore economical.

The Universal Book of Original and Selected Poetry.

This book consists of One Hundred Pages, containing three hundred and ninety beautiful, interesting, pathetic, descriptive, humorous and delightful poems. These poems have been selected from the very best of the ancient and modern authors and the occasional pieces which have attracted favorable attention. It is a book to be kept by the bedside to compose one to sleep, a book to carry in the satchel or to read on the train and street car. It is a book for all people at all times. This is our own publication. It is not sold by anyone else. We issued the Universal Poetry Book for the purpose of using it as a subscription premium in connection with our own new successful paper, the Universal Magazine. The Universal Magazine is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, patterns, fashions—a splendid publication. Anyone who will send us 25 cents to pay for one-year's subscription to the Universal Magazine can select one copy of the Universal Poetry Book as a free premium and we will send it prepaid. Address, THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

Cement Workers' Handbook.

This book is designed to teach anybody how to work with cement; how to mix mortars of all kinds for all concrete purposes; how to make building blocks; how to build walls, floors, ceilings, walks, posts, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers.

For Sixty Cents we will credit one-year's subscription to The National Farmer and Stock Grower and send a copy of the **Cement Workers' Handbook.** Address, Hale Publishing Co.,3550 Vista Ave., St.Louis,Mo.

Free Sample of Amatite—The Roofing That Needs No Painting.

There are doubtless many readers of this paper who are users of ready roofing, who are not familiar with Amatite.

This is a new type of roofing which came upon the market a few years ago and has found wide favor on account of its mineral surface which needs no painting. This mineral surface is embedded in pitch, which grips the stone firmly and makes a kind of pitch-concrete surface. This surface is abundantly able to withstand all sorts of weather year after year without any painting.

Its price is no higher than that of the old-fashioned painted kinds. In fact, in many cases it will be found to cost considerably less.

Next time you paint your roofs remember that painted roofings are no longer the only kind you can buy.

In the meantime, it is a good idea to look up Amatite. You can get full information and a free sample from the manufacturers on request. Address Barrett Manufacturing Co., New York, Chicago, Philadelphia, Boston, Cleveland, Pittsburg, Cincinnati, Minneapolis, St. Louis, Kansas City, New Orleans, London, England

"Harper's Magazine" For May.

Some unpublished letters of Edmund Clarence Stedman, written to his family, his friends and newspapers with which he was connected in 1861-62, and edited by his daughter, Laura Stedman, under the title, "A Poet in War-Time," appear in Harper's Magazine for May. In this same number Robert W. Bruere, General Agent of the New York Association for Improving the Condition of the Poor, writes of that society as "The Good Samaritan Incorporated;" Mary Heaton Vorse, in the opening article, furnished with Nordfeldt etchings, characterizes Tangier as "The Infidel City;" and Olivia Howard Dunbar recalls Jacques Coeur, counsellor and creditor of Charles VII., as "A Merchant Prince of the Middle Ages." There is a sympathetic description of the isolated "Aran Islands" by Maude Radford Warren, and a novel account by Philip Verrill Mighels of "Ancient Crafts in Modern New York." Paintings by the English artist Gotch are reproduced, together with Charles H. Caffin's appreciation of him as "A Painter of Childhood and Girlhood." The fiction is by Keene Abbott, Florida Pier, Norman Duncan, Jennette Lee, Calvin Johnston, Sarah Barnwell Elliott, Marjorie Bowen, and the anonymous author of "The Inner Shrine," with the continued "Wild Olive."

Painting Peach Trees.

A Westmoreland county farmer (Livermore being his postoffice) painted his peach trees with white lead, and then having read that State Zoologist Surface is opposed to the application of oils to the tender bark of peach trees, wrote, in great alarm, to the Professor, asking what could be done to save the trees from being ruined.

Professor Surface allayed his fears by giving him the following information:

"Replying to your letter making inquiry as to whether or not you have made a mistake by painting your peach trees with raw linseed oil and white lead to prevent borers, I beg to say that you have made no mistake by so doing. Two years ago I painted a number of my peach trees with this material, and repeated it on some of them a year later. Last summer I took from them a nice crop of peaches, and the trees are still healthy and apparently uninjured. There were but two borers in them, and I consider it the best possible preventive of borers in trees of any and all kinds. This was merely an application of a coating of raw linseed oil and pure white lead on the trunks of the trees to just beneath the former surface of the ground. Apply it not later than the middle of June, and repeat it about the middle of August. It will also prevent injury to trees by rabbits and mice.

"When I said: 'Keep oils off peach trees,' I had reference to spray liquids. No oil sprays of any kind should be used on peach or plum trees."

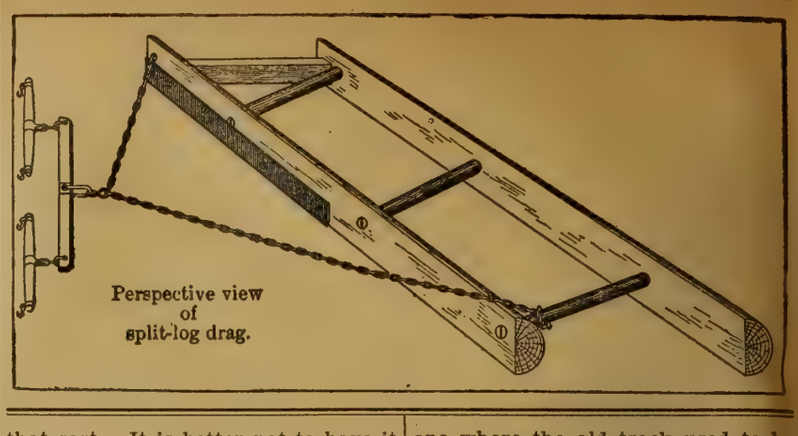
SPLIT-LOG ROAD DRAG.

Extract From a Speech by Hon. Benjamin G. Humphreys in the House of Representatives, Referring to the Use of the "Split-log Road Drag."

It is an account of the simplest, cheapest, and yet the most useful and effective implement for the improvment of earth roads ever invented, a mere glance at which will enable any practical farmer to make one. In some states the farmers by common agreement drag the road along their own fronts after every rain, and the results are almost unbelievable. I have seen its workings myself, both on country roads and on the streets of small towns.

The Split-log Road Drag.

The only tool necessary is the drag. By the drag we do not mean a harrow, as so many people understand the term, but a drag made of a split log. It is made by taking a straight-grained log from seven to nine feet in length and about ten or twelve inches in diameter. This log is split or sawed lengthwise and the two halves set on edge, thirty inches apart, the flat sides facing forward, and firmly fastened together by three bars made of oak, osage hedge, or other hard wood. The illustration and description beneath it shows how the drag is constructed. The log should be of light timber; box elder, cottonwood, beech, or something of



Perspective view of split-log drag.

that sort. It is better not to have it of oak. Mr. King says that the best split-log drag he ever used was made of red elm. After using the drag for some time it will be found necessary to shoe the front log with a piece of iron three or four inches wide. An old wagon tire makes a good shoe for this purpose. The iron should be put on the right side of the front log and extend not more than three-fifths of its length. It should not project more than a fourth of an inch below the edge of the log. Do not face the entire front log with the iron. The length of the drag can be anywhere from seven to nine feet. The longer it is the heavier it will pull. One good farm team of horses, weighing from 1,000 to 1,200 pounds, will handle a seven-foot drag nicely. A heavier team will be required for a heavier drag.

The cut shows in itself how the drag is constructed. The logs are seven to nine feet long and ten to twelve inches in diameter. They are set on edge, flat side to the front, thirty inches apart and fastened together with three strong pins wedged in. Note particularly the way the hitch is made—the chain running through the center of the log at the right end and over the log (looping around the pin) at the left end; this is important. The point of attachment for the doubletrees depends upon the condition of the road and the work to be done. The farther to the right the hitch is made the greater the angle at which the drag will be drawn. Place a movable cleated platform on the cross pins to stand on when using the drag. You will find by experience that by shifting your weight on the drag you can change the angle and the amount of dirt it will move.

How to Use It.

First make it, and have a four-horse evener ready for use the first time. Wait until your roads are very soft, and the wetter and softer the better. Then attach four horses. Begin at your front gate, straddle the right-hand rut, and go to your neighbor's front gate, in the direction of your nearest market town. Then turn and come back along the other rut. This is enough for the first day; but while you are about it you had better go the whole length of the road along your farm, as well as a portion of your neighbor's. Do not be in a hurry; drive slowly; the slower the better. You can not finish this road in a day. You are simply making a beginning. The effect of this first dragging will be to fill up the ruts with this puddled earth and to make a moderately smooth surface, on which it is possible to make three tracks—one on each side and one where the old track used to be, in the middle. This smooth surface will shed water, partially at least, and will give free access to the sun and wind, causing it to dry off quicker than the rough surface on either side of the smoothed space. Then wait until it begins to dry off. Take two horses and go over the same track again. This will still further puddle the clay and carry a little more into the middle of the road, which every passing team will both puddle and compact still more.

If it is thought best to widen the road, which it usually is, the best way to do it is to wait until another rain, and then, when it has dried off sufficiently to plow readily, plow one furrow along the outer mark of the drag; take the drag and spread this smoothly over the surface of the road. In this way the road will be widened by the width of the furrow and will gradually become oval—that is, higher in the middle—and each time the drag is used will become a little smoother and a little harder. If the road is still too narrow, plow another furrow, and so on until the road has been widened as much as desired.

Succulent Feed For Lambs.

Recent experiments at the Iowa Experiment Station show that with corn at ordinary prices cheaper gains on lambs may be made with dry feed than with roots or silage. When corn and silage are low in price, the gains made with silage are a little cheaper than those made with dry feed. The largest total gains were made by the lambs getting sugar beets, and the finish of this lot was also a little better. The lot getting turnips and cabbage required the largest amount of dry matter for each 100 pounds gain. Silage and dry feed came next. The least amount of dry matter was required where sugar beets and mangels were fed. The chief objection to mangels and sugar beets is the large amount of hand labor required to raise them. The results of these experiments are published in Bulletin No. 110 of the Iowa Experiment Station, which may be obtained free by writing to Director C. F. Curtiss, Iowa Experiment Station, Ames, Iowa.

His Kind of Love.

She—"You say you love with all your heart."

He—"With all my heart!"

She—"And you would die for me?"

He—"Hardly. You see, mine is a sort of undying love!"—May Young's Magazine.

DON'T BUY GASOLINE ENGINES UNTIL YOU INVESTIGATE "THE MASTER WORKMAN," a two-cylinder gasoline, kerosene or alcohol engine, superior to any one-cylinder engine; revolutionizing power. Its weight and bulk are half that of single cylinder engines, with greater durability. Costs Less to Buy—Less to Run. Quickly, easily started. Vibration practically overcome. Cheaply mounted on any wagon. It is a combination portable, stationary or traction engine. SEND FOR CATALOGUE. THE TEMPLE ENGINE MFG. CO.,446 West 15th St.,Chicago. THIS IS OUR FIFTY-SIXTH YEAR.

Prof. Samuels' Phenomenal Method Heals Like Magic

His Peculiar System of Healing Causes Enmity of Doctors

ARRESTED MANY TIMES

But Acquitted by Juries and Judges and Permitted to Continue in a Work That He Alone Can Do, as He is the Only Man in the World Using His System—Patients Make Startling Statements of His Successful Method of Treating Consumption, Bright's Disease, Kidney Trouble, Blindness, Fits, Catarrh, Heart Disease, Cataracts, Nervous Prostration, Dropsy, Hay Fever and Many Other Diseases that Baffle the Skill of the Ordinary Physician.

WICHITA, KAS.—The almost miraculous cures of hopeless invalids made by Professor Samuels of Wichita, Kas., have been of such a startling character that they have aroused widespread wonder, admiration and curiosity. Time and again he has taken cases pronounced hopelessly incurable by the medical profession and restored the patients to life and health in a most phenomenal manner.

There is considerable mystery attached to Professor Samuels' method of accomplishing these marvels, and it is known that he does not use the drastic drugs and medicines that doctors depend upon. He claims to have discovered, in his forty years of practice, that a certain law of nature has peculiar properties heretofore unsuspected, and that, by the application of this law, there is no disease he may not cure. And it is a matter of proof that, with the mysterious system this discovery gives him, he has made the blind see and the lame walk. He has revived the flickering spark of life in bodies on the very verge of the grave, and restored to health men and women given up to die by doctors and specialists.

Professor Samuels came into note several years ago by his almost miraculous cure of "Blind Joe," of Topeka, Kas., who was well known in that city, having sold peanuts and popcorn on the streets there for years. He had been blind for ten years and had exhausted all the means in his power to be cured, but had given up in despair until he fell into the hands of Professor Samuels, who effected a cure.

Professor Samuels has been arrested many times for practicing his system without having a diploma. On being interviewed a few days ago relative to his many arrests, Prof. Samuels said:

"Yes, I have been arrested many times for practicing without a license, but in no case have I been convicted. Naturally, the medical profession are jealous of my success and are fighting me most of the time, but how are they going to convict me? Do you suppose any jury, when my patients come into court as they did at Alva, Ok.; Newkirk, Ok.; Ponca City, Ok.; and other towns, and tell how I have cured them of all manner of troubles, do you suppose for a minute that any jury, hearing these people and seeing with their own eyes what I have accomplished, is going to convict me? My trial at Alva was before a very able judge, Jesse J. Dunn, who is now Chief Justice of the state of Oklahoma; after hearing the evidence for and against me, I was acquitted. At Newkirk I was tried before Judge Hausley, a very able judge. Judge Brown, a noted lawyer, was the prosecuting attorney, and fought the case very hard, but I was acquitted. These persecutions were brought because I have no license. Being the discoverer and only practitioner of my system of healing, how am I to have a diploma? I can't issue it to myself, and the medical fraternity, trotting along in the same harness for half a century, too blind to accept my discovery, which accomplishes actual results, make it impossible for me to procure a license as a representative of any of the recognized schools. So what am I to do but to proceed in my own way to perform cures that astound humanity?"

The professor here laid before the reporter a reprint from the court records showing the proof of his assertions that the court had not convicted him.

Professor Samuels is a remarkable man. Bright, alert, progressive, and, although 60, he is straight and active and gives one the impression that he is much younger. He talks with such an earnest conviction and enthusiasm of his work that the listener must believe him and believe in his work.

"What is the nature of your treatment?" was the next question.

"That is a secret that has taken me many years of my life to perfect. I can only say that my results are obtained treating all diseases through the eye. I cure by dropping a colorless liquid which I prepare into the eye. Strange as it may seem, so-called incurable cases of consumption, Bright's disease, dropsy, epileptic fits, nervous prostration, are cured in this apparently miraculous way. My system is based absolutely on scientific principles. The eye is the window of the soul. I have evolved a system of treating other bodily ills, based on the relation of the eye to the system as a whole. This may seem strange, but I back up my claims by results."

Thereupon the professor placed before the reporter his "Message of Facts," affidavits and letters in great numbers, many of them from responsible and well-known people, all bearing on his statements.

This proved that Mr. Frank Hoff, now in business at 249 North Main street, Wichita, Kas., had been given up to die of consumption. He had been treated by the greatest specialist in Brooklyn, N. Y. It was some seven years ago when he had tried everything else without avail, that he came to Professor Samuels and was cured. He is a large, strong man and weighs 240 pounds now, and, when called upon by the reporter, stated that he owed his life to Professor Samuels.

Another noted case of consumption was the case of Mary Agnes Selden, 1820 East Murdock avenue, Wichita, Kas. Several years ago she came to Kansas from New York on account of ill health. However, she began to decline, and tried numerous physicians, who said she had consumption. After she had practically lost all hopes, the case was taken by Prof. Samuels, who cured her. She was seen by a reporter, and she told of her remarkable cure. On her cheeks was the blush of health and her step was elastic. By her appearance none would suspect that she, a few weeks before, had been given up to die of consumption.

Mr. H. W. Shufelberger, living seven miles northeast of Wichita, who was almost blind and deaf, was led by his daughter to the office of Prof. Samuels, and was suffering a great deal of pain from his eyes. Prof. Samuels restored his eyesight after three-weeks' treatment. He goes everywhere unattended and transacts his business and writes almost as well as he ever did in his life. After being entirely deaf in one ear for twenty years, he can hear the tick of a watch.

Miss Ida Garrison, who resides at 963 Roberts avenue, Wichita, Kas., was very low with tuberculosis and pronounced so by the very best authority. She tried all sorts of climate and the very best of doctors on lung trouble and was pronounced incurable by all. I took Miss Garrison under my treatment about seven years ago and she was treated about nine months and is now in perfect health.

Mr. B. R. Robey, who resides at 816 East First street, Wichita, Kas., brought his mother, Mrs. P. Spidal, to Wichita to be treated by Professor Samuels. She was unable to move hand or foot; she was even unable to speak. Her case was paralysis. Physicians had given her up and considered her case hopeless. She was brought into Wichita on a cot and taken in an ambulance to the home of her daughter. She is now entirely cured.

Mr. Harry Evans, a wholesale lumber man, located at 307 Winne Bldg., Wichita, Kas., had what the best physicians called Bright's disease. The doctors could not give him any hope and he continued to get worse. He was also losing his eyesight from what was said to be paralysis of the optic nerve. He took treatment from Prof. Samuels and began to improve from the very start. His eyesight came back and all symptoms of Bright's disease left. After taking Prof. Samuels' treatment, he was examined by the leading physicians and they stated that he had not the slightest trace of Bright's disease.

Mr. Evans is known all over the country, a leading business man whose word can be relied upon, and he would be glad to write or tell anyone of his experience with Prof. Samuels.

The little seven-year-old daughter of G. W. Newcum, one of Kay county's most prosperous farmers, was afflicted with epileptic fits. Mr. Newcum says that his little daughter had been suffering with this supposedly incurable disease, ever since she was one year old, and that he had gotten every conceivable thing for relief, but to no avail, until he went to Professor Samuels a year ago in August. The professor told him he had cured epileptic fits before, and could do it again. Professor Samuels immediately began treatment through the eyes, and the little girl has never had any symptoms of the trouble since. Mr. Newcum says she is now as sound and well as any child could be.

Is it necessary for your patients to come to see you to be treated?" was asked. "No. I have perfected my treatment so that I can treat by mail. Many of my patients come to see me, but it is not necessary. I send my treatment to hundreds, and, in fact, am as successful in treating that way as though the patients were right here. To people from a distance who write me, I send an information blank to fill out. In this way I am enabled to send them the treatment properly prepared with full directions for its use."

"I should think with your ability to cure, you should be in a position to demand big money from your patients," remarked the reporter. "No, I do not do that now. My charges when the patients called on me in person used to be pretty high. I am getting old, and I feel that it is my duty in my last years to place my discovery in the hands of the poor as well as the rich. I believe that I owe a duty to mankind and that as many people as possible should be benefited by my discovery. I want all humanity, no matter what race or nationality, nor where located, to be benefited by my life's work. On this account, I have reduced my charges so they are within reach of the poorest. I am always glad to hear from anyone who is sick, no matter how poor they may be.

"My greatest aim in life from now on will be to relieve and cure the ills of humanity, and when death shall claim me, I have arranged so that my secret will not die with me, but will be known, so that men in all ages to come will reap the reward of my life's work."

Everyone who is sick, no matter what their trouble may be, should write Professor Samuels, Room 110, Samuels Bldg., Wichita, Kas., for his "Message of Facts," and they will find something in it of interest to them.

A Good Prevaricator.

Mother—"Children, I am shocked. You each promised me faithfully you would not eat your oranges until after dinner. You have deceived me."

Willie—"No, mamma; we didn't eat our oranges. Tommy ate mine and I ate his."—Boston Transcript.

FOR THE VEGETABLE GARDEN.

There is a very good book on the subject of Vegetable Gardening, written by Samuel B. Green. It is a manual that can be relied on. It is easy to grow vegetables and save them against the different diseases when at critical periods such a book can be readily referred to. There are 253 pages, nicely illustrated and practical throughout. We will send a copy of the book entitled Vegetable Gardening and The National Farmer and Stock Grower one year for 60 cents. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Aunt Sarah's Autograph Quilt.

The autograph quilt was a new idea that Aunt Sarah got when she went to visit the minister's sister over at Goshen, and as soon as she came home she started to work on one for herself. I helped her to cut the new white muslin into pieces just larger enough than a postal card to allow for the seams, and then I helped distribute them to her friends far and near. They were to write their names on these in indelible ink, and they could write some sentiment besides, "if the spirit so moved," that's the way Aunt Sarah said it, and so I said it when I left the muslin pieces. Everyone seemed right pleased with the idea, and Aunt Sarah was immensely worked up about it. "It'll be the work of my life, Niece Mary," she said. "A kind of monument in cloth, you know."

While the white pieces were out being writen upon I helped Aunt Sarah to cut the colored pieces. At first we thought of having a piecing bee, but then Aunt Sarah decided this would be too precious a work to trust to miscellaneous hands, and she would rather keep it in the family, and when it was all finished have a "showing." Then the white pieces began to pour in so fast that we couldn't stop to read them, but put them in a pile to go through separately. But then the Ladies' Sewing Society decided that they would have a Fair with articles of handiwork for exhibit, and such as were not too good to keep could be sold. Of course, Aunt Sarah was anxious to have her "life's monument" exhibited in this public way, and she kept me working with her so hard that I hardly got a breath of air for a month, and I began to look and feel real peaked. And being in such a rush, we never got to read all those interesting white patches. There were quite a few who had been spirit moved, according to all the writing on some of the pieces, and when I tried to read some of them, Aunt Sarah said: "Work, child, work. We'll have to read them at the Fair with all the rest."

It got out that the quilt was to be exhibited at the Fair, and everyone got to talking about it, and it seemed as if everyone in the neighborhood wanted to borrow something of Aunt Sarah or else give her something. But she took care that the quilt was out of sight in the bedroom where we sewed on it. Well, we got it done; but, gracious! I hope nobody'll ever ask me to help on a life's monument again. It's very worrying, even if you do get paid a dollar for it.

At the Fair the quilt held a position in the center of the room, where all might read who would, and there was a crowd around it from the very first minute. Aunt Sarah was so proud that she forgot all about the humility she's forever telling me I ought to practice. And then I began to notice a kind of whispering among the women, and they began to Oh! and Ah! At first I thought it was because the quilt was such an original stunner, but then I began to think it must be more than that, for someone said: 'It's real good of her to give away the secret in that public manner when every woman of the county can get hold of it;" and another answered: "There's sure been a change for the better in Sarah since she married the minister. Wild horses couldn't have wrested that from her once." And then someone went to Aunt Sarah and thanked her for telling her secret of so many years.

"Land a-living! What are you talking about?" gasped Aunt Sarah.

"Why, the secret of your lemon pies!" answered the woman.

"And who's been telling such lies as to say I ever have or ever will tell the secret of my prize-winning pies? asked Aunt Sarah, tartly.

"It's on the quilt, and I'll show it to you," answered the woman, nettled by Aunt Sarah's sharpness. I followed them, and I giggled outright when I read in the very middle of the quilt a very poor rhyme, but it did the mischief:

"I've a secret I would tell,
Read it here and guard it well,
If from Aunt Sarah you'd take the prize,
That she always gets on her lemon pies,
Try a dash of cinnamon and nutmeg, too,
And the prize will surely come to you."

The rhyme wasn't good, as I've said before (I've got some poetry of my own make, so I know a thing or two about good poems). But the writing was beautiful and it was in the minister's own hand. Not another soul could write like that; that is, not a soul that we knew. Aunt Sarah recognized it, too, and she sobbed: "To think that Abraham would give me away like that! And I never once imagined he even saw that I was making a pie, he's that absent-minded." "But he can write poetry, can't he?" "I didn't know it was in him," she added with pride. I sniffed and wished she could see my book of sentiments.

Well, Aunt Sarah went for the minister in a way that took him out of his absent-mindedness. I think for the time being she forgot he was the minister. But he only answered: "Why, Sarah, I don't know what you put in lemon pies from what you put in sour kraut, so how could I tell?" But when they showed him the writing he admitted it was his. And then he looked puzzled and then a smile wreathed his face. "I remember," he said, "I copied that for Billy Butts. He said he couldn't write it in a sufficiently legible hand."

And then Billy confessed that he had seen her the day he stole the doughnuts from her pantry window, but he wouldn't have told if Aunt Sarah hadn't whipped him with her big slipper. "It was revenge," he said.

So the autograph quilt was all spoiled for Aunt Sarah, and she went to her room and stayed there for a day and a night and went without her meals like a blighted being. But then she came down and she said she was completely chastened and she guessed it was the Lord's will, for He had given and He could take away (I don't know whether He was represented in Billy Butts or the minister), but that she did wish she had known enough not to let on that she hadn't put the secret into the quilt on purpose. It would have been such a beautiful example for the minister's wife to set.—Janet Thomas Van Osdel.

From Little Rhody.

During the Civil War the Union forces were camped on one side of a river in Virginia and the Confederates on the other. The pickets were friendly and traded coffee for tobacco and talked across the water.

"What's your regiment?" asked a Northern soldier of the Confederate picket opposite him.

"Mine's the Forty-ninth North Carolina. What's yours?"

"Mine? Oh, mine is the Three Hundred and Ninety-fifth Rhode Island."

Strawberry Crates.

The Missouri Secretary of Agriculture says: "Strawberry crates are principally of tupelo gum, grown in Arkansas, Louisiana or Texas. One association alone purchased nine carloads of 5,000 crates each, for the 1909 season's pack, the price being $11.28 per hundred, delivered. The cost varies, the price sometimes being 14 or 15 cents per crate, in small quantities. Twenty-four-quart boxes fill a crate, and 510 crates make an average car-load."

THE UNIVERSAL MAGAZINE SUBSCRIPTION PROPOSITION.

We publish the Universal Magazine. It is issued monthly. Every issue is thirty-two pages, three columns to the page, containing home reading, fashions, patterns, poetry, all elegant, interesting and instructive literature. A first-class publication for the money; nothing cheap except the price. In order to introduce the Universal Magazine we have secured a most beautiful picture which can be selected as a subscription premium. The picture is entitled "Mother and Child."

This is a glorious picture. It is 6x8 inches and is mounted on a nice green mat which is 8x11 inches. It is just the right size for a panel picture. It is rich in colors and is ready to tack or hang on the wall. It is not necessary to frame this picture, but no picture in the world is better worth framing. The dark, warm colors of the room, enlightened by the glow of the candles; the chubby face; the restful, healthy, natural position of the child; his delicate, little hands, and the fond look of the mother, all go towards perfecting a picture that will be enjoyed and give happiness to any house it may enter.

Anyone who will send us 25 cents in silver or in new one-cent postage stamps will receive the Universal Magazine for one year, and can select the "Mother and Child" picture as a free premium, which will be sent postpaid. Address, THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

A WOMAN CAN EARN $5000.00 A YEAR

LESSONS BY MAIL

AMERICAN COLLEGE DRESSMAKING

Learn Dressmaking at Home

We will teach you by mail and equip you to command a good income or you can start in business for yourself. Many women nowadays are earning $100 a week—$5,000 a year—by dressmaking. One woman, the head designer of Chicago's largest retail dry goods house, is said to receive $10,000 a year. Salaries of $25 to $50 a week are common. Become a Graduate Dress maker. The regular diploma of this college is issued to all who complete this course of lessons. The American System is most simple and complete in every detail. These lessons will teach you how to draft your own patterns and make your own clothes and enable you to dress far better at one-half the usual cost, also how to design, draft, cut, fit, make, drape and trim any garment, including children's clothing.

WHAT ARE THESE LESSONS WORTH?

Our Students say: "I have made 25 waists (6 silk ones) all perfect fits." "I just saved the price of my course by making my own silk dress." "My husband is surprised and pleased." "I believe your system of teaching is the best in use; it is fully worth $200 to any one contemplating dressmaking." "I would not take $300 for what I have learned and do without it."

This book will be sent you free. At an expense of thousands of dollars this college has published 100,000 of these copyrighted books to advertise the AMERICAN SYSTEM OF DRESSMAKING, and—while they last—will send you a copy FREE. Write for it today. One copy only to each woman. Requests filled in the order received. Don't take time to write a letter, just use the Coupon.

ONE SUIT PAYS FOR COURSE.
Knoxville, Tenn.

AMERICAN COLLEGE OF DRESSMAKING:

I have just finished my lessons in your course of instruction and am delighted with it. In speaking of your system to others, I have said that I would not take $50 for it and do without it. I can save the cost of the lessons in one coat suit. I can buy the material and make it to fit better. I have made three coat suits and a number of skirts and shirt waists, besides quite a lot of other sewing all of which has given perfect satisfaction.

Please accept thanks for the instructions given and the interest you have taken in me.

Very respectfully yours,
MRS. T. L. CATE

For 38 Springtimes thousands of the most successful stock and poultry men have tided their animals over the critical period between Winter and Spring by means of

Pratts

Animal Regulator

for their live stock — and

Pratts

Poultry Regulator

for their poultry.

For 38 Springs these unquestionably reliable preparations have given the Stock and Poultry of the country the elements they vitally needed—and couldn't get from ordinary food—the elements that made them healthy and strong and good producers.

There's a record unparalleled in the annals of stock and poultry regulators in the Continent of North America.

The above preparations are those you should use this Spring.

Remember they are absolutely guaranteed—and back of the guarantee is an honorable record of nearly half a century.

Pratts Powdered Lice Killer

Just the thing your hens need right now—prevents and kills lice.

At your dealers, or by mail for 25c.

The New Pratt Books

are ready! Have you sent for yours? If not, write to-day for the one that interests you most. Here they are.

Poultry Wrinkles. By Michael K. Boyer, Poultry Editor of the Farm Journal; author of "Poultry Secrets," etc., etc.

Things you ought to know by eminent veterinarians—both about horses and cows of them specialists on the care and health of live stock.

Write for whichever book interests you most. We want to send you a copy free.

Pratt Food Company

Some Points on Poultry Feeding.

No one knows it all in poultry feeding, but here are some points that have impressed themselves on the mind of one poultry raiser:

In the feeding of growing chicks, the meat ration is important from the very start. It is the experience of the writer that when the chicks are given a good meat ration from the first they begin a rapid growth, which is continued; while if they do not get it till they are half grown it does not seem to accelerate their growth. In other words, there seems to be a habit of growth that establishes itself and refuses to be easily shaken off.

It is not wise to imagine that worms will be found in sufficient abundance to take the place of meat. Nor is it wise always to dig angleworms for the young chicks. One chicken raiser that did this happened to live in a locality where the angleworms were infested with gapeworms. Gapeworms are parasites of angleworms. The man in mind used to spend hours every Sunday digging angleworms for the chicks but a week or so old. The result was that he had the finest colony of gape-infested chickens in the neighborhood.

A mistake made by amateurs is to mix up for the chicks a great lot of meal and let it lie in the feeding dishes. The new rations are put on top of the old, and souring is started. The dishes are cleaned out but indifferently, and there is always a "starter" left, which hastens the souring of the fresh feed. Sour feed in the crops of chicks often causes death, for the crop is not for that purpose.

One of the very best foods for chicks and old fowls or any kind of fowl is rape. The seed costs little and can be sown on the bare land. It needs only be protected from the birds till it has time to change itself into a leafy plant. When it is a foot high the fowls can be turned on it, and they will find it both food and health. When the most edible parts of the leaves have been eaten, the fowls can be excluded and the plant will put out new leaves for a new period of pasturing. This can be repeated during the entire summer.

The bone mill should be on every farm where fowls are kept. The ground bone, of no use to most farm animals, is just the thing the fowls crave. They will use much of the nitrogen and phosphorus in it, and what they do not use will go to greatly enrich their manure. It is the observation of the writer that bone mills are not on one-half of the farms where they should be found, in spite of the fact that they are generally acknowledged as being food savers and money makers.

Some poultry feeders object to the feeding of oats, and say that they cannot get their fowls to eat them, unless they are starved to it. This is a matter of habit with the fowls. If they are accustomed to eat oats they develop a great liking for them and will choose them to corn, if they are deprived of them for a time. As they are bulky, they can be kept before the fowls all the time without injury to the birds through overeating.

Poultry Notes.

In the Castro Valley, California, on five-acre poultry farms, they keep a maximum number of 1,200 White Leghorns, and one man is kept busy to handle them. There are two dozen such ranches very close together.

Something new and novel in the way of attractions was introduced at the St. Paul (Minn.) Poultry Show last month. It was nothing more or less than chicken vaudeville. Geese, in elaborate costumes, did the hurdle jumping stunt, jumped through hoops, etc., a rooster walked a tight rope, and other stunts were pulled off, including a genuine cock fight every evening.

"Mrs. W. S. Deam has made a good record with her wooden hen—81 chicks out of 86 eggs."—Knob Noster Gem.

Alva L. Hooker in the Reliable Poultry Journal says that for egg production, where the market demands white-shelled eggs, the White Leghorn is best. He stated that on the day he wrote, fancy white eggs were outselling fancy brown eggs by 13 cents a dozen.

The Missouri State Poultry Show to be held in the Convention Hall, Kansas City, November 29th to December 3d, has received the assurance of $4,000 in premiums from the State Poultry Board. T. E. Quisenberry, Secretary, says: "We have already had inquiries from England, Germany and Japan, where exhibitors went to send fowls to the Missouri Show. Besides offering prizes in all classes at the State Shows, the board will conduct educational work in poultry raising at the State Fair at Sedalia."

Mr. James B. Moorman, on the staff of the Department of Agriculture, has a private poultry yard, where he keeps about fifty fowls of all ages. By selection alone he has increased his egg yield of 3,966 in 1907 to 5,511 in 1909. His average appears to be 125 eggs per hen per year.

E. J. Mellette, writing to the Petaluma Poultry Journal, says: "The secret of having eggs keep well when they are packed is to have them good in the first place and to do the packing act the day they are laid."

Fred A. Schell, of Sonoma Valley, California, has 10,000 eggs hatching. He sells "just-hatched chicks," and the demand for them is far greater than the supply. He runs twenty-one machines, the machines being incubators.

Recent feather quotations at St. Louis: Prime white live goose in small sacks at 54c. and large sacks at 52c. per pound; prime gray do. at 41c. in small and 39c. in large sacks; old white, 36 to 38c.; x, 27 to 32c.; xx, 16 to 20c.; xxx, 10 to 14c.; xxxx, 5c.; tare, 10 per cent. on small sacks and 3 per cent. on large. Duck—White, 41c.; dark, 30c. Chicken—Prime dry-picked body, 4c.; wet, damp and quill-mixed, 2c. Turkey—Tail (straight and clean, no shorts), 45c.; wing, 22c.; pointers, 6c.; tail, wing and pointers mixed, 16c.; dry body, 7c.; green body, 1 to 3c.

WHITE DIARRHOEA.

"Dear Editor:—I see reports of so many losing their little chicks with bowel troubles and I thought I would tell my experience. I used to lose a great many of my little chicks from this cause, tried a good many remedies and was about discouraged with the chicken business. So two years ago they began to die and I thought I would try Walker's Roup and Cholera Cure. I used two 50c. packages and raised 300 White Wyandotte chickens and never lost one or had one sick after getting the medicine. Now I wouldn't try to get along without it. I think the remedy is sold by most of the dealers or can be had by sending 50c. to the Walker Remedy Co., Dept. B 7, Lamoni, Iowa.

Mrs. C. M. Bradshaw, Beaconsfield, Ia.

PRIZE PANSIES FOR ALL OUR READERS.

BIG PORTFOLIO BOOK IN COLORS SHOWING OVER 125 STYLES OF VEHICLES—SENT POSTAGE PAID.

Many manufacturers who are well known to readers of this paper, publish large, interesting catalogs of their products each year, and we are glad to recommend every reader of this paper that they write for these catalogs so that they may become familiar with comparative values.

One of the largest and handsomest portfolio books that we have seen is published in colors this year by Mr. H. C. Phelps, President of the Ohio Carriage Mfg. Co. of Columbus, Ohio, manufacturers of the celebrated line of "Split Hickory" vehicles for every purpose. This book, which shows photographic illustrations and full descriptions, is a regular "buyer's guide," explaining fully how high-grade vehicles and harness are made and how it is possible by selling direct from the factory to the user, to save on prices from $26.50 upward on any style of vehicle that you have in mind to purchase this year.

Besides this you can have any vehicle made to order to just suit your taste as to finishings, etc., and the factory agrees to allow you 30 Days' Road Test and gives a full Two Years' Guarantee on every vehicle. Over 125,000 customers of this company have bought "Split Hickory" vehicles in this way after sending for the Company's catalog and ordering direct from the factory. Very likely there are customers of this Company right in your own neighborhood to whom you can be referred if any introduction or references are necessary.

On page 14 you will see the Company's large announcement. It will pay you to write a postal and send your name and address to-day for this large book, which will be sent postage paid if you say that you are a reader of this paper and address Mr. H. C. Phelps, President, The Ohio Carriage Mfg. Co., Station 204, Columbus, Ohio.

Horse Secrets Disclosed.

This is a valuable book. It tells how to feed and fatten your stock in the cheapest, quickest way; how to rear an orphan foal by hand; the secret of silage feeding; how to break a horse of bad habits, and scores of other money-making, money-saving secrets.

This book is published by the **FARM JOURNAL** of Philadelphia, the foremost monthly agricultural paper of this country.

THE FARM JOURNAL

does not sell this book, but offers it to its new subscribers. This paper has for thirty-three years been working for the prosperity of farmers and the happiness of farm homes. It is taken by 700,000 people whom we call "Our Folks," and we believe you will be as fond of it as they now are. Everything in it is boiled down so that its twenty-four to sixty pages every month give you the most matter in the least space. It is ably edited by authorities and is a cheery and welcome friend in every home it enters.

"Horse Secrets" and The Farm Journal for two years, both for 50 cents. Address, **FARM JOURNAL, 1068 Cherry Street, Philadelphia, Pa.**

ONE MONTH MORE FOR ROSES.

The Most Delightful Subscription Premium Offered by a Farm Paper.

We have just heard that our rose garden can deliver roses during the month of May. The National Farmer and Stock Grower will send out a collection of eight choice ever-blooming Rose Plants to each of our patrons who will send in a special subscription.

The Collection of Roses.

The collection consists of **Rhea Reid,** one that received the gold Medal at the National Rose Society; the flowers are rich velvety red. Another one is **The Bride,** one that will thrive under most unfavorable conditions. The flowers are the purest ivory white. **Etoile de Lyon** is the most magnificent pure yellow rose, massive in size and beautiful in every stage of development. **Bridesmaid** starts with the first warm days of spring and requires but little care; the flowers are an exquisite clear pink, beautiful in form and highly fragrant. The **Papa Gontier** rose is a grand variety for outdoor planting, producing double flowers of clear, glowing crimson and blooms from June to late in the year. **Bessie Brown** is a charming, pure snow-white rose; the flowers are very large and it blooms profusely. **Champion of the World** is a rich, ivory pink, and without it no garden selection is complete; it is unequaled for size of flower, fragrance or beauty. **Crimson Rambler,** the last of the collection, is a bright crimson flower that covers the entire bush. It is valuable for decorative hedges, arches and screens. We cannot describe this beautiful collection, but we will guarantee them to please any lover of flowers.

OUR SPECIAL OFFER.

Send Us Sixty (60) Cents. We will send you The National Farmer and Stock Grower for one year. We will send you direct by mail, postpaid, the full set of eight hardy ever-blooming Roses. We will also send you a 16x20-inch picture entitled **"The American Beauty Rose."** The picture is most beautiful. There is a great bunch of roses resting on the white linen cloth of a table. It is glorious, magnificent. **Send Us Sixty (60) Cents.** The paper can go to one address, the picture to another and the roses to another, or all three to one address.

ANOTHER SPECIAL OFFER.

We publish the Universal Magazine. It is a splendid publication, issued monthly. There are thirty-two pages, three columns to the page, illustrated stories, special articles, poetry, embroidery, patterns, etc. The subscription price is 25 cents a year. Send us Fifty Cents and we will send you the Universal Magazine for two years. We will also send you the full set of eight hardy every-blooming roses as a premium. The rose plants will be sent by mail, prepaid. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

CENTURY MFG. CO., Dept. 804, East St. Louis, Ills.

Skim Milk For Hens.

Tests made by the West Virginia Experiment Station prove that skim milk is a valuable food for laying hens. The first test covered 122 days.

The twenty-two hens fed the skim milk laid 1,244 eggs, as compared with the 996 laid by twenty-two hens fed a mash wet with water.

In another test sixty hens fed skim milk laid 862 eggs in thirty-seven days, as compared with 632 eggs laid by a similar lot fed no milk.

Other tests gave about comparative results. The conductors of these experiments estimate under prevailing conditions, with eggs selling at 20 to 25 cents a dozen, that the skim cents a quart.

Low Prices For Potatoes.

Late April quotations for old potatoes at St. Louis; market quiet but firm: Wisconsin Burbanks,30 to 32c.; Rurals, 30 to 33c.; Minnesota Burbanks, 33 to 36c.; Rurals, 30 to 33c.; and Triumphs, 45 to 60c. per bushel; Red River Ohios, 35 to 40c.; Rose 30 to 40c.; Iowa Rurals, 18 to 20c.; Minnesota Ohios, 30 to 35c.; Michigan Rurals, bulk, 30 to 35c.; and Bluff Rurals, 27c.

Stock Yard Charges.

A commission firm at the National Stock Yards reports as follows: On cattle,in car-loads, the commission for selling is 50 cents; yardage, 25 cents; and feed averages 5 cents; total, 80 cents per head. On hogs, in car-loads, commission averages 10 cents; yardage, 8 cents; feed, 2½ cents; total yard charges, 20½ cents a head. On sheep, in car-loads, commission averages 8 cents; yardage, 5 cents; and feed, 1 cent; total, 14 cents. These charges are for unloading, yarding, driving, sorting, weighing, selling, delivering, feeding, watering, collecting money from buyer and paying it over to the shipper, who gets all the proceeds except as above.

Six hundred acres known as the Drummond Farm, on the outskirts of St. Louis, have just been sold at $500 an acre.

Forty-acre farms are not so popular with farmers as they are with city people who have farming on the brain.

The sure way to ascertain the extent of the crop is after the harvest.

The Universal Magazine Bracelet.

This is all the rage. And Adjustable Bracelet. The most elegant design and perfectly finished. It is not solid gold, but it is washed and plated and will stand the acid test. Its match cannot be purchased in country jewelry stores for any price. It is a duplicate of the latest Parisian creation made expressly for the purpose of using it as a subscription premium to the **Universal Magazine.** The **Universal Magazine** is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, fashions, patterns and poetry—a splendid publication for the money. To anyone who will send us a money order for 50 cents we will send the **Universal Magazine** for two years, and we will send one elegant **Universal Magazine Bracelet,** postage free, as a subscription premium. Money returned if not satisfied. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Universal Magazine Bracelet.

Beautiful Flower Pictures.

The most famous painter of flower subjects in the world is Paul De Longpre. He received $2,500 for the original of his picture "American Beauties," and a large sum for "A Study in Violets;" and "Pansy in Perfection" is another of his glorious masterpieces. With 180 of his pictures in their amazing excellence before us we have selected three as the very best to place within reach of our readers as a subscription premium. We delight in offering pictures as supplements and premiums. The pictures we have are panels from the original paintings on heavy water-color paper, size 10½x14 inches. We cannot describe these beautiful paintings. The depth and clearness of color; the remarkable foliage details; the refined taste in grouping and the wonderful naturalness—truly they are unsurpassed in artistic excellence.

The illustrations herewith are feeble representations of the pictures, which must be seen to be appreciated.

Our Splendid Offer No. 1.

To anyone sending us fifty cents by postoffice money order, or in currency, or in new one-cent stamps, we will send The National Farmer and

Stock Grower for one year, and we will send in a tube, postpaid, safe delivery guaranteed, the three 10½x14-inch pictures, "American Beauties," "A Study in Violets," and "Pansy in Perfection," as a free premium.

Our Special Offer No. 2.

We publish the Universal Magazine. It is issued monthly at 25 cents a year. It is a nice, clean, illustrated, interesting, thirty-two-page publication, three columns to the page, devoted to literature, stories, fashions and patterns—well worth the money. Anyone who prefers to subscribe for the Universal Magazine and who will send fifty cents direct to this office will receive the magazine for two years and can select the three pictures as a premium, and we will send them postpaid, safe delivery guaranteed. Address, The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Had to Deceive Her.

They were arguing about the alleged inborn strain of deceitfulness in women, and she retaliated by citing the instances of men deceiving their wives.

"I suppose," said he, "that you hold that a man should never deceive his wife?"

"Oh, no," she smiled back at him; "I shouldn't go so far as that. How would it be possible for the average man to get a wife if he didn't deceive her?"—Lippincott's.

Franklin's Idea of Death.

"Dear Child—I condole with you. We have lost a most dear and valued relation, but it is the will of God and nature that these mortal bodies be laid aside when the soul is to enter into real life. 'Tis rather an embryo state, a preparation for living; a man is not completely born until he is dead. Why then should we grieve that a new child is born among the immortals, a new member added to their happy society? We are spirits. The bodies should be lent us while they can afford us pleasure, assist us in acquiring knowledge, or doing good to our fellow-creatures, is a kind and benevolent act of God. When they become unfit for these purposes, and afford us pain instead of pleasure, instead of an aid become an encumbrance, and answer none of the intentions for which they were given, it equally kind and benevolent that a way is provided by which we may get rid of them. Death is that way. We ourselves prudently choose a partial death. In some cases a mangled, painful limb, which cannot be restored we willingly cut off. He who plucks out a tooth parts with it freely, since the pain goes with it; and he that quits the whole body parts at once with all pains and possibilities of pains and diseases it was liable to or capble of making him suffer. Our friend and we are invited abroad on a party of pleasure that is to last forever. His chair was first ready, and he has gone before us. We could not all conveniently start together, and why should you and I be grieved at this, since we are sure to follow and we know where to find them? Adieu.—Benjamin Franklin, May 12, 1790.

At Iuka Springs, Mississippi.

A SPLENDID HOTEL PROPERTY AT A GREAT BARGAIN.

On account of the death of the former owner, this property was foreclosed under mortgage by a bank that will sell it on easy terms. It is located in an ideal resort town. Besides what is shown in cut here are three cottages, large barns and grounds go with hotel, all adjoining. Iuka is noted for mineral springs, and a fine park three hundred yards from the hotel. Summer rates on railroads to town, including week end rates from local stations and Memphis. Refurnished new throughout, hot and cold bath, telephone system with each room, pool and billiard room, all equipped. Can be bought at a big bargain. An opportunity for a first-class hotel man to make a fortune. Iuka is the summer resort of the South and renowned for its healing springs. The property cost $60,000. It is now better than new and can be bought for $25,000 on easy terms. Address, **JAS. H. FAIRCLOTH, Iuka, Mississippi.**

Force of Habit.

"Why did you break your engagement with that school teacher?" asked the friend.

"If I failed to show up at her house every evening she expected me to bring a written excuse signed by my mother."

Roof Insurance Free.

Congo Roofing is guaranteed by the manufacturers to last ten years. If it should wear out within that time you get new roofing free of charge. If the manufacturers fail to make good their promise, you have a Surety Company to fall back on, and you have in your hands a Surety Bond issued to you at the time your roof is laid, so that you get full satisfaction without recourse to the lawyers.

The proposition is well worth looking into, because it gives you absolute certainty in place of a speculation concerning the durability of your roofing. Ten years of protection is what you want—and ten years of protection is what you get with Congo.

If you are in the market for roofings, look into this proposition. If your dealer doesn't sell Congo, write to the manufacturers, the United Roofing & Manufacturing Co., Philadelphia, Chicago and San Francisco.

Joke on the Farmer.

Mayor Sheehan, of Elmyra, N. Y., was ridiculing the pretensions of a political opponent:

"He takes," said Mayor Sheehan, with a smile, "too much credit. He reminds me of the Cayuse farmer. This farmer came home one night from a banquet, and, throwing himself down in a rocking chair before the stove, he sighed:

"'I'm about tired out. Be the cows in the barn?'

"'Yes, Adoniram,' said his wife.

"'Horses fed and bedded down?' asked the farmer, and he took from his pocket a cigar with a gilt band about it.

"'Yes, Adoniram.'

"'Chickens ain't locked up,though, be they?'

"'Yes, Adoniram, long ago.'

"'Wood chopped for mornin'?'

"'Yes.'

"'Ducks picked and wagon wheel mended for to-morrow's market?'

"'Yes, Adoniram.'

"The farmer lighted the cigar, yawned and said:

"'Well; then, just hand me the farm paper and draw me a jug of cider, Maria. I'll turn in soon. Farmin's beginnin' to tell on me.'"

Prime beeswax is quoted at 30 cents a pound. Inferior less.

HOW TO GET 20 POUNDS OF SUGAR FREE

To every one sending for our new spring and summer catalogue of bargains in men's and boys' clothing, shoes, cook stoves, gasoline stoves, ranges, refrigerators, furniture, washing machines, queensware, glassware, cooking utensils, graniteware, poultry supplies, paints, rubber roofing, lawn swings, field seeds, garden seeds, nets and seines, etc. Your name and address on a postal will bring our special offer, the catalogue and our special monthly grocery price list. Send to-day. **BROKAW MERCHANDISE CO., Dept. B, Main and Walnut Streets, St. Louis, Mo.**

RUPTURE FREE CURE

No operation, pain, danger or detention from work. No return of rupture or further use for trusses; a radical cure in every case, old or young. Trial treatment free to all. It will cost you nothing to try this famous method. Don't wait, write today. **Dr. W. S. RICE, 5 Main Street, Adams, N. Y.**

Wanted To the women of Ohio, Indiana, Illinois, Michigan, Wisconsin, Minnesota, Illinois, Iowa, Missouri, Nebraska and Kansas, who will send me the names and addresses of ten or more substantial farmers who own their land, together with three 2-cent stamps, to pay for packing and mailing, I will send you the finest lithographed calendar, 2½ feet long, ever produced, and a nice little surprise present. This calendar is one that anyone will be proud to own. Little effort is necessary in order to send ten names. If you can send 25 or more, I will send you, in addition to this pretty calendar, a more substantial present, worth any woman's appreciation.

LETA BROWN, 668 Coca-Cola Building, Chicago, Illinois. **Names**

Timely Household Hints.

Every housekeeper should know the difference between a disinfectant and a deodorant, for while a disinfectant kills germs, a deodorant destroys odors and has no power to kill germs; but it is said that whitewash has both deodorizing and disinfecting powers. Carbolic acid is one of the best disinfectants for general use, but be sure it is labeled "Poison!" and kept out of the reach of the children. Sprinkled over a bare floor or in dark, damp closets, it soon purifies the air.

Another good and cheap disinfectant is made by dissolving one and one-half pounds of copperas in one gallon of boiling water.

Charcoal is a good example of a deodorant, but it will not disinfect.

There is no better way to keep bedbugs out of the house than to use gasoline in which carbolic acid is stirred, using three ounces of the acid to one gallon of the fluid; but this must never be used in a room where there is a fire or light, and it should be applied with a feather or a small paint brush, and plenty of this fluid should be put on the beds if there is any sign of a bug.

Nice blankets will be much safer from moths if they are washed clean before packing away, and they may be kept as soft as when new by washing them through a strong Pearline suds and the suds should be beaten to a nice lather before putting in the blankets, and there is nothing better than these suds for washing all woolen articles of any color.

It is not at all a difficult feat in these days when one can buy ready-mixed paints to give the window facings and all the woodwork of a room a new coating of paint, and it adds a world of freshness to the appearance of the room.

A good way to renew an old set of furniture is to rub it with sandpaper until it is smooth, and while this is tedious, it is very necessary. When this is done, put on a coat of white-lead paint, which can be bought at the paint shop, and when the first coat is dry, put on a second and follow this with a third coat with a white-enamel finish, and it will look like new furniture if the painting is carefully done.—Martha.

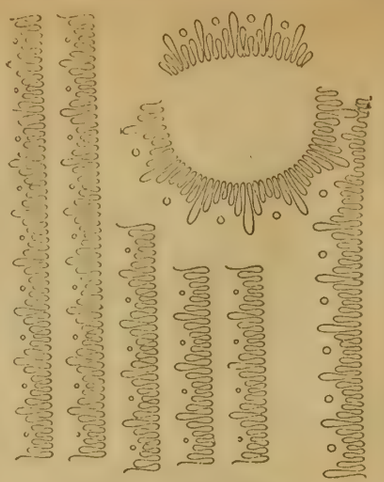
MAY MANTON EMBROIDERY.

A Line of Nice, Useful, Up-to-Date Paper Patterns.

These paper patterns require only a hot iron to insure a perfect transfer on cloth. The way to do it is to lay the material to be stamped on a padded ironing board or table, place the pattern over it with the printed side down and press over the entire surface of the paper with a hot iron, when a perfect outline will result. Please order by embroidery number.

Cushion Cover Pattern.

No. 507.—This is a design for embroidering a cushion cover seventeen inches square. It is quite popular. The price of the pattern is 10 cents.



A Nice Braiding Pattern.

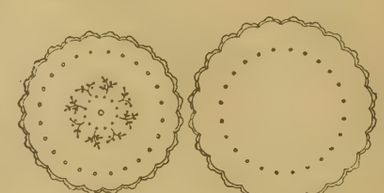
No. 508.—This is a design for braiding a belted blouse or coat, and when finished it has a very attractive appearance. The price of the pattern is 10 cents.

Design For a Carving Cloth.

No. 506.—A suitable design for braiding the ends of a carving cloth, table or dresser scarf. The design is eighteen inches wide and two ends are given. The price of the pattern is 10 cents.

For a Low-neck Waist.

No. 500.—This is a beautiful design for embroidering a low-neck waist and sleeves. It is specially adapted to May Manton Pattern No. 6567. The price of the pattern is 10 cents.

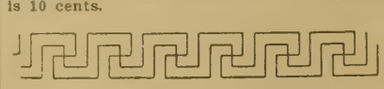


Removable Pin-cushion Cover.

No. 501.—Design for embroidering a removable pin-cushion cover. Upper and lower portions are given for cushion five inches in diameter. The price of the pattern is 10 cents.

For a Band or Border.

No. 504.—Pattern for embroidering a braided band or border. It is two inches wide and three yards long. Five and a half yards of braid will be required for each yard of the design. The price of the pattern is 10 cents.



Another Band or Border.

No. 505.—A simple design for embroidering a braided band or border. Four yards are given in length and the border is one and a quarter inches wide. Four and a half yards of braid are required for each yard of the design. The price of the pattern is 10 cents.

Please send all orders for these embroidery patterns to the **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Thank You!"

Negligence in the use of the little phrase "Thank you!" has led a prominent editor to criticise severely the bride who does not gratefully acknowledge the receipt of her wedding gifts as well as the graduating youth who appropriate their gifts with scarcely a word of recognition. If any person reads the well-deserved reproof without having brought to mind some similar instance of an unacknowledged gift of which he was the donor, he is fortunate in his choice of young friends. It would seem that every young American ought to have the grace to say: "Thank you!" But for this negligence there is a reason some ten or fifteen years behind the omission. It is this: Many children are not taught to say "Thank you!" for all favors received. There comes to mind a dainty little Marjorie whom I have remembered many times in small ways. Seldom have I been thanked, unless I have handed the gift directly to the child. If I send, I hear never a word, and have often wondered whether it were lost. This little Marjorie has been taught the most correct table manners and the best use of the English language. Her mother is extremely careful about every detail of the child's dress. But she is not taught to say "Thank you!" Nor, I am sorry to say, is Marjorie the only friend who has thus grieved me.

But among these little people there is at least one refreshing exception. Truly, I think Russell's mother does not give herself as many airs and graces as does Marjorie's mother, and she is not quite so particular to keep her little lad dressed in the latest mode, but she has taught her little son to be appreciative. Before he learned to write his mother acknowledged his gifts for him, but he stood at her side and told her what to say. Now he sends his thanks in a funny little scrawl and he never forgets. One of these missives reads: "I always was wanting such a cute little cup and saucer and now I've got it." His mother tells me that she tries so hard to have him appreciate what others do, and when he has come, telling her of this or that that has pleased him, she has said to him: "Why don't you tell the person who did it for you? When you think such pleasant things, why not say them to the person who tries to please you?" He follows this advice. One day I was at an informal dinner party given by Russell's grandmother and the little boy was allowed to be at the table with the elders. He ate with great enjoyment and said very little until there was a sudden pause in the conversation. Then Russell remarked: "Grandmother, this is a perfectly declicious dinner. Thank you for it."

There is little doubt but what Russell will be saying "Thank you!" when he becomes a young man.—Janet Thomas Van Osdel.

The Graduation Essay.

There are probably more poor graduation essays written because the young student selects some subject entirely out of the scope of his every-day life than for any other reason. It is such a common fault for the country-bred child to select some topic wholly foreign to his every-day life, and he must needs consult encyclopedia and books of reference without number in order to collect data for the dreaded composition. If instead he were to select some common topic with which he is familiar he could make a far more readable paper which would be a part of himself, instead of a stilted rehash, which everyone recognizes as such. Most children who have been raised in the country use their eyes and ears to advantage, and if they would only write what they hear and see and live, they could write essays that would make the children and young people of any school, be it township or town high school, sit up and listen. Why shouldn't a boy who knows the call of every bird in his vicinity write on "The Calls of the Birds in Our Locality?" He can imitate them, too, and won't it make a change in the usual programme if he does give this mimic call? Or, "The Birds That Winter With Us" is another topic a bird lover can handle. Some other subjects which I have found country-bred children can do full justice to, according to their different tastes, are: "How the Country Helps to Feed the City;" "Our Butterflies;" "Poisonous Plants of Our Vicinity;" "Pests Which Destroy Crops;" "Weeds and Flowers;" "Love Among Animals;" "A Visit to a Cheese Factory;" "Weather Signs." —Janet Thomas Van Osdel.

CORNISH

Sent to You for a Year's Free Trial

Cornish Instruments for real merit, are unexcelled by any other, whatever the price, or name or reputation.

We will send direct from our Factory, any Cornish piano or organ that you may select from our catalog, **on any terms of payment that you may choose** with the distinct understanding that if the instrument does not come up to your fullest expectations you will be under no obligations whatever to keep it, and that the

Trial Will Cost You Absolutely Nothing

If the instrument does not prove better value for the money than you can get anywhere else—if it is not as good an instrument as you can buy for one-third more than we ask—if at any time within a year you feel that you have not a good bargain, send it back; we won't find one word of fault with your decision, and you will not be one cent out of pocket for freight or for use of the instrument.

Two Years Credit If Needed

We Save You $100 and More On a Piano

We Give You a Legal Bond of Indemnity

Easy Terms

which holds us strictly to this offer. You risk nothing. **We assume all responsibility,** because we know all about the great beauty of material and workmanship in Cornish pianos and organs and we know all about the pure, sweet, rich tone quality of our instruments and we know what **a quarter of a million satisfied purchasers** think of them.

If you keep the instrument it will cost you the **Rock-Bottom Factory Price,** not one cent more, and you will receive with it our **Bonded Guarantee** which insures the instrument **for 25 years** against defect in material or workmanship.

Buy On The Cornish Plan—Save One Third

Send For The Cornish Book

Don't think of buying before reading it. It is the handsomest piano and organ catalog ever issued. It explains things you ought to know whether you buy from us or not and it is yours for the asking. Write for it now and please mention which you are interested in—piano or organ.

CORNISH CO. WASHINGTON, N. J. Established Over Half A Century.

Making Cake.

Cocoanut Cake.—Yolks of four eggs, reserving the whites for frosting. Cream with two cupfuls sugar and a tablespoonful of butter. Add three cupfuls of flour, the milk of one cocoanut, together with enough water to make two teacupfuls of liquid, one teaspoonful soda, two teaspoonfuls cream tartar. Dissolve the soda in the water and sift the cream tartar with the flour. Three teaspoonfuls baking powder sifted in the flour may be substituted for the soda and cream tartar. Bake in three layers in a moderate oven.

Filling.—Dissolve two cupfuls granulated sugar in a little water and cook slowly until it hairs. Then stir in the whites of the eggs beaten to a stiff froth. Spread a layer on the top of the lower cake, sprinkle with cocoanut, add a little more frosting to make the next layer adhere, and prepare it in the same way. Cover the top and sides with a thick coat of frosting and then cover this with cocoanut. If the fresh nuts can be obtained, it is better and cheaper to buy one, half a cocoanut being sufficient, when ground through the food chopper, to fill one cake. If out of season for this, substitute the shredded cocoanut.

Marble Cake.—Make after above recipe, dividing into two equal parts. In the first use white sugar and the whites of the eggs; in the dark part use brown sugar and the yolks, also a square of grated chocolate dissolved in water. Add flour enough to make the dough a little stiff. Bake in a loaf, putting in a spoonful of the light batter and alternating with one of dark; or, if a long pan is used, put two-thirds of the dark cake in one end, the same of light in the other, and marble the remainder in the middle. One may thus have three kinds of cake in the one baking. Cover with chocolate frosting with white decorations if desired.—Bessie L. Putnam.

Growing Roses.

While roses are universal favorites, the fact remains that they are not nearly so general in cultivation as their merits deserve. Some are deterred by the first cost, which is now so little that any who wish may indulge, if they but give the matter attention. Then in getting the hardy varieties we are making a purchase not for a season, but for years; a rose bush well cared for is long-lived and may be kept in bloom not only through June, but through the entire summer if given good treatment.

When the plants arrive, soak the roots in warm water for a short time before planting. This may vary from a few minutes to an hour or two, depending upon the condition of the plants on arrival.

Plant in rich soil. Well-rotted fertilizer from the stable added to twice its bulk in leaf mould makes a good combination. Provide good drainage by filling the bottom of the pots with stones, pieces of brick or bits of charcoal. And for a few days place the plants where they will not be in the bright sunshine. If they show signs of wilting, cover with a glass. Lamp chimneys which are cracked are useful for this purpose. Keep the soil moist but not soggy.

After growth has started, give them plenty of warm water and sunshine, with liquid fertilizer once a week. If the latter is not at hand, a teaspoonful of ammonia in a quart of water may be substituted, though this is not a complete plant food. Soot tea brightens the colors and tends to keep the insects down.

As soon as the weather permits, hardy roses should be given a permanent place in the border, their taste for rich soil being fully supplied. The decayed material from an old chip yard promotes a robust growth. And while this is rarely obtainable at the present time, those near woodlands may obtain the same results by making use of the rich earth under some decayed log.

The rosebug is a persistent pest which seems proof against almost all remedies save hand picking. If there are slugs, just mount one of your young poults on your hand and initiate it into the bug-catching industry. After it has once had a taste of the slugs, which are especially numerous on the under side of the leaves, it will quickly rid a bush of them, its sharp eyes spying even the last of the tribe. But if this method is not convenient, a little white hellebore dusted over the leaves when the dew is on will do the work as well.

Spray frequently with tobacco water to ward away other insect pests. For potted roses an excellent method to keep them clean is to spray or sprinkle once a week with soapsuds, following with a tepid bath of clear water. Cold water is the best antidote to the red spider.

Among hardy roses there is nothing more easily grown than the Champion of the World. It is as hardy as the old-fashioned roses, with blossoms of clear pink produced in great profusion through the month of roses. Then if vigorously trimmed back and the soil well enriched—a process necessary to secure summer roses of any variety—it will continue to bloom through the summer, and in autumn the roses will be literally crowded on the stems. More than once we have seen the bush well loaded with buds and blossoms when frosts came.

It is well to bend the stems of climbing roses to the ground before frosts come, fastening them down and giving a little protection from the rigors of winter.

The Crimson Rambler is so easily grown and so beautiful that it should be in every home. Other Ramblers are fast winning the way to prominence through the brilliancy of this most deserving one.—Bessie L. Putnam.

To Exterminate Bed-bugs.

Some time ago Mrs. J. H. Fisher, of Clinton, Ky., was kind enough to give us the following:

"Please let me give a sure exterminator. Try 25-cents' worth of corrosive sublimate in one quart of turpentine; apply with feather in all crevices infested, one application being sufficient. The bottle should be kept away from children. My plan is, use freely each spring when house cleaning."

Soup Making.

For soup making we want to draw out the flavor of the meat; therefore, soak the meat in cold water for one hour. Place the kettle containing this water and meat over a slow fire and heat gradually. This will make soup of fine flavor.

The meat will be tasteless, but will still contain a great deal of the proteid or nourishing matter. It should be seasoned well and may then be used for hash, croquettes, and made-over dishes.

If you want to use boiled meat for dinner, not for soup, put the meat in boiling water and cook quickly for a few moments, then slowly.

For a stew, where you wish to use the meat and the juice, the process is different. In this case you want some goodness in the meat and some in the gravy, so you must put the meat into cold water and put it over a very hot fire where it will boil quickly. Then cook slowly for several hours, until tender. Some people boil meat so hard that it becomes very stringy. There is no better way of making stews than by using cheap cuts of meat, such as the lower round, adding vegetables as desired and cooking it in the oven instead of on top of the stove.

Salt meats should be soaked, the water changed once or twice, and then the meat must be cooked long and slowly.—Mary F. Rausch, Colorado Agricultural College, Fort Collins.

The Automobile Record.

It seems incredible that a human being can safely travel faster than two miles in a minute, but recently Oldfield drove a Benz automobile over an accurately-measured mile on a Florida beach in twenty-seven and thirty-three hundredths seconds at the rate of 131 miles per hour. This performance was timed by a specially devised electrical apparatus, which recorded hundredths of a second, and marked the most rapid flight ever made by man. In 1902, in a German government test, an electric trolley car made an average speed of 128 miles per hour, while the fastest recorded speed of a steam locomotive is 120 miles in an hour. A carrier pigeon in a hundred-mile flight in 1900 flew at the rate of 85½ miles per hour, which has been nearly equaled by the fastest motorcycle at a speed of 84½ miles. A bicycle rider has gone sixty-three miles per hour, but the most swift aeroplane has not exceeded fifty miles an hour, and the speediest motor boat has averaged just less than thirty-eight miles. Horses have traveled faster than steamships, as the Mauretania's record of 30½ miles is not as fast as the running horse, Salvator's record of 37½ miles or the pacer Dan Patch's time, 32½, although a trotting horse has made but thirty and four-tenths miles an hour. An interesting comparison can be made of these rates of speed and a man skating twenty-seven miles an hour, running fourteen miles an hour, rowing nearly thirteen miles an hour, walking nine miles an hour, or swimming 2½ miles an hour.

Traveling at the rate Oldfield drove the 200-horse-power Benz, the journey from New York to San Francisco could be made in twenty-four hours, while a man walking twelve hours a day continuously would take thirty days to travel this distance.

That German engineers can design and build a piece of mechanism of this enormous power which will operate so perfectly under such extreme conditions and be capable of such speed is most noteworthy and proves the startling value of the modern motor car and its dependability.

THE AUTOMOBILE RECORD—27 1-3 seconds to the mile, by Mr. Barney Oldfield, at Florida Beach. This is on a basis of 131 miles an hour.

The Boy Who Was Licked.

"A boy of twelve years of age, with an air of melancholy resignation, went to his teacher, and handed in the following note from his mother before taking his seat: 'Dear Sir—Please excuse James for not being present yesterday. He played truant, but you needn't whip him for it, as the boy he played truant with and him fell out, and he licked James; and a man they threw stones at caught him and licked him; and the driver of a cart they hung onto licked him; and the owner of a cat they chased licked him. Then I licked him when he came home, after which his father licked him; and I had to give him another for being impudent to me for telling his father. So you need not lick him until next time. He thinks he will attend regularly in future."—Christian Advocate.

Conservation of a Commodity.

The farmers of Rock Creek, Ill., found that the retirement of farmers from their farms for residence in the towns was destroying the social and religious life of the community. They took counsel to devise measures by which to save the community.

Their first proposal was a Farmers' Union or syndicate which would rent the land offered by retired farmers, and sublet it to desirable tenants, whose presence in the community would not be a detriment. But this plan soon proved its weakness. The retiring farmers were only too willing to put their lands in the hands of the syndicate and go to the town or city, reassured that while they were enjoying town life, its good schools, its music and lectures—for the retiring farmer is an intelligent, aspiring man—that their farms would be well rented.

So the sons of the early settlers decided that they must go deeper. They undertook to provide their community with better schools. They erected a building as good as one finds in town or city, and they abandoned the old country schools, with their small districts and poor teaching. They thus assembled about a hundred children in one school company. They hired wagons to carry them back and forth. They employed good teachers, and put in laboratories, work benches, sewing machines and ranges, for teaching manual training and domestic science. They heated it well and lighted with gas; and on the third floor they had room for a meeting-place for all the people of the community. Out of doors they have grounds for games, base ball, tennis and foot ball.

The result has been that the retirement from the farm has been stopped. The place has come to be so desirable as a place of residence that the rental of land has gone up, and the average tenant will not go there. Foreigners are excluded and the drifting element of the population has ceased to be restless. Social life has been restored and the continuous life of the institutions of the countryside has been assured.—Warren H. Wilson, Ph. D.

The Bad Habit of Slang.

Slang is tabooed in the home of a West Philadelphia family, principally because there is a bright little girl who displays a persistent aptitude in retaining expressive but uncultured phrases.

The other evening at dinner the mother, father and daughter drifted into the vernacular, and a fresh start was necessary. The little girl started it. "I'm not stuck on this bread," she remarked.

"Margie," said her mother, "you want to cut that slang out."

"That's a peach of a way of correcting the child," commented the father.

"I know," replied the mother, "but I just wanted to put her wise."—Philadelphia Telegraph.

FREE DEAFNESS TREATMENT.

A successful institution makes this remarkable offer to send free medicines to prove their ability to cure Deafness, Head Noises and Catarrh by a new method. Address Dr. Branaman Remedy Co., 656 Gumbel Bldg., Kansas City, Mo.

TO WOMEN WHO DREAD MOTHERHOOD!

Information How They May Give Birth to Happy, Healthy Children Absolutely Without Pain—Sent Free.

No women need any longer dread the pains of childbirth, or remain childless. Dr. J. H. Dye has devoted his life to relieving the sorrows of women. He has proved that all pain at childbirth may be entirely banished, and he will gladly tell you how it may be done absolutely free of charge. Send your name and address to Dr. J. H. Dye, 248 Lewis Block, Buffalo, N. Y., and he will send you, postpaid, his wonderful book which tells how to give birth to happy, healthy children, absolutely without pain; also how to cure sterility. Do not delay but write today.

FITS I have cured cases of 20 years standing. Trial package free by mail. Dr. S. PERKY, Dgls. Park Sta., Chicago, Ill.

THE MEXICAN RESURRECTION PLANT.

This is a great and pleasing novelty. Without water it dries up and is apparently dead. Place it in a shallow tank of water and it revives to a beautiful, living, fern-like plant. Let it dry out again and it curls up like a ball and can be kept for years. It will revive again directly it is placed in water. It requires no soil, no nourishment, no attention.

We have adopted the Resurrection Plant as a subsciption premium to the **Universal Magazine.** The magazine is most interesting and is published monthly. It is an illustrated publication, with genuine stories, splendid poetry and home reading. Send 25 cents for one-year's subscription to the **Universal Magazine** and we will mail you one of these genuine Resurrection Plants as a free premium.

RHEUMATISM

A CURE GIVEN BY ONE WHO HAD IT

In the Spring of 1893 I was attacked by muscular and inflammatory rheumatism. I suffered as those who have it know, for over three years, and tried almost everything. Finally I found a remedy that cured me completely and it has not returned. I have given it to a number who were terribly afflicted, and it effected a cure in every case. Anyone desiring to give this precious remedy a trial, I will send it free. Address,

Mark H. Jackson, No. 491 James Street, Syracuse, N. Y.

Mr. Jackson is responsible. Above statement true.—Pub.

FLORAL POST CARDS FREE!

Send me 4 cents in stamps to help pay postage and mailing expense, and I will send you **10 ELEGANT GREETING POST CARDS!**

I make this wonderful offer to get the names of people who really appreciate high-grade Post Cards, so I can tell you how to get a box of 50 beautiful European Scenic Colors absolutely free. Write me to-day, enclose 4c., and you will be delighted with the ten elegant Cards you will receive by return mail.

Nat Spencer, 439 Hall Bldg., Kansas City

MAY MANTON PATTERNS.

Very Elegant Pattern Service, With Full Instructions For Ordering and Making.

This is the very best pattern service, and we are very much pleased to obtain it for our friends and patrons. Each pattern is new and original.

Girl's Costume.

No. 6607.—Young girls are wearing a great many dresses that are made with loose blouses over plaited skirts. This one is quite novel and in every way attractive. Also it is so easy to make that busy mothers will find it a boon. The blouse is open at the left of the front, but is joined at the lower edge, and the facing is applied over it, so that it is drawn on over the head and can be closed invisibly or with buttons and buttonholes, as liked. Scotch gingham makes the dress illustrated, but such a model is appropriate for all childish materials, the wools of immediate wear, as well as the washable ones of the future. For the early spring, serge, cashmere and similar materials can be so made; for the coming summer linen, ginghams and materials of the sort are charming, while later the model can be utilized for the thinner lawns and the like.

The costume consists of the skirt, the body portion and the blouse. The skirt is straight and is joined to the fitted body, and the two are closed at the back. The blouse is made with front and back portions, but the front edges are lapped and are joined for a short distance, and the facing is applied over the lower edge of the blouse. The sleeves are in one piece each. The full ones are gathered into bands and the loose ones are finished with applied trimming.

The quantity of material required for the medium size (twelve years) is 6⅝ yards 24, 5 yards 27, 4¾ yards 32, or 2½ yards 44 inches wide.

The Pattern 6607 is cut in sizes for girls of eight, ten, twelve and fourteen years of age, and will be mailed to any address by this paper on receipt of 10 cents.

Child's Dress With Bloomers.

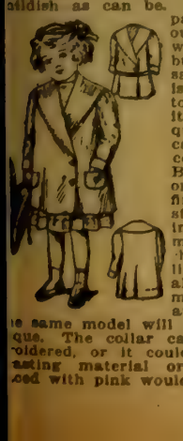
No. 6605.—Such dresses as this one, that are cut with waist and skirt portions in one, are much liked for the little girls, and are especially in demand at this season when washable materials are being made up. This one can be made either with the square neck or high, and it is equally desirable in both styles. It can be trimmed with bands or contrasting material, as illustrated, or with banding, as liked, or the edges could be scalloped and embroidered, if a very dainty effect were wanted. Chambray is the material illustrated, and the bands are of white linen, but little girls wear linen and percales and all sturdy materials of the sort for morning, and the same dress would be pretty made from white lawn or Dresden dimity for afternoon occasions.

There are accompanying bloomers, which dispense with petticoats, and mean both comfort for the child and relief for the washwoman, but these can be used or omitted, as occasion demands.

The pattern 6605 is cut in sizes for children of two, four and six years of age, and will be mailed to any address by this paper on receipt of 10 cents.

Child's Coat.

No. 6624.—The coat that is made with a shawl collar is one of the latest for the little folk, and this one is just as simple and childish as can be. It can be made with patch pockets or without. It can be worn without a belt or with, but it is always the same simple model that is held by two big buttons. In the illustration it is made in three-quarter length, but it can be made longer to cover the skirt, if liked. Broadcloth makes this one, and the edges are finished with tailor stitching, the collar being faced with silk in matching color, but cheviots are liked for little folks' coats, and all light-weight wool materials are appropriate, and a little later the same model will be worn for linen and pique. The collar can be braided or embroidered, or it could be made of a contrasting material or color. White pique faced with pink would make an exceedingly charming, smart coat. Brown cheviot with the collar of natural colored pongee would be smart for immediate wear. Leather belts are greatly in vogue, and, when liked, one can be worn over the coat, as shown in the small view.



The coat is made with fronts and back. The pockets are of the simple patch sort that are finished and arranged over the coat and stitched into place. The collar is joined to the neck, and it and the fronts are faced and lapped over to give the shawl effect. The sleeves are in two pieces each, with rolled-over cuffs.

The quantity of material required for the medium size (two years) is 3¼ yards 27, 1⅝ yards 44, or 1½ yards 52 inches wide, with ¾ yard of silk for collar.

The Pattern 6624 is cut in sizes for children of one, two and four years of age, and will be mailed to any address by this paper on receipt of 10 cents.

Child's Dress.

No. 6597.—The simple little frock that is made full and joined to a yoke is always the prettiest for the tiny children. This one includes a panel at the front that allows effective use of embroidery or other trimming and is exceptionally dainty and charming. As illustrated, it is made of white lawn, with trimming of embroidered edging and banding, but all materials that are used for little folks' dresses are appropriate. The frill can be of the material, either hemmed or hemstitched, or it can be omitted and the dress finished with a hem only. If the embroidery on the panel means too great labor, it can be cut from all-over material or trimmed with bandings or medallions. The neck can be finished with a little frill as illustrated, or with a straight standing collar, or it can be cut out as shown in the back view and the sleeves made short, so rendering the frock somewhat more dressy and also better adapted to the warmer weather.

The dress is made with front and back portions and with a panel that is cut in one with the front of the yoke. The dress is tucked and joined to this panel and to the back portion of the yoke and is closed at the back. Whatever the length of the sleeves, they are gathered into bands.

The quantity of material required for the medium size (two years) is 3 yards 24 or 27, 2¼ yards 32, 2⅛ yards 44 inches wide, with 2¼ yards of embroidery 4 inches wide, 4½ yards of banding to trim as illustrated.

The Pattern 6597 is cut in sizes for children of one, two and four years of age, the Embroidery Pattern No. 374, in one size only, and will be mailed to any address by this paper on receipt of 10 cents for each.

Round Yoke Waist With Bretelles.

No. 6606.—Such a pretty waist as this one is available at all seasons, but especially so just now, when bordered materials and flouncings are to be met at every turn. The bretelles are made with straight edges and consequently are especially well adapted to such materials, but they can of course be trimmed in any way that may suit the fancy, so that the waist is by no means to be confined to fabric of any one sort. It is, indeed, adapted to all the fashionable thin stuffs that can be tucked successfully, and that means almost everything that would be utilized for such a design. In this instance dotted muslin makes the waist and matching border the bretelles, while the yoke is of all-over embroidery, and there is banding used on the sleeves, a very lovely effect being obtained with very little labor.

The waist consists of the lining, the front and back portions, and the front is tucked, while the backs are plain. The bretelles are straight and are tucked over the shoulders. When the lining is omitted the neck edge can be either joined to the yoke or finished with an under facing or trimming. The three-quarter sleeves are made in two puffs, the short sleeves in one, and the sleeves can be either lined or unlined. Many people like lining to support the puffs, even when a transparent effect is desired. In such case the lining can be cut from net in matching color.

The quantity of material required for the medium size is 2¾ yards 21, 2¼ yards 27, or 1⅞ yards 44 inches wide, with 2 yards of embroidery for the bretelles, ⅛ yard 18 inches wide for the yoke, 1⅛ yards of banding to make as illustrated; if one material is used for waist and bretelles, 3¾ yards 21, 3¼ yards 27, or 2¼ yards 44 inches wide, will be needed.

The Pattern 6606 is cut in sizes for a 32, 34, 36, 38, 40 and 42-inch bust measure, and will be mailed to any address by this paper on receipt of 10 cents.

Princesse Slip.

No. 6608.—The Princesse slip is almost a necessity of up-to-date dress, for whether a Princesse gown is worn or the separate waist and skirt, it is essential to dispense with all bulk at the waist line. This one can be made in various ways and is equally well adapted to silk foundations and to lingerie materials. It can be made with low or Dutch neck on square or round outline, or it can be made high neck and with or without sleeves, so that it suits all occasions as well as all materials. The straight gathered flounce can be applied over the lower edge or the slip can be finished with a hem, as shown in the back view. Nainsook with trimming of lace makes the one illustrated.

The slip is made with fronts, side-fronts, backs and side-backs. The long seams render fit a simple matter, and there is a dart in each side-front portion at the waist line, which means perfect smoothness. The flounce is straight and gathered, and can be trimmed on the lines indicated, or as liked. The sleeves are in two pieces each, and can be cut in any desired length.

The quantity of material required for the medium size is 8½ yards 24 or 27, 7¾ yards 32, or 5¼ yards 44 inches wide for the plain slip; 2½ yards 24, 2 yards 27, 1½ yards 32, or 1¼ yards 44 inches wide for the flounce, with 4½ yards of embroidery, 14½ yards of insertion, 3½ yards of narrow edging to make as illustrated.

The Pattern 6608 is cut in sizes for a 34, 36, 38, 40, 42 and 44-inch bust measure, and will be mailed to any address by this paper on receipt of 10 cents.

One-piece Overblouse.

No. 6623.—The overblouse that is cut in one with the sleeves is a pronounced favorite of the season. It is worn with the tailored suit and it is worn with the tunic to match, over a slip or gown. It is made from transparent materials, and it is made from thin silks and wools; it is pretty for lawns, batistes and the like, and it can, indeed, be utilized in numberless ways. This one is absolutely simple. There are only underarm seams to be sewed up, and it requires scarcely appreciable time for the making. The neck can be cut either round or square and trimmed with any contrasting material. As illustrated, the overblouse is made of chiffon and is worn over a guimpe of foulard. In combination with the simple tunic, such a blouse means a complete transformation for the gown of last season, or the one that is partly worn. Made separately and in color to match the skirt, it gives the complete costume effect with the minimum of material and labor. Beneath it can be worn any guimpe or blouse.

The overblouse is made in one piece. It can be drawn up at the waist line by means of tape inserted in a casing or it can be adjusted over a belt, as liked. The trimming is applied over neck and sleeve edges, and the closing is made invisibly at the back.

The quantity of material required for the medium size is 2¼ yards 21 or 24, 1½ yards 32, or 1¼ yards 44 inches wide, with ⅜ yard of silk.

The Pattern 6623 is cut in sizes for a 32, 34, 36, 38 and 40-inch bust measure, and will be mailed to any address by this paper on receipt of 10 cents.

Please be sure to give size of pattern ordered and write your own name and address plainly that no mistake can be made to cause delay.

Kindly address all pattern orders to **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Saved in Time.

Clerk—"I'd like to get off early, sir, as my wife wants me to beat some carpets while the daylight remains.

Employer—"Can't possibly let you off."

Clerk—"Thank you, sir. You are very kind."—Boston Transcript.

FREE TO YOU—MY SISTER

Free to You and Every Sister Suffering from Woman's Ailments.

I am a woman.
I know woman's sufferings.
I have found the cure.

I will mail, free of any charge, my home treatment with full instructions to any sufferer from woman's ailments. I want to tell all women about this cure—you, my reader, for yourself, your daughter, your mother, or your sister. I want to tell you how to cure yourselves at home without the help of a doctor. Men cannot understand women's sufferings. What we women know from experience, we know better than any doctor. I know that my home treatment is safe and sure cure for Leucorrhoea or Whitish discharges, Ulceration, Displacement or Falling of the Womb, Profuse, Scanty or Painful Periods, Uterine or Ovarian Tumors, or Growths; also pains in head, back and bowels, bearing down feelings, nervousness, creeping feeling up the spine, melancholy, desire to cry, flashes, weariness, kidney and bladder troubles where caused by weaknesses peculiar to our sex.

I want to send you a complete ten day's treatment entirely free to prove to you that you can cure yourself at home, easily, quickly and surely. Remember, that, if will cost you nothing to give the treatment a complete trial; and if you wish to continue, it will cost you only about 12 cents a week or less than two cents a day. I will not interfere with your work or occupation. Just send me your name and address, tell me how you suffer if you wish, and I will send you the treatment for your case, entirely free, in plain wrapper, by return mail. I will also send you free of cost, my book—"WOMAN'S OWN MEDICAL ADVISER" with explanatory illustrations showing why women suffer, and how they can easily cure themselves at home. Every woman should have it, and learn to think for herself. Then when the doctor says—"You must have an operation," you can decide for yourself. Thousands of women have cured themselves with my home remedy. It cures all old or young. To Mothers of Daughters, I will explain a simple home treatment which speedily and effectually cures Leucorrhoea, Green Sickness and Painful or Irregular Menstruation in young Ladies, Plumpness and health always results from its use.

Wherever you live, I can refer you to ladies of your own locality who know and will gladly tell any sufferer that this Home Treatment really cures all women's diseases, and makes women well, strong, plump and robust. Just send me your address, and the free ten day's treatment is yours, also the book. Write to-day, as you may not see this offer again. Address

MRS. M. SUMMERS, Box H - - Notre Dame, Ind., U. S. A.

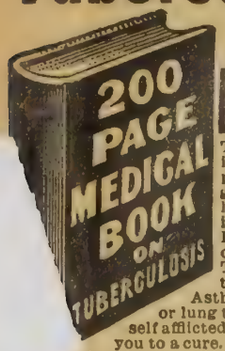
Tuberculosis Book FREE



This valuable medical book tells in plain, simple language how Tuberculosis can be cured in your own home. If you know of any one suffering from Tuberculosis, Catarrh, Bronchitis, Asthma or any throat or lung trouble, or are yourself afflicted, this book will help you to a cure. Even if you are in vanced stage of the disease and feel re is no hope, this book will show you w others have cured themselves after all remedies they had tried failed, and they believed their case hopeless.

Write at once to the Yonkerman Company, 3974 Water Street, Kalamazoo, Mich., and they will gladly send you the book by return mail free, and also a generous supply of the New Treatment, absolutely free, for they want every sufferer to have this wonderful remedy before it is too late. Don't wait—write today. It may mean the saving of your life.

House Cleaning Hints.

A teaspoonful of ammonia in a quart of water is much better than soap for cleaning paint. Pour the water over your plants after you are through with it and make it serve as plant food.

Use a sponge in cleaning windows. Any of the popular polishes which do not scratch will clean the windows well, requiring only the application and wiping off with a clean cloth when nearly dry.

Use alum water if the presence of vermin is suspected.

Fill all the cracks in the floor with putty or a filler made by boiling tiny bits of newspaper in paste until it becomes a pulpy mass. This will greatly lessen the harboring places for moths and other insect pests, besides eliminating a source of dust and dirt. If the floors are painted, varnished or oiled, and the carpets banished, the problem of keeping clean will be greatly simplified.

There is nothing better to keep moths away than the sprigs of lavender with which our grandmothers guarded the linen chest. If the leaves are not obtainable, a bottle of the oil, purchased at the druggist's for a dime, will serve instead, being as efficacious as moth balls and infinitely more agreeable.

If carpets are to be cleaned, choose a windy day and hang them on a strong pole. The wind will during the day relieve you of much beating and save much in the wear of the carpet. Use a broom for cleaning, literally sweeping out the dirt.

One of the new-fashioned mop cloths fastened on the mop is excellent for removing dust from wallpaper. Lacking this, pin a bag made of old knit underwear over the broom and sweep down the walls; or, use one of the soft cloth bags which you keep for sweeping your varnished or oiled floor.

Not all flies die in autumn. A few hide away in some crack or corner, ready to creep forth on the first warm daw and repopulate the earth. Make a small fan of a piece of screen cloth doubled and fastened to a stick handle and hit every one you catch sight of. They are easily stunned by the blow. Even a delicate fabric is not marred by the stroke.

Varnish and paint are now so cheap and so easily applied that everyone can freshen soiled furniture or woodwork with little expense. Study the directions accompanying each brand and you can scarcely go astray.

Before packing away stovepipes for the summer, give them a thorough coat of kerosene to prevent rusting.

Paper sacks are the safest receptacles for furs and other winter goods. Pack away before the moth miller arrives. The goods should first be thoroughly aired, then packed, using plenty of lavender.

Watch for the little black and white beetle with dull red stripes on the wing covers, which is too often found on the windows in spring. This is the buffalo or carpet beetle. But do not confuse it with the bright red lady bug, more or less dotted with intense black. The latter is one of our best friends, frequently seen among house plants in its quest of the plant aphis.

Borax is a good remedy for ants, and it is also excellent for cleaning purposes, especially if hard water is used.

The scum which quickly forms on a wash-dish when hard water is used may be readily removed with a cloth dipped into soap and then into wood ashes. Kerosene will quickly remove it, but it takes work to remove the kerosene odor.

Don't commence cleaning until the weather is warm. Colds and pneumonia are too dear a price to pay for premature house cleaning—Bessie L. Putnam.

Washday Helps.

There are a number of excellent washing machines on the market, but insist on trying before you purchase. The agent may offer to do your washing. Don't be fooled into a bargain of that kind. Work that is easy for a man will be hard for you. You do not want a machine so heavy that you cannot empty it yourself, nor so hard to run that you will be glad to go back to the old washboard. Test the machines, and you can certainly find one that will greatly lessen your load and render heavy bedding as easily washed as towels.

Soak the clothes over night in warm water, soaping well all soiled spots. If there are fruit stains, first remove them by pouring boiling water through the fabric. Blood stains are best removed by soaking in tepid soapy water. A little kerosene added to the soap will help to remove grease or animal matter. Many prefer to use a tablespoonful boiled in a soft soap made from a bar of common laundry soap. It is excellent for removing dirt, but if clothing is not in every-day use it will scarcely prove satisfactory, as if the garments are laid away they soon become yellow.

Pour boiling suds over all black and white cotton goods to set the color, first soaping all soiled places. When partly cool, wash in suds and rinse, adding a little salt to the rinse water to clear the white.

Wash woolen garments in water as warm as the hands will bear, making a suds of some good white soap. Rinse in warm, slightly soapy water.

Starch shirt waists, sunbonnets and other articles that you wish to have quite stiff in laundry starch. They retain it much better than when the starch is made of flour.—Bessie L. Punam.

To Parboil a Steak.

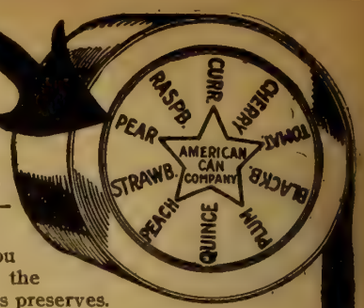
This is about as good as if cooked over the clear coals.

Use on iron frying pan, if possible. Heat very hot, but do not use a drop of grease. When the pan is smoking put the steak in and turn rapidly from side to side. This will help to keep in the juices. Then brown and cook more slowly.

All meat should have a very high temperature at first to sear the outside; then it must cook more slowly.

Meat is ruined if it is cooked very quickly. The flavor is much better and the meat more tender if these directions are followed.

Get the Can With the Star



When you find the "STAR"—top and bottom of a fruit can—buy the can.

For you know this can is clean. You know it is sanitary. You know it is the *only* can good enough for your delicious preserves.

American "Star" Wax Top Can

Look for the "STAR"

The best can outside. The best can inside. Made of extra coated tin plate. Twice as economical—won't break. Won't bleach out your fruit.

THE AMERICAN "STAR" CAN is the only can you *know* will keep your fruit sweet, clean and perfect.

Seals airtight with wax or paraffine. Plain or Indexed tops.

Fruit cans without the "Star" are not nearly so good and they cost about the same. So don't be misled.

Sold by grocers and dealers in crockery, glassware and household furnishings.

AMERICAN CAN COMPANY

NEW YORK CHICAGO SAN FRANCISCO

[Please mention National Farmer and Stock Grower.]

An Example of High Prices.

The St. Louis people have been so distressed by having to pay high prices for farmers' products, they could only afford to expend thirteen thousand, eight hundred dollars for one night of grand opera. The next morning the St. Louis Republic wanted to reduce the customs duties on fruits and admit foreign productions tax free, because the American fruit crop was in danger at the hands of the Almighty.

A WONDERFUL NOVELTY. THE ODOROUS FERN TREE.

A novelty beyond compare. One of the most charming and fragrant of all out-door plants, and one of the most delightful for pot culture. You can have beauty and fragrance all the winter.

These unique ferns are so attractive, their exquisite perfume is abundant, and they are so readily grown, certainly no lover of the beautiful can afford to be without them.

The incomparable fragrance of the leaves and bloom—in fact the entire plant (either green or dried) is perhaps the most wonderful—the most lasting, as well as the most pleasing of anything in the floral kingdom.

Sprays kept in a room or trunk will give out delightful fragrance for years.

The Odorous Fern is grown from seed. One single packet of seeds will produce many plants. Every plant has a selling value.

Plants are very hardy, succeeding everywhere—either in sunshine or dense shade. Blooms profusely first season. Height, four to six feet or more.

Plant for out-door culture any time up to July, and any time later for pot plants for winter.

We have adopted the seed of the Odorous Fern as a subscription premium to the Universal Magazine. Anyone who will send us 25 cents to pay for one-year's subscription to the Universal Magazine can select as a free premium one package of true, guaranteed seed of the Odorous Fern. Remember, the packet of seed will produce a large number of plants. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Spring Dresses

Style and durability blossom into beauty and economy in

Simpson-Eddystone Shepherd Plaids—

the cotton dress goods with perfectly fast colors. These calicoes have been the standard of the United States for over 65 years. Some with a new silk finish.

If your dealer hasn't Simpson-Eddystone Prints write us his name. We'll help him supply you.

SELECTED POETRY.

DRIVING HOME THE COWS.

Out of the clover and blue-eyed grass
He turned them into the river-lane;
One after another he let them pass,
Then fastened the meadow bars again.
Under the willows, and over the hill,
He patiently followed their sober pace;
The merry whistle for once was still,
And something shadowed the sunny face.

Only a boy! and his father had said
He never could let his youngest go;
Two already were lying dead
Under the feet of the trampling foe.
But after the evening work was done,
And the frogs were loud in the meadow swamp,
Over his shoulder he slung his gun
And stealthily followed the foot-path damp.

Across the clover and through the wheat,
With resolute heart and purpose grim,
Though cold was the dew on his hurrying feet
And the blind bat's flitting startled him.
Thrice since then had the lanes been white,
And the orchards sweet with apple-blooms;
And now, when the cows came back at night,
The feeble father drove them home.

For news had come to the lonely farm
That three were lying were two had lain;
And the old tremulous, palsied arm
Could never lean on a son's again.
The summer grew cold and late,
He went for the cows when the work was done;
But down the lane, as he opened the gate,
He saw them coming one by one.

Brindle, Ebony, Speckle and Bess,
Shaking their horns in the evening wind;
Cropping the buttercups out of the grass—
But who was it following close behind?
Loosely swung in the idle air
The empty sleeve of army blue;
And worn and pale, from the crisping hair,
Looked out a face that the father knew.

For Southern prisons will sometimes yawn,
And yield their dead unto life again;
And the day that comes with a cloudy dawn
In golden glory at last may wane.
The great tears sprang to their meeting eyes;
For the heart must speak when the lips are dumb,
And under the silent evening skies
Together they followed the cattle home.
—Kate Putnam Osgood, in Harper's Magazine, 1865.

PAT McBRIDE & CO.

Stretching away on every side
A fair domain you see;
A part belongs to Pat McBride,
A part belongs to me.
I own the golden light of morn,
With all its tints that play
Upon the springing grass and corn—
Pat owns the corn and hay.

I own the cat-bird, thrush and jay,
The larks that sing and soar—
Pat owns the barn-yard fowls that stay
About his stable door.
But where the shadows of yon stream
Are changing every hour,
I own the right to float and dream—
Pat owns the water power.

Mine is the murmur of this rill,
Whose sweet tones never cease.
But all the air with music fill—
Pat owns that flock of geese.
I own yon creamy summer cloud,
That o'er the meadow floats
Like some pure angel in a shroud—
Pat owns those Berkshire shoats.

Mine are those drops of dew that shine
And fill my wild rose full;
These tiny violets are mine—
Pat owns that mighty bull.
Where such things can be got for pelf
Pat buys the finest breeds.
I hold communion with myself—
Pat holds the title deeds.

Pat rises when the morn is new,
And so, sometimes, do I;
I see he has enough to do
As I am passing by.
His muscles seem to be made of steel,
But mine sometimes relax;
While he so sturdy seems to feel,
I let him pay the tax.

My golden profits ne'er escape;
I hide them in my breast;
Pat takes his gold in different shape
And sticks it in his vest.
I count my treasures o'er and o'er
As higher still they mount;
Pat's go with those that went before
To swell his bank account.

Pat owns that clover field in fact,
And so I sadly fear
That love of gain will make him act
Just as he did last year.
The crimson blooms I prized so high
He cut without remorse,
And sold the seed off, by-and-by,
And bought a Norman horse.

No man has wealth enough to buy
My part in this domain.
I would not sell my clouds and sky,
My shadows on the plain;
I would not sell this golden light,
These tales the breezes tell.
Gold has no power to buy my right—
For money Pat would sell.

I gaze at ease on every hand,
At our possessions fair;
Pat plows and sows and reaps the land
And keeps it in repair.
So Pat does me a world of good
While I do Pat no harm,
And on these terms, well understood,
We both enjoy the farm.
—Otho F. Pearre.

"JUST YOU."

An orchard, through whose willow shade
Sunbeams the long grass dapple,
A book that can aside be laid,
A large and ruddy apple,
An afternoon of idleness,
A sky of fleece-flecked blue—
Omar can keep his "wilderness,"
But I'd like these—and you.

Adown the stream floats the canoe,
The water lilies quiver,
A craft that has but room for two,
Upon a golden river;
No drink can equal the divine
Clear draft of heaven's blue—
Omar can keep his jug of wine,
If I have these—and you.

They say the Persian maids are sweet
And fair, with shining tresses,
With tiniest of tiny feet,
With words that are caresses,
Red lips that hide twin rows of pearls,
Dark eyes that languish, too,
But what care I for Omar's girls
If I can have—just you?
—Douglas Anderson, in Smith's Magazine.

A ROBIN SANG.

A robin sang, and lo! a change
Came o'er the spirit of my dreams,
And what was desolate and strange
Became a phantasy of streams
Wide-brimming in their flowered banks,
The yellowhammer's challenge rang,
And the woods were beautiful and green—
A robin sang.

A robin sang, and lo! the theme
He sang my heart was singing, too;
A song it was of when my dream
In all its loveliness were true.
The piping meadowlark at morn,
And in the air the fragrant tang
And breath of all the blooming things—
A robin sang.

A robin sang, and lo! the spring
Was fashioned in the dream he wove
As deftly as Minerva sprang
Full-statured from the brain of Jove.
In imagery I saw the fields,
And heard the clamor of a gang
Of wild geese beating down the wind—
A robin sang.
—Clark McAdams, in Post-Dispatch.

WAITING.

Serene I fold my hands and wait,
Nor care for wind, or tide, or sea;
I rave no more 'gainst time or fate,
For lo! my own shall come to me.

I stay my haste, I make delays,
For what avails this eager pace?
I stand amid the eternal ways
And what is mine shall know my face.

Asleep, awake, by night or day,
The friends I seek are seeking me;
No wind can drive my bark astray,
Nor change the tide of destiny.

What matter if I stand alone?
I wait with joy the coming years;
My heart shall reap where it hath sown
And garner up its fruits of tears.

The waters know their own, and draw
The brooks that spring in yonder heights;
So flows the good with equal law
Unto the soul of pure delights.

From Oven Door to Farm House Door

That sums up the whole story when you buy soda crackers by name—

Uneeda Biscuit

As soon as they are baked they are placed in moisture-proof packages. In this way they are kept free from dust, damp and other harmful conditions.

This means that you are *always* assured of fresh, clean, crisp, unbroken soda crackers no matter *where* you buy them or *when* you eat them.

They come in five cent packages.

(Never sold in bulk)

NATIONAL BISCUIT COMPANY

The stars come nightly to the sky;
The tidal wave unto the sea;
Nor time, nor space, nor deep, nor high,
Can keep my own away from me!
—John Burroughs.

THOU MERRY MONTH.

May! thou month of rosy beauty!
Month when pleasure is a duty!
Month of maids that milk the kine—
Bosom rich and breath divine;
Month of bees, and month of flowers;
Month of blossom laden bowers;
Month of little hands with daisies,
Lover's love and poet's praises;
Oh, thou merry month complete—
May!—thy very name is sweet!
There is May in books forever;
May will part from Spenser never;
May's in Milton—May's in Prior—
May's in Chaucer, Thomson, Dyer;
May's in all the Italian books;
She has old and modern nooks
Where she sleeps with nymphs and elves
In happy places they call shelves,
And will rise and dress your rooms
With a drapery thick with blooms.
Come ye rains, then, if ye will,
May's at home, and with me still;
But come, rather thou, good weather!
And find us in the fields together.
—Leigh Hunt.

THE BEGINNER.

She measured off the butter with a very solemn air;
The milk and sugar also; and she took the greatest care
To count the eggs correctly, and to add a little bit
Of baking powder, which, you know, beginners oft omit;
Then she stirred it all together and she baked it full an hour;
But she never quite forgave herself for leaving out the flour.
—Judge.

THE BREAKING PLOW.

I am the plow that turns the sod
That has lain for a thousand years;
Where the prairie's wind-tossed flowers nod
And the wolf her wild cub rears;
I come, and in my wake, like rain,
Is scattered the golden seed;
I change the leagues of lonely plain
To fruitful gardens and fields of grain
For men and their hungry breed.

I greet the earth in its rosy morn,
I am first to stir the soil,
I bring the glory of wheat and corn
For the crowning of those who toil;
I am civilization's seal and sign,
Yes, I am the mighty pen
That writes the sod with a pledge divine,
A promise to pay with bread and wine
For the sweat of honest men.

I am the end of things that were,
And the birth of things to be,
My coming makes the earth to stir
With a new and strange decree;
After its slumbers, deep and long,
I waken the drowsy sod,
And sow my furrow with lifts of song
To gladden the hearts of the mighty throng
Slow feeling the way to God.

A thousand summers the prairie rose
Has gladdened the hermit bee.
A thousand winters the drifting snows
Have whitened the grassy sea;
Before me curls the wavering smoke
Of the Indian's smouldering fire;
Behind me rise—was it God who spoke?—
At the toil-enchanted hammer's stroke,
The town and the glittering spire.

I give the soil to the one who does,
For the joy of him and his,
I rouse the slumbering world that was
To the diligent world that is.
Oh, Seer with vision that looks away
A thousand long years from now,
The marvelous nation your eyes survey
Was born of the purpose that here, to-day,
Is guiding the breaking plow!
—Nixon Waterman, in Success.

THE HORSE FAIR—BY ROSA BONHEUR.

GREAT COMBINATION SUBSCRIPTION OFFER.

FOUR LEADING PAPERS ONE YEAR AND BEAUTIFUL PICTURE OF THE HORSE FAIR ALL FOR ONE DOLLAR.

THE NATIONAL SWINE MAGAZINE is a splendid publication, issued monthly, finely illustrated and highly instructive. **THE RELIABLE POULTRY JOURNAL** is just as reliable as its name implies, elegantly printed, edited by men who know how to help the beginner. **THE NATIONAL FARMER AND STOCK GROWER** is a highly serviceable paper and fits in finely with the requirements of the stock farmer, dairyman, etc. **THE NATIONAL FRUIT GROWER** is a splendid monthly up-to-date paper; wastes no words; collects useful information; illustrates it and puts it before the people in a way that all may understand. For ONE DOLLAR we will send these four papers for one year, and we will send as a premium supplement the splendid 16x20-inch picture in grand colors entitled THE HORSE FAIR. This is a reproduction of the greatest horse painting in the world by the French female artist, Rosa Bonheur. The original cost fifty thousand dollars and was presented by Cornelius Vanderbilt to the Metropolitan Art Gallery. It is a pure lithograph, and there is a border round it in imitation of a frame of gilded oak. The picture can be tacked on the wall without framing and will remain in good condition for many years.

AGRICULTURAL BLUE BOOK.

Attention is invited to the circular on page 9 of the AGRICULTURAL BLUE BOOK AND LIVE STOCK BREEDERS' DIRECTORY. This is a valuable work and helpful to the entire stock-raising and farming industry. Every farmer who is operating with a purpose, who is raising pure-bred stock or seed grain, or anything to sell to other farmers, should have his name, address and farming specialty appear in the book. We are enabling farmers to communicate with others in any section of the United States.

Cement Workers' Handbook.

This book is designed to teach anybody how to work with cement; how to mix mortars of all kinds for all concrete purposes; how to make building blocks; how to build walls, floors, ceilings, walks, posts, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers.

For Sixty Cents we will credit one-year's subscription to The National Farmer and Stock Grower and send a copy of the **Cement Workers' Handbook.** Address, Hale Publishing Co., 3550 Vista Ave., St.Louis,Mo.

Iceless Refrigeration, as advertised on page 4, is an interesting study and based on known conditions. It is the same order of invention as the fireless cooker—the adaption of nature's laws. Send for catalogue. Do it now.

Protection Against Lightning.

Lightning rods should be obtained from the manufacturer either direct or through his authorized agent. The first lightning rod is fittingly named the Franklin, for the reason that it was he who first learned to control the electric spark. It is manufactured by Cole Bros., of St. Louis, Mo., and has stood the test of sixty years. For particulars kindly address Cole Bros. Lightning Rod Co., 310 South Seventh street, St. Louis, Mo., and mention this paper.

Credit Subscriptions.

We desire to invite attention to our blank form at the end of this item, which can be filled out for subscriptions on credit. This is an invention of Uncle Piper, our subscription editor, who has guaranteed that every one of them will be paid when they are due. The subscription price of this paper is $1.00 for three years, and the bill for the subscription is sent to the subscriber at the end of the first year. When the bill goes out Uncle Piper generally slips in a list of handy premiums for the subscriber to select one, providing he pays the bill promptly, and the general result is that the bill is soon paid. When it comes to getting subscriptions from intelligent, high-class farmers, Uncle Piper is at the head of the class.

Uncle Piper.

SUBSCRIPTION BLANK.

To the Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen: — You are hereby authorized to enter my name as a subscriber to The National Farmer and Stock Grower for three years. At the end of the first year I will pay One Dollar for the three-year period. This order is given with the understanding that I am at liberty to stop the paper at any time by paying the subscription to that date.

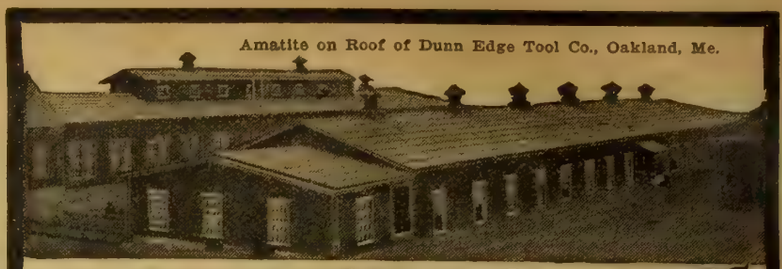
Amatite on Roof of Dunn Edge Tool Co., Oakland, Me.



Amatite ROOFING NEEDS NO PAINT

EVERYTHING nowadays is constructed with the view to save time; to save labor; to save money.

These are the primal points which have made Amatite successful. That these things have been achieved such letters as the one below fully prove.

"Oakland, Me.,
Feb. 2, 1910.

Barrett Mfg. Co.

During the past twelve years we have used several different brands of Ready Roofing; some of these have cost much more than Amatite, but we are free to say that we prefer the latter. Not only does it give fully as good service, but it requires no painting or coating, as some of the others do. We consider this a most desirable feature.

Yours truly,
DUNN EDGE TOOL CO.,
By R. W. DUNN, *Treas.*"

These letters come to us constantly.

Amatite doesn't leak, and *never needs to be painted.* Its cost is low; its service long. It saves time, labor and expense.

Its *real mineral surface* and coal tar pitch waterproofing are responsible for this. We know what Amatite will do. We want you to know. Therefore we offer you a sample free.

Just send your name on a postal to nearest office.

B

Calf Run Breaks All Records.

Marketing of calves at Chicago, one week in May, broke all records. The run totaled 18,174 head, an increase of 1,633 over the previous banner receipts received in the week ending April 23. The high price of milk caused a great expansion in the dairy business. This is reflected in an increased proportion of steer calves here and the Eastern markets and a decrease in marketing of heifer calves, dairymen endeavoring to raise more cows to increase the output of milk. Prices for calves have ruled remarkably high this year. They touched the record figure of $10.50 per 100 pounds, Clay, Robinson & Co. obtaining this price. Since then the market has taken quite a tumble. However, rates still stand around 75 cents higher than one year ago.—Live Stock Report.

Lightning Pitless Scales

Country School Facilities.

Our educational systems change but slowly, at least in the country. If we can judge from the statements of old teachers of country schools, those schools have deteriorated in the last forty years rather than improved.

This has been largely due to the coming in of farm tenants, while the land owners have largely lost interest in the matter of rural education.

But even in the old days the country schools were too poor to meet the demands of this day, when more education than of old is needed.

Here and there we find some improvement in the schools, but in most localities there is no advance, but retrogression.

The only way out is the consolidation of the country schools and the transportation of the pupils at public expense. This does not mean necessarily an increase of expense, for it does not. What goes into drivers and wagons and horses comes out of the lessened number of teachers.

Under the old system of schools, good schools will continue to be impossible, with the exception of schools of good size. Even then such schools will continue to be run at a disadvantage.

One of the disadvantages is the impossibility of keeping good teachers. As soon as a country teacher can get into a grade school in the city or town she does so, and sometimes at a lessened salary. Some of our country schools are now paying very good salaries and are still unable to hold teachers. One school known to the writer pays $60 a month, and board is about $3.50 per week, including room, the teacher going home over Sunday. Yet teachers leave that school and go to a small city, where they begin teaching at $45 a month and pay more for their board. Why?

They leave chiefly because the school house is three miles from a railroad station, and the walk through rain, and mud and snow, with fierce cold in winter, more than offsets all the advantages. In the case of the school spoken of, the boarding place of the teacher has been sometimes as far as two and a half miles from the school house, and the trip to and from the school had to be made twice a day. During the last cold winter the teacher in that school had some terible experiences battling with the wind, the cold and the snow drifts. She says she will not take the school again at any price; that she will clerk in a store or run a typewriter at half price before spending another winter of that kind in teaching a country school. This is in the face of the fact that the School Directors of this particular district are very progressive, have built a nice school house and are liberal with supplies, equipment and in the price paid the teacher. It all gets down to a matter of transportation, not only on school days, but at the two ends of the week.

This is why the City Boards of Education are constantly picking out the best country teachers and getting them, even at a lower salary scale. The only possible solution must include the concentration of the pupils in one school in each township, or some similar concentration.

Naming Country Homes.

In the city, where houses occupy small lots and are designated by street and number, the naming of a place might be considered an affectation on the part of the owner. But in the country, where the dwelling place is situated in the midst of goodly acres stretching away on all sides, it seems most fitting that such a home would have a distinctive name, and that that name should be placed over the driveway or painted on a large stone near the gate or put in some other conspicuous place where the passerby can readily see it. In going about the country I have been impressed by the thrifty appearance of the farms that bear names. Most probably this is because the farmers who have the best kept farms are the ones most interested in naming their places; but it does seem that there is a certain incentive in keeping a place up to its name. Then, too, in telling the location of the farm to a stranger it is more definite and far more satisfactory to say: "Our place is Hilltop on the County Line Road. You'll find the name on the gate," than to designate it as: "The farm below Johnson's, the place with the row of poplars in front."

In fixing upon a name for the farm home, some distinctive feature of the place should be used as a basis for the selection. If Mr. Johnson's farm is known by its row of poplars, it would seem there could be no better name for it than The Poplars. It might be helpful to know that wold signifies gently sloping land; croft, a small farm; mere, a small lake or pool; mead, a meadow; vale and dale, a low place between hills. These are among the most common affixes used in farm names. A few suggestive names are: Hillcrest, Meadowcroft, Oakwold, Clearmere, Broad Acres, Hillslope, The Sentinel, Merestead, Pleasant Mead, The Dells, Elmwood and Cherry Dale.—Janet Thomas Van Osdel.

The first peaches of the season, a crate of fancy "slippy" shipped by the Standard Orchard Company of Scottsville, Tex., were donated, May 20th, by the receiver, the F. W. Brockman Commission Company, of St. Louis, to the Fresh Air Mission, and then sold thirty-two times at the St. Louis Fruit and Produce Exchange, every purchaser paying $5.00 for the peaches. The sales netted $160 for the charity. Scottsville is in Harrison county, Texas, near Marshall, and is pretty far north to have ripe peaches in the last ten days of May.

PROTECTION from LIGHTNING is what this TRADE MARK represents

In the last sixty years, more property—live stock, grain and buildings—and more **human lives** have been **saved** by COLE BROS. FRANKLIN LIGHTNING ROD than by any other Rod ever made. That is because it is a perfect and scientific Lightning Rod, and the *only Rod* whose efficiency has never been sacrificed or cheapened.

COLE BROS. FRANKLIN LIGHTNING ROD

is the **world standard** of protection; not the **cheapest** but the **best.** Its patent couplings, bronze and platinum points and ground connections form a *continuous* channel, by which electricity passes off to the earth as harmlessly as water from your roof. Every foot *guaranteed.*

BEWARE of cheap *imitations* and flimsy *wire* substitutes offered by the unscrupulous. Look for the initials CBFR on *every section* and for the full trade mark as above on *all packages.* Don't take anyone's word for **CBFR** it, see that they are there for yourself. These letters are YOUR Protection as well as OURS. When it comes to **CBFR** protecting life and property remember that Cole Bros. Franklin Lightning Rod has *never failed* in sixty years.

Diversification of Crops.

Diversification of crops is the only safe method of crop production for the ordinary farmer. Specialization is safe only where the crop to be grown is a sure one. There are few sure crops on American farms. Therefore to most farmers the safest course is to grow different crops, so that where one fails another will be in condition to yield an income.

The other day the writer was on a railroad train and sitting behind two ladies who were discussing the weather. Said one: "Did you ever live in a region where the farmers depended on a single crop? Well, I have. It is pitiful; a single night may wipe out the work of the entire year and leave the inhabitants all stranded." The truth of her words will be realized by some people this year.

An illustration in point is the currant crop of this year. The writer knows one man whose principal crop consists of currants. The spring started out well—too well. The currant bushes bloomed early and put out their leaves early. The crop of currants promised to be a large one. The currants developed weeks ahead of time and set in heavy masses. Then came the freeze and the young currants all froze and dropped from the bushes. Not a single currant remains on that currant plantation. It is what may possibly happen to any crop. This is the first year when the failure of currants has been complete or even extensive. Usually the currant crop is a fairly safe one.

Where the climate is changeable and weather conditions are never the same at any one period of different years, it is obvious that we must expect that some years one crop will be favored by the weather and some years another. The man that must have some income every year finds that he can best be sure of it by having several crops. The weather condition that will ruin one crop may prove an actual advantage to another.

The increase of population in the cities and the multiplication of means for marketing crops are in favor of diversification of crops, as the marketing of all kinds of crops is made easier. It used to be impossible to market any crops except those that would keep for a long time. The grains are long keepers and therefore they came to be the leading crops on the farms, as they could be kept for months and years, waiting for right conditions of marketing. In the minds of the farmers of the past most of the crops now being marketed from our vegetable gardens and fruit plantations were side issues, of no importance beyond the supplying of their own tables.

Successful diversification requires a higher order of agricultural education than does the concentration on a single crop. Every crop has its own set of conditions required to make it successful, and the man that follows diversified farming will find himself kept very busy trying to find out the science that goes with each particular product. Because most men are not students and will not give themselves to such investigations is one of the principal reasons why even diversified farming sometimes proves unsuccessful.

On Her Dignity.

"I should like a drink of water," said the young man, politely.

"You'll have a wait until mother comes down stairs," said the young lady, haughtily. "I want you to understand that I never go into the kitchen."—Detroit Free Press.

Select your Hay Harvesting Tools By the Great Dain Standard.

You cannot afford to buy cheaply made tools—we could save 25% in the quality of materials and workmanship put into Dain tools, and you could not detect this deception from appearances, but it's the years of steady service in the field that prove the high quality of Dain tools—and you cannot go wrong in buying hay tools by the Dain standard. Now take for instance the

Great DAIN Truss Frame Sweep Rake

It gets the hay from swath, windrow or cock, better than any other for the reason that this rake **automatically follows the ground—combs the bumps and reaches into the hollows.** It took many years of experience before we determined the exact angle at which the teeth could be set to offer least resistance, yet gather up all the hay. You see this means lighter draft. The hinged tongue and humane hitch takes weight off the horses in rough ground and prevents sore necks. Then, in connection with the sliding seat, the driver can balance the load, lightening the draft, or can lift the teeth off the ground when rake is empty. There's the steel channel truss to prevent sagging at ends or in the middle. For a large capacity rake this one has no equal, it is guaranteed to be the strongest and largest capacity two-wheel rake on the market. We build five different kinds of sweep rakes, but just one grade—the highest—each the leader of its kind. In our line you will find a rake built especially for you. Tell us your hay tool needs and we will send you full particulars.

All Great DAIN Sweep Rakes Have

- Teeth protected by heavy metal points.
- Humane horse hitch to prevent sore necks.
- Removable bushings for wheels to take wear off axle.
- Extra high wheels, easy draft.
- Tubular steel axle.
- Steel channel truss to prevent sagging.
- Patented construction insuring greatest gathering capacity.
- Flexible rake head to conform to meadow surface.
- Best material from which rakes can be made.

Great DAIN Junior Stacker

is one that deserves special mention; it's the most popular stacker made. It's made on the right mechanical principle. The draft is light and evenly distributed. Regardless of the height the hay is lifted, the draft is always the same. This is because the double A frames provide a compound leverage, which in connection with the hoisting rods, also causes the stacker head to be lifted simultaneously from each side, thus preventing sagging or tilting. Patented hay retainers on ends of teeth save one man's time by keeping hay from pulling off and scattering when rake is backed away. Cushion springs protect horses from jar, and cause teeth to rebound quickly, causing hay to fall on stack in flat mass. The only stacker with pitcher teeth adjustable so hay can be delivered into center of stack from bottom to top. This enables stack to settle straight and turn water. With slight adjustment, load can be held at highest point for topping off stack.

All Great DAIN Stackers have

- Patented leverage system promoting easy draft.
- Strong bracing giving enduring strength.
- Delivers hay on the stack in untangled condition.
- Deposits hay center of stack.
- Teeth supported to prevent tilting.
- Hay can be held at highest point for topping off stack.
- Patented hay retainers prevent hay from scattering.
- Large capacity.
- Ease of operation.
- Easy to set up and transport.

In building the Dain Stacker, as is true of all our famous hay tools, our aim has been to produce a machine that would save expense—save trouble—reduce labor—help you make a bigger price-bringing quality of hay. We make seven different styles of Stackers, all invented by Mr. Joseph Dain, the Hay Tool Genius—and made in one factory by hay tool specialists. Consult your dealer about Great Dain Hay Tools or tell us which machine you are interested in. "All About Hay" is full of instructive things, some of which you may not know. Send for it. It's FREE. It also tell about our Loaders, Side Delivery Rakes, in fact the whole Dain Line.

Good and Bad Practice in Cultivation.

Cultivation of the soil is recognized as one of the prime factors in the production of crops. The cultivation of growing crops is an essential in most cases, if large crops are to be looked for. But we find a very great variety of opinions as to how cultivation of growing crops should be done.

Not only is there a difference in theory, but there is a great difference in the practice of cultivation by the men that do not have any particular theory about it. Many practice cultivation for the purpose of killing the weeds and for the purpose of stirring up the ground, with little thought of the direct effects on the growing plants.

Much good is done by cultivation and also much injury in some cases. Many men go on the theory that cultivation is a good thing, and that the better it is done the more good it will do. This "better" generally means deeper cultivation. So deep some farmers cultivate that they speak of it as "plowing" the crop.

Many a crop has been retarded by too deep cultivation, which has resulted in cutting off millions of small roots that were busy in gathering food out of which to develop the crop. The result has been the immediate checking of the crop till new roots could be formed. The time is lost, and more than this, for the substance out of which to build the new roots has to come from the plants already developed. This means a tax on them determined by the amount of root pruning that has been done in the cultivation.

One man in the early part of summer "plowed" his cherry orchard. He plowed it good and deep and killed the sod all around the trees. Close to the trees he spaded up the soil deeply. The trees were young. A good many roots were cut off and the protecting sod was eliminated. When the dry time of midsummer came the trees began to lose whole branches, which withered and died. The cultivation was too thorough. A surface cultivation just breaking up the sod would have done good; the deep cultivation was destructive, since it killed many roots and allowed many of those remaining to dry out. It took the trees three years to recover from the excessive cultivation they had received.

Numerous experiments have been made at the Agricultural Colleges and Experiment Stations to determine the best depths for cultivation. For corn this cultivation should not be deeper than two inches in ordinary soils. The rule should be to cultivate shallow enough to escape cutting of the lateral roots of the plants, whatever they may be. This will differ in different soils and with different plants.

Light cultivation of crops is very effective and costs less than deep cultivation, which is often a detriment rather than a help. The keeping down of the weeds is often the greatest good coming from such cultivation, for in many of our farming states the rainfall is so abundant that it does not have to be conserved by the use of the dust mulch. But even a dust mulch is best made by shallow and frequent cultivation.

Land Advancing in Value.

From Cape Girardeau, Mo., May 4th, it was reported that the Alt estate, consisting of 15,000 acres of land in Cape Girardeau county, had been sold by Capt. G. E. Alt to the Northrup Land Company of St. Louis, the price received being more than $300,000, or $20 per acre. The St. Louis company which purchased the Alt lands was organized by George Northrup, of St. Louis, who has already bought many acres of land of this part of Missouri. The new company will probably divide the estate and place it on the market.

Mr. Geo. W. Baumhoff, of St. Louis, Mo., who already owns and operates several farms, has purchased of W. E. Nims & Son a farm of 760 acres for $42,000. This is a well-known property between Grafton and Jerseyville, Ill.

A report from Waycross, Ware county, Ga., tells of the purchase there of a rich tract of fine agricultural land, containing 140,000 acres, by S. Lee Elliott and other St. Louis capitalists. The deal was made through Senator G. W. Dean. The land purchased adjoins the Deenwood lands south of Waycross. This is one of the largest land deals ever made in that section. Every acre is susceptible of high cultivation. It consists of a sandy loam from 2½ to four feet deep, underlaid by a clay subsoil.

Recent mohair sales in Boston were on the following basis: "Domestic combing, 28¾ to 35c.; carding, choice, 25 to 30c.; carding, average, 20 to 25c.; inferior, 15 to 20c.; noils, first combings, 18 to 22c.; noils, second combings, 23 to 25c."

"International" News Items.

The International Live Stock Exposition Directors held their Spring or Classification Meeting May 19, 1910, in the rooms of the Saddle and Sirloin Club, Union Stock Yards, Chicago.

It was decided to hold the International Horse Show from November 22 to 26, while the International Live Stock Exposition is to cover the usual period, November 26 to December 3, 1910.

It was found that practically all the live stock associations had increased their appropriations for special prizes to be offered in connection with this year's show.

To recognize our breeders as well as our feeders, two additional beautiful silver trophies will be offered by the Exposition; one to the breeder of the grand champion car-load of fat cattle, and another to the breeder of the grand champion car-load of feeder cattle of the show.

WESTERN

Range Horse Sales

will be conducted by

Campbell & Reid and Western Sale Stables Co.,

NATIONAL STOCK YARDS, ILL.,
As usual, during the season of 1910.
The First Sale will take place on

THURSDAY, JUNE 16,

And every two weeks thereafter until the close of the season. We will be glad to hear from Ranchmen having Horses for sale. The demand is sure to be good, especially for well-bred Mares and Geldings in good condition.

Please address

J. J. SEARCY, Sale Manager,
NATIONAL STOCK YARDS, ILL.

A new rule was adopted, requiring a three-months' ownership of at least twelve of the cattle constituting each car-load entered in the fat car-load classes, making it necessary to have the exhibitor make affidavit to this effect and to have this affidavit accompany the entry.

It was decided to follow the custom long established by our State Fair Associations by uniting the Percherons and French Drafters in the same classification.

The "tenant farmer" condition in America and how he could be induced to take up the production of improved domestic animals with the view to increasing the yield of food products from our American farms is a subject that will be given the encouragement and full support of the International Live Stock Exposition in the future.

It was the consensus of opinion that the 1910 Show would in every respect outclass any of its predecessors, and it was decided to put forth every effort to bring about this result.

Any who wish to obtain further particulars concerning the International Live Stock Exposition should address Secretary B. H. Heide, Union Stock Yards, Ill.

Draft Horse Sales.

Trumans' Pioneer Stud Farm of Bushnell, Ill., reports the sale of the imported Shire stallion, King Fuchsia, full brother to their London champion mare, Fuchsia, II. He is four years old, weighing around the ton, with tremendous bone and substance, yet all the style and quality one could possibly ask. This grand horse goes to C. R. Walker, of Oakville, Iowa, and the check for the horse also had considerable substance. Another sale was to Pat Murphy, of Dougherty, Iowa, an imported Percheron stallion, three years old, weighing 1,950 pounds, and one of the best colts imported this season. This is the third stallion Messrs. Truman have sold Mr. Murphy. The firm will send catalogue of the fifth importation this year to anyone writing for it. They have for sale 100 head of imported horses, from two to six years old.

A First-class Commission House.

In consigning live stock for sale at the St. Louis National Stock Yards, remember the Evans-Montague Live Stock Commission Company. It is a successful firm, highly competent and persevering in the interest of their customers. The Evans-Montague Commission Company solicit consignments of cattle, hogs and sheep for sale on the market, and desires stockmen to take notice that the company has special buyers who select and buy stock and feeding cattle for their patrons. Address, Evans-Montague Commission Company, Box 68, National Stock Yards, Illinois.

Western Range Horses.

The season is here for the great sales of Western range horses and mules conducted at the St. Louis National Stock Yards by Campbell & Reid and Western Sale Stables Company. The sales take place every two weeks, and always on Thursday. The present conditions indicate an unusual buying demand. On account of the usual good quality and condition of the offerings presented by this firm there are always plenty of buyers at these sales, and the horses net range horsemen more money than do the sales at any other market. The first sale will be held on Thursday, June 16th. The second on June 30th. Ranchmen having horses to market will find it to their interest to communicate with J. J. Searcy, Sale Manager, National Stock Yards, Ill.

GREAT DISCOVERY.

I cure Fistula and Poll Evil in horses. After years of experimenting I discovered a method by which I can easily cure the worst cases without use of the knife. Method so simple anyone can use it and cure their own cases. Cost of medicine very small. Send $2.00 for recipe with full directions. Address,

DR. D. L. DE VORE, Le Roy, Ill.

The Horse Market.

Holland, Nugent & Maxwell Bros., horse and mule commission salesmen, continue to sell large numbers of horses and mules at the St. Louis National Stock Yards. They hold the horse auction every Monday and Tuesday in the year and sell mules every day in the week. This is strictly a commission firm, not buying or selling any horses or mules on their own account. Having but one interest to serve—that of their customers—they concentrate all energies and their ability to obtain the highest price for every animal sold. Horse and mule shippers will find it to their advantage to ship to this firm and to write for their market letter. The postoffice address is Holland, Nugent & Maxwell Bros., National Stock Yards, Ill.

Horse and Mule Notes.

Trumans' Pioneer Stud Farm of Bushnell, Ill., reports the sale of the imported Percheron stallion Mignon, 67,415, to that well-known breeder Jacob Good, of Hopedale, Ill. This stallion is a beautiful dark grey, weighing about 2,000 pounds, and is one of the best boned Percheron stallions in this country. The breeders in the vicinity of Delevan are to be congratulated upon having such a horse in their neighborhood.

Speaking of light harness horses, Spirit of the West says: "The healthiest horses are those in the country that run loose in the yard and are turned into the stable unblanketed at night."

Mr. M. W. Savage, of International Stock Food Farm, Minneapolis, Minn., announces the permanent retirement of the champion Dan Patch from speed exhibitions. He retires with seven world's records, and he paced 73 miles under two minutes. During the coming season Dan will be in the string on the tracks with Minor Heir, George Gano, Hedgewood Boy and Lady Maud C., but he will not be asked to make speed attempts.

DO YOU NEED FENCING?

Every farmer who needs fencing of any kind should get "American Fence News." It tells a good many interesting facts that you really ought to know before you decide on or buy any fencing. The book is beautifully printed, contains many illustrations and tells how to fence for best effect. It tells how to make permanent wire fence, and contains the whole story of fence building. It also contains an interesting and valuable article on "The Operation of a Farm," showing the best methods of rotating the crops for biggest profits. Then there is a very interesting article showing how you can save work, time and money, avoid worry, increase your income and get more fun out of life. Also you will find an article on "Ornamenting the Farm."

Last, but not least by any means, you will find some facts about American Fence. It will indeed pay you to send a postal card addressed personally to Mr. F. Baackes, Vice-President and General Sales Agent of American Steel and Wire Company, Chicago, Ill., for your copy of "American Fence News."

Clay, Robinson & Co. at St. Louis.

It is now a little over a year since Clay, Robinson & Co. opened their house at the St. Louis National Stock Yards, and ever since the first day the firm has made gains upon the market. It is a most thorough and successful organization, earnestly working to the end that the service to the shipper shall be the best that it is possible to render. Messrs. Clay, Robinson & Co. are strictly live stock commission agents, receiving consignments and selling them to the best advantage upon any of the markets on which the firm is established. See page 7.

Evans-Montague Commission Company

THE MEASURE OF SUCCESS attained by a SHIPPER OF LIVE STOCK depends largely upon THE COMMISSION HOUSE to which he consigns his CATTLE, HOGS AND SHEEP.

If you wish to receive TRUSTWORTHY AND RELIABLE SERVICE and have your consignments SOLD BY CAPABLE AND CONSCIENTIOUS SALESMEN, you cannot do better THAN PATRONIZE OUR HOUSE.

The Shippers' Interests ARE OUR INTERESTS, and our rapidly increasing business IS THE STRONGEST TESTIMONIAL of our ability TO PLEASE OUR CUSTOMERS.

Evans-Montague Commission Company

Box 68,
NATIONAL STOCK YARDS, ILL.

Starting a Flock.

The right way to start a flock of sheep is to get a small lot of healthy young ewes as cheaply as possible, reducing the first cost to the lowest limit. They should be bred to a pure-bred buck of one of the English breeds. By sending the old ewes to the butcher as fast as the ewe lambs will replace them, a first-class flock can be obtained. It is easier, cheaper and better to raise good ewes than is to buy them.

AGENTS WANTED

We want men who are not actively engaged in business to act as our agents. We pay liberal cash commissions. Elegant Automobile $40 fully guaranteed. Splendid Motor buggy $300, fully guaranteed. Write for free catalogue and agents' proposition. Only one agent wanted in each county.

East St. Louis - Illinois

The Triumph of the Hog.

The advance in the price of food products goes on. With most classes of meat it is probable that the prices will again come down, but this does not apply to hog products. They are high in price and, in my opinion, bid fair to go higher. They will now and then sag temporarily, but will not get down and stay down.

Doubtless the current prices of some food products at retail are in part the result of combinations and trusts; but not so the price of hog products. They are up legitimately, though it must be supposed that to some extent the trusts and combines are not neglecting their opportunities in pork, lard, bacon and ham. But even without the combines the prices for hog products are sure to be high, as a general average.

The hog has been for thousands of years the most slandered of all domestic animals. He has been boycotted by many religions, the devotees of which were determined to put him out of business as a producer of human food. Even to-day whole nations are leagued against him; but in spite of that he is triumphant.

To-day the consumption of hog products is steadily increasing. One reason is that hog products can be kept for a long time and still be very delicious as articles of food.

Bacon stands at about the head of our meat products. To-day in the markets of Chicago bacon is retailing at 27 cents a pound, even the bacon of our own hogs, which are not supposed to be very suitable for the production of bacon. Irish bacon is now being sold in Chicago at 40 cents a pound, but it is found only on the tables of the rich. It shows how high bacon stands as a food product when the Irish can send it to the greatest American hog market in the world and sell it at an advance over our own bacon. But bacon can be carried to any part of the world and still be regarded as a delicacy. Probably there is no meat at this time so widely appreciated as bacon. Even the physicians are ordering it for weak stomachs.

Next to bacon stands ham, and the ham is now being used as a trade mark on the billboards. It has grown steadily in favor with the people of the world and is still growing. It does not have to be packed in barrels of pickle to keep it from spoiling, but, once cured, a ham can be dropped into a sack or a grip or a trunk and carried anywhere. The explorer can have his ham and eggs even in the heart of Africa.

Barrels of pork and tins of lard are purchased for the navies of the nations of the world and enter into the supplies of the ships that sail to the remotest seas. This is not true to the same extent of beef or mutton or poultry. None of these can be so perfectly kept, and this keeping quality is what has made the products of the hog the most desirable.

The lesson to be learned is, that the demand for hog products is on such a firm basis that hog raising is one of the branches of agriculture that can be engaged in with the certainty of a good market for all future time.

HOW TO GET THE MOST MONEY FROM YOUR HAY CROP.

There is scarcely any need of suggesting to our readers that baling hay very greatly increases the profit to be derived from marketing the hay or alfalfa crop, and that this profit is made still larger by the use of a durable, simple, economical press of large capacity. It is well worth while for any farmer who is marketing his hay crop to write for the illustrated catalogue describing the new model all-steel hay press made by the Whitman Agricultural Co., 6901 South Broadway, St. Louis, Mo., whose advertisement appears on another page of this issue. This well-known firm has built up a wonderful reputation for their "Steel Beauty" Hay Press as a money maker for the farmer.

THE EYES OF THE WORLD ARE NOW TURNED TOWARDS WESTERN CANADA. WHY? Ask those who have **BEEN THERE.** Have you any money working for you in Western Canada? Here are a few of our selected **FARM BARGAINS** in the **PROVINCE OF ALBERTA:**

483 acres, **THREE MILES FROM THE THRIVING TOWN OF KITSCOTY,** on the main line of the Canadian Northern Railway. Well graded road on east side of land into town; surface slightly rolling but fit for steam plow. Soil rich black loam, several feet deep, on clay subsoil. Little timber on one corner, not more than 20 acres, balance clean open prairie. 15 acres under cultivation. Excellent water at 20 feet. **ENGLISH-SPEAKING COMMUNITY AND PROSPEROUS DISTRICT.** Price, $13 per acre; $2,500 cash, balance 6 years 6 per cent.

640 acres, **IMPROVED FARM, ONLY 7 MILES FROM PONOKA,** on the Calgary-Edmonton line. Excellent soil. 120 acres under cultivation, all arable; some timber on one of the quarters. Good house; two good granaries; good stable; hen house for 100 fowl; large running shed. Fenced, three strands of wire. **FREE OF STONES.** Price, $15 per acre; reasonable terms to reliable parties. **WE HAVE SIMILAR BARGAINS IN SASKATCHEWAN AND MANITOBA.**

R. G. THOMPSON & CO.,
Canada West Lands and Investments,
708 McIntyre Block, WINNIPEG, MANITOBA.

TENNESSEE.—Send for booklet on farming and full description and prices of lands for sale in the valley of East Tennessee, the healthiest climate and best lands in the country. Address, **East Tennessee Real Estate Company,** Morristown, Tenn.

TEXAS.—2,600 acres, 11 miles from Sabinal, Uvalde county; about half agricultural, balance excellent grazing. Price, $7.00 per acre; half cash; deferred payments to suit the purchaser. Address, **Albert D. Evans,** North Fort Worth, Texas.

TEXAS.—A Great Bargain.—1,650 acres, 95 per cent. agricultural, in northeast corner of Red River county; 400 acres in cultivation and under hog-proof fence; 200 acres in Bermuda grass; eight houses and plenty of good water. Situated 11 miles north of Avery, on the T. & P. Railroad. Price, $25,000; one-third cash; deferred payments to suit purchaser. Address and mention this paper, **A. J. Martin,** Harris Ferry, Texas.

We can sell your property; send description. Northwestern Business Agency, Minneapolis.

GOVERNMENT FARMS FREE:—Official 112-page book "Vacant Government Lands" describes every acre in every county in U. S. How secured free. 1910 diagrams and tables. All about irrigated farms. Price, 25c. postpaid. Webb Pub. Co., Dept. 75, St.Paul, Minn.

THE PENCIL with patent point-protecting holder, is six inches long and is provided with a rubber eraser. Write for it at once. It's free.

THE BOOK has 32 pages and contains exact illustrations and descriptions of **over 300 separate styles of new Spring Shoes** for men, women and children. It gives you simple directions that show you how easy it is to **buy these shoes by mail.** It offers you all the conveniences of a visit to the largest shoe store west of New York City—variety and value unequalled anywhere. Not a "cheap" shoe in the book. Nothing but good, reliable footwear at honest prices. Write for the book today, now.

Brandt's 619-621 **Washington Ave.** ST. LOUIS, MO.

The National Farmer and Stock Grower.

(Title Registered in U. S. Patent Office.)

Published monthly by The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Subscription Price, 50 cents a year, or $1.00 for three years.

Entered at Postoffice at St. Louis, Mo., as second-class matter in January, 1901.

The surest way to exhaust the soil and to fail in farming is to raise the same field crop on the same ground year after year.

"A More Profitable Corn Planting Method" is the title of Farmers' Bulletin No. 400, issued by the Department of Agriculture. It is by Prof. C. P. Hartley. It is only just issued and is worth its weight in gold. Every farmer should have a copy. Write to Hon. James Wilson, Secretary, Department of Agriculture, Washington, D. C., and he will send you a copy.

This publication is an advocate for the protection by custom duties of all United States grown, raised and manufactured products. Every competitive item, foreign grown or manufactured, should pay a tax on entrance to this country in the form of a duty for the support of the government. The idea that our own products be taxed by city, county, state and the national government, and foreign goods enter untaxed, does not appeal to us.

At St. Louis, May 31st, No. 2 red wheat sold at $1.06 to $1.09 per bushel, No. 2 corn at 59 to 59½ cents; standard oats at 39 and 40 cents; select No. 2 white at 40½ cents. This is grain sold by sample on the Exchange.

Sending money out of the country for goods we produce ourselves will not make our own people rich. There are some of our own people who think it will; but they are mistaken.

Some of the people who are opposed to the protection of American industries, farm products included, are just as happy as if they were in their right mind.

At Chicago, on May 31st, the May option for wheat closed at 94¼ cents a bushel, against $1.34 at this time a year ago. Here is a difference of 40 cents a bushel. Such a decline would eternally ruin any industry except farming.

We usually print thirty-two pages. This time for mechanical reasons we print but sixteen. We are preparing to issue the finest publication in the agricultural class.

Our great electrical inventor, Hon. Thomas A. Edison, says that the horse has no place on city streets; that motors can do all the work. So they can, but for every motor that is made to work a hundred are made for pleasure. If none but draft autos were allowed on city streets there would be plenty of room for work horses.

The National Farmer and Stock Grower, Hon. Thomas A. Edison and Hon. Jim Wilson agree upon one point—that the wasteful credit methods in buying and selling and the retail delivery of small packages are largely responsible for the so-called ultimate consumer paying ten cents for a five-cent package of rice.

The Retail Margin on Beef.

According to the United States Department of Agriculture, in selling beef the average retail cost paid by the consumer in fifty cities is 38 per cent. In other words, the retailer buys meat for $100 and retails it out for $138. Out of the $38 margin he has to pay expenses.

In New York, where the largest amount of meat is sold, the butcher sells closer, buying $100 worth of meat at wholesale, he sells it for $120 at retail. In Baltimore the retail margin is only $17. In Chicago the retail margin on the $100 is $46; Cincinnati, $25; Omaha, $23; the Kansas City, Kas., margin is $50; and the Kansas City, Mo., margin is $25.

Some of the towns having high margins in beef retailing are Augusta, Ga., 61 per cent.; Fort Smith, Ark., 54 per cent.; Mobile, Ala., 64 per cent.; Nashville, Tenn., 63 per cent.; Natchez, Miss., 56 per cent.; Shreveport, La., 68 per cent.; Louisville, Ky., 52 per cent.

These figures represent retail margins only—the difference between the prices the retailers pay at wholesale and what they receive at retail.

Safe Rules in Trade.

"It is a pretty safe rule to sell surplus stock when it is high, regardless of whether you think it may go still higher. And it is a good rule to buy needed stock when it is cheap, for prices are always on the swing; when low it is likely to be higher, and when high it is likely to be lower."—The Horseman.

Bucket shops are simply gambling houses, using legitimate Board of Trade quotations as a basis. We agree with the Secretary of Agriculture that the bucket shop is an evil without compensation. Let us hope that bucket shops can be eliminated without also eliminating the right to do legitimate, beneficial and useful business.

Draft Horse Breeders' Association.

The Missouri Draft Horse Breeders' Association was organized on December 29, 1909, at Columbia, Mo. The officers of the association are as follows: Mr. J. F. Roelffson, Maryville, Mo., President; Mr. J. L. Thompson, Guilford, Mo., Vice-President; Mr. E. A. Trowbridge, Columbia, Mo., Secretary-Treasurer.

Since the organization of this association its membership has increased greatly, and it now includes the most extensive breeders of draft horses in the state. Membership is solicited from all persons in the state of Missouri who are interested in the improvement of the draft-horse business.

The next meeting of the Missouri Draft Horse Breeders' Association will be held at Sedalia, Mo,. during the week of the Missouri State Fair, October 1—7, 1910. At this meeting the feasibility of a Missouri stallion law, the registration of pure-bred horses and other live subjects will be discussed.

The association is at present directing its energies toward securing a larger and better exhibit of draft horses at the Missouri State Fair. Missouri draft horse breeders should make a particular effort to exhibit horses at their own State Fair. The Draft Horse Breeders' Association is making a great effort to secure as large an exhibit from its members as possible. This movement needs your support and your co-operation. The benefits derived from it will be mutual. It is particularly urged that all persons interested in the draft-horse business become members of the Draft Horse Breeders' Association and thereby secure the benefits therefrom.

The membership is $1.00 per year. Further information may be had by addressing, and members will be accepted and recorded by, E. A. Trowbridge, Secretary-Treasurer, Columbia, Mo.

The Agricultural Blue Book.

This is our own publication. An edition will be issued promptly on August 1st. It will contain 20,000 names and addresses of live stock breeders, stock farmers, experimental farmers and ranch owners, selected leading men in their communities. It will also contain the names and addresses of 5,000 leading business firms, manufacturers, etc., who do business with farmers. We have heretofore published only names of live stock and plant breeders, but we are constantly enlarging the book and making it more useful. See advertisement on page 9.

Circular No. 63 of the Bureau of Plant Industry of the Department of Agriculture gives valuable information concerning methods of legume inoculation.

There was an attempt to advance the price of May wheat, but it failed because those who contracted to deliver did deliver. The wheat supply is not on a famine basis.

CRITTENDEN & CO., Dept 29, Cleveland, Ohio

THE SEWING AWL.

A Most Useful Premium For Subscribers to The National Farmer and Stock Grower.

A farm on which there is not a sewing awl is in difficulties when work is most pressing. It is surprising how useful this little implement is. It is the Myers Famous Lock Stitch Sewing Awl. It is the only sewing awl made with a groove running the full length of the needle and has what is known as a diamond point. In order to sew leather or any heavy, thick material without breaking or cutting the thread it requires a needle with the groove running the full length of the needle. You might just as well have no groove in the needle as to have it only part of the way. With the Myers Awl you can sew old or new harness, saddles, carpets, canvas, tents, rugs, quilts, shoes, grain bags, and many other things. You can use any kind of thread in the Myers Awl, and it makes a lock stitch same as a sewing machine. It is very simple; a woman can use it as well as a man. It is one of the most practical devices ever invented. They are put up with two needles; one is straight and one curved, with a small screw-driver and wrench combined. Also a reel of waxed thread with each awl ready for use. Every teamster and farmer should own a Myers Lock Stitch Sewing Awl, as there is use for one in almost every household. The Myers Awl is nicely finished, the metal parts are nickel-plated, the needles and wrench are kept in the hollow handle, which has a screw top.

Anyone who will send One Dollar cash to pay in advance for two-years' subscription to The National Farmer and Stock Grower can select one of Myers' Lock Stitch Sewing Awls, which we will send by mail, postage paid, as a free premium. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Concrete Fence Posts.

Farmers' Bulletin No. 403, issued by the Department of Agriculture, gives clear and definite directions for the construction of concrete fence posts. The bulletin also includes useful illustrations. The pamphlet concludes by saying: "As far as simple re-enforced concrete is concerned, it should be remembered that it has been in common usage in all countries for a great many years and cannot be covered by patent rights. No one need hesitate to use this form of construction, for all claims that the general use of re-enforced concrete fence posts is controlled by patents are unjustified and untrue." Anyone who is desirous to study this subject should write to the Secretary of Agriculture, Washington, D. C., and ask for Farmers' Bulletin No. 403.

The AGRICULTURAL BLUE BOOK AND LIVE STOCK BREEDERS' DIRECTORY.

We publish the AGRICULTURAL BLUE BOOK, and we are now collecting information to appear in the Second Edition. The First Edition is out of print and every copy sold out.

The AGRICULTURAL BLUE BOOK contains 5,000 names and addresses of business firms and individuals whose products are in use in farming sections. For example, Agricultural Implements, Dairy Apparatus, Poultry Supplies, Stock Foods, Veterinary Goods, Seeds, Trees, Plants, etc. Every firm in the list does business with farmers.

The AGRICULTURAL BLUE BOOK, however, is mainly composed of the Country Section. This is arranged alphabetically by states. Every name can be found easily. The list includes experimental farmers, live stock and plant breeders, seed, fruit, grain and dairy farmers and ranch owners. This is a select list of the principal farmers and stock breeders and raisers in America—a few in each county and a good number in each state. The list gives the name, address and the special line of agriculture the farm may be devoted to. In the First Edition this list occupied sixty-five pages, containing 11,050 names. This list is now being revised and corrected, and by careful selection it will be increased in the next edition to 20,000 names and addresses and 128 pages. The book will contain 160 pages and each page about 160 names—about 25,000 names and addresses in all.

Live stock breeders, fruit growers, experimental farmers and members of live stock or agricultural associations, ranchmen, can have their name, address and class of stock or crops raised entered in this book free of charge. LIVE STOCK BREEDERS and SEED GROWERS are specially invited to send in their names and addresses.

The price of the Farm Edition of the AGRICULTURAL BLUE BOOK is $1.50 per copy. An inch single-column advertisement (to appear in proper state arrangement) and book, $3.00; two-inch single-column advertisement and copy of book, $5.00. Live stock breeders sell many pure-bred cattle, hogs, horses and sheep, goats, jacks and jennets to other breeders and farmers by having proper entries in the AGRICULTURAL BLUE BOOK. Once on a farm, a copy of this book will be referred to for a full year. Large advertisements are not solicited.

Difference in Cows.

In the good dairy herd of the Geneva Experiment Station, N. Y., the result of careful breeding and selection for years, great differences were found between the yields of individual cows. The best cow of the herd, who held her place for four years, gave three times as much milk as the poorest cow in each of three seasons, and it cost only one-tenth more to feed the good cow than to feed each poor one.

Even the poorest cow in this herd probably paid for her feed, for she produced butter-fat at from 26 to 33 cents a pound; but the Station has records of herds in New York state that average only 80 pounds of butter-fat per cow, bringing in a gross return of $26 a head. How much it cost to feed those herds probably no one knows, but the least the Station could carry any cow through a year on, for feed alone, was $47.50.

If the poor herds of the state gave an average of only $26 worth of product in a year, $20 less than it cost the Station to keep its lightest-cost cow, how much did the poor cows of those herds lose their owners? Any cow-keeper will be interested in the bulletin giving all the facts in the case.

The New York Station herd consists of Jerseys and Jersey grades, and has been built up at small cost, just as any farmer could build up his own herd, until it averages more than 6,000 pounds yearly per cow, of 5½ per cent. milk.

It needs only a postal card request, addressed to the Station, to secure the bulletin, No. 322. Address, New York Experimental Station, Geneva, N. Y.

The Science of Keeping Poultry Healthy.

The greatest loss in the poultry yard comes from disease. If one could keep all kinds of diseases out of the flock, profits would be easy to figure out. It is the breaking out of poultry diseases of various kinds that upsets the calculations of those that have in their minds figured out large revenues from the multiplication of the fowls and the increase of poultry products.

The old and experienced poultry raiser has less trouble from diseases than the beginner in poultry culture. The novice always runs into serious disasters because he does not realize how easy it is to scatter the germs of disease among the fowls.

The science of keeping poultry healthy has to be learned, and largely by experience, because the beginner does not take to heart the advice given him. In some of the poultry yards the writer has seen, all the conditions were so favorable for the entrance of disease that time only was required to produce the catastrophe.

The first requisite in the keeping of disease out of the flock is the elimination of the louse and the mite, two things that are to be found in abundance in most poultry yards. To make relentless war on the louse and mite is the surest way of building up a wall of protection against the coming of diseases. It is probable that the bite of the parasite often carries disease to the fowl bitten. This we do not know for a certainty, but it appears a reasonable conclusion. Medical science has now demonstrated clearly that the bite of mosquitoes conveys yellow fever, malarial fever and other like diseases. Just what the limitation is to this process we do not as yet know, but we can safely assume that the rapid spread of disease among poultry is due to the activity of the parasites, at least in part.

That it is possible to keep the premises free of these insects is proven by the fact that some of our large poultry farms are kept entirely free of mites and lice. One large Experiment Station, the Maine Station, keeps many hundreds of laying hens and raises thousands of chickens yearly, and up to the time of the last report familiar to the writer had never had a louse or mite in its poultry yards.

Keeping all things clean is a part of the work required. Dirt and dampness should not be tolerated, as they are the best allies of disease. Free dry air and sunshine, summer and winter, are the allies of poultry health.

Don't permit poultry diseases to be brought in by the introduction into the flock of diseased birds. It must be remembered that diseases are contagious and can only come in by the actual transference of the germs of disease. Germs do not originate spontaneously, but are transported. The poultry owner should be careful about allowing visitors that may have been in yards where disease exists.

Green feed in abundance all the year round will do much to keep away digestive troubles.

-make two blades grow

where one grew before—that is the most profitable way to farm. One acre yielding 30 bu. is more valuable than Two acres yielding 30 bu.—for your plowing, seeding, tillage and harvest expense is Cut in Half. In Maine, farms that sold for $5000 before fertilizing are now worth $20,000. Fertilizing Pays! We can give you positive evidence that the proper use of

EMPIRE FERTILIZERS

has many times Doubled a crop yield. Empire Fertilizers have been standard for 28 years—prepared by practical farmers and soil scientists who Know. There is an Empire brand for every need of every soil and crop.

Milk Producers' Association.

No meeting was held in the month of May and none will be held in the month of June. In July a meeting of the Directors will be called to attend to routine business.

The Milk Committee was in St. Louis on Monday, May 23d, and after making round of the dairies sent out the usual report to members in good standing.

Some shippers from New Douglas, Ill., not receiving full amount from dairies for their milk, as reported by the Milk Committee, the President went with them to the dairy company and obtained a correction, getting them one cent a gallon more than non-members received.

Since last report, Mr. W. S. Prickett, representing shippers on the Clover Leaf Route, sent in dues for C. A. Ernst, of New Douglas, Ill.; and F. X. Speidel, representing shippers on the Bonne Terre Route, sent in dues on account of W. F. Halter, Flucom, Mo.

During the intervals between meetings Mr. Wm. A. Fischer, Secretary, 409 Franklin avenue, St. Louis, Mo., is in charge of the interests of the Milk Producers' Protective Association of Missouri and Illinois.

Death of Chas. A. Olmstead.

It is our sorrowful duty to announce the death of Mr. Chas. A. Olmstead at Shipman, Ill., on May 11th. He was a farmer and dairyman of Macoupin county, and was 56 years old when he died. For the past twenty-five years he had been identified with the dairy industry and a leader in all the movements for the benefit of milk producers. He was one of the organizers of the Milk Producers' Protective Association of Missouri and Illinois; he served on the Milk-selling Committee for several years; he was in charge of cream sales for producers in his home community. He served gratuitously when it was necessary to attend meetings or act as representative of the association to get freight rates modified or milk advances brought within practical limits; in short, he was a loyal worker in every good cause for the benefit of the community and interests with which he was identified, and was of good influence amongst his fellow-men. He had resigned his connection with the Milk Producers' Association before his last illness, to do some special work for the St. Louis Dairy Company, but he was always referred to as a member of the association, and was called on for assistance and counsel in any emergency. Such men are the soldiers of the peace army, who leave the world better from having lived and worked in it. As his county paper says: "His life was such that wherever his lot was cast his presence was helpful, the memory of which will be treasured forever in the hearts of his loved ones and friends. His pleasant smile manifested the good will of his soul for all."

Violating the Dairy Law.

We would very much like to see the Dairy Department of the Missouri Agricultural College before the bar of justice to be punished for having a cow that gives milk which is not up to the standard prescribed by law. Common, every-day dairymen have been arrested and fined for less.

We believe the experts of the Missouri Agricultural College had a hand in the constructing the law that the great show cow of the College cannot live up to. The law ought to be changed or the cow ought to be sent to the butcher block.

Missouri Cow Test Association.

Enterprising dairymen are instituting a Missouri Cow Test Association in order to show the way to improve the dairy output of the state. This movement is authorized by the Missouri Dairy Association. The committee in charge of the work consists of Robert F. Tesson, Clayton, Mo., Chairman; I. T. Van Nolte and A. H. Shepherd, Columbia, Mo. The Cow Test Association invites the cooperation of all who are interested in Missouri dairying. Communications should be addressed to the Chairman.

Why Cream Tests Vary.

Variation in tests has caused much dissatisfaction in the selling of cream. When the cream is from the same cows, which have been fed the same ration and milked by the same man, and when the same separator is used, the farmer naturally thinks the percentage of fat in the cream should remain the same.

Errors are often made in making tests, especially in taking the sample, but variations constantly occur that are due to other causes. The most common causes of these variations are as follows:

1. Variations in the speed of the separator.
2. Variation in temperature of milk separated.
3. Rate the milk flows into the machine.
4. Amount of water or skim milk used in flushing out the bowl.
5. Change in the richness of the milk separated.
6. Adjustment of the cream screw.

Change in the speed of the separator is the most common cause of variation.

Again, the temperature of the milk separated varies on the farm from day to day. If cream tests 30 per cent. when the milk is separated at 90 degrees, it may test as high as 40 per cent. when separated at 70 degrees. Under average conditions on the farm, however, the variation in fat due to change of temperature will not amount to more than 3 or 4 per cent.

A third cause of variation is found in the rate at which the milk flows into the machine. If less than the regular quantity flows into the bowl, the tendency is to increase the per cent. of fat in the cream.

The richness of the milk separated affects the richness but not the quantity of cream. The richness of a cow's milk depends on inheritance, and can not be changed permanently by feed.

Small variations are likely to occur from the other causes suggested by Prof. Eckles. By the use of an ordinary Babcock testing machine and by measuring the sample of cream into the test bottle with the same pipette as is used for measuring milk, any farmer can make a test of his cream that will satisfy him as to the accuracy of the test he receives from the cream buyer.

All this is fully explained in Circular No. 37 by Prof. C. H. Eckles, of the Missouri Agricultural College, Columbia, Mo. Write for it.

Top price for hogs at St. Louis, May 31st, 1910, was $9.67½ per 100 pounds; weight, 289 pounds.

100% A YEAR For Twenty Years To Cow Owners

That's the marvelously good investment that nearly 1,200,000 satisfied users are finding the

DE LAVAL CREAM SEPARATOR

With one or more cows the corresponding size of DE LAVAL separator saves its cost the first year, in more and better product and less labor, and it may be depended upon to go on doing so for twenty years, as there are already thousands of instances to prove.

There's half this much saving in the use of a DE LAVAL over inferior separators, while other separators last but from six months to five years instead of twenty years. They lose half that might be saved while they do last.

That's the whole separator story in a "nut shell" and the reason for the now nearly universal sale of DE LAVAL cream separators.

A DE LAVAL catalogue may be had for the asking. Likewise the trial of a DE LAVAL machine.

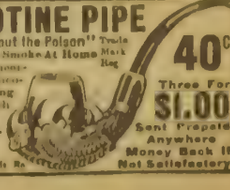
40c Three For $1.00 Sent Prepaid Anywhere Money Back If Not Satisfactory



Helps For the Economical Girl.

"Take care of the pennies and the dollars will take care of themselves," is a trite saying, and when a girl has learned to take proper care of her clothes she saves many a dollar, for they not only look better but last twice as long.

If your parasol is worn down the seams, sew narrow strips of velvet down each seam and sew three or four rows around the edge, and, if the cover is worn, rip off the old cover and cut out one section for a pattern and make a new cover of sateen or any preferred material.

Clean your white shoes with gasoline and let stand for an hour or two, then wash them with peroxide of hydrogen and place them in the sun.

White kid gloves may be colored black with any good dye by applying it warm with a brush, and, when dry, the shoes can be given a coat of black shoe polish.

You can have nice cuff links by buying four pretty buttons and sewing a small cord through the shanks of two of them and then working over the cord with thread to match the buttons, and one may have a pair of links for every shirt waist if desired.

Fine white waists last twice as long if they are rubbed lightly in the washing, and they need very little rubbing if they are put to soak in warm suds in which a little borax is dissolved, as this softens the water and whitens the fabric; and there is nothing better than this suds for washing chamois gloves. After washing them clean through this suds they should be rinsed through a light suds, so a little of the soap can be left in the kid to keep it soft.

The borax suds is excellent for washing the pretty ginghams and muslins, as the borax helps to keep the color in the goods, and it is fine for washing woolen dress skirts of any color.

I have seen summer waists made prettier than when new by setting in a vest when they had become too tight across the bust.

Artificial flowers and straw hats can be made to look like new by dissolving some water-color paint of the desired color in gasoline and painting them with a paint brush, and sometimes the addition of new leaves, which can be bought for a trifle, will give the flowers a fresher appearance.—Aline.

Oatmeal Cookies.

While the following recipe is not an original one, it is good enough to pass along the line, and the variations suggested may serve not only to give variety or to enable one to work within a limited amount of certain ingredients, it is hoped that the impression may be given that the experienced cook is not bound by iron-clad rules. If eggs are high-priced or shortening is scarce, she knows how to make her coat fit the cloth and still have a presentable product.

Oatmeal Cookies.—One and one-third cups white sugar, one cup sweet milk, one cup melted butter, lard or meat fryings, two eggs, one cup raisins or currants, two cups flour, three cups oatflakes or rolled oats, one teaspoonful soda (or two of baking powder) dissolved in the milk. Flavor with nutmeg or cinnamon. Drop with spoon. The fruit may be omitted, using two teaspoonfuls of cream tartar if the soda is used instead of baking powder. Drop with a spoon. If not so thick but that they run together in baking, add a little more flour. Bake in a moderate oven.

For every-day use we have found it satisfactory to cut out a little of the shortening. These cookies are very nourishing as well as delicious in taste. For the school lunch they are just the thing, and are much more quickly made than those which are rolled out, besides being more moist and appetizing.

Avoid buying oat flakes in bulk. At this season, especially, they are too apt to be invaded with insect pests. It is better to pay a little more rather than to get a damaged article. By getting the five-pound packages one may obtain it at a reasonable price and still be sure that it is good. Keep the box tightly closed when not using, or the flies will soon work their way in and ruin it.—Bessie L. Putnam.

At Chicago, May 31st, the May corn option closed out at 55⅜ cents a bushel, which is 12 cents lower than the best time of the year.

By stating we were in favor of the protection of all American products in our last edition we found ourselves in trouble with some of our subscribers. We will continue to say so, however, until all the subscribers we have left will agree with us.

At Chicago, May 31st, the May option for oats closed out at 36½ cents a bushel, showing a decline of about 5 cents a bushel in a month.

At St. Louis, May 31st, old potatoes were selling at 32 to 36 cents a bushel, and new potatoes at 85 to 97 cents a bushel.

CAUSES and CURE of EYE AND EAR TROUBLES

Every person should possess a general knowledge of the formation of the eye and ear and understand how to treat and care for them. Eyesight and hearing are God's greatest gift to man. You should learn how to protect the eye and ear, to prevent disease from destroying these wonderful organs, for when once destroyed no artificial aid or device can ever replace them. Hence, learn now at no expense to yourself how to care for your eyesight and hearing.

Send for This Book—Use the Coupon

Here Is My Great Book—I Want You to Have It

This Book Explains All Practical Tests and Illustrates the Delicate and Intricate Parts of the Eye and Ear. Anatomically and Scientifically Accurate.

I have written this book with but one object in mind, and that is to relate actual facts, to tell what I have accomplished in the light of my past experience and what I expect to accomplish in the future. It may give you a light that will illuminate your path to the recovery of the divine gift, which you may be in danger of losing. With this confidence and hope that I have given to the world, something that may aid those who are afflicted and prevent others from falling into the ways that may injure, it is my desire that you get from it all the benefit towards the means of saving either your sight or hearing.

One of the Greatest Books Ever Published

Full From Cover to Cover With Information Concerning the Treatment and Care of the Eye and Ear — SEND FOR IT AT ONCE — USE THE COUPON.

My book is handsomely bound in cloth and contains 160 pages of most valuable information. Fill out and mail to me the coupon, and I will send the book to your address free of any cost or obligation to you.

The book tells how to test and care for the eye and ear. A splendidly illustrated chart of the eye is shown, and several methods for testing the eye are given. There are many chapters devoted to the different forms of disease the eye is heir to; also the proper information for the care and cure of eye diseases is suggested.

I Believe I Have Prepared a Book That Will Benefit Any Sufferer Who Accepts This Opportunity to Know Its Contents.

The ear is illustrated with good pictures, and described fully. The causes and forms of deafness are clearly explained and remedies suggested. There is a chapter instructing you how to test the hearing, how to know if you are suffering from any trouble with the ear, or may be threatened with such trouble. You will find instructions in the use of a series of tests which will enable you, if you have ear troubles, to decide the amount and location of the defect in your hearing, and can therefore take proper measures for relief.

Help a Friend—If You Are Well and Strong

If You Know of a Friend or Relative Afflicted With Eye or Ear Troubles, Send for My Book for Them, So They May Be Benefited by the Information It Contains.

Space will not permit me to say all this book contains for those who would be benefited by knowing its contents. I only say I tried to write a book—a treatise that would be valuable as a reference book, that the doctor could refer to for information or the sufferer for advice. The facts I present are the result of personal contact with thousands of the most complex derangements of the eye, ear, nose and throat. If you know of a friend who is afflicted with eye, ear, nose or throat trouble, recommend my book. It is not to be supposed that the well can fully sympathize with the sick. They would have to feel every pain of mind and body which the sick endure, but the well can and should do their part in aiding those who are afflicted. **Send for my book today for yourself or a friend.**

I Have Only a Limited Edition. Get Your Book At Once.

I want it to go as far as possible in spreading the glad news that there is help for those threatened with blindness and deafness, and the knowledge contained in my book, if imparted to those so afflicted, may be the means of restoring them to healthful sight and hearing. I impose no obligations; I ask no favors from anybody. I simply want interested people to get my book. It is free.

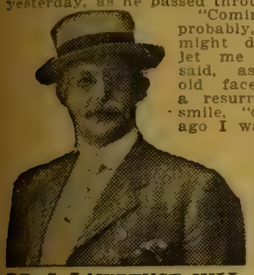
How to Get Rid of Consumption

Remarkable Rescue of Prominent Indiana Man a Matter of Life-and-Death Interest to Every Man or Woman Suffering From Consumption, Bronchitis, Asthma, Catarrh, Hacking Cough and Throat or Lung Trouble.

For Benefit of National Farmer and Stock Grower Readers, He Tells How He Cured Himself at Home — Costs Nothing to Try.

"I think I owe it to all sufferers of lung and throat trouble and consumption to tell them some mighty good news, a sure way to cure themselves right at home with little trouble," said E. S. Stroh, of Angola, Ind., yesterday, as he passed through.



DR. J. LAWRENCE HILL.
Snapshot of the Doctor Taken a few Days Ago.

"Coming from me, probably, some people might doubt this, but let me tell you," he said, as his 66-year-old face flushed with a resurrected, youthful smile, "over two years ago I was a weazened-up wreck, a consumptive at 63. Three lung specialists passed me up. Every day I would cough up about a pint. I had chills and fever every afternoon. I could hardly eat even the plainest food, coughed nearly all night, and was down to 137 pounds when I hit on the cure. Well, you see me now. I weigh 166 pounds, frisky as a boy at 66, can do a big day's work, and eat like a prince."

"Now I am not trying to boost anybody, but I must give credit where credit is due. Dr. J. Lawrence Hill, 1708 Hill Building, Jackson, Mich., the well-known lung specialist of America, and probably so far the only successful one, cured me. That was two years ago. I have just had my lungs examined again and there is no trace of consumption nor danger of its returning. Dr. Hill makes a specialty of treating throat and lung sufferers at a distance who have not the means of visiting his office personally. That's the way he cured me, and I know of many others who had one foot in the grave almost, brought back to life by what he calls his Rational Treatment. It certainly is a wonder.

"I wish every reader of your paper who has weak lungs, catarrh of the bronchial tubes or catarrh in any form, chronic bronchitis, asthma, chronic hacking cough, loss of flesh, night sweats, hemorrhages, soreness or pain in the chest or under the shoulder blades, or any other deadly symptom of consumption, to send to Dr. Hill for his trial package. This treatment checks at once further progress of the disease, develops atrophied cell tissues and brings on new resisting power, appetite, flesh and good health." Fill out the coupon below and mail today.

Trial Treatment Package Coupon.

Dr. J. Lawrence Hill.
1708 Hill Building, Jackson, Mich.

I am suffering from throat and lung trouble, so please send me your large trial package in plain sealed wrapper, that I may try it and see for myself if it will do what you claim it will. I enclose 20c. to help pay for the packing, etc., and as an evidence that I am not sending for the trial package out of idle curiosity.

MAY MANTON PATTERNS.

Very Elegant Pattern Service, With Full Instructions For Ordering and Making.

This is the very best pattern service, and we are very much pleased to obtain it for our friends and patrons. Each pattern is new and original.

Tunic Skirt With Upper Portion.

No. 6627.—Short overskirts, or tunics, that are cut to form points at the sides, are among the prettiest to have appeared. This skirt shows one cut on the best possible lines, and is especially well adapted to bordered materials and to flouncing, although it can be made from plain with equal success, as its straight edges can be trimmed in any way to suit the fancy. Bordered foulard makes the one shown in the large view, flouncing the one shown in one of the small views, plain material the other, and the skirt is equally attractive in all three materials. When bordered material or flouncing is used the tunic requires to be seamed at the sides, to allow of using the straight edges, otherwise it is made seamless. The flounce can be either plaited or gathered, and consequently it suits almost all materials. Bordered material and flouncing mean the minimum of labor, but there are many lovely effects to be obtained by the use of plain material with bandings or with applied soutache or embroidery. Lightweight French serge made with the flounce plaited, and the edge of the tunic braided with soutache would be exceedingly handsome, while the thinner and lighter materials illustrated are dainty and charming in the extreme.

The skirt is made with the five-gored upper portion, the flounce and the tunic. The flounce is straight and the tunic is cut in one or three pieces, as it is made from plain or bordered material.

The Pattern 6627 is cut in sizes for a 22, 24, 26, 28 and 30-inch waist measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Child's Coat.

No. 6624.—The coat that is made with a shawl collar is one of the latest for the little folk, and this one is just as simple and childish as can be. It can be made with patch-pockets or without; it can be worn without a belt or with, but it is always the same simple model that is held by two big buttons. In the illustration it is made in three-quarter length, but it can be made longer to cover the skirt, if liked. Broadcloth makes this one, and the edges are finished with tailor stitching, the collar being faced with silk in matching color, but cheviots are liked for little folks' coats, and all light-weight wool materials are appropriate, and a little later the same model will be worn for linen and pique. The collar can be braided or embroidered, or it could be made of a contrasting material or color. White pique faced with pink would make an exceedingly charming, smart coat. Brown cheviot with the collar of natural colored pongee would be smart for immediate wear. Leather belts are greatly in vogue, and, when liked, one can be worn over the coat, as shown in the small view.

The Pattern 6624 is cut in sizes for children of one, two and four years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Blouse Waist.

No. 6630.—The pretty dressy blouse that closes at the front makes one of the features of the season, and is so practical and desirable that every woman welcomes it. Here is a model that is closed invisibly and that is worn with a separate shield, and this shield can be made with a Dutch neck or with a collar, as liked. Scotch gingham with trimming and shield of plain lawn makes this waist, and the material is to be greatly in vogue, but the model is equally appropriate for voile and for marquisette, for silk and for linen; indeed, for all seasonable materials. Buff linen with trimming portion and shield of white would be exceedingly smart and exceedingly handsome. One of the beautiful foulards or pretty striped cotton voiles would be charming made with trimming of plain colored material, and as the blouse is equally well adapted to the separate waist and to the gown, its uses are almost without limit.

The blouse is made with fronts and back, which are tucked on becoming lines. The sleeves are in one piece each and gathered into bands. The front edges form box plaits and the collar is joined to the neck edge. The shield is quite separate and closed at the back, while the waist closes invisibly at the left of the front.

The quantity of material required for the medium size is 3½ yards 21 or 24, 3 yards 32, or 1⅞ yards 44 inches wide, with ⅞ yard 27 inches wide for the trimming.

The Pattern 6630 is cut in sizes for a 34, 36, 38, 40 and 42-inch bust measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Please be sure to give the size of pattern ordered and write your own name and address plainly that no mistake can be made to cause delay.

Kindly address all pattern orders to **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Ropp's Commercial Calculator.

This is a standard book and a revised, enlarged and improved edition. There are millions in use. Ropp's Commercial Calculator is specially valuable to farmers. By its regular use many hard problems become easy. It will prevent mistakes, relieve the mind, save labor, time and money, and do your figuring in the twinkling of an eye. As handy as a watch, always ready and reliable. Anyone who will send fifty cents for one-year's subscription to this paper, The National Farmer and Stock Grower, can select one copy of Ropp's Commercial Calculator as a free premium. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

TEETH LEFT BEHIND.

Old George Kettle rushed into the Trotwood telegraph office the other day with a small package wrapped in a newspaper under his arm.

"Telegraph this to my wife down to Dayton, Harvey," he said to the telegraph clerk, thrusting the package through the window.

"No, no, George, we can't do anything like that," laughed the clerk.

"Drat 'ee," said George angrily, "ye got to do it. It's my wife's teeth."—Kansas City Journal.

ADVERTISE TO GET CREDIT.

An old duck was complaining to a rooster that she did not get proper recognition. She said: "I have been laying eggs here on this ranch all the season and I lay just as many eggs as the old hen does, that sister of yours that everybody writes about and talks about her at the table, and she gets a great deal more credit and I don't get anything." "Well," the old rooster replied, "you don't understand this business. When you lay an egg, you just waddle off through the alfalfa and say nothing, but when my sister does anything, she advertises it. You want to be a press agent."—Exchange.

FREE TO YOU—MY SISTER

Free to You and Every Sister Suffering from Woman's Ailments.

I am a woman.
I know woman's sufferings.
I have found the cure.

I will mail, free of any charge, my **home treatment** with full instructions to any sufferer from woman's ailments. I want to tell all women about this cure—you, my reader, for yourself, your daughter, your mother, or your sister. I want to tell you how to cure yourselves at home without the help of a doctor. Men cannot understand women's sufferings. What we women know from experience, we know better than any doctor. I know that my home treatment is safe and sure cure for Leucorrhoea or Whitish discharges, Ulceration, Displacement or Falling of the Womb, Profuse, Scanty or Painful Periods, Uterine or Ovarian Tumors, or Growths; also pains in head, back and bowels, bearing down feelings, nervousness, creeping feeling up the spine, melancholy, desire to cry, hot flashes, weariness, kidney, and bladder troubles where caused by weaknesses peculiar to our sex.

I want to send you a complete ten day's treatment entirely free to prove to you that you can cure yourself at home, easily, quickly and surely. Remember, that, it will cost you nothing to give the treatment a complete trial: and if you wish to continue, it will cost you only about 12 cents a week or less than two cents a day. It will not interfere with your work or occupation. Just send me your name and address, tell me how you suffer if you wish, and I will send you the treatment for your case, entirely free, in plain wrapper, by return mail. I will also send you free of cost, my book—"WOMAN'S OWN MEDICAL ADVISER" with explanatory illustrations showing why women suffer, and how they can easily cure themselves at home. Every woman should have it, and learn to think for herself. Then when the doctor says—"You must have an operation," you can decide for yourself. Thousands of women have cured themselves with my home remedy. It cures all old or young. To Mothers of Daughters, I will explain a simple home treatment which speedily and effectually cures Leucorrhoea, Green Sickness and Painful or Irregular Menstruation in young Ladies, Plumpness and health always results from its use.

Wherever you live, I can refer you to ladies of your own locality who know and will gladly tell any sufferer that this Home Treatment really cures all women's diseases, and makes women well, strong, plump and robust. Just send me your address, and the free ten day's treatment is yours, also the book. Write to-day, as you may not see this offer again. Address

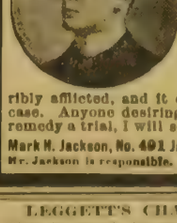
RHEUMATISM

A CURE GIVEN BY ONE WHO HAD IT



In the Spring of 1893 I was attacked by muscular and inflammatory rheumatism. I suffered as those who have it know, for over three years, and tried almost everything. Finally I found a remedy that cured me completely and it has not returned. I have given it to a number who were terribly afflicted, and it effected a cure in every case. Anyone desiring to give this precious remedy a trial, I will send it free. Address,

Mark H. Jackson, No. 491 James Street, Syracuse, N. Y.
Mr. Jackson is responsible. Above statement true.—Pub.

LEGGETT'S CHAMPION DUSTER.

This is worth investigating. It distributes insecticides in dust form on cotton and potatoes. It is made for hand and horse power. Write for Spray Calendar and Special Cotton Circular. Address, Leggett & Brother, 301 Pearl Street, New York, N. Y.

Hot Sun—Dusty Roads

By the time you reach town and light you'll be hot and tired and your throat dry with dust and dirt. Hunt up a soda fountain and treat yourself to

A Glass or a Bottle of

Coca-Cola

Just as cooling as the bottom step in the spring house. You'll find it relieves fatigue too, and washes away all the dust and thirst as nothing else will. It touches the spot.

Delicious - Refreshing - Wholesome

5c Everywhere

Our Free Booklet

"The Truth About Coca-Cola" tells all about Coca-Cola—what it is and why it is so delicious, wholesome and beneficial. It gives analyses made by scientists and chemists from coast to coast, proving its purity and wholesomeness. Your name and address on a postal will bring you this interesting booklet.

The Coca-Cola Co., Atlanta, Ga. 3-F

Whenever you see an arrow think of Coca-Cola

A WONDERFUL NOVELTY.

The Odorous Fern Tree.

A novelty beyond compare. One of the most charming and fragrant of all out-door plants, and one of the most delightful for pot culture. You can have beauty and fragrance all the winter.

These unique ferns are so attractive, their exquisite perfume is so abundant, and they are so readily grown, certainly no lover of the beautiful can afford to be without them.

The incomparable fragrance of the leaves and bloom—in fact the entire plant (either green or dried) is perhaps the most wonderful—the most lasting, as well as the most pleasing of anything in the floral kingdom.

Sprays kept in a room or trunk will give out delightful fragrance for years.

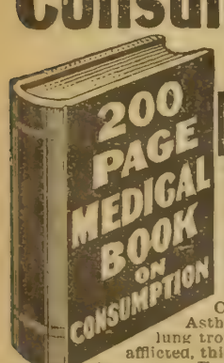
The Odorous Fern is grown from seed. One single packet of seeds will produce many plants. Every plant has a selling value.

Plants are very hardy, succeeding everywhere—either in sunshine or dense shade. Blooms profusely first season. Height, four to six feet or more.

Plant for out-door culture any time up to July, and any time later for pot plants for winter.

We have adopted the seed of the Odorous Fern as a subscription premium to the Universal Magazine. Anyone who will send us 25 cents to pay for one-year's subscription to the Universal Magazine can select as a free premium one package of true, guaranteed seed of the Odorous Fern. Remember, the packet of seed will produce a large number of plants. Address, The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Consumption Book FREE



This valuable medical book tells in plain, simple language how Consumption can be cured in your own home. If you know of any one suffering from Consumption, Catarrh, Bronchitis, Asthma or any throat or lung trouble, or are yourself afflicted, this book will help you to a cure. Even if you are in the advanced stage of the disease and feel there is no hope, this book will show you how others have cured themselves after all remedies they had tried failed, and they believed their case hopeless.

Write at once to the Yonkerman Consumption Remedy Co., 4133 Water Street, Kalamazoo, Mich., and they will gladly send you the book by return mail free and also a generous supply of the New Treatment, absolutely free, for they want every sufferer to have this wonderful remedy before it is too late. Don't wait—write today. It may mean the saving of your life.

Helpful Vacations.

As the country schools are now closing for the summer vacation, the children will be free to follow their own inclinations for the coming months. But the fact that the child is outside the walls of the school room does not mean that his education has ceased. The three or four four months when he is at home with his parents should be a period of rich development along lines which he cannot give time to when he has his school work to keep up. The father who takes his boy with him about the farm, making him a confidential assistant, explaining the whys and wherefores of agriculture as they occur to the lad's questioning mind and giving the boy when he has become capable along certain lines responsible work from which he can see results, has become the teacher. When a son knows that his father has confidence in him and that he is expected to show an intelligence about farm matters, he is stimulated to best effort. He feels that his father talks to him as man to man. Then the months which are spent in learning from a man of wide experience are the means of broadening out the boy and giving him an education along practical lines. Even though he leaves the farm in after years, the summers spent in the society of his father will make him a better man in whatever line of work he should choose.

The mother has a like opportunity of helping the daughter to learn the principles of housekeeping. If each summer vacation the little girl is taught along this line she will be able to take a diploma for the common branches of housework at the same time she takes her school diploma. Best of all, during the summer months the mother and daughter are becoming better acquainted.

But a vacation without any fun would make dull Jacks and Jills of the young people. So, during the season when the farm labor lightens up a little, arrange for an occasional family outing. If possible to make such arrangements, allow the son and daughter to go away from home for a short time to friends or relatives whom the parents are confident will do only good to their children. Home is all the dearer when the young folks do return, and the contact with new people and new surroundings gives them fresh thoughts. —Janet Thomas Van Osdel.

Useful Helps For the Cook.

A good way to cook prunes is to soak them twenty minutes, then wash them and put them to soak over night, then in the morning boil them in the same water for ten minutes and add the sugar and a little salt just before removing from the stove, and a slice of lemon added before the prunes are quite cooked is thought by many to be an improvement.

If your bacon meat has much lean in it and is too salty, put in a skillet with enough cold water to cover it and let it come to a boil, then lift it out, roll in meal and fry.

To make good boiled icing, beat the whites of three eggs to a very stiff froth, then add slowly one pound of good granulated sugar and then set the bowl containing the mixture in a deep pan of boiling water and stir constantly until the frosting is very hot, and it is ready to use.

When creaming butter and sugar you can save time by using a fork instead of a spoon.

You can keep your dish towels soft and white by rinsing them out in hot soda water after each meal and then boiling them twice a week in strong Pearline suds, and when they are kept clean in this way they need very little rubbing, and hard rubbing will soon wear them out, and there is nothing better than this suds for cleaning the biscuit board, tables and floors.

To freshen lard, put it into a deep kettle, and when hot drop in slices of raw Irish potato and small bits of bread dough and let them get brown, and just before taking from the stove stir in about one teaspoon of soda for every five pounds of lard.

If a bunch of grape leaves are put in the brine in which cucumbers are to be soaked for pickling, it will help to keep them sound and firm and of a good color.

Vegetables growing above ground should be cooked in salted water, and those grown beneath the ground in fresh water.

To keep potatoes from turning dark after being boiled, peel them an hour in advance of cooking time and allow them to stand in cold water.

A very little soda put in stewed cranberries, rhubarb or gooseberries before the sugar is added will take less sugar to sweeten and will make them more tender.—M. H.

Be Sure it's The "Star" Fruit Can

And you are sure of satisfaction.

More durable and more economical than glass jars. Clean and sanitary.

American "Star" Wax Top Can

Look for the "STAR"

Made from extra coated heavy tin plate.

Keeps preserves sweet and wholesome. Seals airtight with wax or paraffine. No bother with rubber rings.

You get the *most* when you buy the can with the "Star" stamped on the top and on the bottom. The old reliable "Star" can is always safe.

Plain or Indexed top.

Sold by all grocers and dealers in crockery, glassware and household furnishings.

AMERICAN CAN COMPANY

NEW YORK CHICAGO SAN FRANCISCO

MAXIMS IN ROTHSCHILD'S WILL.

The following twelve maxims formed part of the will of Meyer Anselm Rothschild, the founder of the great banking house at Frankfort:

Seriously ponder over and thoroughly examine any project to which you intend to give your attention.

Reflect a long time, then decide very promptly.

Go ahead.

Endure annoyance patiently, and fight bravely against obstacles.

Consider honor a sacred duty.

Never lie about a business affair.

Pay your debts promptly.

Learn how to sacrifice money when necessary.

Do not trust too much to luck.

Spend your time profitably.

Do not pretend to be more important than you really are.

Never become discouraged; work zealously and you will surely succeed.

Enterprising farmers looking for new locations will find it to their advantage to watch the railroads opening up new territory. One of the best, safest and most reliable is the Union Pacific. This road has shown millions of farmers the road to fortune. Write to E. L. Lomax, U. P. R. R., 868 Farnum street, Omaha, Neb., and ask for Pacific Northwest Land Booklets. They are worth having.

BEYOND THE GATES.

e often wondered, she and I,
What thing might lie behind the wall,
hose gate stands open when we die,
Then sudden, shuts beyond recall.

e longed and looked, and dear ones past
As if on wings in viewless air,
o path they left, nor shadow cast,
They sailed and sailed, we knew not where.

metimes when twilight gathered round,
Each spake to each when lamps were low
nd never yet God's answer found;
We only said: We do not know.

hen came a promise each to each,
Our thoughts still on the gate divine,
eyond the wall, if one has speech,
Who enters first shall give a sign.

ne summer day she left my side,
A struggle and the angels won;
nd that sad gate that stood so wide,
I heard it close and all was done.

nd then I waited for the sign;
If love should pierce the mighty wall,
hen she would speak, this lost of mine;
I listened, but no word at all.

ll once, with Nature all in tune,
I walked beneath the myriad stars;
he breath of night was on the June,
And God seemed letting down the bars.

nd all at once I seemed to hear
Celestial music in the sky,
nd her sweet voice, so soft and clear;
And then I know we do not die.
—S. H. M., in The Independent.

THE EDUCATED FARMER.

resident James of the University of Illi-
, says there is a demand for college
duates on the farms.

like to hike back to the soil, I'm weary
of the city;
getting nothin' for my toil—not even
praise or pity;
ed to have a fool idea that city life was
charmin',
that the saddest fate would be to earn
my livin' farmin';
I've got bravely over that old-time hal-
lucination.
I'd go back to-day if I'd a college
education.

used to be if men could hoe, and dig, and
plow, and hammer,
'd git along on farms, although they
didn't know much grammar;
didn't take a graduate who knew about
the tenses
mean a calf or mend a gate or fix up
broken fences.
them days any one, almost, could have
the occupation
turnin' up the soil without a college
education.

sorry that I ever got that idiotic notion
at workin' in a town was what you'd call
a fine promotion;
sick of workin' by the day in every kind
of weather
livin' where the folks must all be hud-
dled up together.
farms, they used to say, supplied the
backbone of the nation;
'd see me hikin' back if I'd a college
education.

mighty change has come to pass since
when I plowed the stubbles;
farmer's in another class and havin'
fewer troubles.
He's livin' like a prince out there an' pilin'
up his riches;
He puts on cuffs, an' needn't wear big boots
nor baggy britches.
I'm mighty sick of city life—it's just one
long vexation—
But what's a man to do without a college
education?
—E. E. Kiser, in Chicago Record-Herald.

THE SPICE OF LIFE.

Otto's Auto.

Young Otto bought an auto, which he ought
to not have done
Till he had studied fully how an auto ought
to run!
But Otto didn't do it, so he had himself to
thank
That when Otto cranked the auto, why
young Otto was the crank.

For Otto left the auto with the lever pushed
to "go,"
When he ought to have reversed it, with the
power shut off, you know;
So when Otto cranked the auto the auto
gave a jump,
And landed Otto sprawling, with an auto-
matic thump.

But Otto grabbed the auto as the auto
autoed by,
Then Otto and the auto down the street did
fly;
And at a speed that auto the luckless Otto
whirled
Like an automobile autocrat who thinks he
owns the world.

While the auto-bating public stood and
watched that auto rash
Till he ran against a lamp-post with a most
terrific crash!
Then they sadly laid poor Otto, who had lost
his auto zest,
Where the autos cease from troubling and
the Ottos are at rest.

L'Envoi:

Now in this auto story, with its sad and
fatal turn,
There is a moral hidden which we surely
ought to learn;
No Otto ought to auto till he knows the
auto rules,
For an automatic auto is no toy for auto
fools.
—Boston Globe.

THE BABY'S FACE.

Who can fathom the fairy grace
That dwells in a velvety baby face?
Who can fathom the fairy glee
That rings in a baby's melody?
And who unravel the secret wile
That sleeps in the nest of a baby's smile?
The hungry and lingering joy we know
When our rough face touches a babe's,
and, lo,
We feel the touch of the velvet skin
And the warm, sweet lovelight bound
therein!

A baby's face—how can one tell
Its mystic charm and its holy spell?
Rough hearts go by, rude, rugged men,
From the dust and grime of mart and fen;
But under the cloak of their outer din
Love's hunger sleeps their souls within,
And when they see a baby's face—
Round and rosy and sweet with grace—
They long, as you and I, to press
The velvet joy of its warm caress.

How much it holds, how deeply lays,
Within its soft and gentle maze,
The charm to soothe, the charm to heal,
The hurt that lives so often feel!
A baby's face along the way
Is like a little bloom-o'-day;
And, like a little flower, it brings
The sweetness of a thousand springs;
The balsam of the heart-made-well
Is in the touchstone of its spell.
—Baltimore Sun.

BACK OF IT ALL.

The world went wrong with the banker
As he sat at his desk that day,
For in every place there appeared a face
That would not go away.
The hands on the clock moved slowly,
And his brow wore a troubled frown,
And the tears would start as there rose in
his heart
A sorrow that would not down.

The world went wrong with the toiler
As he dug in the street that day,
And his eyes grew blurred as he thought he
heard
A faint voice far away.
The day seemed never-ending,
And a weary sigh he gave—
For with every stroke of the heavy pick
He seemed to be digging a grave.

Back of it all was a reason
Back of it all was a cause—
For the heart, be sure, of the rich and poor
Is governed by love's same laws.
At home in the banker's mansion,
At home, in the humbler place,
Each man could see in the universe
The upturned, tear-stained face

Of the child he had ruled, scolded
As he went to his work that day;
And the little ears, as it said good bye,
Would ring in his ears for aye.
The banker went home to his mansion,
The toiler went home to his cot—
And each man pressed to his throbbing
breast
The tangled curls of a tot.

The Right Way to Buy Soda Crackers

—and the *simplest* way. Ask for them by name—and the goodness will take care of itself. Buy

Uneeda Biscuit

Then, no more broken, soggy, stale or exposed soda crackers. Uneeda Biscuit come in individual packages that hold just enough for each soda cracker occasion. *Fresh* when you buy them. *Whole* when you open the package. *Crisp* as you eat them.

A number of five cent packages of Uneeda Biscuit is a wiser purchase than a quantity of ordinary soda crackers in wooden box or paper bag. Never sold in bulk.

NATIONAL BISCUIT COMPANY

Bags.

There are many forms of bags, dainty and useful, which aid greatly in keeping order in the household, especially if there is a dearth of closet room. The fancy ones make a room more home-like, and the others, if they are not pretty, are exceedingly convenient.

There are always little odds and ends which accumulate and may be quickly worked up into a most dainty receptacle for holding some necessary article. If you have remnants of silkolene, use them for this, while stray pieces of crash or linen also combine in the same useful manner.

A woman recently came across a strip of figured goods about eighteen inches long and five inches wide. It was large enough for a bag to hold handkerchiefs or hair ribbons, but so narrow that it must be pieced down through the middle. The colors were yellow roses and green leaves on a white background. In a moment she had decided to buttonhole loosely the selvedge sides together with gold mercerized thread, and this pulled apart just a little to give a fancy effect. The bag was then made in the usual way and shirred at the top. The little girl of the house was delighted to find it hanging in her room ready for some of the little things which are apt to get mislaid.

A bag for soiled linen should be a part of the furnishing of every room and will be found quite a convenience when wash day comes. Another of plain white cloth tacked to the inside of the pantry door for dish towels will be a saving of time, another may hold the dusting cloths, and if drawers are lacking, a third is useful for retaining the every-day towels after they are ironed and aired. Make one to catch the remnants when sewing, and another small one to hold pins, thimble, wax and other sewing material. Fasten a pasteboard circle in the bottom and make of it a receptacle for needles and pins. This is handy when traveling as well as when sewing.—Rosalie L. Fellows.

In Hundreds of Cases After Other Treatment Had Failed

We Prove It To You

By the Words of Those Who Say They Have Been Cured With Magnetic Shields

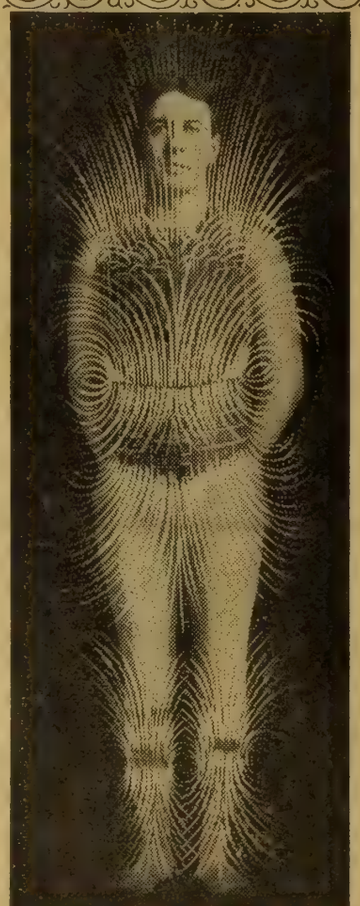
All we wish is an opportunity to show you the evidence, and after you have seen what wonderful work has been accomplished by Magnetic Shields, **YOU ARE TO BE YOUR OWN JUDGE** as to whether or not you want to use Magnetism in your own case, the same as others have. We do not urge anyone to buy Magnetic Shields; we simply give you the facts, and after considering the facts you follow your own inclination. It is your duty to investigate. It will cost you nothing to get the facts, and you will obtain much valuable information, free of charge, upon the subject of Magnetism, if you send statement of your case.

You Have Everything To Gain

By a careful, thorough investigation, for Magnetic Shields have done all we claim for them and a great deal more, or we certainly would not ask you to make an investigation and use the result of that investigation as the basis from which to judge of the merit of Magnetic Shields as a curative agent.

We Make Shields For Every Part of the Body For the Treatment of Every Form of Oisease

The accompanying cut shows how Magnetism is radiated from the Lung Shield, Belt and Lower Leggins into all the vital organs, as well as lower extremities, giving new life and activity to the circulation from head to foot, thus strengthening all the vital organs and large nerve centers and assisting nature in the work of eliminating diseased conditions by reason of the better circulation of blood that is established as soon as the Shields are applied. This set of shields contains over eight hundred powerful Magnetic Storage Batteries, that are guaranteed to hold their power and will never have to be recharged.



Read the Truth

More Forcibly Expressed in These Letters Than Any Statements We Could Make

"GOD BLESS DR. THACHER!" PARALYSIS OF LOWER HALF OF BODY OF SIXTEEN YEARS' STANDING

THACHER MAGNETIC SHIELD CO., CHICAGO, ILL.

Dear Sirs: It would take a large amount of space to give a history of my case from start to finish, but for the sake of suffering humanity I will give a few words to help along, if possible, the great work you are doing for the afflicted. In 1883 I was taken with malarial fever of typhoid form, causing complete muscular paralysis. By the aid of the best medical skill in the East, I became, after several years, able to sit up and use my arms, but my lower limbs remained paralyzed until after I put on the Magnetic Shields in 1899, sixteen years afterward. My case is a noted one in New York State, and all the medical fraternity decided I would never be able to walk again. Dr. C. I. Thacher said I could and would walk again, and he was right and all the rest were wrong. It is needless to say that I had spent money freely all these years without receiving results, until I found the Magnetic Shields. We who have been restored by its wonderful power begin to realize the great work being accomplished by Dr. Thacher, and we would be unjust to our Creator and to our fellow-beings, as well as being very ungrateful, if we did not use all our efforts and powers in spreading the grand truth, bringing greatest joy and hope to the chronic invalid, deliverance from disaster, transition from the old life to the new. I am one of the thousands who, with all my heart, can say fervently: "God bless Thacher and his great work." All personal letters, inclosing stamp for reply, will be promptly answered for those wishing minute data of my case. Yours truly, CLARENCE D. SMITH, R. F. D. No. 6, Rome, N. Y.

SERIOUS COMPLICATION OF LUNG, STOMACH AND KIDNEY TROUBLE. A MARVELOUS CHICAGO RECOVERY

DR. THACHER:

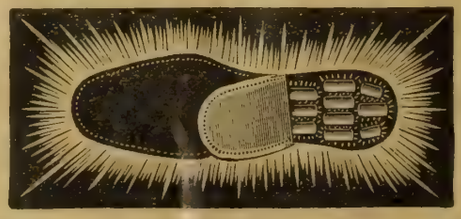
Dear Sir: It gives me great pleasure to testify to the perfect cure I have gained by using your wonderful Shields. After suffering fifteen years with stomach troubles, although doctoring the greater part of the time, I kept getting worse until I was the victim of a severe complication of stomach and kidney trouble, which a year and a half ago all seemed to go to my lungs. Had dreadful pains, lost my appetite, could not sleep, became so very weak I could hardly walk across the floor, and not able to do my work. At times when my pains were not so severe I would try to read, but could not for more than five minutes at a time, as I was very nervous. My family and friends thought I could not live another month. I was getting tired of taking medicine. Nothing helped me. I happened to see your advertisement in the paper, which read: "Magnetism Cures Without Medicine." I thought "While there is life there is hope." So just one year ago today I put on your wonderful Magnetic Vest, Leggins and Insoles. The result was a miracle, for in two days I felt relieved; in a week very much better; in three weeks entirely cured.

Words cannot express how thankful I am to you for your kind advice; also for the treatment, to which I owe my life. May you live long for suffering humanity's sake. May your great and sure cure be known a great deal better than it is today.

Yours respectfully,
MRS. O. RAY, 2316 Ridgeway St., Chicago, Ill.

IF YOU MUST SEE WITH YOUR OWN EYES, AND MUST HAVE PROOF ON YOUR OWN BODY BEFORE YOU CAN BELIEVE—

TRY THESE FOOT BATTERIES



THEY WILL CONVINCE YOU

They will convince nearly any living person that MAGNETIC SHIELDS MAKE THE BLOOD CIRCULATE. They are regular little blood pumpers. They do what all the medicine on earth cannot do. THEY WARM THE FEET and keep them warm. They are the greatest comfort and luxury of modern days, though they are the smallest MAGNETIC SHIELDS we make. They cost the least of any Shield we make, but they do splendid work. They are good for rheumatism, sore or tender feet or any unnatural condition in the feet, and can be worn on any part of the boly to test their power and relieve pain. Foot Batteries are $1.00 per pair or three pairs for $2.00 for single power, or $2.00 per pair and three pairs for $4.00 for compound or double power, postpaid. Send size of shoe when ordering Foot Batteries. Send for information and proof of the value of FOOT BATTERIES and all other Shields. It will cost you nothing to investigate. Our Book, "Plain Road to Health," Free.

MISSOURI CATTLE WHICH TOPPED THE EAST ST. LOUIS MARKET FOR A YEAR BY TEN CENTS PER HUNDRED POUNDS.

These twenty head of 1,574-pound beef steers were handled by Clay, Robinson & Co. and marketed by Oswald Bros. & Robien, of Boonville, Mo. They brought $8.60 per hundred pounds on June 8th. Barring the four loads of cattle sold by Clay, Robinson & Co. at $8.50 on the same day, this price was seventy cents per hundred pounds higher than any other load of cattle made. In addition to this, it is necessary to go back to last October to find a time when as high a price was obtained, and also it stood ten cents per hundred pounds higher than any cattle brought on that market this year. These cattle were bought in Kansas City last fall during the Stock Show as feeders and averaged 1,100 pounds at that time. They were Colorado-bred, grade Herefords, branded Westerns, and were fed by E. Schlotzhauer, of Pilot Grove, Mo., on a full feed of corn, oats, bran and clover hay, and finished with a ration of linseed meal. The cattle were of good quality and fat. They were contracted by Oswald Bros & Robien from Mr. Schlotzhauer about April 1 at $8.00. Sturtevant & Haley, of Boston, were the purchasers. In this connection we desire to invite attention to the card of Clay, Robinson & Co., which will be found on page 7. This great firm of live stock commission agents is well established at ten of the principal live stock markets and is noted for superior service and sales that suit at every one of them.

Cement Workers' Handbook.
